His thin, parted beard, his hooked nose, his Mongolian lips are a sure index of his character. There is a studied clumsiness in his movements, which you are sure belonged to the man himself. When he drinks you can hear his teeth rattle on the wine-cup. His fingers dissect with a savage curiosity the food set before him. He comes before us in such a guise that nothing he says or does can surprise us. The differences of his wayward nature are subtly harmonized. His cruelty and his tenderness are alike made credible. His heavy-lidded eyes deliver, before his tongue, the message of his elemental passion. And in spite of diversities the Emperor's dignity is constant and unchanging. His first entrance upon the stage—it is in the second act—is a very miracle of pompous tranquillity. You are prepared by the crowd for a terrible apparition, and *Ivan* appears upon his white horse, Eastern and sardonic, a monument of disquieting quietude.

"Thus with shifting emotions his dignity remains immutable. When he finds a daughter he is still a despot. He pardons the city, bidding cease the massacre, with the sudden graciousness of a tyrant. Even his grief at his daughter's death is the more bitter because it is the grief of a monarch still unapproachable. Here, at any rate, is a consistent portrait, consistently drawn by a master's hand, a portrait which, for those who have seen it, will survive ineffaceably with memory itself."

His equal upon our modern stage would be manifestly impossible to find, and we have no touchstone by which he may be tried:

"If we would match him we must go back in our theatrical annals as far as Edmund Kean. At all hazards these two actors have arrived at the same goal: the object of Kean was, the object of M. Chaliapin is, to suppress self, to represent something which lies beyond the complacency of egoism. Kean, as we know, got his effects from the street or the prize-ring. He interpreted the heroes of Shakespeare in the terms of a vivid experience. What Hazlitt says of him would fit M. Chaliapin like a glove: 'He exhibited'—in 'Richard III.'—'all that energy and discrimination, that faculty of identifying himself with the character he represents, which are to be ranked among the greatest efforts of human talents.' And again: 'The actor's eye (if truly inspired) comprehends more than is set down for him, starts at hidden fancies that only pale passion sees, and his voice is a trembling echo and the broken instrument of thoughts and of an agony that lie too deep for mere words to express.' Thus Hazlitt of Kean, and there is no word of it which may not be truthfully applied to M. Chaliapin, the Edmund Kean of our day.

"It is a difficult enterprise to compare the living with the dead, but especially when it is a transient art which they practise. Yet if M. Chaliapin's method differs not from Kean's, the ambition of the two men appears to be the same. Kean was happiest when he was asked to represent the characters of Shakespeare. There he found the proper fuel for the fire of his passion. And assuredly M. Chaliapin was born into this world to play his part in the tragedies of our English poet. It matters not whether the lines be sung or said. M. Chaliapin would prove their inspired interpreter. His own desire is to act *Macbeth*, and admirably would he show us *Macbeth's* vacillating spirit. But rather than as *Macbeth* or as *Othello* I would see him as *Lear* with *Mad Tom* defying the storm upon the blasted heath."

GORKI AND CHALIAPIN.

The upper of the two figures is the singing-actor hailed by the English as the greatest actor since Edmund Kean.

THE CALL TO THE POETS

ENGLAND'S POETS are rushing into verse, but our papers, that are better placed to preserve some calmness of judgment, find the outpourings sadly lacking. "There is a good deal of fuss and fury," observes the *Boston Transcript*, "the sort of careless roughness that comes from hurry to get to press rather than from rugged vehemence." Calling the roll of the principals, this paper notes Robert Bridges as sounding the "call to the colors" and "William Watson, ready for any fracas, Stephen Phillips hoping daily to 'come back'; Alfred Noyes substituting cudgel for

olive-branch in the propaganda of Peace." On the other hand, it notes that Kipling is strangely silent, while Massfield, the man who might give England's dreadnoughts some sort of virile battle-hymn, is meditating." Our department of "Current Poetry" will sift the war verse here and abroad in future issues; meantime we echo the disappointment over the present output, for, as *The Transcript* avers, "it is a sorry pity that when, if ever, a nation's singers should rise to inspiration, England turns out, for the most part, journeymen's work." Giving specimens:

"Robert Bridges's poem lacks power and size, for the very obvious reasons that he has not the fire to drive his short lines to anything better than

Thou careless, awake!
Thou peacemaker, fight!
Stand England for honor
And God guard the right.

"Stephen Phillips varies the monotony of such atrocious lines as

Him whom God destroys He mad-
dens first,
Then thy destruction make thy
madman's thirst.

with the excellent, tho perhaps obvious, recollection that it was on 'the haunted ground' of Belgium that

There bowed a mightier war lord to his fall.

"William Watson, also, 'has it in' for the German Emperor, and says so frankly and well:

At last we know you, War Lord. You that flung
The gauntlet down, fling down the mask you wore.
Publish your heart and let your pent hate pour—
You that had God forever on your tongue.

"Whatever the truth of the matter, the poets are all very bitter over what Alfred Noyes calls 'the felon hands' of Germany. But they are not able to see in 'that trampling, drilling foolery in the heart of Europe,' which H. G. Wells has so much more brilliantly and bitterly described, one side, and one side only, of the German race. They have not struck that high note of the novelist when he asked that in the hour of victory England should remember to save a noble race from vindictive revenge.

"Alfred Noyes, in the best poem of the lot, stands squarely to the guns of what has been his antiwar campaign:

Thus only should it have come, if come it must,
Not with a riot of flags or a mob-born cry.

"But how petty even his versifying compared to what was presumably its inspiration."

RELIGION AND SOCIAL SERVICE

MILITARISM ANALYZED

A PICTURE for which we shall have to wait for history to furnish the key is drawn by Dr. Charles E. Jefferson, dealing with the spectacle of this century's militaristic display. "Delusion," he calls it, for the article was written before the war-clouds rose above the Servian horizon. Now the significance of everything is changed, but the details that go to make up the picture still have their salience. He notes, in the rôle of the historian of the future, the preparations made for war ever since the century began, especially among the

THE THINKER.

Who watches the struggling armies reaching for temporal power.

—Williams in the Boston Traveler.

nations which confess allegiance to the Prince of Peace. He sees that these "preparations were carried forward with tremendous energy and enthusiasm, and that the air was filled with prophetic voices picturing national calamities and predicting bloody and world-embracing conflicts." Alongside this fact the historian of the future will find another fact no less conspicuous and universal, that everybody of importance in the early years of the twentieth century was an ardent champion of peace. In *The Christian Century* (Chicago), Dr. Jefferson continues:

"He will find incontestable evidence that the King of England was one of the truest friends of peace who ever sat on the English throne, that the German Emperor proclaimed repeatedly that the cause of peace was ever dear to his heart, that the President of the United States was so effective as a peacemaker that he won a prize for ending a mighty war, that the Czar of Russia was so zealous in his devotion to peace that he called the nations to meet in solemn council to consider measures for ushering in an era of universal amity and good will, and that the President of France, the King of Italy, and the Mikado of Japan were not a whit behind their royal brethren in offering sacrifices on the altar of the Goddess of Peace. A crowd of royal peacemakers in a world surcharged with thoughts and threats of war, a band of lovers strolling down an avenue which they themselves had lined with lyddite shells and twelve-inch guns, this will cause our historian to rub his eyes.

"His bewilderment, however, will reach its climax when he discovers that it was after the establishment of an international court that all the nations voted to increase their armaments. Everybody conceded that it was better to settle international disputes by reason rather than by force, but as soon as the legal machinery was created by means of which the swords could be

dispensed with, there was a fresh fury to perfect at once all the instruments of destruction. After each new peace conference there was a fresh cry for more guns. Our historian will read with gladness the records of the Hague Conference, and of the laying of the foundation of a periodic Congress of Nations, and of a permanent High Court. He will note the neutralization of Switzerland, Belgium, and Norway; the compact entered into by the countries bordering on the North Sea, to respect one another's territorial rights forever; the agreement of the same sort solemnly ratified by all the countries bordering on the Baltic; the signing of more than sixty arbitration treaties, twelve of these by the Senate of the United States; the creation of an International Bureau of American Republics, embracing twenty-one nations; the establishment of a Central American High Court; the elaboration and perfection of legal instruments looking toward the parliament of man, the federation of the world.

"He will also note that while these splendid achievements of the peace spirit were finding a habitation and a name, the nations were thrilled as never before by dismal forebodings and the world was darkened by whispers of death and destruction. While the Palace of Peace at The Hague was being built, nations hailed the advent of the air-ship as a glorious invention, because of the service it could render to the cause of war. This unprecedented growth of peace sentiment, accompanied by a constant increase of jealousy and suspicion, of fear and panic, among the nations of the earth, will set our historian to work to ascertain the meaning of this strange phenomenon, the most singular perhaps to be met with in the entire history of the world."

It will not take him long to discover, points out the writer, that the fountains from which there flowed these dark and swollen streams of war rumor were all located within the military and naval encampments.

"It was the experts of the army and navy who were always shivering at some new peril, and painting somber pictures of what would happen in case new regiments were not added to the army and additional battle-ships were not voted for the fleet. It was Lord Roberts, for instance, who discovered how easily England could be overrun by a German army; and it was General Kuropatkin who had discernment to see that the Russo-Japanese war was certain to break out again. The historian will note that the magazine essays on 'Perils' were written for the most part by military experts, and that the newspaper scare-articles were the productions of young men who believed what the military experts had told them. Many naval officers, active and retired, could not make an after-dinner speech without casting over their hearers the shadow of some impending conflict.

"It was in this way that legislative bodies came to think that possibly the country was really in danger; and looking round for a ground on which to justify new expenditures for war material, they seized upon an ancient pagan maxim—furnished by the military experts—'If you wish peace, prepare for war.' The old adage, once enthroned, worked with the energy of a god. The love of war had largely passed away. The illusion which for ages it had created in the minds of millions had lost its spell. Men had come to see that war is butchery, savagery, murder, hell. They believed in reason. Peace was seen to be the one supreme blessing for the world, but to preserve the peace it was necessary to prepare for war. This lay at the center of the policy of the twentieth century. No guns were asked for to kill men with—guns were mounted as safeguards of the peace. No battle-ships were launched to fight with—they were preservers of the peace. Colossal armies and gigantic navies were exhibited as a nation's ornaments—beautiful tokens of its love of peace. And following thus the Angel of Peace, the nations increased their armaments until they spent upon them over two billions of dollars every year, and had amassed national debts aggregating thirty-five billions. The expenditure crushed the poorest of the nations and crippled the richest of them, but the burden was gladly borne because it was a sacrifice for the cause of peace. It was a pathetic and thrilling testimony of the human heart's hatred of war and longing for

peace, when the nations became willing to bankrupt themselves in the effort to keep from fighting."

The historian of the future will not see things in the same light as we do. He "will begin to ask whether there might have been any relation between the multiplication of the instruments of slaughter and the constant rise of the tide of war talk and war feeling":

"He will probably suspect that the mere presence of the shining apparatus of death may have kindled in men's hearts feelings of jealousy and distrust, and created panics which even Hague conferences and peaceful-minded rulers and counselors could not possibly allay. When he finds that it was only men who lived all their lives with guns who were haunted by horrible visions and kept dreaming hideous dreams, and that the larger the armament the more was a nation harassed by fears of invasion and possible annihilation, he will propound to himself these questions: Was it all a delusion, the notion that vast military and naval establishments are a safeguard of the peace? Was it a form of national lunacy, this frenzied outpouring of national treasure for the engines of destruction? Was it a hallucination, this feverish conviction that only by guns can a nation's dignity be symbolized, and her place in the world's life and action be honorably maintained?"

At this point Dr. Jefferson's article diverts to the discussion of a desirable change in the world's attitude toward militarism. But events have rendered naught his exhortations. He has some words upon the psychology of the militarist, however, that may help students in understanding events as they are unrolling before his eyes to-day:

"The militarist of our day betrays certain symptoms with which the student of pathology is not altogether unfamiliar. There are obsessions which obtain so firm a grip upon the mind that it is difficult to banish them. For example, a man who has the impression that he is being tracked by a vindictive and relentless foe is not going to sit down and quietly listen to an argument the aim of which is to prove that no such enemy exists, and that the sounds which have caused the panic are the footfalls of an approaching friend. The militarist will listen to no man who attempts to prove that his 'perils' are creations of the brain. Indeed, he is exceedingly impatient under contradiction; and, here again, he is like all victims of hallucinations. To deny his assumptions or to question his conclusions, is to him both blasphemy and treason, a sort of profanity and imbecility worthy of contempt and scorn. He alone stands on foundations which can not be shaken, and other men who do not possess his inside information, or technical training for dealing with such questions, are living in a fools' paradise. The ferocity with which he attacks all who dare oppose him is the fury of a man whose brain is abnormally excited.

"Like many another fever, militarism grows by what it feeds on, and unless checked by heroic measures is certain to burn the patient up. Men in a delirium seldom have a sense of humor. The world is fearfully grim to them, and life a solemn and tragic thing. They express absurdities with a sober face, and make ridiculous assertions without a smile. It may be that the militarists are in a sort of delirium. At any rate, they publish articles entitled, 'Armies the Real Promoters of Peace,' without laughing aloud at the grotesqueness of what they are doing.

"The militarist is comic in his seriousness. He says that if you want to keep the peace you must prepare for war, and yet he knows that where men prepare for war by carrying bowie-knives, peace is a thing unheard of, and that where every man is armed with a revolver the list of homicides is longest. He declares his belief in kindly feelings and gentle manners, and proceeds at once to prove that a nation ought to make itself look as ferocious as possible. In order to induce nations to be gentlemen, he would have them all imitate the habits of rowdies. To many persons this seems ludicrous, to a militarist it is no joke. He is a champion of peace, but he wants to carry a gun. The man who paces up and down my front pavement with a gun on his shoulder may have peaceful sentiments, but he does not infuse peace into me. It does not help matters for him to shout out every few minutes, 'I will not hurt you if you behave yourself,' for I do not know his standard of good behavior, and the very sight of the gun keeps me in a state of chronic alarm. But the militarist says that, for promoting harmonious sentiments and peaceful emotions, there is nothing equal to an abundance of well-constructed guns.

"A droll man, indeed, is the militarist. What matters it what honeyed words the King of England and the German Kaiser interchange so long as each nation hears constantly the launching by the other of a larger battle-ship? And even the Prince Bülow may say to Mr. Asquith a hundred times a week, 'We mean no harm,' and Mr. Asquith may shout back, 'We are your friends,' so long as London and Berlin are never beyond ear-shot of soldiers who are practising how to shoot to kill, just so long will England and Germany be flooded with the gossip of hatred, and thrown into hysteria by rumors of invasion and carnage."

THE APPEAL OF THE WOMEN

THE HAND OF THE WOMAN is raised against the warring nations, and the following appeal, signed by Anna Howard Shaw, Jane Addams, Desha Breckinridge, and Caroline Ruutz-Ross, is sent to the organized suffragists of

NINETEEN CENTURIES AFTER CHRIST.

—Nelson Harding in the Brooklyn Eagle.

twenty-six countries in the name of the National American Woman Suffrage Association:

"The cloud of a great international war darkens all Europe and the shadow of the conflict hangs over all the nations of the world, insuring disaster to all people and the turning back of civilization for a century to come.

"During the past hundred years women have given their toil not only to motherhood and the cares of family life, but also to the building up of the great industries of every country. They have devoted thought and energy and have made great sacrifices to develop education and establish reforms for the betterment of humanity. Hundreds of thousands have sacrificed their lives to the life-giving vocation of motherhood. Yet without one thought of the sufferings and sacrifices of mothers who have reared sons, or of the tremendous industrial burdens that war will impose upon women, who will have to do their own work and the work of the men called to the field of battle; without consideration of the little children who will have to be taken from school or from play for industrial toil thus wantonly imposed upon them by the Government whose duty it is to protect and shield them; this curse of a medieval war is thrust upon those whose will and wish have not been consulted.

"Is it that hundreds of thousands of their sons may go down to death before the terrible machinery of modern war that the

nations call upon women to give their youth, their years of toil, and their labor for a higher civilization? Have they reared sons only to become prey to the ambition of kings and exploiters? Shall the strongest and noblest of the races of men be sacrificed and only the weak and maimed left to perpetuate mankind?

"The suffragists of the United States call upon the women of the world to arise in protest against this unspeakable wrong and to show war-crazed men that between the contending armies there stand thousands of women and children who are the innocent victims of men's unbridled ambitions; that under the heels of each advancing army are crushed the lives, the hopes, the happiness of countless women whose rights have been ignored, whose homes have been blighted, and whose honor will be sacrificed if this unholy war does not cease and reason and justice take the place of hate, revenge, and greed. This is not a national issue; it involves all humanity."

LORD MORLEY'S SPIRITUAL SIDE

THE "honorable and lifelong protest against the wickedness and insanity of war," with which a writer in *The London Quarterly* accredits Lord Morley in an article written before the outbreak of the European conflict, became an actuality of moment with his resignation from the British cabinet when war was declared between England and Germany. It is "the depth and tenderness of his social sympathies," we are told, that "give edge and passion" to Lord Morley's antipathy to war, for through all his long life he has never forgotten, to use the statesman's own words, "the masses of men, those who dwell in dens and whose lives are bitter." And again we hear him say: "I count that day basely spent in which no thought is given to the life of the garret and the hovel." It is this sense of the brotherhood of man, the *Quarterly* writer tells us, that drew Morley so strongly to Voltaire, and not the great Frenchman's "reckless speculative intelligence," just as it is the lack of it that led Morley "to rebuke even his great master, Edmund Burke." Morley is at a loss to understand, we read, why Burke could not see that "that for which men cried in the days of the French Revolution was no idle abstraction, no metaphysical right of man, 'but only the practical right of being permitted by their own toil to save themselves and the little ones about their knees from hunger and cruel death.'" Yet it is perhaps in his insistence on "the supremacy of the ethical and spiritual," says the writer, that we see most clearly "the commanding influence of Morley's Christian environment," and he adds:

"One or two of his recorded judgments will best illustrate what is meant. Thus he makes it a ground of complaint against Emerson that he has so little to say of 'that horrid burden and impediment on the soul which the Churches call sin, and which, by whatever name we call it is a very real catastrophe in the moral nature of man.'"

"When Dr. Draper lays it down as a fundamental axiom of history that human progress depends upon increase of our knowledge of the conditions of material phenomena, this is Morley's comment: 'As if moral advance, the progressive elevation of types of character and ethical ideals, were not at least an equally important cause of improvement in civilization. The type of Saint Vincent de Paul is plainly as indispensable to progress as the type of Newton.'"

In his choice of spiritual masters, the writer points out Morley shows "the same bent of soul," altho "ignorant and prejudiced people speak sometimes as if his thinking had been fashioned solely on French models of a type peculiarly distasteful to English minds," and we are informed that—

"A mere glance at his collected works should be sufficient to dispel this delusion, even if we had not his own distinct and emphatic disclaimer. 'Men,' he says, 'who sympathize with him (Voltaire) in his aims, and even for their sake forgive him his method, who have long ago struck the tents under which they once found shelter in the lands of belief, to whom Catholicism has become as extinct a thing as Mohammedanism, even they will turn with better chance of edification to the great masters and teachers of the old faith than to the fiery precursor of the new.'"

"Every one knows his profound admiration for the writings of John Henry Newman and Dean Church. It may be of interest, too, to mention that during one of Gladstone's political campaigns in Midlothian he told his host one morning at breakfast that he had just received from John Morley a little volume sent to him because of the delight and profit it had yielded to Morley himself. It was John Woolman's *Journal*. Those who have turned over the quiet pages of the pious Quaker will not need to be told that one who could find strength and refreshment there has little in common with the hardy blasphemer whom, twenty-five years ago, men thought they saw in the biographer of Voltaire, Diderot, and Rousseau."

In passing, the writer recalls that at one time in his Oxford days Morley was "intending to take orders in the Anglican Church," and he goes on to say that:

"We are always conscious in Morley's references to religion of his sense of the seriousness and magnitude of the issues at stake. He is no light-minded trifler, 'sapping a solemn creed with solemn sneer.' There is a certain high seriousness, a certain somber nobleness, even in his denials. The elegant dabbler in infidelity, for whom the great controversy is not a grim battle but only a glittering tournament; the agnostic who has 'his day with the fine ladies like the black footboy of other times or the spirit-rapper and table-turner of our own'—all this moves him to a wholesome scorn."

"Moreover, Morley never allows himself, like Voltaire, to be blinded to the historical greatness of the Christian faith, and the part which it has played in human affairs."

"The two things best worth attending to in history," the writer quotes Morley as saying, "are not party intrigues nor battles nor dynastic affairs, nor even many acts of Parliament, but the great movement of the economic forces of a society on the one hand and on the other the forms of religious opinion and ecclesiastical organization." The writer adds:

"And so he can recognize the worth of things as far apart as the monotheism of the Old Testament and the evangelicalism of John Wesley. In the one he sees 'the germ of much that is purest and loftiest and most inspiring among the ideals of western civilization'; in the other he recognizes the base of many of the powerful characters of the nineteenth century, from John Henry Newman downward."

"He admits, too, that Christianity was the only force by which the regeneration of Europe could have been effected after the decline of the Roman civilization. More than once he stands forward as the champion of the Church of the Middle Ages, against which so much ignorant abuse has been directed. 'Amid many imperfections and some crimes,' he declares, 'it did a work that no glory of physical science can equal, and no instrument of physical science can compass, in purifying men's appetites, in setting discipline and direction on their lives, and in offering to humanity new types of moral obligation and fairer ideals of saintly perfection, whose light still shines like a star to guide our own poor voyages.'"

A PRAYER FOR THOSE AT WAR—The Bishop of the Protestant Episcopal diocese of New York, Dr. David H. Greer, has published the following prayer for use in the churches of his diocese during the war:

"O God, Who hast made of one blood all nations of men to dwell on all the face of the earth, and Who in Thy Holy Word hast taught us that One is Our Father, even God, and that all we are brethren: We pray Thee in this dark hour of international strife that Thou wilt open the eyes of the people, and those who in Thy Name are entrusted with the authority of governance, to see and understand their right and true relation to Thee, and through Thee to one another. Teach them by Thy Spirit that hatred and violence are not strength, but weakness; that the true safeguarding of a nation is not to be found in weapons of war, but in those eternal principles which make for righteousness and truth and brotherhood and peace. Give to those who shall suffer in the war which is raging now the consolations of Thy grace. Heal the sick; comfort the wounded; minister to the dying, and bind up the broken heart. Bring, we pray Thee, to a speedy end this international strife; and hasten the time when peace shall flourish out of the earth, and all shall dwell together in unity and love, and war shall be no more. We ask it in the Name of Our Saviour Jesus Christ. Amen."

CURRENT POETRY

ARTHUR DAVISON FICKE is a poet whose name is popularly associated with modernity. Yet to *The Forum* he contributes a sequence of Shakespearian sonnets.

Furthermore, he demonstrates his mastery of that beautiful old form. "Sonnets of a Portrait Painter" are true reflections of a lover's varying moods. Some of them are exquisite works of art; all of them are skilfully wrought. The two which we quote are chosen chiefly because they most readily endure separation from the context.

Two Sonnets

BY ARTHUR DAVISON FICKE

There Are Strange Shadows

There are strange shadows fostered of the moon,
More numerous than the clear-cut shade of day. . . .

Go forth, when all the leaves whisper of June,
Into the dusk of swooping bats at play,—
Or go into that late November dusk
When hills take on the noble lines of death,
And on the air the faint astringent musk
Of rotting leaves pours vaguely troubling
breath.—

Then shall you see shadows whereof the sun
Knows nothing, ay, a thousand shadows there
Shall leap and flicker and stir and stay and run,
Like petals of the changing foul or fair,—
Like ghosts of twilight, of the moon, of him
Whose homeland lies past each horizon's rim. . . .

I Have Seen Beauties

I have seen beauties where light stabs the hills
Gold-shafted through a cloud of rosy stain.
I have known splendor where the summer spills
Its tropic wildness of torrential rain.
I have felt all the free young dominance
Of winds that walk the mountains in delight
To tear the tree-trunks from their rooted stance
And make the gorges thunderous of their might.
The light, the torrents, and the winds, in you
I thought I had perceived to kinship grown.
It was a dream. Until this hour, I knew
Nothing—nay, nothing all my days have known
Where beauty, splendor, freedom, held such part
As when you came—and swept me to your heart.

The publication of a poem by Alice Meynell is an important event in the world of letters. The *London Athenæum* recently had the honor to print these lovely lines. "The Thrush Before Dawn" is the greatest poem inspired by a bird since Shelley's "Skylark." Its beauty is flawless and the transcendent splendor of the last stanza, so great and yet so simply expressed, shows unmistakably its author's genius.

The Thrush Before Dawn

BY ALICE MEYNELL

A voice peals in this end of night
A phrase of notes resembling stars,
Single and spiritual notes of light.
What call they at my window-bars?
The South, the past, the day to be,
An ancient infelicity.

Darkling, deliberate, what sings
This wonderful one, alone, at peace?
What wilder things than song, what things
Sweeter than youth, clearer than Greece,
Dearer than Italy, untold
Delight, and freshness centuries old?

And first first-loves, a multitude,
The exaltation of their pain;
Ancestral childhood long renewed;
And midnights of invisible rain;
And gardens, gardens, night and day,
Gardens and childhood all the way.

What Middle Ages passionate,
O passionless voice! What distant bells
Lodged in the hills, what palace state
Illyrian! For it speaks, it tells,
Without desire, without dismay,
Some morrow and some yesterday.

All—natural things! But more—whence came
This yet remoter mystery?
How do these starry notes proclaim
A graver still divinity?
This hope, this sanctity of fear?
O innocent throat! O human ear!

There are readers whom the deliberate introduction of the mystical number seven, which was done to death by the poets of the Pre-Raphaelite Brotherhood, will annoy. But the maker of this charming Celtic picture (from *The Irish Review*) uses the number as naturally, it may be supposed, as Mr. Yeats used "nine" in his best poem—"The Lake Isle of Innisfree."

June

BY GERALDINE PLUNKETT

I fill my heart with store of memories
Lost I should ever leave those loved shores,
Of lime-trees humming with slow drone of bees,
Of honey dripping sweet from sycamores,

Of how a fir-tree set upon a hill
Lifts up its seven branches to the stars,
Of the gray summer heats when all is still
And even grasshoppers cease their little wars,

Of how a chestnut droops its great green sleeve
Down to the grass that nestles in the sod,
Of how a blackbird in a bush at eve
Sings to me suddenly the praise of God.

Punch has always been famous for its light verse. A recent issue contained this whimsical song, full of the very spirit of summer.

The Sweet o' the Year

Get your summer smocks on, ye little elves and
fairies!
Put your winter ones away in burrows under-
ground—
Thick leaves and thistledown,
Rabbit's- and misel-down,
Woven in your magic way which no one ever varies,
Worn in earthy hidey-holes till spring comes
round!

Get your summer smocks on! Be clad no more in
russet!
All the flow'rs are fashion-plates and fabrics for
your wear—
Gold and silver gossamer,
Webs from every blossomer,
Fragrant and so delicate (with neither seam nor
gumet).
Firmly you spin them, but they will not tear!

Get your summer smocks on, for all the woodland's
waking.
All the glades with green and glow salute you
with a shout.
All the earth is chorusing
(Hear the Lady Flora sing!—

Her that strews the hyacinths and sets you merry-
making),
Oak and ash do call you and the blackthorn's
out!

Get your summer smocks on, for soon's the time
of dances
Soon's the time of junketings and revelers'
delights—
Dances in your pleasures
Where your dainty presence is
Dangerous to mortals mid the moonlight that
entrances,
Dazzling to a mortal eye on hot June nights!

Here is a poem that has little passion to recommend it; it is rather an elaborate exercise than an inevitable utterance. But it is a lovely piece of verbal embroidery, full of light and color. The second and third stanza are especially rich in decoration. We take it from the *London Nation*.

Dream-Journeys

BY R. GORELL BARNES

If on a sudden you and I had wings,
If Time and Space came round us like a mist
So we were set a-journeying where we list
To follow all the breeze' wanderings,
Still and together, motionless in change;
Or if some genie, horn from out the air,
On magic tapestry us twain should bear,
What haunts beloved, what climes most longed for
would we range?

Would we away and idly hover down
Where new, like ivy, sets itself on old
To see the blossoms, billowy fold on fold,
Below the ward of Fugl's snowy crown;
Or with the lion watch shy Kenia peared
Beneath the dawn's caress; or tread the land
Where the hoar temples creep into the sand
And the Mueddin rises through an orange-colored
world?

Would we see realms of Akbar, and be found
By the gemmed palace of the chosen queen?
Would saffron-scented Jhelum flow unseen,
And hid be high Potala and "God's ground"?
Ever the old? Would we not seek the new,
Search out the spreading granaries of earth,
The teeming vastness and great cities' birth,
Where lately roamed at large the moose and
caribou?

Would we be gone so far, and never take
The Rhône for comrade to the terraced vines,
Nor, journeying upward through the rugged
pines,
Come to the snows from which its waters break?
Would we explore the dark-lived steeps of
Spain,
And would the wonder of our eyes be given
To gray-green olive-slopes, pure blue of heaven,
And mighty, broken shell of Pentelican fane?

And Italy? Would we not silent glide
To still lagoon by hushed, cool ocean-streets;
Stand where the gleaming Applan ribbon meets
The azure sky; and in Val d'Arno bide—
Ah, stay for ever, and, when summer fell,
Bargain for wealth of melons, figs, and flowers,
Make lazy dream of all the golden hours,
Attuned to languorous note of distant convent-
bell?

Maybe, to all of these; and each in turn
Would yield us of its grandeur, charm, or ease;
But still we should not know the depths of peace,
Our spirits still unsatisfied would yearn
For some soft vale where thrush and blackbird
sing,
For frail, unfolding beechen canopy,
A zephyr faint with primrose ecstasy,
And all the thrilling lilt of English wood in spring.

PERSONAL GLIMPSES

ANECDOTES OF THE WAR-MAKERS

WILLIAM the Sudden, now more than ever living up to his sobriquet, has always been careful to impress upon the Germans his ideal of a perfect physique. It is not generally known that the Kaiser is himself partially a cripple. Since birth his left arm has been practically useless, but so cleverly does he hide this that it takes a keen observer to detect his deficiency. One of the Kaiser's favorite habits is rapid and nervous gesticulation of the right hand and arm, in a manner almost Gallic. In this way has he learned to distract attention from the other arm, that in its shortened sleeve hangs limply at his side. The *New York Evening Sun* remarks upon the courageous way in which, as a boy, he learned to overcome his handicap, and tells the story of his early career:

The way in which he overcame this physical disability, which might have caused a different sort of man to think his whole life ruined or embittered, showed in him the grit of a brave youth. He trained his right arm to do the work of two. He gradually taught himself—at how much pains none but himself will ever know—to row, to swim, to fence, to shoot, to handle the reins and the tiller, and to play the piano. He does all of those things to-day—and does them all uncommonly well.

For schooling, the young prince went to Cassel and to Bonn. He was a boy among boys; he threw himself impetuously into the life of his fraternity, attending its jolly symposia of beer, tobacco, song, and dueling. It is interesting to remember this, now that he has been prohibiting the student duels and quarreling so sternly with the beer tipplers.

He has always been a man of energy. Trite, but true, he is much akin to our own Titan of Oyster Bay. For some years after his accession, laughter, amazement, and a half-scandalized applause followed the Kaiser wherever he went and in all things he did and said. He was the *enfant terrible* among the royalty of Europe. He was always startling the world by some new freakish impulse, some grotesque oration, some new display of quaint versatility. William flashed around Europe with unbridled pomp and yards of tinsel. William mounted the pulpit. William flung the doctrine of divine right in the very face of triumphant democracy. William scolded his nobles; proclaimed his mastery of the aims and spirit of the twentieth century; threatened to "dash in pieces all who opposed him"; settled a great strike as a father settles a nursery dispute; devised new uniforms and court dresses, new dances and pageants; saved society with an international labor conference; painted pictures, composed verses; dismissed Bismarck, and became, in truth, William the Second to None. In each guise he intrigued, mystified, shocked, or disturbed a wondering world.

Sir John Jellicoe, he of the comic-opera name who leads England's Home Fleet and is responsible to his Sovereign for the safety

of the coast-line of Great Britain and Ireland, is one of the most insignificant men in stature in the British Navy. Yet his intrepidity is as great as his inches are few. In his younger days he was a famous boxer, footballer, and all-around athlete. Since then his adventures, says the *New York Evening Sun*, have been many:

He has seen plenty of fighting. As a sub-lieutenant he was present at the bombardment of Alexandria, and afterward took part in the battle of Tel-el-Kebir as an officer of the Naval Brigade.

Jellicoe was ill, suffering from Malta fever, on board the *Victoria* when it was rammed by the *Camperdown* and sent to the bottom of the Mediterranean off the coast of Syria, carrying down with her Admiral Sir George Tryon and more than 600 officers and men. Jellicoe miraculously escaped. Indeed, having entered the water when his temperature was over 103, he was fished out at the normal, 98, cured of his illness; so that it was irreverently said that he was born to be hanged.

He was badly wounded in the attempt to relieve the foreign legations at Peking fourteen years ago, while serving on the staff of Admiral of the Fleet Sir Edward Seymour; he received a Boxer bullet through his lungs, but managed to recover. He is regarded in the English and foreign navies as more responsible than any other officer for the marvelous progress in naval gunnery in the British Fleet.

It will be recalled that the French Premier who recently gave out France's answer to the German ultimatum, and who is to be her guiding-hand during the coming campaign, is a new appointee. After much difficulty in the choice of a Premier, M. Viviani's selection was met with much popular approbation. In *THE LITERARY DIGEST* for June 27, of this year, appeared a brief sketch of his career. The *Salt Lake Tribune* mentions some of the extraordinary qualities of M. Viviani, which, in this country, might almost be deemed disqualifications for a political office:

Viviani is essentially an artist. He knows the line and the works of every living French painter of prominence. It is said that no poet has gained renown in France in the last generation without a gracious word from him, uttered at a time when the poet was still striving for recognition. The Premier is essentially a man of taste, a discerning critic, and a magician in the use of words. His judgment of a picture is accepted without quibble, and the writer who receives his praise immediately attains fame.

Lately he has attracted, perhaps, more attention than any statesman in France, because of his rich mental gifts and the extraordinary progress which he has made in recent years as an orator. The unfriendly *Paris Gaulois* declares that somehow his genius as an orator shone with unwonted brilliance all at once when he had turned forty-five. Although a man of note in public life for many years, his powers were scattered and wasted until, a few years ago, he obtained a control over them which permitted him to coordinate them in a sort of

Unblinded—

One discovers that coffee drinking is often the cause of needless ills and aches.

It has been the experience of thousands, that headache, sleeplessness, indigestion, heart disturbance, biliousness and numerous other symptoms of disease vanish when one quits coffee with its drug, *caffeine*, and uses a pure food-drink such as

POSTUM

The change is easy and pleasant—nothing missed except the symptoms of *caffeine* poisoning. The change from ill health to comfort is the simple result of replacing the drug-bearing drink, coffee, with the wholesome, nourishing, health beverage, *Postum*.

Then Nature can start her marvelous rebuilding, and with returning health there comes a sense of vigor and comfort that is unmistakable.

Postum now comes in two forms:

Regular *Postum*—must be well boiled to bring out its flavour and food-value. 15c and 25c packages.

Instant *Postum*—a soluble powder—is made in the cup *instantly* with hot water. 30c and 50c tins.

Grocers everywhere sell both kinds, and the cost per cup is about the same.

"There's a Reason"

for

POSTUM

masterly concord. His is the genius that arrives late. He is of fine presence, with flashing eyes and a voice which has been described as a kaleidoscope of sound, changing its effects in every new combination, a voice that at one moment is soft with pathos, at another moment poetic and musical, and often ringing with martial energy and appeal.

Why has the Czar of Russia listened to the Muscovite priest, Gregory Rasputin, and what is the influence which he seems able to exert upon the Czar? In discussing this question, the *New York Evening Sun* quotes Count Sergius Witte, former Premier of Russia and its favorite diplomat in the Western world, as scouting the idea that his influence has been due to any hypnotic power or baleful mysticism. To Witte's mind the matter explains itself quite simply:

If Rasputin has any weight with Emperor Nicholas, it is because the latter regards him as better qualified than any one else to communicate to him the real sentiments and views of that peasantry which embraces 90 per cent. of the population of the Empire and constitutes the backbone and principal force of the vast nation subject to his sway.

Full of the muzhik devotion to the Imperial house and of belief in the Czar himself, as the Little Father of his subjects, Rasputin approves and encourages his Sovereign in all those reforms which are destined for the welfare of the peasant and for his relief from the oppression of the bureaucracy and of the great landowners.

If Rasputin, who emerged from the trials with wholly clean skirts, so successfully urged Emperor Nicholas to refrain from committing his people to war a couple of years or so ago, it was because he was able to convince his Sovereign of the fact that the peasantry which he represented would be averse to it, and would also be the principal sufferers thereby. That they will, according to a French expression, "pay for the broken pots" of the present war, and that it will weigh most heavily upon them, can not be denied; and if Rasputin had been on hand at St. Petersburg, instead of at Irkutsk, in Siberia, recovering from his wounds, he would in all probability have again invoked the Czar and Czarina, in the name of the peasantry of Russia, for the sake of peace. In that event the war might have been localized and restricted to Austria's invasion of Serbia. His influence would assuredly have been exercised in behalf of peace.

Had there been no other, more formal declaration of war between France and Germany, the appointment by Premier Viviani of Théophile Delcassé as Minister of War would have been sufficient. This cold and stolid Frenchman is like a flare of scarlet to the Teutonic bull. As recently as January, 1913, Germany ordered the dismissal of Delcassé from the Cabinet. His subsequent appointment as Ambassador to Russia was regarded almost as a direct affront in Berlin, besides being known to be a move full of danger for Germany. Delcassé's favorite occupation

"Tempting"

Yes, decidedly tempting, any way you look at it. A delicious foretaste—as you might say—of pleasing domesticity, exemplified in a delicious foretaste of

Campbell's Tomato Soup

Could there be a happier suggestion of prospective home-comfort and good cheer?

Fragrant, appetizing, satisfying; with a combined richness and delicacy which bespeaks the utmost care in its preparation; yet all achieved without household labor or concern.

Experienced housewife though you may be, isn't there yet a useful hint for you in the artful artlessness of this dainty maid?

Think it over—today.

is making friends with royalty, in which he is said to resemble Lord Beaconsfield. The *entente cordiale* between England and France was built up, if we are to believe the *New York World*, through private informal conferences between Edward VII. and Deleassé, while the French Ambassador and Sir Edward Grey found themselves more than helpless. Deleassé is now the warm personal friend of the Czar as well. A brief description of him follows:

A little man, of stocky, peasant build, whose hair seems always to be in disarray, whose brilliant neckties serve but to emphasize his muddy complexion, and whose ill-fitting clothes look as if they might have been bought at the Shop of Three Balls, he has a face as hard and as strong as marble. Pity, compassion, even the emotion of hatred, seem to it unknown. He is a Frenchman who has nothing of the Frenchman's volubility. And he is a peasant who has the exquisite manners of a prince—when he wants to use them. Standing beside his wife to receive any one distinguished enough to be allowed to take up his time, he is overshadowed by a tall lady of ample proportions, splendidly gowned as befitting the widow in the first instance of a millionaire, who looks downward upon her second spouse with devotion and pride, effacing herself mentally before him so completely that the little man seems to stand there alone and to fill the room with the bigness of his intellectual strength.

Nevertheless, when French officers went to plant the French flag on the Upper Nile and England's objections brought about the "Fashoda incident" and probable war with England in 1898, and Germany stood with open arms, ready to make friends with France, Deleassé refused, and humiliated himself before Great Britain. The English Ambassador in France called to present an ultimatum. He fumbled at his frock-coat button to get the paper from his pocket. War or peace hung on that button—reconciliation with Germany hung on it, too.

"Do not undo that button," said Deleassé. "I must not see that paper. It is a threat, and if I see it France must fight. Matters will arrange themselves."

This was the first seed sown for the *entente cordiale* and the first seed, also, for the present war.

Of Sir Edward Grey, the British Secretary of State for Foreign Affairs, Mr. Gladstone once said: "I never knew in any man such aptitude for political life with so little inclination toward it." But the events of to-day seem to show that Mr. Gladstone, while right in his fundamental estimate of the English statesman, was much deceived concerning Sir Edward's own attitude in the matter. One writer in *The World* gives an explanation of the misjudgment:

This was on account of Sir Edward's apparent absorption in his favorite sport of dry fly-fishing, of which he is still both in theory and practise the greatest expert. Indeed, the only book that he has ever written was his book on fly-fishing in that famous encyclopedic series on sports, the

The most costly furniture in a library can never compensate for the absence of a Standard Dictionary.

Have a Glass Garden This Winter

Thousands throughout the country will enjoy fresh vegetables throughout the bleak winter because they will grow them in Lutton's Miniature Glass Gardens.

So that you, too, may revel in the luxury of crisp lettuce, luscious radishes and other of your favorite vegetables, order your glass garden today. Many plants and flowers will bloom all winter in one of these gardens.

Our special sash and frame is 8 ft. 4 in. long and just wide enough to put in a 3 ft. space with southern exposure. One large light of extra heavy glass allows the maximum of life-giving sunlight. Strongly made, easily ventilated.

Price complete; ready to put together. Freight prepaid anywhere in the United States. **\$10⁵⁰**

Planting instructions sent with each frame. Write for complete catalog of Lutton's Greenhouses and Glass Garden equipment.

WILLIAM H. LUTTON CO.
221-223 Kearney Avenue Jersey City, N. J.

Badminton books—apparently little related to the graver interests of a statesman.

And yet . . . the man who knows just the particular shade of dry-fly necessary to cause the shy trout to risk its all has just the equipment required to angle in the still waters of diplomacy which run so deep.

He has from the beginning disbelieved a notion very common in European chancelleries that lying is a necessary gift for a diplomatist. He could no more lie in public affairs than in private. When he does not want to speak, no amount of House of Commons questioning or pressure could make him, and when he does speak he will speak the truth and nothing but the truth, tho perhaps not the whole truth. I have again and again heard Sir Edward Grey speak in the House of Commons. In his coldness and reserve, in the low and restrained tone of speech, he is a very typical Englishman, a pure Anglo-Saxon. When it fell to his lot to announce war to the House of Commons, he did it in the same even tones he would employ in opening a bazaar. There was no passion in his voice, no declamatory gestures, no attempt to play for a theatrical climax. He was simply doing that which belongs necessarily to his duties, and, however extraordinary, he remained as ordinary as if it were part of the routine of his office.

GERMAN TACTICS AT THE RIVER MEUSE

WHILE the war correspondents in Europe are finding their place in the international conflict, and are bringing their heavy artillery to bear upon the American newspaper, there have been several slight skirmishes in the way of war reporting performed by amateurs who, in the performance, have deserved great credit for their picturesqueness of description and fulness of detail. One of the best of these was the Belgian business man, Benjamin Hallet, who brought to London an account of the storming of Liège and the crossing of the Meuse. As soon as the Germans arrived within sight of Liège, their General von Emmich advanced under a truce flag to demand that no resistance be made by Belgium in the contemplated invasion. The parley proving unsuccessful, the General returned. Says M. Hallet, quoted by the *New York Tribune*:

General von Emmich had barely ridden back across the bridge over the River Meuse, and was still in sight, cantering across the beautiful valley, when there was a long roar, a cracking crash and splash. The bridge had been blown up. General von Emmich was seen to turn on his horse and watch the cloud of dust which went up into the air far above the cloud of smoke from the explosives.

The next hour was, I think, the busiest I have ever seen. Women and children, weeping, were hurried away in every possible kind of vehicle and many on foot, staggering along, trying to run and hardly able to walk because they were carrying so many things. The men, and many women too, were taking up positions to which they were

Service First

GAS companies were among the first public servants to adopt as their guide the idea of *Service*.

¶ They recognize that the same principles apply to the sale of Gas as apply to the sale of any other commodity; that it is to their own advantage to supply Gas of the best quality and at the lowest possible price.

¶ They early realized that their best asset is a satisfied customer, because satisfaction to the public means more Gas used, and more Gas used means greater satisfaction to the public.

¶ Upon these principles the National Commercial Gas Association was formed. The objects of the Association are to perfect Gas service; to bring your Gas company into closer touch with *You*; to tell you of the many valuable and attractive qualities of Gas, of its efficiency and economy; to see to it that Gas appliances placed on sale for you to buy are the best and most satisfactory in every way.

¶ Each year the use of Gas increases. Each year the quality of *Service* improves. Each year the public better understands that its Gas company is composed of business men—merchants—whose success depends upon honest, modern business methods, who desire to serve and who ask, in all good faith, the hearty coöperation of the public in their endeavors.

¶ A thriving Gas Company is evidence of a thriving community—both prosper through coöperation and an intelligent use of Gas.

¶ In order to bring the varied uses of Gas clearly before you we have prepared some interesting booklets.

¶ *For Manufacturers*, "A Thousand Uses for Gas." It lists the efficient and economical uses for Gas in over 60 industries.

¶ *For Every Mature Person*, "The Hygienic Value of Gas." It explains the hygienic effect of Gas lighting and dispels many fallacies that have heretofore passed unchallenged.

¶ These booklets will be sent *Free* upon request. Write at once.

It's Waiting for You "The Story of Nancy Gay" Free. Send for it

Nancy says: "Do you remember how charmingly our house was lighted at my wedding, and how cool and well ventilated it was? Well, that was due to a happy thought of mine, and the wonderful service we get from the Gas Company. Just the day before, I realized that we were only equipped with old fashioned burners, except for our reading lamps, so I telephoned to the Gas Company and they promptly sent a man out and he changed them all to those wonderful new inverted incandescent lamps in almost no time and without interfering in any way with all the other preparations that were going on. You may be sure we will never live where we can't get Gas Company service. We know how good it is."

For Large and Small Buildings For Factory and House For Strength and Beauty

Douglas Fir insures so much practical superior value for so many different uses that it is generally recognized as the

Greatest "All-Utility" Lumber

For structural purposes, such as the columns, girders and beams of a factory, or the framing timbers of a house, it is ideal, not only because it is stronger than any other commercial structural lumber, but also because it weighs much less than any other wood of anywhere near its strength.

When cut "Vertical Grain" for flooring, stepping, shelving, and similar uses, where friction and mechanical wear must be withstood, or with grain perpendicular as in paving blocks, it is astonishingly durable.

When cut "Slash Grain" for interior finish, doors and panels, it shows such a handsome and distinctive figure that it is widely used for interior finish in the most elaborate and expensive buildings and is frequently given preference over costly hardwoods, not merely because it is cheaper, but because it is regarded as more beautiful and as having more individuality.

The U. S. Forest Service Bulletin No. 88 in commenting on Douglas Fir as "the most important of American woods," says, "though in point of production it ranks second . . . the great variety of uses to which this wood can be put place it first."

Ask Your Local Lumber Dealer

to show you DOUGLAS FIR. And you will be interested in the Douglas Fir Booklet, which we will send you on request. It is an Economy Help. Write us for it.

WEST COAST LUMBER MANUFACTURERS' ASSOCIATION
706 Tacoma Bldg., Tacoma, Wash.

sent by those who were in charge. The soldiers were hurrying at the double to their positions. Then came an astonishing silence. The Germans were coming.

From the tops of the old disused fortresses, from almost anywhere in the city, in fact, because Liège is on a hill, the German troops could be seen approaching. Just as the first line came into view, the guns of the German artillery, posted somewhere far behind them, started booming. The shells could be heard coming as they hummed through the air. They were not aimed at the city, but at the forts which lie in a crooked line quite some distance out. Some of the shells went wide, buried in the earth, and then kicked up a vicious, spiteful kick. Some hit the forts, but buried themselves in the sand outworks and sputtered out. The forts did not reply.

Ahead of the German column galloped some wagons. They pulled up alongside the river, near the wreckage of the blown-up bridge. The soldiers, looking in the distance like busy ants at work, seemed to be tearing their wagons to pieces and throwing the bits into the river. Other men picked up the bits, and in what seemed an amazingly little while a pontoon bridge began growing in jerks across the river.

The Liège forts all this time seemed dead. I believe the Germans had come to the conclusion they were to be allowed over and into the city without opposition. The Liège gunners were waiting, and all the time they were waiting, they were getting the line on that pontoon bridge.

The first rank of the German soldiers, crossing the bridge, were about twenty feet from the Belgian side, swinging with the bridge, and had just broken from a quaint, slow, waddling march into a run, when the Liège guns let go. When the frightful roar stopped, the only part of the pontoon bridge left was about fifty feet of it on the side where the Germans were, and the surface of the river was wiggling with German soldiers, struggling horribly to free themselves from the dead and the shattered and swim to the side.

At the same time, Liège sharpshooters picked off, one by one, about a dozen German sappers who had stayed on the Belgian side after finishing the bridge and had lain down under the bank. Some of them ran to try to find shelter under the ruins of the old stone bridge, but they were shot down as they ran.

The other German soldiers appeared to take no more notice of what had happened than if it had been part of the arranged program. Another set of wagons galloped up and another pontoon bridge was thrown across the Meuse. Before it was completed at least a hundred of the men building it were shot. As they fell into the river others took their places and went on building the bridge. The German guns about this time did not give so loud a report when firing. I was told that that was because they had been moved closer to the city.

Then the battle began. The Liègeois did not fire much at the artillery, which could not be seen. They waited for the troops. The slaughter was terrible. Every time the advancing line jumped up to run a few yards nearer to us we could see men fall, dead or wounded. I doubt if I could have watched it much longer, even if I could have stayed. And yet it was absolutely fascinating.

Important Books That Deal With The Places, Peoples, and Problems

Concerned in the Present

WAR IN EUROPE

France From Behind the Veil, by Count PAUL VASSILI. Political and social life in France during the last fifty years, as viewed from the inside. An unusual record of great interest. Octavo, cloth, \$3.75; by mail, 16c extra.

The Fifteen Decisive Battles of the World, by Sir EDWARD CREASY. A classic narrative covering the stirring drama of the world's greatest battles from Marathon to Waterloo. 12mo, cloth, 35c; by mail, 8c extra.

The History of Civilization in Europe, by FRANCOIS GIZOT. A wonderful series of lectures, written in Guizot's usual luminous style, and covering the various forces, problems, policies, etc., that have affected European civilization since the fall of the Roman Empire. 12mo, cloth, 35c; by mail, 8c extra.

A History of the Modern World, by OSCAR BROWNING, of Cambridge University. A history of the past 100 years. To thoroughly understand the present embroglio, read these stirring and authoritative volumes. 2 vols., cloth, \$7.50 per set; carriage 45c extra.

Guizot's History of France from the Earliest Times to the Outbreak of the Revolution (abridged). A remarkable condensation of Guizot's great work, containing a thorough index, tables, etc. Octavo, cloth, \$1.75; by mail, 16c extra.

Warships and Their Story. A large, beautiful book detailing the fascinating story of the growth of the warship from the primitive craft to the marvelous fighting machines of the present day. Profusely illustrated. \$5.00 net; carriage 30c extra.

Delightful Dalmatia, by ALICE LEE MOORE. An intimate and charming description of one of the Austrian provinces which may soon be devastated by the war. Just issued. 12mo, cloth, about 50 beautiful illustrations. \$2.00 net; by mail, 12c extra.

Napoleon in His Own Defence, by CLEMENT K. SHORLER. Gives Napoleon's own view of his captivity at St. Helena, and his own estimate of his career. Illustrated. \$4 net; by mail, 12c extra.

From Naval Cadet to Admiral, by ADMIRAL SIR ROBERT HARRIS. Filled with the romance of British naval progress from 1865 to the present day. Octavo, cloth, boxed, \$4.50 net; by mail, 16c extra.

The Victoria Cross: Its Heroes and Their Valor, by D. H. PARRY. From personal accounts, official records, and regimental traditions. 8 full-page illustrations. New, large edition. Octavo, cloth, \$1.75 net; by mail, 12c extra.

FUNK & WAGNALLS COMPANY

254-60 Fourth Avenue

New York, N. Y.

I was told that it had been discovered there were no fewer than 80,000 Germans marching on the city. There were only 40,000 trained soldiers in Liège. How they have held out, I can't understand. No more war for me. No, sir, never.

HE BIDS ROYALTY LOOK PLEASANT

TO rise in a brief fifteen years from owning a little photograph gallery at a summer resort on the North Sea, to the post of Court Photographer to the Royal Family of Bavaria, to the Emperor and Empress of Germany, to the King and Queen of Spain, the King and Queen of Italy, Czar Ferdinand of Bulgaria, and about a score of ducal courts, is success of a splendor rarely to be equaled. Yet the hero of this fairy tale of fact, Herr Adolf Baumann, discusses his good fortune with admirable modesty. In *The National Sunday Magazine* he tells the story of his career, but quietly and without any attempt at self-glorification. One learns that opportunity came literally knocking at his door, unsought; but the reader must himself infer what Herr Baumann does not even suggest—that opportunity found him ready to welcome her and to profit enormously but deservedly from her visitation. There follows the story of that first appointment:

I shall never forget the emotions I felt when royalty came to me, an humble and obscure photographer, to have sittings. I had begun photography as a small boy and had worked in studios in most of the big cities of Europe. In 1883, at the age of twenty-four, I opened a small studio at Norderney, a summer resort on the North Sea. One day in July, I was summoned to the Hotel Victoria to see Count Mirbach, ceremonial master for the Princess Wilhelm, now the Kaiserin of Germany. He told me the Princess desired a photograph taken and wished an appointment at my studio.

Marveling at the good fortune that so unexpectedly befell me, I waited for royalty at the time appointed. I wore, as customary, full dress, with white gloves. Finally a carriage, driven by a single horse, drew up before the studio. I went forward as the door opened and a lady and child, accompanied by a nurse and court dame, entered. This, then, was the Princess—the future empress of the Fatherland. I saw a woman of delicate features, medium in height, with blond hair and dark-blue eyes. She had on a light dress, of very simple pattern, covered with white lace. I saw she wore but one bracelet. She most graciously addressed me. Her voice was gentle and very soft.

"Herr Baumann, I have brought with me my oldest son." She smiled at the little fellow, in charge of the nurse—the present Crown Prince. "We want our photographs taken, and I so hope they will be good—you see I wish to surprise my husband."

She didn't seem at all like a princess—she was so unassuming and simple. My assistant made the preliminary prepara-

A Little After Washing—

A touch before going to bed. Just enough to supplement the natural oils of the skin and keep it smooth and unwrinkled.

This is the favorite "beauty treatment of the woman who has made the acquaintance of *Palmolive*"—

—First, *Palmolive Soap*, for every toilet purpose. Then, as protection against sun, wind and weather, a slight application of

Palmolive Cream

Palmolive Soap

is made from the Palm and Olive Oils, so highly prized by Oriental women. Its rich, smooth lather embodies all their famous beautifying qualities, they give Palmolive its attractive natural color. A hint of fragrance adds to refreshing qualities.

Palmolive Shampoo

is as beneficial for the hair as Palmolive Soap and Cream are for the complexion. Scalp specialists everywhere use Palm and Olive Oils for treating hair that is in poor condition.

THREEFOLD SAMPLE OFFER—Liberal cake of *Palmolive*, bottle of *Shampoo* and tube of *Cream*, packed in neat sample package, all mailed on receipt of five two-cent stamps.

Let Our Concrete Specialists Co-operate with Your Architects

In full co-operation with your architects, your engineers, and your own organization, we place at your disposal for your new building, valuable experience derived from thousands of important structures all over the world. We are specialists in reinforced concrete, unequalled in this field.

Consider the advantages of having such an organization working with your architects and engineers—ensuring exact adaptation to your own requirements of the most modern, practical and economical reinforced concrete design.

Inform yourself by writing to us about your proposed building. You will receive interesting suggestions without the slightest obligation on your part.

Kahn System Reinforced Concrete ensures fire-proofness and permanence at low cost. It was used in the large fine buildings here illustrated, as well as in thousands of others. Other products include United Steel Sash for windows, Hy-Rib and metal lath, waterproofings, technical paints and specialties.

tions, and the sittings began. We first took a number of the future Crown Prince. A lively little fellow, he jumped about in the chair, shouted, and seemed to have no end of fun. I snap my fingers, told him to look for the bird to fly from the camera. Finally the Princess, taking a rattle, stood beside me and shook it while I made the exposures. When the Princess sat down, her lady-in-waiting primped her hair and smoothed out the folds in her dress. To be royal is not to be unfeminine.

"Is my face pleasant enough?" she asked. And again, "You see I must not smile too much!"

From these sittings a satisfactorily generous choice was made, smiling portraits for the Princess's immediate family, serious and dignified poses for public presentation. This was the first great step for the young photographer. He removed to Berlin, where his good fortune was confirmed by a second series of sittings from the Princess. The celebrated Prof. Franz von Lenbach, then a favorite painter for royalty, approved so highly of the young man's work that he suggested a semi-partnership. Herr Baumann to take views of his royal patrons in order to give the painter better acquaintance with his subjects and so obviate the tedium of extra sittings. He accompanied Lenbach to Rome when the celebrated picture of the Pope, now in the Munich Museum, was painted, that was afterward refused by the Pope because of Lenbach's sympathy with Bismarck. It was during these sittings that the Pope made the remark, anent the mad King Ludwig II. of Bavaria: "I am sorry that his mind is affected. I believe his interest in this music of Wagner has affected his mind and driven him insane." In those days Wagneritis was unknown as the violent but harmless affliction with which we are nowadays acquainted. Wagner was cordially hated among Herr Baumann's patrons, Carmen Sylva of Roumania being the only exception. Of all the women of royalty whom he has photographed, he declares the Infanta Eulalia of Spain to have been the most beautiful. She and her sister, the Infanta Isabella, were almost alone in maintaining at all times the reserve and hauteur of their high station. "As a rule," he says, "I found the kings and queens and princesses unassuming and simple in manner—just like every-day folk," and "I found early in my experience that any sort of exaggerated respect or subserviency is disliked. Royal-ties generally like to be treated in a pleasant, friendly way. In fact . . . I think they found that having their pictures taken gave them an opportunity to be democratic." Queen Helena of Italy was always frank in her desire that the most should be made of her charms. Princess Gisella, daughter of Emperor Franz Joseph of Austria, was also very particular about

MOTOR CARS AND THEIR STORY

A great story covering every phase of the amazing romance of the motor-car—curious and novel early motor-cars—various modern cars—powerful racing cars—famous tests of various types—New York to Paris race—military armored cars—motor driven guns—fire-fighting cars—agricultural motors—sensational jour-

neys of cars through swamps, across deserts, over mountains, through streams, etc., etc. *A great big book, profusely and beautifully illustrated.* Of keen interest to all auto owners; chock full of vital facts and especially valuable for those engaged in any phase of the automobile business.

Large octavo, cloth; 368 pages. \$6.00 net; average carriage charges, 24c.

FUNK & WAGNALLS COMPANY 254-60 Fourth Avenue, New York

If you put up jams, preserves, or pickles which have met with general approval of every one privileged to sample them—if you make candy which is both wholesome and delicious—if your farm or orchard produces some specialty which has made them famous—why not dispose of what you do not need to your fellow readers, adding considerably to your income?

Perhaps you are unaware of the comparative ease of conducting a mail order food business—how to get orders—how to pack foodstuffs and ship them. If so, we will be pleased to help you with our experience and answer any question regarding this business you may ask.

The Mail Order Food Department, which will be introduced in the September issues, is reserved for those selling food products by mail. It will be the means of starting a great number of our readers in the mail order food business. Why not be among the first? For all particulars address Mail Order Food Department.

The Literary Digest

her poses; she is described as being always superlatively well gowned and as possessing the smallest waist within the photographer's observation. Princess Theresa of Bavaria recounted often to Herr Baumann her great admiration for America and its people and their free and democratic ways of life. The writer's most enthusiastic reminiscences, naturally enough, concern the sittings given by Emperor William. The Kaiser takes his appointments with deep seriousness, his mind always on the effect he wishes to make in the eyes of his adoring subjects. Herr Baumann describes the latest of these occasions:

I was peremptorily summoned to Berlin and informed that the Kaiser desired a number of sittings. At that time the Kaiser was sitting to two painters, one Fleishman, the other an artist whose name I do not remember. With three assistants, whom I got so as to work quickly, I went to the palace one morning. We waited for five minutes in one of the anterooms. The two artists sat before their easels. Finally the door opened. The Kaiser, in the uniform of Hungarian Hussars, entered.

"Good morning, gentlemen," he said. His voice was resonant, commanding. In every gesture he showed the perfection of military affectation.

His gaze devoured us. When the Kaiser speaks he looks directly and deeply into your eyes. You feel he reads your mind.

"Where is the Court Photographer?" he said. I came forward.

"Where shall I stand—where is the light best?" he asked. It was as if he were giving a military order.

The Kaiser took his place. When he is photographed he voluntarily assumes the poses desired; he alters his expression as he wills; then he commands. He refuses to be photographed sitting—this position, in his opinion, lacking dignity. He likes photographs which reveal him with a tense commanding expression. Before the camera, from what I have observed, his main thought is of the effect his picture shall have, first, upon the Army, and then upon the people. Because of the two artists, who had begun work at their easels, I had difficulty in properly placing and focusing my camera. The Kaiser at once saw this.

"Baumann is nervous," said he. And addressing the artists, he commanded, "Gentlemen, please make place for the Court Photographer."

They retired. I moved the camera to various positions, working as quickly as possible, the three assistants handing me plates.

The Kaiser assumed one position after another, turning this way and that. He had already thought out the poses he desired; knew exactly what he wanted. Master of the situation, even before the camera, he changed his posture and expression with the art of a consummate actor. He was very particular about the curl of his mustache, often, between exposures, giving the ends a stiff upward twirl with his fingers.

"All right: go ahead, Baumann." It

Fishermen! A Wonderful New Fish Catching Bait
USE ONE LIVE MINNOW ALL DAY
This is the new, live minnow bait that is making such a great record for itself, that is the talk of the country; equals all other artificial bait. Strong, clear, magnifying glass tube, housing a live minnow. Wonderful power of attracting fish lies in the fact that, when in water, the glass apparently disappears, leaving minnow clearly visible and greatly magnified. Minnow has fresh water; starry alive; never mutilated; can be used all day. Experienced fishermen tell us that it is the most wonderful bait they have ever used.

was like taking a moving picture. Plates changed between me and my assistants with sleight-of-hand agility.

"Enough!" finally declared the Kaiser. In forty minutes I had taken thirty-five different photographs, all in different positions.

"I hope the photographs will be the kind I like," he said. "I will then give you an order."

When I received the proofs back I found he had personally made the most painstaking directions for retouching. He was particularly fastidious that every vestige of creases be touched out from his clothes, especially the sleeves. Most of the photographs showed him serious and grim of visage. Evidently he was pleased. His order that time amounted to \$1,500. A number of enlargements were ordered for his regiments. Of all the photographs taken, those selected for this purpose represented him as being most rigidly commanding and formidably severe. Without question the Kaiser is a profound psychologist.

WAIFS OF WARFARE

THE Sargossa Sea, so long the pleasing haunt of the more fantastic of best-seller novelists, has loosed its moorings, drifted away from the fateful slow whirlpool of the Indian Ocean, and cast anchor in New York harbor. Here at least is a curious collection of shipping, caught in this back-water of international war, which might conceivably pass itself off as being nearly related to the mythical argosies of the Sea of Dead Ships. The New York Press explains:

From Ellis Island to Tottenville, in the Upper Bay, there is to be seen to-day a sight not equaled anywhere in the world. In this greatest port of this greatest neutral Nation lie strings of ships flying the flags of all the countries now grappling to the death in Europe. They are so close together that the proverbial biscuit could be tossed almost from one to the other, so close that scowls and hard words are communicated easily enough by the crews. Yet they lie in amity; the mantle of this Nation covers all alike.

It is a striking illustration of the part this country is playing—and we trust may continue to play—in this great war drama. Our aid in combat is given to no nation; our hospitality is extended to all.

Here are British tramps and German liners, Russian emigrant ships and French freighters, Austrian hookers and many others, their ensigns all fluttering. Some may grow weary of inaction, perhaps, and slip out past Sandy Hook, to brave the dangers of destruction or capture. How many will be afloat a year from now?

IMPORTANT TO SUBSCRIBERS CONCERNING VACATION CHANGE OF ADDRESS

When notifying THE LITERARY DIGEST of a change in address, subscribers should give both the old and the new address. This notice should reach us about two weeks before the change is to take effect.

The First Five FREE

My Private Havana

I want to introduce to you a ten-cent smoke at a five-cent price.

This is my private Havana cigar, made up especially for me under my monogram band. I am a critical smoker myself and this is the choicest leaf I have found in 40 years of smoking. It comes from a mountainous district in Cuba, selected for me by an expert. Made up in a Panetela shape, it affords a smoke of exquisite flavor and aroma—light, sweet, thoroughly satisfying.

You cannot buy it in cigar stores. And if you could you would pay just twice what I ask. My price is \$5 per hundred; \$2.00 for fifty; all charges prepaid. Try it!

The First Five My Treat

Send me your business card or write me on your business letterhead (stating your position), enclosing 10c toward shipping expenses, and I will send you trial cigars. Then smoke the five at my expense. See if you ever experienced cigars of such dainty taste, such mild, exquisite flavor before.

I supply heavier, stronger cigars too, for those who want them. But most men prefer this exceptional J. R. W. Havana Panetela. Don't wait. Write today for the Free Cigars.

THE SPICE OF LIFE

Unfair.—Sol—"Vell, then, I wish you the same as you wishes me."

KEY.—"There you are, Sol. Beginning it all over again."—*Modern Society.*

Hard Luck.—"You are not the boy who usually caddies for me?"

"No, sir. I tossed up wif 'im for yer."

"And you won?"

"No! I lost."—*London Mail.*

Suspicious.—"So your husband kept house and cooked his own meals while you were away. Did he enjoy it?"

"He says he did; but I notice that the parrot has learned to swear during my absence."—*Boston Transcript.*

Far from Home.—**FIRST ARTIST.**—"The umbrella you lent me? I have lent it to a friend."

SECOND ARTIST.—"That is very awkward. The man who lent it to my friend tells him that the owner wants it."—*Le Rire.*

Understandable.—"The President seems to be having a hard time among bankers and financiers securing members of the Federal Reserve Board."

"Yes. But you must remember that the idea of this board is to have on it only honest men."—*Life.*

A Warning.—Woman is certainly coming into her own. Even in tender romance she is exerting an influence.

The young man had just been accepted. In his rapture he exclaimed, "But do you think, my love, I am good enough for you?"

His strong-minded fiancée looked sternly at him for a moment and replied, "Good enough for me? You've got to be!"—*Judge.*

A War Lexicon.—In a letter to the editor of the New York Sun an anonymous writer gives the following important interpretations of various phrases of "Desperanto," or the language indulged in by frantic telegraph editors on American newspapers:

Terrific Slaughter.—Sixteen French and seventeen Germans wounded.

Hurled Back.—The withdrawal of an advanced outpost.

Thousands of Prisoners.—Three German farmers arrested.

Deadly Air Battle.—French aeroplane seen in the distance.

Gigantic Army of Invasion.—Two troops of cavalry on a reconnaissance.

Overwhelming Force.—A sergeant and a detail of twelve men.

Fierce Naval Battle.—Mysterious sounds heard at sea.

Americans Outrageously Maltreated.—One American asked to explain why his trunk contained maps of German roads.

Bottled Up.—A fleet at anchor.

Trapped.—An army in camp.

Rout.—An orderly retreat.

Heroism.—A failure of soldiers to run away in the face of danger.

Decisive Conflict.—A skirmish of outposts.

Nerves frazzled, temper on edge, stomach in rebellion, kidneys kicking over the traces, losing weight, no ambition—

Thousands of business men today can say, "Yes, that's me." It's the price we pay for keeping on the jump in the modern business race.

Our systems are full of poison; our digestive organs are overtaxed and cannot assimilate all that we crowd into our stomachs; result, indigestion and consequent defects of metabolism, followed by Bright's Disease, renal calculi, stone in bladder, albuminuria, rheumatism and gout.

BUFFALO LITHIA SPRINGS WATER

is Nature's own remedy for these ills. Physicians have prescribed its use for over forty years with wonderful results. Among them **HUNTER McGUIRE, M.D., LL.D.,** late President American Medical Association, who said: "**BUFFALO LITHIA WATER**, as an alkaline diuretic, is invaluable. In Uric Acid Gravel, and, indeed, in diseases generally dependent upon a Uric Acid Diathesis, it is a remedy of extraordinary potency. I have prescribed it in cases of Rheumatic Gout, which had resisted the ordinary remedies, with wonderfully good results. I know from constant use of it personally and in practice that the results obtained from its use are far beyond those which would be warranted by the analysis given. I am of the opinion that it either contains some wonderful remedial agent as yet undiscovered by medical science, or its elements are so delicately combined in Nature's laboratory that they defy the utmost skill of the chemist to solve the secret of their power."

If you are not "right," try a course of Buffalo Lithia Springs Water. Buy a case and drink from 6 to 8 glasses a day; then see how improved you are.

Write for booklet, "Springs of Health."

DON'T CUT TONSILS, CURE THEM

Read Dr. Faulkner's Book—"Tonsils and Voice," \$2.00. The only book published on tonsils and adenoids. They are normal organs. To cure them is better than to destroy them. This book tells what they are, what they do, what deranges them, and how to cure them without the hospital and the knife. Tells the dangers of their removal. Tells of deaths; accidents; injuries to health and impairment of voice. Contains contributions from famous physicians, singers, and voice authorities, presenting an accumulation of the world's best judgment upon the questions involved. 400 pages. Illustrated. The Blanchard Company, Lock Box 445, Dept. F, Pittsburgh, Pa.

INVESTMENTS AND FINANCE

THE WAR'S EFFECT ON OUR FOREIGN TRADE

WHILE the interruption of transatlantic traffic for the moment paralyzes this country's export trade by cutting us off from our best foreign customers, we are reminded by the *New York Financier* that this paralysis will be only temporary, and that ultimately our position in international commerce and finance will be greatly improved by Europe's disastrous war. Imports, it is pointed out, will be affected more than exports. *The Financier* makes the following analysis of the situation:

"The total of our import and export trade for the year ending June 30 last was 4,258 millions of dollars. This was almost equally divided as between exports and imports, the balance of trade in favor of the United States standing at 470½ millions.

"The origin and the distribution of this volume of business is general—that is, it covers a territory larger than that now affected by war, altho it must be said that the nations now engaged in conflict are by far our best customers, and we in turn buy the greater part of our imports from them. Taking the year 1913 as an illustration, the exports from the United States to Europe were valued at 1,479 million dollars. This is about 60 per cent. of our total export trade. To classify it would require too much space, but it may be pointed out that raw cotton alone made up more than one-third of the total exports to Europe. Of the balance of our export trade, North America—Canada mostly—took 25 per cent. of our exports, South America 6 per cent., and Asia less than 5 per cent. It will be seen, therefore, that about 40 per cent. of our export trade lies outside the affected war area. It is incredible to think that because war exists in Europe, our export trade to Europe will be more than partially stopped. Europe needs our trade now more than ever; the matter of cotton supplies is vital, and in every department of commerce the pressure to obtain quantities of manufactures the production of which is interfered with by the withdrawal of men for war purposes will be increased rather than diminished. The question of successful or continued shipment of these commodities depends largely on the ability of the nations affected to keep the ocean lines of travel free.

So far as imports are concerned, the United States draws a little less than half of its needs from Europe. About 20 per cent. come from Canada and from North American territory, 12 per cent. from South America, and between 15 and 16 per cent. from Asia. The problem underlying the question of shipment of exports applies also to imports into this country. It is almost a certainty, however, that imports will be affected more than exports; first, because the rise in prices abroad will have a tendency to cut down the total, and secondly, because the manufacture or production of goods abroad will be temporarily, but seriously, interfered with, by reason of the withdrawal of hundreds of thousands of men from their usual occupations. The imports into the United States from Europe, for the most part, are of a classification described as manufactured, or semimanufactured, while our imports from other countries are in the nature of food products or materials of a primary character.

So far as the general situation is concerned, this country will feel first the effect of interruption of food exports and of such commodities as cotton, mineral oils, etc., but as already stated, it is not to be expected that even with Europe at war such exports will be stopped altogether. As a matter of fact, the result probably will be a volume of exports almost as large as in normal seasons, and at enhanced prices. If this is true, and if, as is almost certain to occur, imports from Europe are to be lessened, then the final result must be the accumulation of a trade balance abroad greater than has been the case for the past year, and a corresponding enhancement of the wealth of this country, rather than its shrinkage. The whole problem rests largely on the ability of the United States or of other nations in keeping open and providing fully for transportation facilities.

"Important as our export and import trade are, the country does not depend altogether on it. The total production of the United States in any given twelvemonth is probably twenty times the amount of goods sold abroad. The amount sent overseas determines and regulates prices to an appreciable extent, but the United States is such a well-balanced nation that it is its own largest customer and its export trade, huge as the totals may seem when viewed singly, is in the nature of a drop in the bucket compared with the goods the people of this country exchange as between themselves. If this small portion of interrupted commerce gives us concern, think of what Europe has to face in the paralysis of trade, not only domestic, but foreign as well, and the terrific drain of capital occasioned by war.

"Even should the United States lose every dollar of export business within the next year, which it is utterly preposterous to assume, it would still be in a position so infinitely superior to the nations of Europe as to forbid all comparison. As pointed out in these columns before, Europe may be engaged in a struggle to change geographical boundaries, but when the map is completed, it will be found that the boundary defining the commercial and financial center of the world will have been transferred to the western hemisphere."

THE COST OF WAR

The present European war, according to estimates quoted in *The Financial World* (New York), is costing the nations involved a total of \$25,000,000 a day—and these estimates take no account of the cost in human lives. In the same publication we find the following table, showing the cost of nine earlier wars in dollars and in lives:

Wars	Duration in days	Loss of life	Cost in money
England-France (1793-1815)...	8,168	1,900,000	\$6,250,000,000
Crimson War (1854-1856)...	734	485,000	1,525,000,000
U. S. Civil War (1861-1865)...	2,436	650,000	3,700,000,000
France-German (1870-1871)...	405	290,000	1,590,000,000
Russo-Turkish (1877-1878)...	334	180,000	950,000,000
U. S. Spanish War (1898)...	101	2,910	\$165,000,000
Boer War (1899-1902)...	963	90,000	1,000,000,000
Russo-Japanese (1904-1905)...	576	555,000	2,250,000,000
Balkan Wars	302	145,500	200,000,000

* United States only.

Another estimate, published in the *New York Herald*, places the daily cost to the nations now at war in Europe at \$50,000,000 a day. *The Herald* writer goes on to say:

"The loss of untold thousands of lives of young men who are needed in the fields

and workshops of Germany, France, Austria, Russia, and Great Britain, the nations engaged in the greatest war in history, will be equivalent, experts say, to the loss of billions of money in the crippling of industries all over Europe. The destruction of property of all kinds located in the pathway of the contending armies, not to speak of the destruction of costly warships, will foot up high in the billions, but how high even the most imaginative expert refuses to venture an opinion.

"When it is considered that in thirteen years the cost of maintenance of the armies and navies of the countries at war, as well as the cost of naval construction, has exceeded \$20,000,000,000, some idea may be had of the expense attached to war and the preparations of European countries for just such contingencies as arose in Europe last week. The cost of the Panama Canal, one of the most useful aids to the commerce of the world, was approximately \$370,000,000, but the expense of the preparations for war in Europe during the time it took to build the canal exceeded the cost of this gigantic undertaking nearly sixty to one.

"The wealth of the five nations at war is estimated at \$270,000,000,000, and in thirteen years the cost of maintenance of armies and navies, naval construction and the like exceeded \$20,000,000,000, or about 13 per cent. of the total wealth of the countries involved. The same money, if spent in the construction of railroads and extension of a merchant marine would have made all of these nations commercially the most powerful in the world.

"This enormous expense which was incurred in preparation for war will now be rapidly increased to meet the expenses of actual warfare. The British House of Commons authorized war credits amounting to \$1,025,000,000, while the German Reichstag voted \$1,250,000,000. Austria and France have set aside vast sums for their respective war chests.

"In anticipation of trouble last year, Germany voted \$250,000,000 for extraordinary war expenses and about \$100,000,000 was spent on an aerial fleet. France has thus far spent \$60,000,000 for the same purpose and American experts are now watching developments to ascertain if the money was judiciously spent.

"It is expected that the taxes to meet the extraordinary expenses of the war will be quadrupled in Germany and France within the next six weeks. As business is at a standstill throughout Europe and every port of entry blocked, experts are wondering where the money is to come from. All agree that, when peace is declared and the figures are all in, the result financially will be staggering and that the heaviest burden it has ever borne will rest upon Europe for fifty years to come."

Illuminating, also, is a glance at the national debts of the countries involved—debts which, as the Milwaukee Wisconsin says, represent the unpaid balances of the cost of former wars and emergency loans for the purpose of increasing armaments:

	National debt	Interest
Austria-Hungary.....	\$3,612,389,000	\$144,496,000

HOW THE EXPRESS COMPANIES ARE DOING

Since the parcel post came into operation and reduced express rates became operative, all the express companies have been struggling hard to make both ends meet. During the first nine months, ending on

The Automatic Feed Mailing Machine you said some one would build some day—

Pence Mailing Machine

Seals—Affixes Stamps and Stickers
all in one operation

Systematize Your Outgoing Mail

Saves Labor—Time—Money

Only one operator necessary.
Seals and Affixes Stamps on 6000 envelopes per hour.

Handles empty envelopes to 3/8 thickness without any adjustment.

Places stamps in any position desired.

Affixes as many stamps as desired.

Uses regular postage stamps as furnished in rolls by the Post Office Department without paying extra for re-rolling.

Keeps an accurate record of stamps used.

Will either seal or stamp, or do both in one operation.

Affixes stickers on backs of envelopes, too.

Guaranteed satisfactory.

Little Tom Tucker
Calls for his supper;
What shall it be,
While bread and butter?

No, sir! Not Tommy!
The doctor has said,
"Give him Borden's Eagle Brand,"
That's how he's fed!

What every Doctor knows

Every doctor knows that a baby's stomach is an individualist. Some form of milk must be selected and modified to suit your baby's particular needs.

When a condensed milk is selected as the best food for your baby, your one concern is the purity of the brand of milk used.

BORDEN'S EAGLE BRAND CONDENSED MILK

The overwhelming evidence in favor of the cleanliness and purity of Borden's Eagle Brand Condensed Milk has had weight with both doctors and mothers.

BORDEN'S CONDENSED MILK COMPANY
NEW YORK

This company has supplied pure milk for 57 years

Patented May 2nd, 1911

Chicago, Ill.

June 30, 1914, their losses were estimated to have been over \$3,000,000. It was contended by the companies, when the proposed reduction was under consideration, that the reduction of 16 per cent. in their rates, combined with the parcel post, would be most disastrous. They were unanimous in making vigorous protests. So strong was their feeling that at one time they were seriously considering a resort to the courts for an injunction on the ground that the lower rates would be confiscatory. The Interstate Commerce Commission then contended that losses in revenue would be overcome by an increase in business due to cheaper rates.

At last the companies consented to make a test of the new rates, as a sort of experiment, but in the hope that a demonstration of their losses would ultimately secure a return to better rates. *The Journal of Commerce* recently made inquiries as to the latest results of operations under the reduced rates and found that the predicted increase of business had "absolutely failed to materialize." Following are some of the facts drawn from its inquiry:

"As a matter of fact, figures as to the outbound business done in and around the metropolitan district of New York show that the ratio of increase in gross business to the decrease in revenues stands at about 8 to 13, in computing the respective percentages.

"During the nine-month period ending June 30, the operating income of the American Express Company fell from \$689,568 to a deficit of \$607,898. During the single month of March, 1914, the first after the effectiveness of the lower rates, the revenues of the American suffered a loss of \$128,486, according to the latest returns received from Washington.

"The statistics also show that the Adams Express Company, during the first nine months of the fiscal year, ran down its operating income from \$172,296 to a deficit of \$567,765, of which \$116,329 was incurred during the month of March. The Great Northern, owned and operated by the Great Northern Railroad as a part of its transportation system, suffered a reduction in operating income from \$194,678 to \$144,270 and represents one of the best examples of the companies operating at a profit many long-haul routes.

"The Southern Express Company, which also operates many profitable long-haul routes, was affected by the lower rates and parcel-post competition to the extent of realizing a decline in operating income from \$192,717 to \$640,404. The Wells Fargo Express Company, which, together with the other large companies, recently took over some of the mileage formerly operated by the now defunct United States Express Company, lost about \$515,000 in operating income, the figures for the nine-month period of the last fiscal year being \$814,622, as against an operating income of \$1,301,088 for the corresponding nine-month period of the preceding fiscal year.

"To put the situation of the express companies for the first nine months of the fiscal year in a brief way, it may be said that the companies operating in the South and the West have suffered heavy losses of revenue, but still remain out of the deficit column, while the larger companies operating in the East are finding themselves sinking deeper and deeper into the deficit column. As has been said, the salvation of the Western and Southern companies is mainly due to their possession and operation of profitable long-haul routes."

Stands the Test of Time & Weather

Never fear that midsummer's heat will affect Flex-a-Tile Asphalt Shingles. The hotter old Sol, the flatter and tighter Flex-a-Tiles lay. There is nothing in them to rot or rust. Tough as the sole of your shoe, Flex-a-Tiles stand the severest test of time and the elements.

FLEX-A-TILE

Asphalt Shingles for the Home

A roof of Flex-a-Tiles is as attractive as it is durable. That's because they are surfaced with crushed granite or chipped Vermont slate in the natural red, garnet, green, emerald or brown tones—beautiful, brilliant, never fading. Forced into the top coating of Gilsontite under tremendous pressure, this stone surface is as durable as the shingle body itself. Before you roof, get the whole Flex-a-Tile story.

**NORTH GERMAN
LLOYD**

CURRENT EVENTS

European War

August 6.—Italy notifies Great Britain that she will remain neutral, despite Austria's claims.

The German attack on Liège, Belgium, continues, with heavy German losses.

The British cruiser *Amphion* is reported sunk off the coast of Holland, as a result of striking a floating mine; 130 men are lost.

A German squadron is reported as bombarding Helsingfors, Finland.

The Cunarder *Mauretania*, fleeing from capture, puts in at Halifax, accompanied by the White Star liner *Cedric*.

The Secretaries of the State, Navy, War, and Treasury Departments are appointed by President Wilson as a board in charge of the relief measures for American tourists.

August 7.—The English Ambassador leaves Berlin. Violent anti-English demonstrations are reported there.

The Germans before Liège request a twenty-four hour armistice, to allow the dead and wounded to be cared for, but it is not granted.

August 8.—A French detachment invades Alsace, skirmishing with German forces in the neighborhood of Altkirch and Mülhausen.

August 9.—The city of Liège is entered by the German forces. The attack on the forts of Liège is suspended, pending the arrival of German siege guns.

August 10.—As the result of the approach of an Austrian army through southern Germany, France declares a state of war to exist between Austria and France.

The British Admiralty informs the Mayor of Birmingham that the new cruiser *Birmingham* has sunk *U-15*, the first German submarine to meet disaster.

The Canadian Government at Ottawa receives orders for the immediate transportation of 10,000 volunteers to England.

The French deploy Turkish native troops from Algeria, in the Abatian invasion.

August 11.—European war reports give the situation in various localities as follows: the German army of the Moselle facing the French near Longwy; Germans in possession of Landen, a railroad point ten miles from Louvain, the headquarters of the Belgian army; French and English forces supposed to be at Namur; the French invasion of Alsace checked beyond Mülhausen, with a French loss of ground; the Russian forces occupying small border towns in East Galicia and invading Transylvania in Austria; Austrian troops advancing upon Warsaw, in Russian Poland; the Austrians being driven completely out of Serbian territory, and Serbians occupying the Bosnian town of Sarajevo.

August 12.—England declares a state of war to exist between that country and Austria.

The concentration of German troops along the Netherlands frontier causes much disturbance in Holland and causes Belgium to ask Holland's intentions in the event of violated neutrality.

A new Austrian ambassador, Baron Karl von Marcho, has been appointed to Rome.

Mexico

August 7.—Provisional President Carbajal issues a statement opposing General Carranza's demand for an unconditional surrender of Mexico City. He receives word from Secretary of State Bryan commending his course of action and assuring him of the moral support of the United States.

August 9.—Representatives of Brazil, Guatemala, Great Britain, and France, together with Governor Iturbide and a Carranza envoy, meet in Mexico City to consider means to hasten a satisfactory surrender of the city to the Constitutionalist forces.

August 12.—General Carranza orders to be held at Tampico a large consignment of ammunition consigned to General Villa.

Washington

August 6.—The death of Mrs. Woodrow Wilson occurs at the White House.

August 7.—The Senate confirms the appointment of Messrs. Warburg and Delano, completing the total Federal Reserve Board membership.

August 8.—The President selects C. S. Hamlin as governor and F. A. Delano as vice-governor of the Federal Reserve Board.

August 10.—Brief and simple funeral services are held for Mrs. Woodrow Wilson in the East Room of the White House.

President Wilson formally transmits to the Senate the Nicaraguan treaty for canal rights.

August 11.—The Senate passes the emergency ship bill, admitting foreign-built ships to American registry.

Let Us Keep You in Trim

10 Days Free

All By a Few Minutes' Daily Fun Under a New Kind of Shower

Send No Money

Will you let us *lend* you—for ten days' free use—a new kind of refreshing energizer that in two or three minutes' fun of a morning will fill you chock full of all-day ginger and hustle? That will help you do more and better work?

Will you let us *send* you—simply for a test, without any obligation to keep it—a new kind of stimulating needle shower that in two or three minutes before or after dinner will make you feel good as new when you come home all tired out?

Will you let us *prove*—right on your own bath tub—how a few minutes' enjoyment of a Kenney Shower at bedtime will rest and refresh your whole system and soothe you to sound sleep?

How a Kenney Shower makes either hot or cold water twice as refreshing—how much more invigorating and enjoyable it is than a plain tub bath—how its daily use both summer and winter will help keep you at your best?

Only \$6 If You Keep It— Nothing If You Don't

You can make this prove-it-to-you test without sending us a single cent in advance. If you are willing to part with the shower after a trial—if you are willing to go back to tub baths—simply return it and it won't cost you a penny. And it will cost you only \$6 if you keep it.

Beats a Tub Bath 40 Ways

In this day and age, no bathroom is complete without a shower. Instead of using the same water over and over as in tub bathing, every drop that touches your body from a shower is fresh and clean—the only sanitary way to bathe.

And now for only \$6 you can have a four-stream needle shower—a new and improved kind that gives you the most luxurious and stimulating wash-down anyone can take. We think you will find almost as much difference between a Kenney Shower and an old-fashioned overhead curtain shower as between a bath in a fine porcelain tub and a sponge bath out of a tin pail.

No Clammy Curtain

Has all the good points of the extravagantly expensive showers without a single one of their faults. No clammy curtain to spoil your enjoyment—done away with the old-fashioned expensive curtain and with all complicated parts.

SALES AGENTS WANTED

Exclusive territory given to men who can qualify. Must be hustlers, with selling experience or selling instinct, and with enough capital to carry stock required to meet demand. Write for proposition and proof.

MEAD CYCLE CO., Dept. K 172 CHICAGO

Kenney Needle Shower

All Metal—Fits Any Tub
Guaranteed Not to Splash
Out—Free Trial to Prove It

why the price is so low. Guaranteed not to splash out of tub, no muck on walls or floor—30 days' trial to prove it.

The only needle shower that fits any bath tub. Easily put up—no tools needed—not even a screw driver.

A strong, handsome, all metal, nickel-finish fixture. Never in the way—doesn't interfere with regular use of tub.

Don't Have to Wet Your Hair

All four of the invigorating needle-sprayed streams are thrown direct against the body from the neck down—no breath-taking shock as with overhead showers—don't have to wet your hair—women can now enjoy a shower without bothering with a rubber cap.

A Week's Use Worth the Price

Now being installed in many expensive hotels. Also used in the homes of thousands of people who could afford to pay ten or twenty times as big a price would buy a better shower. Many of them say a week's use is alone worth all a Kenney Shower costs.

Remember we aren't asking you to buy this shower, but only to try it—to let us lend it to you ten days free so you can see for yourself how you like it. No red tape about trying it—don't send any money—simply order on your letterhead or enclose business card or reference. Better make the free trial now—we know much better you'll feel as the result of a daily shower.

Covers a wide variety of subjects that have no systematic relation with the modern state. Every woman, old or young, can profit by the wise counsel and advice given in this volume.

Cloth bound. By mail, postpaid, \$1.00

Punk & Wagnalls Company, 254-256 Fourth Ave., New York, N. Y.

THE LEXICOGRAPHER'S EASY CHAIR

In this column, to decide questions concerning the current use of words, the Funk & Wagnalls New Standard Dictionary is consulted as arbiter.

Readers will please bear in mind that no notice will be taken of anonymous communications.

"P. H.," New York.—"What, if any, is the distinction between 'at last' and 'at length'? Please differentiate or explain the point."

You will find these prepositional phrases defined in place in the NEW STANDARD DICTIONARY under *last* (p. 1392, col. 3). The phrase, *at last*, is defined as meaning "in the end; finally"; and also, "at the end of life." Under *length* (p. 1416, col. 1), the phrase, *at length*, is defined as meaning "after a great while; finally; at last"; and also, "at full length; without omission or contraction." From the foregoing it may be deduced that *at last* emphasizes finality, whereas *at length* emphasizes not only a period of waiting but the attainment of the end of that period.

Dr. James C. Fernald, in his "Connectives of English Speech," says (page 56): "*At last*—*at length*: These two prepositional phrases are quite distinct in meaning and are not, in strict usage, interchangeable. The assumption that *at length* means the same as *at last*, and is therefore superfluous, is an error. Both *at length* and *at last* presuppose long waiting; but *at last* views what comes after the waiting as a finality; *at length* views it as intermediate with reference to action or state that continues, or to results that are yet to follow; as, 'I have invited him often, and *at length* he is coming'; 'I have invited him often, and *at last* he has come'; 'At length he began to recover'; 'At last he died.' 'At last he concluded' is correct, but 'At last he began' would seem somewhat grotesque. 'Scarcely thus *at length* failed speech recovered sad.'—Milton, *Paradise Lost*, bk. iv, l.

357. 'O, then, at last relent.'—Milton, *Paradise Lost*, bk. iv, l. 79. 'At length the freshening western blast. Aside the shroud of battle cast.'—Scott, *Marmion*, can. 6, st. 26. 'There at last it lay, the bourn of my long and weary pilgrimage.'—R. F. Burton, *El Medinah*, ch. 25, p. 389. 'All work must be done at last, not in a disorderly, scrambling, doggish way, but in an ordered, soldierly, human way.'—Ruskin, *Crown of Wild Olive*, let. i, p. 26. 'Every hero becomes a bore at last.'—Emerson, *Representative Men, Uses of Great Men*, p. 26. 'At last as marble rock he standeth still.'—Tasso, *Godfrey of Bulloigne*, tr. by Fairfax, bk. vi, st. 27.

"W. L. B.," New York.—The birth of such a man as Verdi was not a great event in history, for he was the son of an innkeeper and tobacco-nist. But the death of Verdi was an important event in history because at that time he had become one of the world's greatest men.

"I. S. R.," New Orleans, La.—To forfeit is, in general, to lose title to or possession of through failure to fulfil some obligation or condition. To confiscate is to appropriate (private property) as forfeited to the public use or treasury, especially because of the wrong-doing of the owner. The sense of forfeit meaning "to cause one to suffer forfeiture" is obsolete except in history.

"H. C. L.," Eastbranch, N. Y.—The *dasheen* is a tuberous-rooted taro, usually of dwarf habit. The word is from the French West-Indian dialect *da Chine*, meaning "from China."

"H. W. L.," Hanover, N. H.—The word *sibling* has been out of use since 1425. It is an obsolete term the equivalent of which to-day is *kin* or *relative*. Any modern use of *sibling* is an attempt to revivify a word long since dead.

"C. S.," Philadelphia.—A waterfall is not merely a body of water falling through the air; it is, in addition, a scarf or necktie with long drooping ends, or a chignon with pendent curls.

POPE PIUS X. IN THE GARDENS OF THE VATICAN.

In the eightieth year of his age and the eleventh of his pontificate, the Supreme Pontiff of the Roman Catholic Church died on August 19, his end hastened and his last hours darkened by grief over the terrible war involving most of Europe. His last official proclamation was a call to all Catholics to pray that a merciful God might "speedily remove the evil causes of war, giving to them who rule to think the thoughts of peace." He said once on his sick-bed: "In ancient times the Pope by a word might have stayed the slaughter, but now he is impotent." As man, priest, and Pope, Giuseppe Sarto, later Pius X., was loved and revered for the simplicity, benevolence, and saintliness of his life.

TERMS: \$3 a year, in advance; four months, \$1; single copy, 10 cents; postage to Canada 85 cents a year, other foreign postage \$1.50 a year. **RECEIPT** of payment is shown in about two weeks by date on address label, subscription including the month named. **CAUTION:** If date is not properly extended after each payment, notify publishers promptly. Instructions for **RENEWAL, DISCONTINUANCE, or CHANGE OF ADDRESS** should be sent *two weeks* before the date they are to go into effect. *Both old and new addresses* must always be given. **DISCONTINUANCE:** We find that many of our subscribers prefer not to have their subscriptions interrupted and their

TOPICS OF THE DAY

AMERICA'S LOSS AND GAIN IN EUROPE'S WAR

THAT THE EUROPEAN conflict "may mark the beginning of a new commercial and industrial era in the United States," says an authority in the *New York Journal of Commerce*, is "not at all unlikely," and the question whether we are to reap lasting economic benefit from the conditions thrust upon us, or profit only temporarily to suffer later crises of reaction, depends upon "the alacrity with which the American business man will seize the opportunity, and upon the wisdom with which the American legislator will face the situation." In this connection we find much expert and editorial testimony to the fact that "vaster, more intricate, and more rapid readjustments of industry are now called for than at any previous period in modern history." As to what we, in this country, are to gain and what we are to lose, the *New York Evening Post* cites as an authority Joseph French Johnson, Dean of New York University School of Commerce, and says of him that he is "optimistic as to the effect of the war on American agriculture and the industries which cater largely to agricultural interests," yet believes that "many industries will suffer severely." *The Post* then quotes "a summarized statement of the chief items of profit and loss to the American people" which appears in Dean Johnson's article on "War and American Business," written for the Alexander Hamilton Institute, and, according to *The Post*, based on an investigation conducted by the research department of the Institute. The summary follows:

LOSS

(1) The tendency to drain gold from this country, which must be offset by accumulating reserves, restricting credits, and avoiding inflation of currency.

(2) Closure of European market to American securities and sale at low prices in this country, resulting in checking all permanent financing and stopping new projects and construction that have not been financed; probable permanent diversion from the United States and Canada of large amounts of European capital which would otherwise have come to us.

(3) Cutting off certain raw materials (chiefly chemicals) which are essential in some lines of manufacture; great reduction in European demand for raw materials, partly manufactured, and manufactured goods, resulting in partial readjustments and in losses.

(4) Increase in the cost of living.

While admitting the opportunities of the United States to build up its export trade, Dean Johnson points out the difficulties of breaking into new markets, even when they are temporarily left open; and as for extending its financial influence, he says:

"It is likely that the bankers of South America and the Orient will increase their deposits in New York—the only safe haven for the moment—and the New York bill of exchange will temporarily take the place of the London bill. . . .

PROFIT

(1) Opportunity to increase the prestige and banking connections of America in international financing.

(2) Opportunity to enter South American and Oriental markets and secure a larger share of this trade.

(3) Sale of foodstuffs and military supplies at high prices in European markets, resulting in prosperity for producers of these goods and for industries which cater to these producers.

"For the present, however, we are confronted by a closed market for securities with no definite prospect of its being reopened. Broadly speaking, only hand-to-mouth financing is possible."

A striking feature of the situation, in Dean Johnson's opinion, "is the uneven influence of the war on American industries"—

"We shall probably see, if the situation continues, certain industries and commercial organizations working at top speed and making enormous profits, while beside them will be the empty offices and deserted factories of other industries."

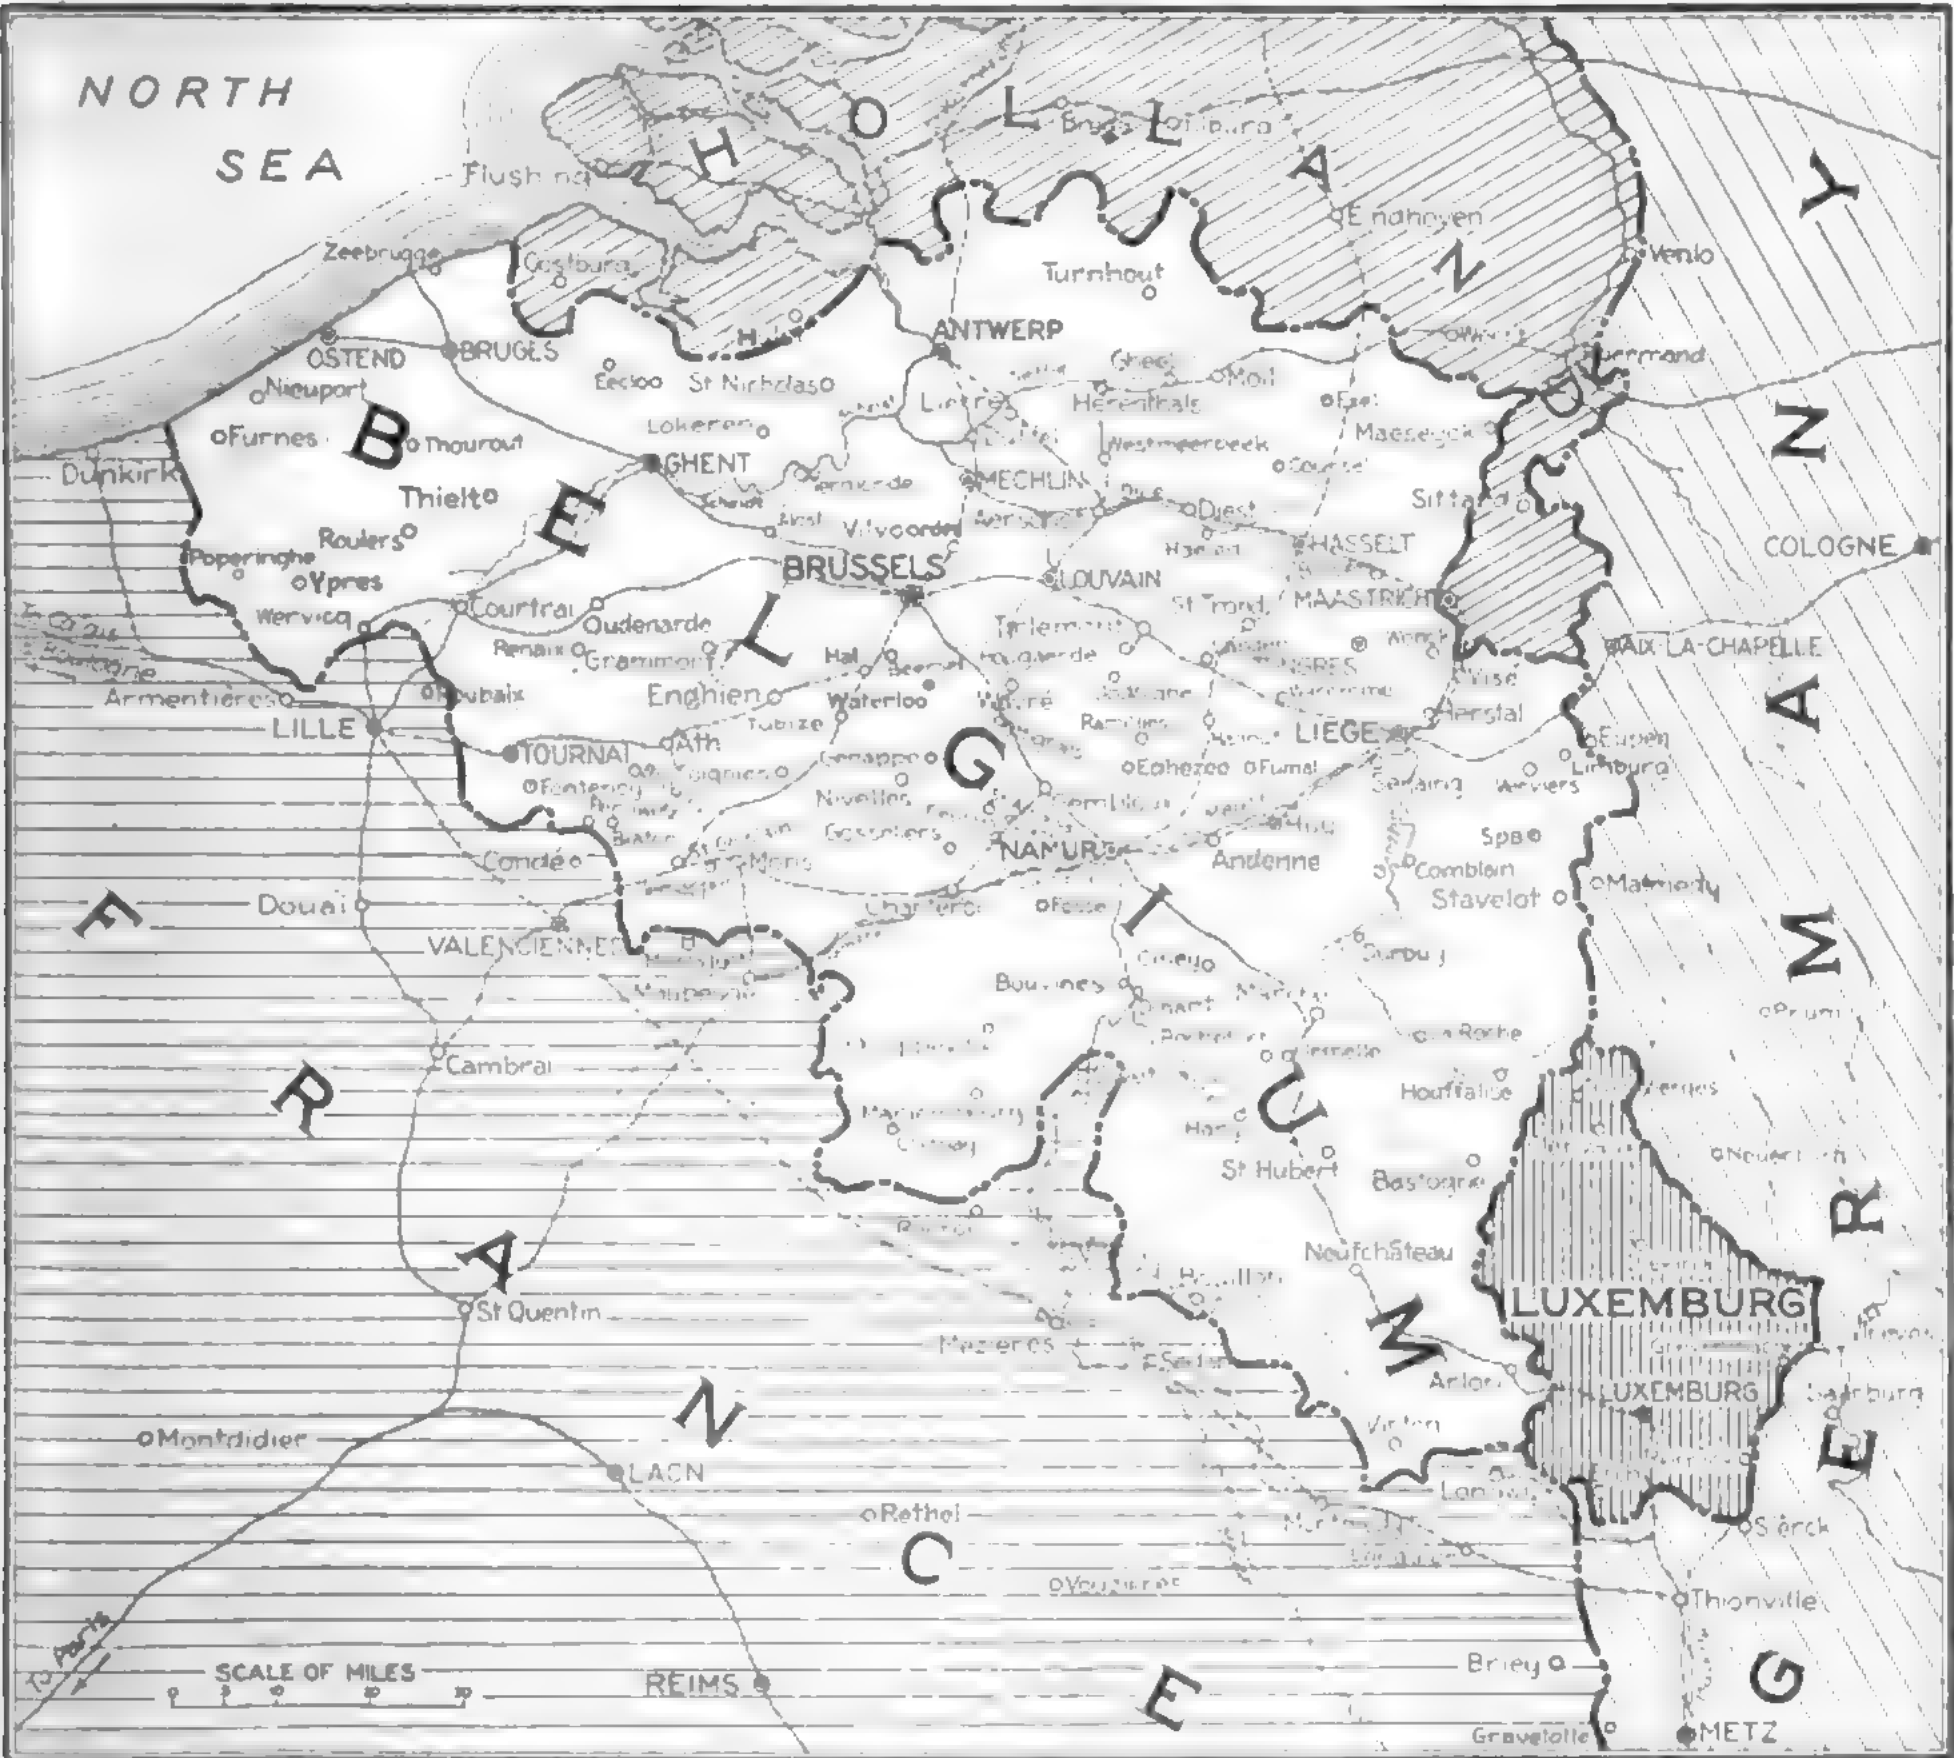

"There is scarcely a business in the country that does not need immediate readjustment. It may not be radical in most cases, but it will be enough in thousands of instances to make the difference between profit and loss, between success and failure. The readjustment may consist simply in revising orders for stock and raw materials; it may consist in reducing or extending sales and office expenses; it may consist in securing additional capital for some big, timely expansion. Every business needs, more than ever, hawk-eyed watching and quick decision."

The Journal of Commerce presents another authority in an article by Edwin R. A. Seligman, McVickar Professor of Political Economy at Columbia University, who tells us that "so far as the immediate effects of the war upon our chief raw materials are concerned, the prospects are not very favorable to cotton, and perhaps a little less unfavorable as to wheat and other food products." This is our share, he explains, of "the inevitable loss which is consequent upon so huge a war," and he adds:

"In industry, however, the situation promises to be different. Here the opportunities for, and the prospects of, progress are exceedingly bright. To the extent that the belligerents will lose their export trade to South America, Asia, and Africa, owing to the general disruption of industry, we shall have a chance to supply the deficiency, and this deficiency is bound to be enormous. Even if England and France are able soon to keep the water lanes open, their energies will be so much occupied by the war as to cause a great falling off in their exports. So far as Germany is concerned, probably this all but complete cessation of commerce will afford us an unheard-of opportunity in South America and Asia. There is every reason to believe that under favorable conditions an immense impetus will be given, more particularly to the textile and the metal industries, the influence of which will considerably overbalance any possible loss from a fall in the price of our raw materials."

The "favorable conditions" mentioned by Professor Seligman, refer to "the possibility of securing the bottoms in which to transport this vastly increased output of industry," and he says that what is "really the crux of the problem" is "our ability to establish a merchant marine." Having pointed out various ways in which this might be done, Professor Seligman assumes that "in one way or another" our carrying trade will increase equally with the growth of our manufacturing industry, and "the combined result will undoubtedly be temporary prosperity." So much for the "immediate effects" of Europe's war on our business affairs, but when we come to examine "ulterior results," we meet "a more complicated situation," says the writer, because:

"In the first place, the prodigious destruction of capital which is to be expected the world over will also affect the situation here. As the European countries would need much of their future surplus to repair the ravages of the war, there would be so much the less to invest in the United States. Our tempo of progress will therefore become slower. The relative decrease in the amount of available capital will mean a higher rate of interest. Specifically, also, this will mean a further fall in the price of securities and especially of bonds—government as well as railway and industrial. The tendency of wages, also, throughout the world will be downward because dearer capital means less efficient

BELGIUM--THE FIRST BATTLE-FIELD OF THE EUROPEAN WAR.

The full effect of the first two weeks of the Belgian campaign—from the German entrance into Belgium on August 3 to the German occupancy of Brussels on August 20—is yet to be shown, while the rigid war censorship keeps us in ignorance of the moves on the military chess-board. Judging from meager and discrepant press reports, Liège was attacked on the 4th, but its forts offered so spirited a resistance as to delay its capture for about a week. The German forces then spread out and pushed westward, with their cavalry overrunning most of central Belgium. A battle seems to have been fought near Diest, and there was fighting along a line from Louvain and Wavre on the Dyle to Gembloux and a point on the Meuse. The capture of the Belgian capital seemed to indicate that the Germans were still unbeaten and in control of two-thirds of Belgium. Yet English and French official statements insist that the Belgian resistance delayed the Germans sufficiently to give the allies a decided strategic advantage, and that the Belgian Army is safe behind the impregnable fortifications of Antwerp and in a position to harass the German flank. Readers will note the more important railroad lines connecting the cities of Brussels and northern France. Paris is 200 miles by rail from Brussels and 190 from Namur.

production, and less efficient production tends to a lowering of wages."

Again, the very prosperity that may attend the war, we are warned, involves "the grave danger of a reaction" when it is over, and we are told that "unless the American consumer of the next few years is prepared to make some sacrifices by his willingness to suffer high prices, we shall be in great danger of experiencing an industrial and commercial crisis of first magnitude." To avoid such a calamity "in whole or in part" we must "retain the control of the neutral foreign markets" that we now expect to secure, says Professor Seligman, and do so by use of the following means:

"In the first place, our banking facilities must be internationalized so that we shall no longer be dependent upon London as we now are. Fortunately, the new Federal Reserve Act will render this at all events possible; the efforts that are even

now being made by some of our leading banking institutions promise well for the future.

"In the second place, far more attention must be paid than is the case at present to the needs of the foreign market. Our consular service, which is now only partly out of politics, should be at once definitely and completely removed therefrom. Our diplomatic service, which is at present so demoralized and which is of far more importance to commerce than is often imagined, should be put on a similar permanent basis. The system of commercial attachés and experts, both at home and abroad, should be greatly developed. . . .

"In the third place, a much more systematic movement must be initiated to teach our manufacturers how to conform to the habits and the prejudices of the foreign market, in methods of packing, in conditions of output and in details of payment. . . .

"Fourthly, no wholly successful export business on a large scale can be maintained without favorable transportation rates, both inland and overseas. It should be one of the first duties of our Interstate Commerce Commission to study this problem and

to interpret the law so liberally as to permit our common carriers to make those modifications in rates that may be rendered necessary, but which are now, through a strict interpretation, held to be illegal."

"More liberal legislation" is asked also by Professor Seligman in order that we may retain "a goodly share at least of the world's

THE INNOCENT BYSTANDER

—Robinson in the New York Tribune.

carrying trade, which we are in a fair way of securing in the immediate future," and he argues that "the country will have to be prepared to make temporary sacrifices and perhaps to suffer, in the shape of subsidies, temporary infractions of a normally sound practise, in order to achieve the greater good," and he concludes:

"The seeds of the great industrial prosperity of the United States were planted a century ago during the war with England. The British command of the world market dates from the Napoleonic wars. The German onset into industry and commerce was the result of the war of 1870. It is not at all unlikely that the present European conflict may mark the beginning of a new commercial and industrial era in the United States."

THE FOOD-PRICE "WAR"

THE MENACE of a people at peace starving in a land of plenty, and in a year of "bumper crops," because of "speculation" in foodstuffs, based on Europe's need, is responsible for "a nation-wide fight" against extortion. This "war upon war prices" is led by President Wilson, who says in a letter to the Attorney-General that "the rapid and unwarranted increase in the prices of foodstuffs in this country upon the pretext of the conditions existing in Europe is so serious and vital a matter that I take the liberty of calling your attention to it." Resolutions of inquiry on the subject, Washington dispatches say, are piling up in both Houses of Congress, and we read also that from coast to coast "legal forces of the Government, assisted by State and municipal authorities," are conducting investigations. In some districts, according to the press, prices have decreased slightly as a result of the Government's action, while elsewhere we read that prices are going still higher. The general tone of editorial criticism is pronouncedly bitter, as, for instance, when the Philadelphia *North American* says that "those who are gambling upon the necessities of human beings are waging war against the American people." On the other hand, business interests do not lack defenders, who argue that the increase in food is due to a natural economic law and not to "any con-

spiracy or 'unlawful combination.'" Thus the *New York Journal of Commerce* tells us that:

"It is natural to suppose that the demand for certain supplies on account of the war in Europe and the closing of important markets will cause an advance in prices, and it is equally natural to discount the results by holding back these supplies until advantage can be taken of it. This will of itself tend to increase the domestic prices. No doubt the farmers and cattle-men of the West are doing their part in this, and the packers and grain dealers are not above the desire of profiting by conditions that give promise of gain. Wholesale traders are as a rule in competition with each other in disposing of what they control, and are not likely to increase their profit to any extent, while actual combination is hardly practicable among retailers. It is the general spirit of speculation and watching for the main chance that accounts for the situation, in all probability.

"It is selfish, no doubt, and it may not be highly moral or patriotic, but motives cannot be controlled by law and mere lack of moral scruple and patriotic self-denial cannot be punished by legal process. Those guilty of these sinful purposes may be exposed, and if the facts show that they deserve it they may be condemned and made to feel that their reputation in the community is damaged. Public opinion may exert a restraining influence over their behavior. Business is usually conducted in accordance with some prevailing standard, and that depends upon the general sentiment of the community, which can make itself felt if it tries."

The *Chicago Herald* discountenances the assumption that "every rise in food prices" is due to "unlawful combination," and points out that "whatever the various investigations establish as a matter of fact, and however efficiently the legal machinery is set to work to punish and prevent unwarranted increases, we might as well face the fact that we are confronted if not by a present at least by a prospective increase of food prices due to the European war." In the view of the *Washington Times* also, "it is quite inevitable that prices must go up when the world confronts to-day's conditions," and it informs us that this "is one of the penalties the world must pay for the privilege of having a war every now and then."

In sharp disagreement, however, with the theory that the war must perforce add to the cost of living is the statement of

HIDING BEHIND IT.

—Kirby in the New York World.

Roger W. Babson, an acknowledged authority on economic and financial statistics. The *New York World* quotes him as saying:

"There is absolutely nothing to warrant the recent increase in the cost of flour. We have the biggest wheat crop in the history of the country. We don't import that commodity. There

BELGIAN TOWNS WHOSE FORTRESSES DELAYED THE GERMAN ADVANCE TOWARD THE FRENCH FRONTIER.

are no ships to export it. By every law of supply and demand the prices should go down.

"Neither is there any reason for an increase in the price of beef or in the by-products of cattle. The prices of these should be lower, if anything. And after peace is declared in Europe and ships are available to transport beef across, there is no reason to anticipate a sudden demand for beef that will send the price up again. On the contrary, beef shipments should be below normal, for there is bound to be a prolonged era of economy among the nations engaged in war."

Speaking editorially, *The World* says that "if necessary to promote the welfare of our people, we may and should forbid the exports upon the promise of which the impending robbery is based." Among other journals that call a halt on speculation in foodstuffs are the *New York American*, *Evening Journal*, *Globe*, *Evening Mail*, *Morning Telegraph*, *Sun*, *Tribune*, and *Evening Mail*, the *Philadelphia Public Ledger*, *Inquirer*, and *Evening Telegraph*, the *Newark (N. J.) News and Star*, the *Baltimore*

American, *Washington Star*, *Boston Transcript*, *Traveler*, and *Christian Science Monitor*, *Albany Journal* and *Knickerbocker Press*, *Springfield Republican*, *Buffalo Express*, *Cleveland Plain Dealer*, *Cincinnati Enquirer*, *Columbus Dispatch*, *Nashville Tennessean*, *Chicago Post*, *Indianapolis News*, *Grand Rapids Press*, *New Orleans States*, and *Spokane Spokesman-Review*. The emphatic protests of all these observers are summed up in the calm and reasoned statement of *The Financial World* (New York and Chicago), that there is "no excuse for war prices," because —

"We have an enormous exportable surplus of flour, and could meet all of the big demands of England and France, even if they were able to take it freely, and have enough and to spare for our own people; the sugar crop in Cuba is said to be the greatest on record, and yet sugar is up 50 per cent., to 8 cents per pound; there is an actual shortage of meat, but it is not such as to justify the big advances . . . and there isn't the slightest basis for the claims

that all canned goods and many other foodstuffs have gone up because of the increased foreign demand.

"The dislocation of industry will be quite severe on our people at the start of this war, and until they fully adjust themselves to the new and altered situation, they will be in no mood to submit meekly to food extortioners. If no other means are found to curb them, they will institute such economies, as indeed many of them have already done, as will leave many of the speculators with unsold goods on their hands. We think this aspect of the situation will be quickly realized by the speculators. Therefore we do not anticipate more than a brief era of high prices."

THE HARVESTER TRUST'S "GUILT"

THAT a trust may be good but illegal is the most striking point, as some editors see it, brought out by the long-awaited decision of the United States Circuit Court at St. Paul ordering the dissolution of the International Harvester Company. Altho the decision declares this company a combination in restraint of trade and a monopoly within the meaning

TAKING MORE THAN HIS SHARE.

—Bee in the Baltimore Evening Sun.

of the Sherman Law, it adds: "It is but just, tho, to make it plain that in the main the business conduct of the company toward its competitors has been honorable, clean, and fair." "Probably no stranger decision, at least in a big case, has ever been handed down," remarks the *Toledo Blade*; and the *Chicago Evening Post* characterizes it as "the most remarkable decision rendered in the course of all the absurd 'trust-busting' campaign." "In many ways," notes the *Chicago Economist*, "the decision of the court, while apparently unfavorable to the company, is a practical vindication." And Cyrus H. McCormick, president of the convicted company, reminds us that the decision is by a divided court, and declares that "the case will not be ended until the Supreme Court has said the last word." The *Kansas City Journal* and the *Colorado Springs Gazette* express gratification that the present decision is not final, and see a fair probability of reversal. In reviewing this case, remarks the *Newark Star*, the Supreme Court will be confronted for the first time with the following paramount issue:

"Shall a combination protected by the expiry of the statute of limitations be construed as a continuing offense against the Sherman Law when the facts subsequent to the act of combination fail to reveal undue or unreasonable restraint of trade or the abuse of monopoly power? It is one of the most interesting and vital points ever presented to the court under the antitrust statute."

Other papers, however, such as the *Milwaukee Journal*, the *Springfield Republican*, and the *St. Louis Republic*, see no absurdity in the idea of a "good but illegal" trust. "Good trusts may become bad trusts by the simple process of transfer of the controlling interest," remarks *The Republic*, which goes on to say:

"There are some kinds of power that have no right to exist under democratic forms of government. The question of their use is secondary. The power to restrain trade through monopoly and combination is dangerous wherever it exists, for there is no form of moral insurance that will guarantee society against the peril of the falling of the machinery into unscrupulous hands. The American people have pronounced against the trust species without regard to the history of the individual."

Similarly in *The Republican* we read:

"The policies of managements may change. A bad management may succeed a good management. The same trust may be a stern upholder of all the Sunday-school virtues in one period and a ravaging colossus of trade war in another period. The law, consequently, as interpreted by the courts, condemns a combination for what it is as well as for what it does. If a combination has the power to monopolize or to restrain trade, it comes under the ban whether or not it actually does monopolize or restrain trade. The Harvester combination of five companies, controlling 80 to 85 per cent. of the trade, did eliminate competition among them, and thus the combination acquired monopolistic power.

"One is reminded of benevolent despotism by this case. The argument for the benevolent despot is that he uses his absolute power for the good of the people. But no self-governing people, in view of the world's experience, will tolerate that kind of a ruler. The Sherman Act is based on the theory that benevolent monopolies in industry are likewise unworthy of public confidence. So the law prohibits them good or bad, and the courts are making an end of them.

"The present law may be too drastic. A good trust, so called, may be capable of achievements, particularly in the foreign trade, that small companies can not match. The Germans have long thought and acted on that idea, in developing their foreign commerce. But if experience finally demonstrates that these advantages can be secured in no other way than through great combinations, strict government regulation will be the inevitable accompaniment of a change in the law whereby greater freedom in combination could be lawfully enjoyed."

The dissolution decision was handed down by Judge Smith, of Iowa, and Judge Hook, of Kansas, while the third member of the court, Judge Sanborn, of Minnesota, registered his dissent in a minority opinion, in which he took the ground that when the suit was brought, and for at least seven years before, the company had not been a combination in restraint of trade, or a monopoly. He argued that it was not overcapitalized, that it had not since its first organization destroyed competition, and that it had at no time oppressed remaining competitors, its main purpose being to develop foreign trade.

Turning to the majority decision, we find the court saying:

"The International by suppressing all competition among the five original companies was in restraint of trade as prohibited in the first section of the Sherman Law, and it tended to monopolize within the meaning of the second section of the same law, and this restraint and this monopoly were the direct and immediate effect of the consolidation, and were not incidental and uncertain in their effect. . . .

"It will, therefore, be ordered that the entire combination and monopoly be dissolved, that the defendants have ninety days in which to report to the court a plan for the dissolution of the entire unlawful business into at least three substantially equal, separate, distinct, and independent corporations with wholly separate owner and stockholders; or in the event this case is appealed and this decree superseded, then within ninety days from the filing of the precedendo or mandate from the Supreme Court the defendants shall file such plan, and in case the defendants fail to file such plan within the time limit, the court will entertain an application for the appointment of a receiver for all the properties of the corporate defendants, and jurisdiction is retained to make such additional decrees as may become necessary to secure the final winding up and dissolution of the combination and monopoly complained of and as to costs."

THE WORLD'S NEW WATERWAY.

Tho there is still work to be done, and tho the formal "opening day" is months distant, the Panama Canal is now ready for the world's interoceanic trade. The *Ancon* made the first regular trip with a complete cargo on August 18, with Colonel Goethals on the bridge. This picture shows the steamer *Cristobal* on a successful experimental journey made several days previously.

THE PANAMA CANAL OPEN

THERE is a "sad irony," it is remarked, "in opening the Panama Canal to the world's trade at a moment when there is no trade to go through it." The purpose of the canal is to strengthen the bonds of peaceful commerce, but to-day commerce stands paralyzed and peace has flown. Many editors comment regretfully upon the fact that the practical completion of this great achievement wins so little attention from a world intent upon the war news from Belgium and Alsace. The *Philadelphia Record*, however, making a virtue of the inevitable, stoutly maintains that "this unostentatious dedicatory act may be considered a more appropriate celebration of a triumph of the arts of peace than if it had been associated with martial pomp and an array of commerce-destroyers and battle-ships." "It was a thoroughly businesslike proceeding," the *New York World* concurs, "in keeping with the way the great interoceanic waterway has been pushed to completion," and it remarks:

"On schedule time the steamship *Ancon* left Colon, passed through the locks, and within ten hours entered the waters of the Pacific at Panama. Within twenty-four hours a small fleet of ships of commerce had made the passage. For the formal celebration we shall wait until next spring."

"To-day the canal lies open to all the nations of the world upon equal terms. The United States has acted with entire good faith, and in the observance of its treaties discriminated against none and reserved no exclusive rights to itself. Beyond the collection of tolls, which are uniform to ships of all flags, it has assumed none of the privileges of national ownership at the expense of friends and rivals in trade. It has achieved a moral triumph no less impressive than the material victory won by its engineers over nature in the piercing of the Isthmus."

In all editorial comment much stress is laid upon the altruism that the United States has shown in putting through this great project for the benefit of all mankind. "There is not," avers the *Baltimore American*, "a more useful work of human agency upon the face of the globe," and the *Chicago Herald* adds:

"The people of all nations will feel, directly or indirectly, the beneficial result. Americans should find a solemn pride in the thought that they have added so much to a world from which other nations are taking so much away."

It is universally maintained that the canal must remain neutral, in the present dangerous state of affairs, and yet, the *Baltimore American* reminds us, "the United States stands committed to its defense in order to preserve it as a world avenue and to secure for itself the naval advantages that it would contribute in case of military necessity." The regulations that

have been made with the view of preserving neutrality are summarized thus:

"The war-ships of any of the nations now at war may use the canal under certain conditions, although they are forbidden to blockade it or to exercise within it any right of war or commit within it any act of hostility. Vessels of war of belligerents, by the terms of the treaty, shall not revictual nor take any stores in the canal except so far as may be strictly necessary; and the transit of such vessels shall be effected with the least possible delay and with only such intermission as may result from the necessities of the service. Nor shall any belligerent embark or disembark troops, munitions of war or warlike materials in the canal except in the case of accidental hindrance of the transit."

"It is also provided, that vessels of war of a belligerent shall not remain in the adjacent waters of the canal longer than twenty-four hours at any one time, except in case of distress; while a vessel of war of one belligerent shall not depart within twenty-four hours from the departure of a vessel of war of another belligerent."

CONSTITUTIONALIST RULE IN MEXICO

A LITTLE MORE THAN three years after Francisco Madero was installed in power in Mexico, and about a year and a half after the killing of Madero and the establishment of the Huerta dictatorship, "a Government pledged to carry out the political and social reforms embodied in the Madero program" is once more, as the *New York Evening Post* notes, "functioning in the capital." The brief dispatches telling of the last steps toward a peaceful settlement were almost lost in the mass of rumors from European battle-fields. But they were sufficient to inform the American public that Provisional President Carbajal resigned his office, and that representatives of those left in power signed an agreement naming Gen. Venustiano Carranza Provisional President, providing for the turning over of garrisoned places to the Constitutionalist troops and the disarmament of the Federal forces. Then, on August 15, a Constitutionalist army, under General Obregon, peacefully entered Mexico City, while all the population made holiday. Guaranties for the protection of life and property had been made which satisfied the requirements of the United States. General Obregon said of his triumphal entry into the capital at the head of 15,000 soldiers:

"It was a glorious home-coming. I think on all sides it was joyously realized that our entry signalized the return of constitutional law and order and sounded the knell of dictatorial usurpation of authority. To-night crowds are thronging the avenues, and there is much cheering and singing. 'Constitu-

nationalist' and 'Federal' are forgotten terms. Soldier and civilian mingle merely as brother Mexicans."

Up to this point, then, declares the *New York Commercial*, the "watchful waiting" policy of President Wilson and Secretary Bryan has been a "shining success." As for international newspaper talk of jibes from European diplomats—

"Europe had a somewhat similar precedent in the Balkans, which simmered and finally boiled over in a general war that has shaken the world. We would have had a savage war with Mexico that would have strained our relations with all other Latin-American Republics if the Federal Administration had handled the affair no better than the Great Powers of Europe dealt with the Balkan affair. It is worth noting that the United States Senate is breaking all previous records for speed in dealing with our foreign relations by validating the treaties which Secretary of State Bryan has negotiated with other nations."

Carranza's triumph is now complete, declares the *Springfield Republican* (Ind.), tho he has still to show his strength against possible rebels, "for Mexico is not yet rid of reactionary tendencies and explosive forces." The *St. Louis Post-Dispatch* (Rep.), *New York Times* (Ind.), *San Francisco Chronicle* (Rep.), and *New Haven Journal-Courier* (Rep.) are fearful of Villa's jealousy and ambitions. And Mr. Charles M. Pepper, coming from Washington, reminds *Boston Herald* (Ind.) Secretary that—

"Villa to-day is in full control of the States of Chihuahua and Coahuila. He is in possession of the main communication lines, and administers all the sources of revenue. He is also carrying out, in good faith, the radical land reform which he committed himself. He is giving his followers a good deal of money in the matter of perquisites from expropriated and the official plunder, considered entirely legitimate from a Mexican point of view. Foreign enterprises in northern Mexico are looking to him instead of Carranza for protection, and are getting it."

THE WAR IN BRIEF

THE censor's pen is mightier than the sword.—*New York Evening Sun*.

It looks more and more as if the war were going to be pulled off in executive session.—*Indianapolis News*.

ADD "horrors of war": The possibility of German winning the electoral leadership from Paris.—*Boston Herald*.

THE race-horses Mr. Wilson gave to the poor of Paris are entered for the Chantilly steeple.—*Philadelphia North American*.

THE European method of attracting American tourists is to create some more battle-fields for them to visit.—*St. Louis Mirror*.

IS the American war correspondents who have rushed to Europe wish to keep right up with the news they should have their home papers sent to them regularly.—*Boston Herald*.

A MORATORIUM we take it means that a country needs a little rest. It settles down.—*Chicago State*.

MANY Europeans who resented Wilson's handling of the Mexican problem are beginning to see they lived in Mexico.—*Kansas Times-Dispatch*.

LOTS of New Yorkers will never get over their amazement at the country's moving along so nicely with the *Stark Exchange* closed.—*Rockford (Ill.) Republic*.

IT will take centuries to recover from this blow to civilization, but doubtless our prominent optimists are reflecting in their cheery way that there will be plenty of centuries.—*Ohio State Journal*.

HOW implicitly Belgium trusted that guaranty of neutrality is shown by the fact that she always maintained a supply of impregnable fortresses on her frontiers.—*New York American*.

"BELGIUM'S Queen Visits Wounded!" "Grand Duke's Marble Palace in St. Petersburg to Become Hospital!" "But, oh, it's 'Mr. Atkins' when the band begins to play."—*New York World*.

Yet Mr. Pepper does not expect to see civil war break out in Mexico, thinking it "the more likely that Villa's military strength will compel Carranza to make concessions, and that for a time the civil war will be averted, and possibly even that the factions will work harmoniously." The *Buffalo News* (Rep.), perhaps mindful of the fact that General Funston's brigade is to remain in "watchful waiting" at Vera Cruz, is confident that our Government can avert any trouble by simply warning Villa "that the United States recognizes the other man and that it will not stand any misconduct on his part."

So the *New York Evening Post* deems it no "unmitigated optimism" to believe that a new epoch has begun for the troubled Republic:

"It is true that the habit of revolution may persist, and that unclouded peace is still for the future. But, after all, even in Mexico a revolution, to attain formidable dimensions, must have a cause behind it. Madero stood for one set of principles, and the reaction under Felix Diaz and Huerta stood for another set of principles. That the reaction had spent its force for a long time to come, if not for ever, may be safely assumed. Mexico can not go back to the state policies and economic policies of Porfirio Diaz. Such dangers, therefore, as are anticipated will arise from the personal jealousies and aspirations of those who have carried the revolution to success. But here also we have grounds for believing that the dissensions between Carranza and Villa have been magnified by their opponents. Or, if strife should break out, there is still the all-important fact that, whereas formerly Mexico's internal troubles were fed in part from across the Rio Grande or regarded with contemptuous indifference there, the elements now in control in Mexico City have behind them the express friendship of the United States. Carranza has with him the good wishes of the American people and the Administration in Washington, a factor almost of primary importance in guaranteeing the permanence of the new régime."

AND so now it is the War Cost of Living.—*New York Evening Sun*.

IF no news is good news the European press censors are certainly apostles of optimism.—*New York American*.

PROBABLY by this time the "movie" actors are fighting European battles in New Jersey.—*Waterbury Sentinel*.

ANTHONY: America is protected for the time being from the pauper-made goods of Europe.—*Philadelphia North American*.

AMERICAN tourists who went to Europe to look at historic ruins now have a splendid opportunity to see how they were made.—*New York Evening Sun*.

ABOUT all that Europe can be expected to do for the San Francisco exposition next year is to send over a display of survivors.—*Grand Rapids Press*.

THE war has not availed to stop our export trade in international athletic trophies. The polo cup having previously gone back to England, the tennis cup goes to Australia.—*Springfield Republican*.

FOREIGN reservists in this country have not yet seen fit to take the advice of *The Daily News* and "pair," so we suggest that a reservist be exchanged for each American refugee until the latter are all back home.—*Chicago News*.

"UNEASY lies the head that wears a crown," says the old adage; but judging from the many conflicting reports coming from the warring monarchs, it appears that they lie rather easily.—*Nashville Southern Lumberman*.

"God of our fatherland"—Nicholas. "God of our dear fatherland"—Wilhelm. "God of all French"—Poincaré. "God our defense and bulwark"—Franz Josef. "God of our race"—George. "God our right arm"—Albert. And from the cockpit of Europe comes the fighting slogan of Serbia, "We can take care of ourselves." Serbia at least is not blasphemous.—*Philadelphia North American*.

"BEAT IT!"

—Bowers in the *Newark Evening Star*.

FOREIGN COMMENT

JAPAN AS ENGLAND'S HOPE IN THE PACIFIC

JAPAN, as we learn from the dispatches, has virtually joined in the war against Germany by demanding the restoration of the Chinese territory of Kiaochow annexed by the Kaiser. A demand has also been made by Tokyo that "Germany withdraw immediately from Japanese and Chinese waters all German war-ships." The Japanese Government have sent to Berlin an ultimatum, in which Germany's Pacific possessions are threatened with attack unless these demands be acceded to.

Germany's Pacific Ocean possessions have an area of 96,000 square miles, with a white population of 1,984 and 634,000 natives. Most important is Kiaochow, the surrender of which Japan has demanded. This is a district of two hundred square miles on the east coast of the province of Shantung, China. Its population is 170,000. The principal port is Tsing-Tau, which the Germans have strongly fortified and provided with a garrison of 3,125, composed of German marines and Chinese soldiers. Second in importance, from a military standpoint, are the islands of Savaii and Upolu, of the Samoan group. Possession of these islands would give Japan a most important naval base. Other German colonies in the Pacific are the Caroline group, the Pelew, the Marianne, the Solomon, and the Marshall islands. All of these are of commercial value and would be rich prizes in the hands of Japan, which seeks outlet for her surplus population. German Togoland, on the west coast of Africa, of an area of 33,700 square miles, has already been seized by the British. Japan has long desired to live in touch with the Western nations and has now given proof of her willingness to share their burdens. The Japanese press repeat over and over again their belief that England and her colonies and possessions in the Pacific need the help of Japan. Can not the Japanese assimilate with, as well as give practical assistance to, the Western peoples? A writer in the *Koris Tokyo Sekai* speaks with great wisdom and moderation on this subject, and this utterance is most important, considering the non-assimilative sentiment of some of our contemporaries. We translate this Oriental's article as follows:

"We hear of assimilative people, that is to say, those who have the talent or the faculty of appreciating or affiliating themselves with the work of other peoples. Can the Japanese do this? While they have the reputation, the question is, Do they live up to it? Of course, this reputation springs up from the facility with which our country may adopt other civilizations and adopt the notions of foreign countries. They have, of course, shown in the matter of Korea and China, and while the Japanese have customs and character it would be absurd to say that they have not borrowed a great deal from other races with whom they have come in contact. No one will dispute the fact that since their war with Russia, the Japanese have fashioned their life very largely on an occidental pattern. They have

been somewhat vain of this new departure, but it would be absurd to say that they have thus established a perfect assimilation with the Russians or other Europeans, of which they so constantly boast."

This very acute oriental journalist concludes by observing that pride of this sort should not blind his countrymen to the fact that they are still dependent on foreign loans, and should not indulge in "narrow chauvinism." "While nations are interested in interchanging what is really and peculiarly their own, they should never forget the debt they owe to those nations who have, as it were, lent to them the gifts of their national character."

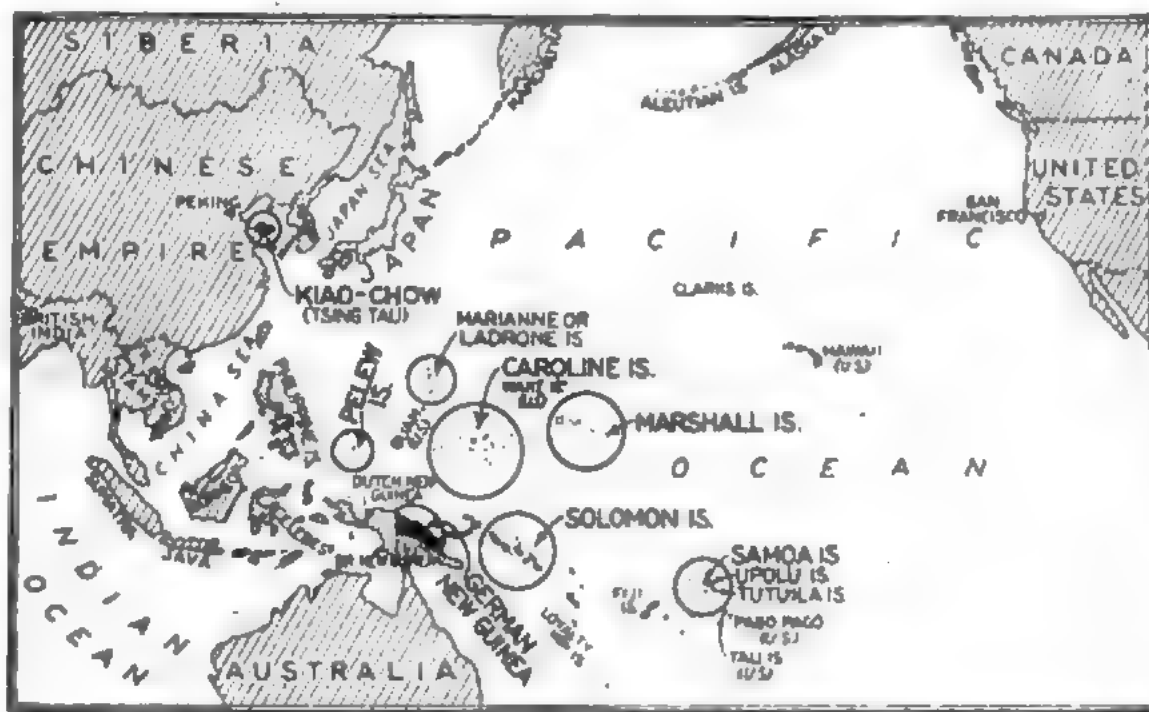

As the United States, at least in California, has turned a cold shoulder to Nippon, all eyes are turned toward England's Pacific colonies, which in the present war Japan has already shown a willingness to protect, and in the *Mainichi Deupo* (Tokyo) we read:

"We are convinced that it is a matter of the utmost importance that Britons beyond the seas should make a better attempt at fraternizing with Japan, as better relations between the English-speaking races and Japan will have a vital bearing on the destiny of the Empire. There

is no reason why the British colonies fronting on the Pacific should not actively participate in the Anglo-Japanese Alliance. Britain needs population for her surplus land and Japan needs land for her surplus population. This fact alone should draw the two races closer together. Moreover, the British people have ample capital but deficiency of labor, while it is the reverse with Japan. Great Britain already has close relations with the races of Asia, and as Japan is among the foremost of those races, Britain's surest way of peaceful advance would be by the aid of Japan. It is to Japan that the West must look for a complete harmonization of oriental and occidental ideals. Britain's world-wide territory requires a world-wide police, which is impossible for Britain without the aid and sympathy of Japan. In case of a rebellion in India or South Africa, Great Britain would be greatly handicapped should a second enemy descend through Persia, unless Japan were on hand to check such ambition. The harmonious cooperation of Britain and her colonies with Japan insures safety to British and Japanese interests alike. Without such cooperation, Japan and Great Britain are both unsafe."

A writer in *The Japan Magazine* (Tokyo) thinks that Japanese and Australians are quite capable of arriving at some understanding that will give the British colonists in Japan equal privileges with Japanese in the English colonies. Thus we read:

"There is nothing that would do so much to bind East and West firmly together as the opening of the British colonies to Japanese immigration. Then, indeed, Britain would be a lion endowed with wings. Large numbers of Japanese in the British colonies would mean that Britain would have the assistance of Japan in the protection of her colonies. But if an anti-Japanese agitation is permitted, both countries will be making the worst instead of the best of the Anglo-Japanese Alliance."

WHERE JAPAN ENTERS THE WAR GAME.

The circles on this map surround Germany's Pacific possessions.

Thus it would be allowed to make Japan an enemy instead of a friend. The policy suggested would also tend to make the colonies permanent parts of the British Empire, whereas now they may some time be tempted to independence. If such a situation can arise in a small place like Ulster, it is just as likely to arise in any of Britain's outlying possessions. It seems to the *Mainichi* that the British people both at home and in the colonies are not yet alive to the importance of the policy suggested, and it is, therefore, pointed out and emphasized before it is too late."—*Translation made for THE LITERARY DIGEST.*

WHY ENGLAND GOES TO WAR

THE REMARK made by little Wilhelmine to her grandfather, Caspar, while contemplating the skull picked up on the field of Blenheim,

"Now tell us all about the war,
And what they killed each other for."

is still being repeated. In view of the terrible struggle now going on in Belgium, close to the battle-field of Waterloo, people are asking each other what it all means and why England should start from her island home to add to the European conflagration?

A writer in the *London Times* has given us several reasons why England was forced into the struggle. England has been in danger for a long time from her isolation, and it is only when she has strengthened herself by the union with France and Japan that she has had the opportunity of vindicating her place as a Great Power among the countries of Europe. The *London Times* states the condition of things as follows:

"The first principle of all British foreign policy is recognition of the fact that England, tho an island, forms part of Europe. Forgetfulness of this simple fact has in the past had disastrous consequences. Without reverting to the war of 1870, when England, by abandoning France to her fate, allowed her to be

which was Japan. To quote further from the article which we have cited:

"The first step in this policy had little reference to Europe. It consisted in the Anglo-Japanese Alliance of 1902. But it was the Anglo-Japanese Alliance that led directly to the Anglo-French Entente of 1904. During 1903, England strove, as she is striving now, to prevent war, by urging Russia to come to terms with Japan. France also sought to restrain her ally, lest entanglement in the Far East should render Russia incapable of supporting France in Europe. Russian support was indispensable to France, who had constantly been exposed to diplomatic and military pressure by Germany, and had, in 1875, only been saved from German attack through the intervention of the

dismembered, and has ever since paid the cost in the growing burden of international armaments, it is necessary only to remember the position held by Great Britain at the end of the South African War. The policy of the late Lord Salisbury had been one of 'splendid isolation.' When disaster overtook us in South Africa we were without a friend on the Continent, and were only saved from attack by a European coalition because the Emperor of Russia declined to sanction such a policy, and because the question of Alsace-Lorraine formed an insuperable obstacle to military and naval cooperation against us by Germany and France.

"The policy of 'splendid isolation' became a military and political impossibility, unless we were prepared so to strengthen our Army and our Navy as to be able to defy any attack or combination of attacks by land and sea. King Edward recognized this fact, and with the advice of his Ministers sought to diminish the number of our potential enemies on the Continent. Contrary to many interested or mistaken assertions, neither he nor Lord Lansdowne ever conceived the policy of making friends in Europe as a policy of aggression."

It seems that the isolated condition of England was considered by English statesmen as exposing her to the danger of being molested. England, therefore, instituted the Anglo-French Entente after forming an alliance with the most important Asiatic Power,

Emperor of Russia, and especially of Queen Victoria. Queen Victoria then saw that the undisputed predominance of Germany in Europe, and the permanent disablement of France, would create for England a situation as dangerous as that which grew up when Napoleon established his supremacy on the Continent."

To prevent a new Germanic Napoleonism rising up in Berlin, Russia and France were forced into a defensive coalition. The English and French Ministers failed to prevent the war between Russia and Japan, and this result placed France and England in a dilemma. As *The Times* remarks:

"Anglo-French efforts failed to prevent the Russo-Japanese War in 1904. Germany, who was anxious to remove the pressure of the Russian Army from her eastern frontier, counteracted them. When the war broke out, France and England were obliged quickly to decide whether they would join in the war and fight each other, or would agree to remain neutral and to counter-balance German supremacy. They chose the latter course in February, 1904. A few weeks later the agreement with France, known as the Entente Cordiale, turned this negative agreement into a positive pact.

"Russia is now defending a vital interest. France, who is bound to Russia by alliance, and still more by the necessities of her European situation and political independence, is compelled to support Russia. England is bound by moral obligations to side with France and Russia, lest the balance of forces on the Continent be upset to her disadvantage and she be left alone to face a predominant Germany."

Belgium is one of the most important points in Europe. It lies in the very vital spot of the European Empires. If Belgium is conceded to Germany or to France, the equilibrium of the European Powers is immediately destroyed. As we read:

"A vital British interest is therefore at stake. This interest takes two forms—the general interest of European equilibrium, which has been explained, and the more direct interest of preserving the independence of Holland, and particularly Belgium. The Franco-German frontier along the Vosges has been so

formidably fortified on both sides that a German or a French advance across it seems improbable. The point of contact between the German and French armies would naturally lie in or near Belgium. But a German advance through Belgium into the north of France might enable Germany to acquire possession of Antwerp, Flushing, and even of Dunkirk and Calais, which might then become German naval bases against England. This is a contingency which no Englishman can look upon with indifference."

English statesmanship seems so far to have been recognizing that contingency, and it will be asked why the British Government did not wait until a direct attack was made either upon the ships or shores of her Empire? Our writer answers as follows:

"Because in these days of swift decisions and swifter action, it would be too late for England to act with any chance of success after France had been defeated in the North. This is why the shots fired by the Austro-Hungarian guns at Belgrade reverberate across the English Channel. The safety of the narrow seas is a vital, the most vital, British national and Imperial interest. It is an axiom of British self-preservation. France does not threaten our security. A German victory over France would threaten it immediately. Even should the German Navy remain inactive, the occupation of

Belgium and northern France by German troops would strike a crushing blow at British security. We should then be obliged, alone and without allies, to bear the burden of keeping up a fleet superior to that of Germany and of an army proportionately strong. This burden would be ruinous.

Great Britain does not keep up a powerful fleet and a capable standing army merely for the sake of following mere tradition. Sheer necessity has compelled the maintenance of armed men to meet just such an emergency as now presents itself. Thus:

"The instinct of self-preservation, which is the strongest factor in national life, therefore compels us—if the efforts of our Government to keep the peace should fail—to be ready to strike with all our force for our own safety and for that of our friends."

WAR SCENES IN PARIS.

AMERICAN IDEALS TO TRIUMPH THROUGH THE WAR

THE BLOODSHED of the present war is to have one result, says George Shubel, who claims to represent a phase of German-American opinion, in his contribution to *The Ridgewood Times* (Brooklyn). It will prove the absurdity of autocracies and military dynasties, while it establishes before the world the sublime superiority of American ideals. It was only recently that so brilliant and experienced a public man as Chauncey M. Depew remarked of the present conflict: "This war will mean the greatest impulse for Socialism that history records. It will mean an end of all kings with real powers and an end to all bullying bureaucracies."

It is not to be supposed that the speaker intended to advocate or predict the domination of such theories as Behel and Marx advocated. He simply meant that government in Germany

NAPOLEON'S DOUBT.

"The world's mine oyster, which I with sword will open."
—*Vorwärts* (New York).

would necessarily become of the people, for the people, and by the people. Germany is to obtain this heritage, says Mr. Shubel, through a baptism of blood. To quote his words:

"The best thinking Germans here in America deplore this war. The best thinking Americans of German extraction, imbued with American ideals, think it is a crime!

"We, here in America, are able to reflect upon the immediate and remote losses to the great German people as a whole; losses irremediable, that can never be compensated for, even in case of victory and aggrandizement of territory, for Teuton heart-blood is flowing, and that is more precious, more valuable to the civilization of the world than all the moneys and territory and spoils of war that can possibly be gained as the result of bloodshed!

"Sir Roger Casement, ex-member of the British Diplomatic Service, has said: 'To me the German people stand for the efficiency, the culture, and the manhood of the white race of continental Europe.'

"The world acknowledges what Sir Roger admits. The splendid qualities of our race, its alert energy, its indomitable industry, its capacity for concentration, its patience and determination in study and preparation, above all, its admirable and unequalled mental and moral discipline, have evoked the admiration of the entire world, and, transplanted on soil here more friendly toward self-expression, what wonderful fruits in way of personal prosperity and happiness has it not yielded?

"We say now that the heart-blood that produces this is flowing! Five million lives, among them the flower of the race, are now pushed forward for what purpose? Lives will be wiped out, each containing a thinking human brain, so valuable to the creative and productive progress of the nation and the world, and there is suddenly caused a halt upon the advance of what is admitted to be a vigorous, intelligent, rich, and varied phase of civilization—all to what purpose?"

"Our sympathies are with the great common mass of people

across the sea of whose blood we are. Our sympathies are with the great common people of all races and all the world. It is they who must fight these wars; it is they who must bear its bitter burdens; and for whom?

"All during the time that this terrible war will be in progress, destroying so much that German life has stood for, we, here in America, in most sober-minded and rational manner, will be able to reflect upon these two questions: To what purpose is this war, and for whom is it being fought?

"Never mind as to who the real aggressors have been in this war. We will not debate that question with you. We will not debate it with ourselves. But just let us reflect continuously upon the two questions: To what purpose is this war, and for whom is it being fought?

"But this one thing we can hopefully prophesy as a result of the war. We prophesy it because, tho German blood is in our veins, we, here in America, believe in the final world-triumph of American ideals and institutions. We say that when those of our loving kind and blood across the sea come to that hour when they will have time to reflect, as we already do now; when the war is ended, when the various governmental systems through whom this bloody conflict has been precipitated, will meet to divide the spoils and settle their accounts, some wonderful changes in government may come about, and the end of dynasties, of the Romanoffs, the Hapsburgs, and the Hohenzollerns may come to an end.

"Let us hope that our German race, which is as intelligent as any in the world, and which knows what liberty is, despite the fact of a governmental system exerted in the direction of repression and vested authority, will be the first to move in the direction of taking the business of governing themselves into their own hands instead of blindly following 'palace policies.'

"Then, and with such changes in government only, can the permanent peace of Europe be secured, and the great common people of the world be freed from the burdens of wars that are not and have never been of their own making."

EUROPE'S MUCH-CONQUERED EMPIRE—The Emperor Francis Joseph of Austria was born on August 18, 1830, and the *Tribuna* (Rome) celebrates this anniversary by recapitulating the perpetual defeats which Austrian armies have suffered in war. This record is looked upon by such papers as the *Tribuna* as rather an ill omen for Kaiser Wilhelm and his forces. The following is given by Italy's government organ as a list of the unfortunate battles in which the flag of Austria went down:

1618-1648 (The Thirty Years' War).—Austria was defeated by Gustavus Adolphus at Leipzig in 1631; at Lützen in 1632. Pomerania was occupied by the enemy and the Austrians finally beaten by the French and forced to sue for peace.

1683.—In this year the Austrians were defeated by the Turks, and the Emperor Leopold fled from Vienna and sought the assistance of John Sobieski of Poland, and the allies then put to flight the Turks who had gathered round the walls of Vienna.

1707-1710.—This was the war of the Spanish succession. Prince Eugene of Savoy defeated the French in Italy; and joining his forces with those of Marlborough, he routed the French at Oudenare in 1708, and at Malplaquet in 1709.

1717.—Prince Eugene beat the Turkish subjects of Austria for a second time at Belgrade.

1714.—Frederick the Great dispossessed Austria of Silesia, and after a severe engagement at Mollwitz, put the Austrian Army to flight.

1755.—In the Seven Years' War, Frederick the Great discomfited the Austrians at the battle of Prague.

1757.—The Austrians endured a terrible defeat at Lützen.

1760.—At Torgau and at Liequitz, the Austrians suffered a terrible defeat, as they did in 1762 at Freiburg. Napoleon, in this latter end of the eighteenth century, appeared upon the scene and drove the Austrians from Italy, after his triumphant victories at Lodi, Arcole, and Rivoli, and four years later defeated the Austrian forces at Marengo and Montebello. Napoleon's triumph over the Austrians reached its summit at Austerlitz, when Vienna fell before his advancing forces, and was occupied by the French. For a second time Vienna was captured, in 1809, after the Austrians had been conquered at Eckmühl, Asperin, and Essling. Fifty years afterward came the battles of Magenta and Solferino, which drove the Austrians from Italy. Finally the Seven Weeks' War, in which the Austrians were cut to pieces by the Prussians commanded by Moltke and Prince Frederick, at Sadowa.

SCIENCE AND INVENTION

AERIAL ARTILLERY

WITH the apparently successful elimination of the war correspondent in the present European contest, it is not likely that we shall be able to read a personal account of a real bomb-dropping trip by an aerial passenger. This being the case, great interest attaches to the following account by Jacques Mortane, of a trip with Lieutenant Varcin, of the French Army, in a demonstration of bomb-throwing from an aeroplane, just before the outbreak of the war. This comes as near to reality as anything we are likely to meet with. Mr. Mortane, who is a contributing editor of *Flying*, prints his account in that journal (New York, August). He says:

"We left with three bombs on the biplane *Maurice Farman*, used in the Michelin bomb-dropping contest. The hood was of canvas, open in front in a way to enable the aviator to see in front of him; another opening under his feet made it possible to see below—both openings together giving full view of the field. The shells were placed one by one in a holder situated at the right of the pilot, made of steel, opening by a contrivance operated by a string attached to the right of the aviator. When the aviator moves his leg and pulls the string, the thing opens, the shell falls, the two parts close again automatically, and another shell replaces the first one.

"The aiming is done through a very simple ingenious device. Across the opening at the aviator's feet, parallel with the ground, and in the direction of the course of the aeroplane, there is a string divided into several equal parts by means of small leads of different colors, to facilitate distinguishing them. Stretched out behind the aviator and tied to the sides of the fuselage is a string which the aviator pulls before him, to rest his forehead against, to prevent the vibrations of the machine from shaking his head. Lieutenant Varcin, thus equipped, aims, aims again, and jerks the string with his leg—and succeeds! His system, easy as play, exact as the deadliest weapon, is fixt in a few minutes, and at the maximum cost of two to three cents. Does not this description make some of my readers believe that I am joking? Nevertheless, nothing is more exact, nothing is less exaggerated. This is the way Lieutenant Varcin won the Michelin prize—and dropt three bombs during our flight, as I shall relate.

"As darkness was approaching and the circle of the target was no longer very visible, Lieutenant Varcin said he would drop the bombs in the pond known as 'Trou Sale,' using a tiny island about one meter wide as target.

"'I will hit it out the third shot,' he said.

"We started out, ascending in wide circles. In passing above the Fort of Satory, Lieutenant Varcin pointed to the exposed fortification and remarked how easy it would be to destroy this fortified place in case of war by dropping a few large bombs. Knowing that all fortifications are thus exposed, that no way has yet been found to defend a place against aircraft, except with aircraft, there passed through my mind visions of bloody devastation due to aircraft, and while shuddering at the horror, I had a feeling of deep admiration and wonder, as I had never had before, for the little craft which was carrying us. All heads of armies and the authorities to whom is entrusted the maintenance of the prestige and honor of the country should take just such a trip as I took; they should look down upon the massive, expensive fortifications, all exposed and vulnerable, all defenseless.

"At 750 feet we turned to get above our watery target. 'Look!' cried Lieutenant Varcin to me. This precaution was unnecessary, as I did not miss one move of my skilled conductor. He had performed greater feats than that. Bang! Off went the shell, sinking into the water, not a meter from the green strip, and that was the worst of the series. We reascended to 1,350 feet; then fired again. This projectile made a greater splash in the water, and almost touched the strip of grass. Again we ascended, this time passing 1,650 feet. Evening was with us and we saw with difficulty, but enough to permit Lieutenant Varcin to place, with admirable precision, his third shell, in the middle of the green strip.

"The experiment was over, and Lieutenant Varcin turned

toward the aerodrome. As we flew along in the dusk I thought of the experience and was convinced that I had witnessed the beginning of still another revolution in military art to be worked by the potential aeroplane; and I venture to say that aerial artillery in the next war will be more exact, more far-reaching, and more efficient than regular artillery."

Some say that in a fighting aeroplane there should be at least two aviators in order to obtain precision. The pilot can not act also as artillerist, they say. A convincing reply to the contrary is given in the experience of Lieutenant Varcin, according to Mr. Mortane. He also believes that accuracy of aim is favored by height, contrary to many authorities. We read:

"We can establish as a theorem that, within a certain height, the higher the aeroplane is the less the projectile's course is affected by the atmosphere. The ground, the woods, the trees, and streams of water, create eddies and atmospherical conditions which change incessantly. . . . Shooting from 750 feet may, therefore, seem easier for aiming, but whereas the artillerist is not sure of the deviation, he can not count on his shell, and his skill can not make up for the atmospheric variations with which he would be unable to contend, even if he foresaw them. Shooting at 3,000 feet is easier, surer, and comes nearer the height which prudence would dictate to the aviator in war-time."

THE USELESSNESS OF OPENING WINDOWS

THE SIMPLEST and most effective way to ventilate a room, in the opinion of most of us, is to open windows. But now comes Dr. James Frederick Rogers, of New Haven, Connecticut, and tells us calmly that open windows do not ventilate. A stream of fresh air, to be sure, may flow in through such an aperture, but it mixes little with the stale air of the room, and may flow out again almost as pure as when it entered, leaving most of the cubic contents of the room in as bad a condition as before. This is so true that one may breathe bad air even out of doors, provided he is in a somewhat sheltered position. The products of respiration remain in his vicinity unless removed by a breeze. Apparently, one must live in a wind if he wants his air perfectly pure. Writes Dr. Rogers in *The Medical Times* (New York, August):

"Our ancestors of a century ago were little troubled by the nightmare of fresh air. They closed their windows, drew the curtains of their couches closely, and dropt off to sleep, untroubled by dreams of being smothered by carbon dioxide, or of waking up dead from the effect of poisonous organic matters in the breath, from superheating, or from overhumidity. If these happy beings were wrong in their ideas, it must be said that they were at least consistent in their conduct. They practised as they preached.

"On the contrary, we of this very scientific generation are forever talking ventilation, tho we do not usually ventilate. We are spending mints of money in trying to discover the cause of the ill effects of bad air, and we worry over these problems in rooms where the standard for pure air, as set down by those in conference, is utterly disregarded. We have even, of late, become so disheartened over the problem that we have attempted to abandon the matter altogether by taking the sides or windows out of our rooms, leaving them open to the winds of heaven. In doing so, the problem seems to disappear, for ventilation apparently pertains altogether to life within four walls.

"The fact that, altho it seems to do away with ventilation, we do not all take the walls out of our houses or carry on our daily work in the open air, speaks for our inherent good sense that it is better to make the most of impure air than to waste our energies in fighting cold and running the risk of the many infections to which cold renders us liable. Tho bad ventilation is often due to false economy, yet we instinctively recognize

that it is more economical to sit in warm, if ill-ventilated, rooms than in those thrown open to the blasts of winter.

"Open-air schools are undoubtedly a good thing for certain classes of children, but we have not as yet, so far as the writer knows, had any comparison with the effects upon children of a well-ventilated school-room conducted in the same way. The name 'open-air school' is misleading, for the difference between this and an ordinary school is not by any means simply one of the character of the air; the giving of extra meals, the periods of rest and sleep, the superior opportunity for bodily exercise, the abundance of light, are not found in the ordinary school, and have as much, if not more, effect than the purity and temperature of the air; last, but not least, there is a different psychical atmosphere produced by the new and novel surroundings, by teachers chosen for the purpose, each striving enthusiastically to make the most of the new arrangement; finally, the pupils are of a class not likely to badger the teacher, and so bring about reflexly a general lowering of the mental atmosphere of the school. Under such conditions both physical and mental progress ought to be accelerated."

The curious fact, which Dr. Rogers names "the inadequacy of open doors or open windows in changing the air of a room," was discovered by him in the course of recent tests of air in public buildings, described in the course of the present paper. He found the air "usually bad, and often very bad." In one school-room, where the subject of ventilation was being discussed and the pupils were taught that the limit for carbon dioxide was seven parts per ten thousand, Dr. Rogers's tests actually found twelve parts. Opening windows improved matters little, except directly in the path of the draft. The content of dioxide might be as low as seven in the breeze, while at one side it kept steadily at twelve to fourteen. Here is an instance:

"In a room at 3:45 three large windows were raised the full height of the sash; there was a strong breeze blowing toward that side of the building, and it swept through the room so as to be felt distinctly in the hall, and with a force sufficient to carry some small papers from the teacher's desk. The windows were closed after a ten-minute gymnastic lesson, and at this time a test taken in a corner, out of the line of draft, showed the air in that vicinity still contained at least nine parts of carbon dioxide. I do not know what it contained previous to this open-window period, but the principal told me that this teacher was always in poor health and kept the room closed. The striking thing about this instance is the lack of real ventilation produced in ten minutes by wide-open windows and a strong breeze."

"The St. John's River, Florida, is dark in color, but the Blue River empties into it, and can easily be distinguished from the general stream for miles by its color. Gases act in much the same way, tho' of course they diffuse more rapidly, and the stream of pure air in this case flowed through the room without immediately affecting the surrounding stagnant air."

This is only one of many illustrations given by Dr. Rogers. To quote again:

"Without giving details of further tests, suffice it to say that the results were similar; and always there was found a lack of what is considered by all hygienists good ventilation, even tho' the conditions were such as we usually think quite sufficient to renew the air rapidly."

"The recently published experiments of Thomas Crowder are of interest in connection with these tests. He has shown that with good ventilation we rebreathe anywhere from 1 to 10 per cent. of the air we have just expired."

"In a bedroom of ordinary size, containing 1,200 cubic feet of pure air, the air rebreathed, no matter what the temperature, contained an average of 14 parts of carbon dioxide. With a person lying in bed with the side of the face resting on the pillow, the air taken in showed an average of 23 parts carbon dioxide, or 4 per cent. of the expired air. He attributes the increase in this position to the tendency of gases to cling to surfaces, a fact which helps to explain some of the findings in my own tests. The introduction of air into the room at the rate of 28,000 cubic feet per hour lowered the amount of carbon dioxide rebreathed comparatively little, and with quite a perceptible breeze from an electric fan blowing upon the head, there continued to be from 11 to 15 parts of carbon dioxide taken in, with the person in bed."

"In order to do away with rebreathing, the enormous amount of 300,000 cubic feet of air per hour had to be introduced, or

100 times as much as is sufficient to keep the air, in general, pure."

"Out of doors, when the person was at all sheltered, the proportion of expired air rebreathed was nearly as high as before. To quote Crowder's words: 'One does not necessarily breathe pure air because he is out of doors; he is not at all likely to do so under the ordinary conditions of sleeping-tents, tent-houses, or half-open porches, such as are used for therapeutic or hygienic purposes.'"

Dr. Rogers cites with approval the system employed in the Y. M. C. A. training-school at Springfield, Massachusetts, where recent tests seem to demonstrate the efficacy of using the same air over and over again, withdrawing it to be cleansed by washing. The effect of Dr. Rogers's paper is to confirm the doubts felt by most persons regarding our present knowledge of the real principles, aims, and results of what is usually called "ventilation."

EARLY OR LATE MARRIAGES?

THE QUESTION of whether it is better for the race that its members should marry early or late in life reduces itself chiefly, if we exclude morals, to a problem of quick or slow breeding. The later the average age of marriage, the fewer generations to the century, and the greater the injury—or benefit—to the race, according to the way one looks at it. Prof. Roswell H. Johnson has recently shown in *The Journal of Heredity* (Washington) that the tendency is for the more intellectual classes to marry later, and hence to multiply more slowly, than their so-called inferiors. He believes that this will result ultimately in the deterioration of the race. On the other hand, Caspar L. Redfield, of Chicago, is circulating a reprint of a recent article by him in the same journal, in which he asserts that slow breeding, while it may lessen the quantity of the product, improves its quality, and he offers a cash prize for evidence to the contrary. These opposing views are well summarized in an editorial in *The Oregonian* (Portland, Ore., July 24), as follows:

"Professor Johnson says that the inferior classes produce four generations to a century, while their betters produce but three. A little ciphering will prove to anybody that if the two grades of people begin a century with equal numbers, the inferior stock will compose two-thirds of the population at the end of the first century."

"This means that, under present conditions, the lowest grade of human beings is gradually, but effectually, taking possession of the world and crowding out their superiors. No intelligent person can gaze with equanimity on such a prospect. None of us really want the world to become the abode of blockheads and simian types exclusively. We all prefer to imagine the future supplied with at least as many wise men as we have now. A few more in proportion would do no harm."

"The obvious remedy for the uninviting aspect of our racial future is, as Professor Johnson believes, earlier marriages on the part of the better classes. Their children would thus become more numerous. He also assumes that they would be, upon the average, of a higher type than those of the poor and ignorant. It is just at this point that Professor Johnson, with all his weight of learning, slips up. At least C. L. Redfield, of Chicago, believes that he slips up. So confident is his belief that he is willing to back it with 200 good solid dollars. Mr. Redfield offers \$100 for the names of any three great men who have been brought into the world at the rate of four generations to the century. He inclines to think that men of high intellectual ability have been bred at the more moderate rate of three generations to the century, or even more slowly still."

"If this is so, then late marriages on the part of the more fortunate classes are not to be deplored. On the contrary, they should be encouraged, because they are a distinct advantage to the race. If Mr. Redfield is right in his views, earlier marriages on their part would not increase the relative number of desirable children. It would merely add to the roll of simpletons."

"To clinch the matter, Mr. Redfield offers another \$100 for a single instance of a man of the highest eminence who has been produced on the basis of three generations to a century. This

DISAPPEARING MONUMENTS TO WASTE.

The disappearance of the great culm-heaps which have long been a feature of the landscape in the Pennsylvania anthracite region bears witness to the increased efficiency of modern mining. These huge accumulations of coal-dust, formerly regarded as waste, are now utilized. The picture on the reader's left shows a typical Pennsylvania coal-breaker under the old régime, surrounded by its hills of culm. On the right is a nearer view of a culm-heap at Throop, Pennsylvania, with a group of poor children picking over its surface for coal large enough to burn.

offer applies to men like Bacon and Darwin, who tower immensely above the average. Mr. Redfield rather suspects that men of that class have been bred at the rate of two generations to the century, and perhaps somewhat more slowly still. From some calculations of his it seems that grandsons are most numerous, upon the average, when their grandfathers are 64 years old. This would probably make their fathers most prolific at an average age of 30, but we must avoid the persistent blunder of making prolific births identical with desirable births.

"The age when a man is most likely to produce children need not be the age when his children are most likely to be of advantage to the race. If geniuses are commonly born of mature parents, then it follows pretty clearly that late marriages are preferable to early ones from that point of view. From other points of view, that of morals, for example, we might still prefer early marriages."

SHRINKING CULM-HILLS

THE MOUNTAINS of culm, or coal waste, which break the sky-line throughout the anthracite coal region of Pennsylvania and which were for many years considered a nuisance are now being made to serve a very useful purpose, says *The Press Bulletin* of the United States Geological Survey (Washington, July). This culm consists in the main of coal-dust so fine that it smothers a fire in an ordinary grate or furnace. To-day, however, it is being pressed into small bricks or even burned in its powdery form on special types of grates, in which combustion is often assisted by a forced draft. As a result of these changes the old culm-heaps are vanishing, and new ones are not being formed. We read further:

"There is at present a market for almost any grade of anthracite that will burn, and no more coal goes to the culm-bank except for temporary storage and subsequent recovery by washers. These ranges of artificial hills, unsightly monuments to former waste, are contributing their share to the total coal production and are rapidly disappearing. Even the waste from the culm-bank washers is being utilized, for it is flushed into the mines and partly fills old workings, where it cements together and furnishes support to the roof when the coal previously left for pillars is removed."

FINDING LEAKS IN WELLS BY ELECTRIC LIGHT

THERE are two kinds of leaks—one where an objectionable liquid leaks in, as water through a roof, and one where a useful liquid leaks out and escapes, as milk through a leaky pan. One might think that a "leaky" well would be an example of the latter class, but it is rather of the former type. There is little trouble about the good water staying in, but in wells where impure surface water is excluded by tight casing, a leak in the casing may cause trouble by admitting what is not wanted. This was recently the case in the wells that supply the city of Galva, Illinois, which are about 1,500 feet deep. How the leaks were located by using electric lights and a field-glass is told by Lloyd Z. Jones, the city engineer, in *The Municipal Journal* (New York, July 30). Says Mr. Jones:

"When the wells were first drilled, about 20 years ago, the water rose to within 150 feet of the surface, but for some time it has stood at 240-246 feet. The pump cylinders are 300 feet below the surface and are always covered with water. The well is cased for 110 feet with 12-inch tubing and below that level is cased with 9-inch tubing to the bottom. The joint between the casings is of lead.

"In 1906, the quality of water in the wells seemed to have changed, and it was thought that a leak had developed in the casing. The pump was taken out and a cluster of three electric-light bulbs was lowered into the well. The lamps were connected by a long wire to the lighting circuit, and were provided with a shade above. The lowering of this light into the well was followed by the aid of a field-glass. It was found that water was entering through a leak in the casing at the lead-packed reducing joint, 110 feet below the surface of the ground. This was repaired.

"There were indications of another leak in the casing in 1911, and the above process was repeated. It was found that a leak had developed again in the lead joint.

"The cause of failure in the casing at this point is probably explained by the continual vibration of the earth, which is brought about by the running of heavy trains on the main line of the railroad, only 100 feet away, and by the jar of the pumps. The upper strata are of soft, water-soaked material. The pump

and heavy masonry base are fastened to the top of the casing, and the result is a rather top-heavy structure. The vibrations tend to break the casing at the weakest point."

MUSIC IN WOOD

THE XYLOPHONE, the only musical instrument in which wood is the actual vibratory substance, has rarely been regarded seriously. A xylophone solo is always interesting, but one's attitude of mind toward it is apt to resemble somewhat that which one maintains, perforce, toward a steam-calliope. One recognizes the tune, but it assumes a more or less comic attitude. Wood, however, is by no means an unmusical material. Used to reenforce or modify tones, it serves to enrich and make more melodious the quality of many instruments. A contributor to *The Hardwood Record* (Chicago, July 25) makes this clear. Wood, according to this writer, possesses certain properties which are absolutely essential in the production of some kinds of instruments. The vibration of a steel piano-wire, for instance, is satisfactory only when there is a proper sounding-board, to magnify, modify, or soften the tones. He goes on:

"The spruce sounding-boards for pianos are beyond the reach of competition from substitutes. The metal people know better than to push in there, and cement and fiber-board are out of the question. Since Mittelburger, the German musician, while sleeping under a roof of cedar shingles in Philadelphia, 160 years ago, was entranced with the resonance produced by rain-drops falling on the shingles, until the present time, wood has held an indisputable place in the manufacture of musical instruments. Mittelburger's first work under his theory that wood was more musical than metal was when he built a pipe-organ—the first in America—with the pipes of Southern white cedar, the same wood which had charmed his ear while he listened to the rain on the roof.

"The superlative quality of spruce as material for sounding-boards is due to the long, straight, regular fibers of which the wood is composed. The microscope reveals what the unaided eye can not see. The minute cells forming the wood are extremely long—fully one hundred times as long as their diameter measurement—and each cell or fiber is stretched like a taut string. Altho these cells, all lying lengthwise of the wood, are packed and stretched closely, side by side, there is room for vibration when they are struck. One fiber communicates its vibrations to another next to it, until the whole body of the board is set vibrating and giving back the sounds which are so rich, deep, and pleasing to the trained ear of the musician.

"All woods possess this quality or resonance, but in vastly different degrees. Some are dull and nearly dead, others emit tones quick and sharp, and still others give out sounds that continue a long time and gradually die away as if vanishing in the distance. Spruce is of the latter kind. The ear need not necessarily be trained to the technicalities of musical tones to discern the high qualities of spruce in the matter of giving back sounds. . . .

"Wood possesses resonance, metal has ring. That may not wholly conform to dictionary definitions, but it classifies the two materials pretty accurately. In certain instances, the ring of metal is beautiful. The chime of well-tuned bells needs no apology. In fact, it can be classed among the most perfect sounds. The singing of a tightly stretched telephone wire across an open field in the autumn wind is a most pleasing melody to one who has an ear for the delicacy of the simpler sounds. But how much softer and melodious that singing wire becomes if the ear is prest against the telephone-pole, so that the vibrations come through the wood to reach the ear, instead of directly from the wire. Every one of the billions of fibers that make up the telephone-pole seems to add something. The tones are segregated and multiplied until they range from the sound of a bee's wings to the bass notes of an eolian harp. It is the wood, simply the rough telephone-pole, that works the miracle.

"Some of the finest phonographs are equipped with wooden horns. This is done, it is explained, to get rid of the 'metallic ring.' The purpose is accomplished. Resonance is substituted for ring.

"Gottlieb Mittelburger, the organ-builder and musician who is mentioned above, announced what he considered a great

discovery when he said that the tones emitted from the cedar organ-pipes 'were finer than from metal.' Whether he was the discoverer or not, he announced a fact which has never since been disputed. The vibration—or the sound, if that name is preferred—does not originate in the wood or the metal of the organ-pipe, but in the air within. It is transmitted through the material of which the pipe is made, and is modified in its passage. The metal gives the 'ring,' the wood the 'resonance.'

"It is a fact that the supreme function of wood when employed in musical instruments, as sounding-boards in pianos, the top of the violin, the organ-pipe, or the phonograph-horn, is to modify and enrich the tones. It does not originate there usually. They originate elsewhere—in the piano, harp, or violin strings, the air column in the pipe, or the disk of the phonograph—but the wood picks them up, beautifies and enriches them in a wonderful and mysterious manner, and transmits them to the outer air, from which the hearer receives them.

"Therein lies the wood's superiority in the peculiar field, and there, apparently, it will remain until some inventor shall discover something to take its place. No such material has yet been discovered. In some directions substitutes are giving wood a hard run for its place, but not in the musical instrument industry, where doubtful innovations are not welcomed."

THE DANGERS OF GOLF

THO TO MANY it has seemed the most harmless of pastimes, it now appears, according to one writer, that various real dangers lurk in the game of golf. These may even prove fatal, we are told, if one is old enough. According to "The Annotator" in *American Medicine* (New York, July) it offers great temptation to overstrain, and the old should beware of it. We read:

"Deaths of old men on the golf links have been sufficiently frequent to warrant us in warning our patients not to abuse this best of out-of-door games for those past middle life. The last victim is a well-known artist who died from a ruptured aneurism.

"Most of the deaths seem to be due to a strain which throws the blood pressure temporarily above the strength of the vessel and either an artery bursts and the heart dilates or is unable to contract against the pressure. Few people realize what an effort they put forth in making a long drive. The exercise between strokes is ideal for a damaged heart and arteries, and that is the very reason it tempts us to overstrain for a few seconds. If the effort were more prolonged we would not attempt to compete with boys whose elastic arteries are built for just such intermittent pressures.

"Tho we retain our ability to put forth our full muscular power for a few seconds, no one over 40 or 45, perhaps no one over 35, should ever do it, and this is the temptation in golf. Men who can not resist had better give up the game if they are in a very serious condition, but a mere warning will be sufficient for the rest. We do not advise people to give up riding in street-cars because a few heart cases drop dead running for one. The wise take warning, and as years pass we note a less and less tendency of grown men to run for cars or run up stairs, but the fools are not all dead yet."

But there is another danger, and a more subtle one, indirectly connected with the game. It has already been noted in these pages that golf balls often contain a corrosive liquid which may spurt out and injure the curious investigator of their construction. *The Lancet* (London, July 18), in an article on this subject, notes that there may exist in a golf ball "all the potentialities of a bomb" if it is not carefully handled. It goes on:

"Some experiments which we have made with such a ball show that the pressure exists only so long as the liquid core is held tight in the grip of its tenacious rubber binding. At this stage if the liquid core is pricked by a sharp instrument, the contents are ejected with great force. If, however, the elastic binding is gradually released or unwound, the liquid core, we find, is disclosed at its full size, having had its pressure gradually relaxed, and the little bag of fluid is then practically incapable of discharging its contents. The bag of fluid, in our examination of balls of similar make to the one with which the accident occurred, consists of a little rubber bottle or flask containing a semifluid

mass of soft soap or potash soap. The rubber bottle is closed at its neck by means of tightly bound string. Leakage is possible at this point, so that the contents may be discharged without the intervention of a sharp instrument. The potash soap we examined was very strongly alkaline, and no doubt would act as a corrosive in much the same way as free caustic alkali. Most people are aware of the exquisite pain which even soap made for toilet purposes gives when inadvertently the lather gets into the eye. When this happens with a strong, coarse, alkaline potash soap used for common scouring purposes it may easily be imagined how intensified the action can be. But in the instance quoted the potash soap was also a projectile which came into contact with the sensitive tissue of the eye with great force. We think that makers of such balls should issue a caution in regard to the dangers of the liquid core existing under the great pressure of the tight rubber folds. For the sake of children who may get possession of old golf balls, we think that it should be widely known that to experiment with the structure of certain varieties is attended with grave risks."

WHAT SOUNDS CAN BE HEARD?

IT IS WELL KNOWN that not all vibratory disturbances in the air are audible. Whether those that can not be heard should be called "sounds" is perhaps debatable; but at any rate they differ from sounds in no respect except that they do not affect the ear. Recent experimenters find that both the number of vibrations and the duration of the sound influence its audibility—probably the latter more than the former. Apparently no ordinary sound can be heard unless it lasts longer than one-fortieth of a second, no matter how loud it may be, altho practise may enable the ear to catch one that is still shorter. Says a writer in *Cosmos* (Paris, July 9):

"Savart, in 1830, attempted to find out whether a very small number of successive vibrations, or even a single vibration, would be sufficient to produce a recognizable sound. Others after him took up the same question, but all do not agree. Some assert that a considerable number of vibrations is necessary, while others say that even a fraction of a period is sufficient. It is generally acknowledged, however, by those who have examined all the evidence that two complete vibrations suffice to identify a sound.

"Dr. Gianfranceschi, who has been investigating the graphic trace of the vowels, has taken up the problem, using the differential interrupter of Blaserna. This is a very simple apparatus—a cylinder, partly covered with a conducting layer on which rubs a contact. If the cylinder be made to rotate regularly and the contact be moved from left to right, the electric circuit will be closed for a shorter and shorter time. The sound is produced near a microphone situated near the interrupting cylinder. The operator who identifies the sound listens at a telephone in a distant room.

"The results of numerous experiments show . . . that the number of vibrations necessary to enable a sound to be heard is not constant; it varies from two to forty or more. What is constant is rather the duration of the sound, which must be at least one-fortieth of a second in order that the sound may be identified.

"This is apparently the smallest time required by the auditory organs to adapt themselves to a sound that strikes them. This period constitutes a sort of physiological constant.

"Mr. Gianfranceschi, however, was able to recognize certain sounds of much shorter duration—less than a hundredth of a second, but it should be said that these sounds were very familiar ones, such as the voice of a singer who had assisted him for several years in his studies of the vowel sounds. In this case, his ear had become habituated by practise to recognize a given sound more and more quickly. When sung by another voice, the same sounds required for identification a longer time, of the usual order of magnitude. It should also be said that the Blaserna interrupter, running at five to six revolutions per second, makes a noise at each revolution, and a repetition of this kind is naturally capable of facilitating greatly the identification of the note.

"When the vocal vibrations are registered by a graphic process, one complete period, according to Mr. Gianfranceschi, would be sufficient for the recognition of a definite vowel."—*Translation made for THE LITERARY DIGEST.*

BIG PHOTOGRAPHIC LENSES

EXPERIMENTS with an unusually large photographic lens, nearly a foot in diameter, made by the well-known optical house of Dallmeyer, show, according to a note in the *Revue Scientifique* (Paris, July 18), that large lenses possess the power of "seeing around corners" to a certain degree, thus justifying their use by photographers in taking portraits. The lens in question was constructed in an attempt to take photographs of natural size, without subsequent enlargement. The correspondent tells us that a week was occupied in calculating the exact form and arrangement of each of the lenses to be used in the camera, before any work of construction was done. We read:

"This preliminary study being finished, it was seen that the theoretical data could not be realized at once in practise. The lenses must be 11 inches in diameter, and the glass-makers had no blocks of this size in stock. It was necessary to wait six months for the raw material. Fortunately, the grinding and polishing of the four lenses were executed without accident, and the instrument was tested and pronounced excellent. . . .

"As the diameter of the lenses greatly exceeded the distance between a man's eyes, some singular results might be expected. A thin plate was photographed, painted on each side with alternate black and white stripes, so arranged that a black band on one side was opposite a white one on the other. This plate was placed 20 feet from the object-lens and photographed in four different ways, as follows:

- "1. With the object-lens covered, except for a little hole in the center;
- "2. With the object-lens covered, except for a little hole at the right;
- "3. With the object-lens covered, except for a little hole at the left;
- "4. With the object-lens completely uncovered.

"Test No. 1 gave a photograph like that which would have been obtained with an object-lens of the same focal length, strongly diaphragmed. Tests 2 and 3 gave photographs like those that would have been obtained by moving an object-lens of the same focal length five inches to right and left. Finally, Test No. 4 showed both sides of the plate at once. These photographs thus confirm what theory would cause us to expect: an object-lens of large dimensions has the curious property of seeing around corners. Portrait photographers have always maintained that large objectives give more roundness and modeling to the face than small lenses, and their preference for large apertures is justified, not only by the rapidity of exposure effected with these instruments, but also by the stereoscopic effect that they produce."—*Translation made for THE LITERARY DIGEST.*

ANIMALS THAT LIVE WITHOUT DRINKING—Dr. Blandford assures us, says *Cosmos* (Paris, July 9), that the antelopes that live in the sandy desert between Lake Chilka and the sea are unable to obtain water. If this assertion has not convinced all the physiologists, they should consider the evidence presented by another case reported by Dr. Drake-Brockman. Since 1910 a herd of gazelles have lived on the little island of Saad-ud-Din, on the coast of Somaliland, where there is no source of fresh water and where there is not more than three inches of rain annually. The gazelles, therefore, have no means of slaking their thirst except at very rare intervals, and as the vegetation is scarce, they have not even the opportunity, during the dry season, of supplying the lack of water by consuming bulbous plants rich in moisture.—*Translation made for THE LITERARY DIGEST.*

Referring to the article on a keyboard for the violin, quoted in our issue for July 26, Dr. Benjamin Newhouse, of Washington, writes us as follows: "In 1899, fifteen years ago, a Mr. Frank T. Benjamin, of Hazzer's Hall, Baltimore, Maryland, used this identical paper guide, which was glued to the finger-board under the strings. I call your attention to this fact so that the credit for this may be placed to Yankee ingenuity. I was a scholar of Mr. Benjamin's and used this printed paper guide myself in 1892."

LETTERS AND ART

THE TO-MORROW OF EUROPE

MUCH GRAVITY was observed in the French capital at the moment war was declared; in London there was some jubilation. Not from the reflective ones, perhaps, but from the crowd that always flings up its hat. On August 5, a few hours after England had declared war, Mr. Harold Begbie wrote for the *London Chronicle* this reflection on the "To-morrow of Europe." In particular he exhorted the crowd in the street not to put on paper caps and "march through the streets waving penny flags, breathing beer and singing 'Britons never shall be slaves.'" "Let us not sing boastful songs!" he writes. "Honor may call us to fight, self-preservation may force us into the slaughter-house; but let us wear on our sleeves the crape of mourning for a civilization that had the promise of joy, and strike our enemy without a hiccup or a curse. Never shall we know again what is now perishing. And we shall want all our strength for To-morrow."

The inconvenience caused by the upset of our daily habits, particularly of those of the thousands of our American fellow citizens traveling abroad, is already acutely felt. How many have reflected on the change in the deeper streams of life that Mr. Begbie here calls attention to:

"This war means the sudden stopping of a clock by which we moderns have regulated not only our meals, not only our journeys, but the habits of our minds. The big stick of brutal force has been suddenly thrust into the exquisite and delicate mechanism of civilization. The wheels cease turning, the hands are arrested, and the peaceful, friendly, and most familiar tick-tack of our human existence dies into a silence not yet broken by the clangor of guns, the groans of the dying, and the noise of falling thrones. Already, now at this moment, civilization stops—stops dead. We in England, who have done nothing, and even now may do nothing in the war, are hurled suddenly back into barbarism. We arm; but it is against hunger. We mobilize; but it is against murder. Religion, philosophy, literature, painting, and, chief of all, perhaps, science with its torch at the head of our human hosts, are suddenly flung backward; they become of no moment. Who wants to know about immanence? Who cares to hear what Bergson and Eucken think? Who bothers about books and pictures? Who is ready to endow a laboratory or listen to the chemist and the biologist? We are back in the age of sticks and stones, but perishing science—'so the struck eagle. . . .—has armed us with other weapons; the slaughter will be more hideous, the ruin will be more calamitous, and for nobody will there be a crown of glory."

"All that has made this strange experience of conscious human life interesting, ennobling, and hopeful has rested upon commerce; and commerce has been what it has been because of two things, credit and good manners. Where is credit now? At banker in London, what British merchant, ever dreamed

a week ago to hear of such a thing as a moratorium? And where are good manners gone? Look for them in Asia, but not in Europe. At every Christian frontier you can pick up a broken treaty and a dishonored bond."

"Mr. Norman Angell told me this morning that out of this war—'everybody fighting and nobody wanting to fight'—two changes of transcendent importance will emerge. We shall have a Cossack Europe, and New York will henceforth be the center of credit. Russia must win. She calls a million sixteenth-century peasants from the fields and Germany mows them down. Another million take their place. Death again. Another million. And yet another million of these sixteenth-century peasants. And when it is all over, those who are left will go back to their fields."

"But Germany, France, England, particularly England and Germany, where will they turn when the million dead are shoveled under bloody soil? The bricks and mortar of industry may be still standing; but where will credit be found? And what will the millions of starving factory-hands be doing? How shall we get upon our feet? Where is the clockmaker who will mend the smashed wheels and set the pendulum swinging once again? Happy the Russian peasant who will go back to his sixteenth century and his field, telling the time by the sun's shadow. Industry in Europe, with other things of older date, will lie in ruins."

"In three months from now the democracies of Europe will be crying out for a return to normal conditions. The war fever will have spent itself. The war lords will be confronted by their outraged and maddened victims. What will they

answer? Men will want work, they will want wages, they will want food. Europe will ask for these things, and the war lords will be driven to answer. Which of them, with all his wisdom and strength, will be able to restore three centuries of human progress? Normal conditions! These normal conditions are the fruit of 300 years of evolution, 300 years of moral and intellectual evolution—a labor not of yesterday nor of pigmies. Destroy normal conditions and you destroy to-day, yesterday, and all the yesterdays of European civilization. Expect, then, a bewildering To-morrow."

"Armaments have broken the back of the laborer; and with the fall of the laborer all things fall, all things come to earth. Because of the war lords, and only because of the war lords, the man of science is paralyzed, and civilization stops. Humanity has been fooled. Too late it discovers it."

"Remember this, too. Among the young conscript soldiers of Europe who will die in thousands, and perhaps millions, are the very flower of civilization; we shall destroy brains which might have discovered for us in ten or twenty years easements for the worst of human pains and solutions for the worst of social dangers. We shall blot those souls out of our common existence. We shall destroy utterly those splendid burning spirits reaching out to enlighten our darkness. Our fathers destroyed those strange and valuable creatures whom they called 'witches.' We are destroying the brightest of our angels."

A SAFE DEPOSIT.

—Kessler in the *New York Evening Sun*

ANOTHER LITERARY MAN'S VIEW

VERY DIFFERENT from Mr. Harold Begbie's view is the view of Mr. Bernard Shaw. He is not troubled with visions of spiritual calamity. In a sense he puts on the paper cap, and while he kicks up his heels, he intends that the blow shall hurt England, too. To the *New York World* he seems "a jingo, a pacifist, an indifferent socialist, and the lover of a bloody fight when it suits his own notions." It further points out that "Mr. Shaw disapproves of British diplomacy no less than of German militarism. He sneers at the modern labor movement, whose politics is international, because it would have stayed England's hand and left militarism supreme at Berlin. He holds in contempt the "peace-retrenchment superstition," and regards Asquith and Grey as moral weaklings. He is strongly in favor of peace, but would have defied Germany to declare war by threatening her with violence." Mr. Shaw proves to *The World* that he has "an agile mind, an elastic philosophy, and an individual point of view." What he had to say was communicated to *The Daily News* (London). As the English papers are much delayed in reaching us, and come irregularly at that, we quote from a special cable dispatch to the *Philadelphia Public Ledger*:

"Now that we are at war, it is well that we should know what the war is about. To begin with, we were not at war because Germany made an infamous proposal that we should allow her to violate Belgian neutrality. If it had suited us to accept that proposal, we could have found plenty of reasons for accepting it; advocates of our own neutrality have found some of them already; no more infamous than the diplomatic reasons we have given in the past for courses which happened to be convenient to us. Let us, therefore, drop it.

"Our national trick of virtuous indignation is tiresome enough in peaceful party strife at home; in war it is ungallant and unpardonable. Let us take our pugnacity to the field and leave our hypocrisy and our bad blood at home; they weaken a heroic fighter and encourage only blackguards. This war is a balance-of-power war and nothing else, and the fact that we all have to face is that if our side is victorious the result will be an overbalance of power in favor of Russia, far more dangerous to all the other combatants than the one we are fighting to redress.

"Prussian militarism has bullied us for forty years, and months ago neither Germany nor France believed we would fight when we came to the point. That is why there was such a wild explosion of delighted surprise when the French Chamber learned that we were game. After all, that is why the Kaiser, the reckless of every other interest concerned, offered us the best excuse he could invent for our neutrality. But even we were only too ready to snatch at it, and that is also why we had to take off our coat and sail in. We had to show that when it comes to the balance of power we were no mere dummy weight in the scale.

"Our immediate business is, therefore, to fight as hard as we can, for our weight when the settlement comes will depend on the part we shall have played in the conflict.

"Meanwhile, political influences of organized labor at home must not be wasted in idle and exasperating platitudes about the wickedness of war and the extravagance of big armaments and the simplicity of non-intervention and all other special interest planks of the old peace retrenchment and reform platform.

"The difference between the foreign policy of the socialist and the foreign policy of capital is simply that capital sends the flag at the heels of commercial speculation for profit, and socialism would keep the flag at the head of civilization. Capital, which is badly wanted at home, is sent abroad after cheap labor. Financiers use control of the army and fleet, which they obtain through Parliament, solely to guard their unpatriotic investments. That is the root of the present mischief.

"France, instead of using her surplus income in abolishing French slums and building up French children into strong men and women, has lent it to Russia to strengthen the most tyrannical government in Europe. And to secure interest on her loan, she has entered into an unnatural alliance with Russia against her more civilized neighbors. We have no right to throw stones at France on this account, for we made an agreement with Russia of a still more sordidly commercial character for the exploitation of Persia with capital that should have fed our starving children.

"And now mark the consequences: Germany with hostile France on one side and hostile Russia on the other is in a position so dangerous that we here in our secure island can form no conception of its intolerable tension. By our blindness we have brought about the war. We have deliberately added to the strain by making a military and naval anti-German alliance with France, without at the same time balancing its effect by assuring Germany that if she kept peace with France we would not help Russia against her, nor in the last resource allow Russia to advance her frontier westward.

"Is it to be wondered that Germany, with a chronic pride in its militarism, raised to desperation by the menace of Russia, France, and England, made a wild attempt to cut its way out, after a despairing appeal to us to let it fight one to two instead of one to three?

"Let us be just to Germany. It may serve her right that she frightened us so much that we became incapable of realizing that our terror was nothing to hers, but if we had been true to civilization and kept our capital at home and our honor untarnished by squalid commercial adventures in the East, we should have controlled the situation and kept the European peace.

"History will not excuse us because after making the war inevitable, we run around at the last moment begging everybody not to make a disturbance."

AS A MEANS OF POPULAR EDUCATION

THE SALE OF MAPS has taken a great bound in the past weeks, and it is safe to say that they are assiduously studied. Nearly all the great New York newspapers have hung out maps of Europe, and the crowds that study them are almost as large as those reading the bulletins. "One of the sure results of the war will be the geographical education of the public" comments the *New York Evening Post*, with the prophecy of surprising happenings to the map:

"General conversation in the cars and on the street shows that the ideas of the average man are vague enough, once he goes beyond the elementary facts regarding the situation of Paris and Berlin and the location of Belgium somewhere north of France. Especially in the matter of distances is there a fine uncertainty, for which, however, there is a very legitimate excuse. On this point we are in the opposite position to the mythical Englishman who planned half-day excursions to Chicago and Omaha from the Waldorf-Astoria. With our own vast spaces in mind, we find it difficult to visualize the contracted scheme of European geography, to grasp the fact that Paris is about the same distance from the German frontier as Albany is from New York, or that the possible theater of war in Belgium is included within an area fifty miles by fifty. Within that space Belgian soil is thick-strewn with battle-fields running back through the Napoleonic wars and the campaigns of Marlborough and the generals of Louis XIV. to the beginnings of the fourteenth century and the wars of the Flemish burghers against the rising French monarchy.

"On the other hand, this very circumstance makes an intelligent study of the war possible to the newspaper reader who is willing to make use of existing maps. Outside of Europe, war is a maker of geography. It puts obscure places on the map in the sense that they are new to even the fairly well-trained geographer. In Manchuria, names like Kin-chow and Mo-tien-ling were beyond the expert. The Boer War brought geographic recognition to Spion Kop and Magersfontein; and only the most scholarly of map-makers up to two years ago took account of Lule Burgas and Tchataldja. It is different with the battleground of the present war. We do not know what village in Belgium, northern France, or Alsace-Lorraine may leap forward into permanent fame, but once the name is cabled over to these shores, it is safe to say that it can be found on most respectable maps."

An eager and determined searcher for a good effect of the war in Europe, chimes in the *New York Times*, might claim to have found it in the fact that innumerable people who hitherto have talked little except shop and gossip and sport are now devoting no small part of their time to the discussion of subjects that have at least the merits of being large.

"Of course, not all that one hears about the great conflict is

based on profound knowledge of history and international politics, but none of the excited debaters is without some information of the countries and interests involved, and frequently a 'man in the street' whose appearance is most unpromising shows a surprisingly clear comprehension of what is going on, and where, and expresses opinions that reveal intelligent thinking.

"The baseball scores displayed by the newspaper offices still have their faithful votaries, but they are neither as large nor as devoted as formerly, while the crowds in front of the war bulletins are enormous and permanent. No listener to what is said by the watchers there can have any doubt that the sentiment by far prevailing in this town is—well, for the 'entente' and against the 'alliance,' and it is a curious fact that no oftener before the bulletin-boards than everywhere else is responsibility for the war put on the nation that did the actual starting of it. Her act of ruthless aggression is passed over as characteristic and expected, while her ally and defender is treated, both by those who praise and those who blame, as the real originator of strife.

"And the New York's population has many representatives of all the countries at war, they get along well together, on the whole—marvelously well. Hot words are occasionally exchanged when prophecy has gone far, but resort to the argument of fists is rare and the bystanders usually interfere before much harm is done."

The *Times* also pictures the compensating phases of the lot of our suffering compatriots abroad:

"Theirs will be the Vergilian joys of remembering all these wild happenings, of rehearsing them endlessly to interested relatives and acquaintances at least decently resigned, and of being freed for the rest of their lives from the common necessity of filling in conversational gaps with talk about the weather. It is no small thing to have been even an involuntary part of historic events, and enviable indeed is he or she who can turn to a page in history and say, 'All this I saw and some of it I was.'"

DUSE'S GIFT TO HER SISTER ARTISTS

AT THE EVENING of her life, Eleanora Duse has turned the accumulations of a prosperous career over to the purpose of giving comfort and delight to her sister artists. She has established in Rome for the benefit of young actresses "*La Casa della Duse*"—the House of Duse. That, indeed, is the name by which the mansion located in one of the pleasant and accessible suburbs of Rome will be known, tho the modesty of the famous actress long led her to protest against the title. The nearest analogs to this institution are likely the Three Arts Club in London and the Gamut Club of New York. Here the women whose interests or occupations ally them with the arts of music, painting, and the drama find a center for discussion and recreation. In *La Lettura* (Rome) the new House of Duse is described, and the actress herself is quoted as protesting against the name,

"Because the material house, the walls, the roof, the doors, the windows, the furniture, the tangible things, have a secondary and negligible importance in this which is meant to be an asylum for the soul, a spiritual refuge which will offer peace to the heart, serenity to the mind, repose to the brain, intellectual well-being, pure and wholesome nourishment to the imagination, living water and whole bread to appease the insatiable hunger and inextinguishable thirst of the divine populace, always ill

nourished. For it is the material house, the house of bricks and stone and mortar, the house of goods and chattels, which I give; and all the rest, the life, the soul, everything else, must be given by them, the little actresses, by their presence, by their intelligent pleasure in these spiritual benefits; it is they who must create therein the multiplex and multiform soul, thrilling and trembling like an organ of a hundred pipes, vibrant and piercing as the fanfare of a hundred trumpets, fragrant and fresh as a nosegay of a thousand flowers. It is I who have dreamed and willed the advent of this multi-souled spiritual refuge, but it is to my little companions in art, my fresh, modest, unknown little sisters, that I have confided the realization of the dream."

The mansion is pleasantly situated at some distance from the city on the right-hand side of the Via Nomentana, descending toward the tomb of Saint Agnes. A number of tram-lines from the most various parts of Rome—from the Piazza Venezia, near the Teatro Nazionale; from the Pantheon, near the Teatro Valle; from the Cancelleria, near the Teatro Argentina; from the Esedra near the Teatro Costanzi—converge toward the most direct and important line which descends from the Porta Pia toward the Aniene valley along the magnificent Via Nomentana, one of the most beautiful and majestic roads to be seen in Italy. The writer continues:

"The Casa, then, is far away, remote, not exposed to the glance. This distance makes a pause and a transition. . . . This difficult access creates a state of soul. This little street buried in verdure and silence, these hundred steps which delay the desire for silence and

repose, are a preparation and an initiation. One does not enter here as into a café, bearing with one the echo of gossip, the bitterness of a calumnious reference, the irritation of a quarrel on the boards, the rancor caused by a harsh and unjust criticism. The Casa della Duse is far from all this, far enough . . . and to me this appears its sweetest charm. . . .

"The house was opened, after scarcely two months of preparation, with beautiful rooms well arranged for study, conversation, reading, writing, music, or to do nothing in. How delicious to do nothing, *far niente*, in such an atmosphere! There are small, bright bedrooms full of light and sunshine, very simply furnished, for a long sojourn or a brief *villeggiatura*, or a period of study and reflection. There are deep and ample easy chairs to lounge in for long hours, and small, light chairs to carry out under the trees; there are large and small writing-desks, an excellent piano, the shade of trees, and the perfume of flowers. . . .

"Thus is the Casa, and it was solemnly inaugurated with a most elegant tea-party, which reunited many illustrious personalities; many beautiful and elegant persons; many—too many!—princesses, marchionesses, countesses; many novelists, story-writers, gazetteers, dramatic critics, and authors, poets, author-esses, artists, feminists, and journalists; everybody representative of society and the arts, from the Principessa Teano, tormentingly beautiful, and the Contessa di San Martino, exquisite in her indefinable and ineffable elegance and seductiveness, to Grazia Deledda, in her serene elevation to the highest and purest literary glory, and Tina di Lorenzo, on her ideal throne of perfect and complete actress and lady. . . . And in this perilous encounter and shock of two aristocracies, that of birth and that of genius, the little white house among the verdure did not tremble on its base. It is solid, therefore, both as a building and as an institution."

Mottos are inscribed over the doors, in the English fashion, which prevails throughout the house, such as "One does not live by bread alone." etc.

ELEANORA DUSE.

Retired from the stage, she devotes her fortune to founding a club for her sister artists.

WAR AND THE BOOK TRADE

THE PRINCIPLE of the survival of the fittest seems likely to apply with considerable vigor to all the industries that minister to the people's reading. The small authors will be hard put to get their writings published, in England especially, and England has furnished a greater quantity of our reading-matter than is casually realized. Our own publishing trade is beginning to face results of the war's blockade on imports, as *The Publisher's Weekly* (August 15) points out:

"Shut off from the world's supply of tin, England, the price of that metal has gone up in the last ten days by leaps and bounds, which means that linotype, monotype, and allied alloys are going up in response.

The week has seen a 100 per cent. rise in tin in the New York market and a cent a pound rise in linotype metal. Which means that composing-rooms will husband their supplies and buy no more than they positively have to till his abnormally high price falls off.

"The paper outlook, since paper is not, like the type metals, capable of indefinite reuse, is more serious. . . . Normally, the United States is both an exporter and importer of paper, in about equal amounts, around one thousand tons a day. Unfortunately for the book trade, however, the imports largely represent book-papers. Besides this, we import largely the raw materials of our

letter grade papers in the forms of chemical wood-pulp from Germany and rags from all over Europe. A 5 per cent. rise in news-paper is already listed, and an equal or greater rise in all book-papers is immediately probable. The likelihood is that this country will be supplying most of the world's paper for some months to come, and that will mean prosperity for our paper-mills, and incidentally higher prices all long the line."

The *Chicago Evening Post* reviews the changes that are likely to befall our book import trade, and takes a glance at a further future:

"Not only are a majority of the large holiday books, with their tempting colored plates, printed in England, but practical treatises on every subject under the sun, numbers of scientific books and practically all of the philosophical books of first-rate importance are printed on the other side of the water.

"Then there is fiction, in which branch of literature even the most patriotic American would admit that England is largely head of us. The American reader will doubtless soon have opportunity to notice the difference in the booksellers' displays when we have to rely on native talent alone.

"And when the stream of importations is resumed, how different it will probably be in its aspects! The attention which the English are bestowing upon the war and the straitening of their means of subsistence will probably put a number of minor writers, and perhaps some few publishing houses, out of business entirely. The character of the novels and poems that do get themselves into print will be changed. The water will be very effectually squeezed out of all English literary stock.

"But, on the other hand, we can imagine that Thomas Hardy may, out of the vast drama that is now unfolding before that calm gaze which already in imagination has seen Napoleon weep Europe, write another poem comparable to 'The Dynasts.' Or, if that is too much to hope for, there are younger

men, men like Lascelles Abercrombie, from one of whom some not inadequate emotional interpretation of this vast tragedy may come."

Specialists, like dealers as well as collectors of rare books, will find a greater difference than any, since their activities move distinctly within the spheres that are counted as the luxuries. The *Boston Transcript* glances in this direction:

"Book collectors and dealers in old and rare books are alike viewing with apprehension the general European war, which bids fair to have a decidedly bearish effect upon the market for their wares. It is to be expected that foreign collectors will turn their attention to other matters than book-collecting for some time to come, and it is not unlikely that a vast amount of foreign material will come into the American market to be disposed of here for what it will bring, altho it is by no means an easy matter

to guarantee that consignments of foreign books to this country will not be regarded as prizes of war. In fact, the shipment of any very large number of valuable books to this country from Germany or England might be considered lawful prey for the enemy. Thus history would be repeating itself. The libraries of the Ptolemies were augmented by devices of war. When a vessel laden with books entered one of their harbors, the captain was forced to surrender them, but he was given copies in place of the originals—an 'amenity' which would hardly be followed in the present warfare.

"Within the last decade the United States has been a tremendous

importer of rare books, the accretions to this country's libraries, public and private, being estimated at a million dollars a year. While shipments from the United States can not naturally be regarded as contraband of war—in the sense that they are designed to give 'comfort to the enemy,' they may be such—the interchange of books between America and Europe will be appreciably curtailed for some time. Meanwhile, American collectors will be likely to restrict their buying, altho dealers will be in some cases forced to cut down their prices, and thus afford a rich opportunity to the collector here. Many American libraries, like the splendid one of Zelotes Hosmer, were sacrificed during the Civil War, and it is probable that a similar fate will come to some of the great foreign collections during the present war. A general restriction of activities is likely in the book-collecting world and the auction-room."

The *Springfield Republican* predicts the immediate changes in the character of our reading matter:

"A world event of such transcendent importance will not only create a demand for a special literature, if a literature devoted to so enormous a subject can be called special, but it is likely, also, to have a marked effect upon literary taste. Some subjects which have grown to immense dimensions in a time of prolonged peace will be obscured by the clash of arms. For example, the literature of feminism, too swollen and too widely theoretical to be entirely wholesome, is likely to have a check; woman's world in general will shrink temporarily while battles rage. There will be less attention for the exploitation of vice or the discussion of sex, or for most kinds of problem literature, and perhaps some surcease of miscellaneous agitation will do no harm. But writers who can tell a stupefied world what this fearful portent means, who can throw light on the great fundamental problems of the race, and give some hint as to its destiny, will have an attentive and even anxious hearing. War books, of course, will be in demand."

THE SPIRITUAL REFUGE.

Near Rome stands this gift of the Great Duse "to my little companions in art, my fresh, modest, unknown little sisters."

RELIGION AND SOCIAL SERVICE

HAS CHRISTIANITY BROKEN DOWN?

IF THE CHURCHES throughout the world possess the same candor as the stock exchanges they would do what the latter have done—close their doors. So writes the Rev. G. Monroe Royce, a Protestant Episcopal rector of New Windsor-on-Hudson. He puts the solution of the war question squarely up to the churches of Christendom, who preach the gospel of peace, and go forth to war almost to a nation, among those who are profest followers of Jesus. "What a spectacle we Christians are to the non-Christian world, whom we in our

of things, popes, patriarchs, bishops, and churches would hardly be needed.

"But one has a right to expect that, after nineteen hundred years of civilization calling itself Christian, the Church and her ministers should have influence enough, power—downright moral and spiritual power—enough to prevent the savage, the brute instincts of mankind dominating not only kings and other rulers but the whole body of people composing the nations of Europe. This much we have a right to insist upon, and if the combined influence of all organized Christianity can not bring about such a result, then it is, I think, perfectly fair to conclude that the Church machinery has broken down; that it does not do what it professes to do, and is not worthy the support it is receiving. Of course, I am acting upon the assumption that the people who support the Christian Church do so with the expectation that it will not only teach the principles of Christianity as beautiful sentiments, but will insist that at least the fundamental principles of Christianity must be regarded as controlling forces by organized society, such as states."

Something of the same challenge to Christianity is put by the Rev. W. S. Rainsford, formerly of St. George's Church, New York. He addresses the same paper in these words:

"Can these men and nations, bent on wholesale murder, in any real sense be Christians at all? Is there any connection whatever between the teachings of Jesus and what they believe?"

"How can any man kneel to the God and Father of Jesus, and then rush forth to kill his fellow men?"

"And from such questions there must in the minds of many arise another—since, at least temporarily,

all the restraints of the Christian religion have been by millions cast aside. Are the commands of Jesus, the things he stood for and died for, are they practical? Can mankind in the gross ever be expected to live by them? Are they not as angels' food, too high and pure and holy for our actual grosser life?"

"Looking squarely at things as they are, can we believe that a spirit of obedience to the Lord of Peace and Good Will will some day 'cover the earth as the water covers the seas' and at last 'war cease in all the world'?"

"What answer can we make to such hard questions? Yet all men who think and feel must make some answer, are ever making answer now, must either admit that Christianity has proved a failure, that it can not restrain the beast in man, or that, in spite of this horrifying outburst of barbarism, a clearer, saner, more brotherly idea of life is slowly growing in the mind of man."

"Can any one who observes the course of things doubt that the spirit of brotherliness is growing?"

"Can any of us, looking on in stupefaction at this tragedy of the nations, yet doubt that for every such awful, if temporary, return to moral chaos, a mighty revulsion of the spirit must arise against war?"

"Surely not in the minds of onlooking millions only—not even in the hearts of those other many millions torn by agony as they part with the men who make life to them worth the living—but also in the secret thoughts of those advancing hosts, innocent boys and men in life's prime, marching forth from homes they have builded and from women and children they have loved, marching at the bidding of they scarcely know what, into the valley of the shadow of death."

"Of what are they all, these embattled millions, thinking?"

"War brutalizes some men, but these are the few, the men in whom the beast is already predominant. It does not brutalize the good man, and those who know its dreadful reality are for it filled with loathing and hatred. So much we know."

"In spite, then, of this last failure of Christianity to influence the conduct of nations, certain things are sure, and to them let us hold fast."

"The spirit of Jesus has given to the modern world a new

THE CHIMES.

—Bradley in the Chicago Daily News.

self-glory call heathen!" he exclaims in the New York *Evening Post*. At the same time he points out the ironic fact that "we are spending millions of money in the vain effort to convert these heathen peoples to our way of religion. What a mockery! What a farce!" He would have us "tell these popes, patriarchs, bishops, churches, and missionary societies that if they can not prevent such direful carnage, such a universal outrage upon humanity, we refuse to contribute one penny to their support." We read further:

"That Christianity continues to exist in the outward seeming is most true. True, there are still popes, patriarchs, bishops, missionaries, and thousands of churches where the Bible is read and prayers are said the year round. But if these popes, patriarchs, bishops, ministers, and churches all combined can not enforce upon the nations of the Christian world the first principles of the religion they profess, then it is perfectly evident that Christianity has broken down—in practice, at least—and the question presents itself to practical minds, why this waste of men and money upon a mere theory of life that is not workable; upon a mere sentiment which has no practical value. The modern world boasts of its efficiency, of its practical, utilitarian ability, and yet it is spending millions upon millions in the support of Christian churches, Christian ministers, Christian missionaries, whose sole reason for existing is that they undertake to persuade men and nations to live in harmony with the essential principles of Christianity, which are love to God and man. But the actual conduct and character of the Christian nations of the world at this moment, as revealed by the state of things in Europe, strip the churches and their ministers of all spiritual significance. To put it in plain language, it seems that they are not doing what they profess to do, and what they are paid for doing, and hence there is a vast waste of money and energy."

"Of course one does not expect—outside of Utopia—a condition of things where all mankind will live according to the law of love; and moreover, did there actually exist such a state

sense of pity. It has given it a new sense of neighborliness; multitudes feel, as never before, they are their brother's keeper.

"It has limited the ordinary man's power as well as his wish to revenge his personal wrong. He has less recourse to bludgeon and sword, and more to arbitration.

"Here, then, are undoubted facts. In these directions the teachings of Jesus have profoundly influenced modern life. If national life and racial passion still resist Christian morals, is it not reasonable to suppose that it must leaven and purify even these as it has modified and softened man's contact with man?"

There is a cool irony in the lay preaching of Mr. Simeon Strunsky, who furnishes the department of "Post Impressions" in this paper. In the issue of August 15 he writes:

"I sometimes think that the disadvantages of believing in one single ruler of the universe must be painfully present to the war lords and the cabinet ministers and the bishops, archbishops, and patriarchs when they prepare to go to war. In Parliament and before their congregations they assert, of course, that Providence is on their side. But in their heart of hearts they must sometimes have their doubts whether the Power whom they claim as an ally may not turn out to be only a judge. For the purposes of war, paganism has an enormous advantage over monotheism. What a nation needs when it is preparing to kill more of its neighbors than its neighbors can kill of its own citizens is a tribal god upon whom it can count for undivided attention and sympathy. Berlin could then address its petitions to Moloch, Paris to Beelzebub, London to Dagon or Neptune, Rome to Ashtoreth, with utter confidence and with no danger of confusion.

"For obviously there must be confusion when many nations, professing the same creed, are compelled to use very much the same formulas of prayer, inserting only the respective name of the country and its ruler. A private tribal god, upon whose exclusive services the war leaders might count, a private book of prayer embodying the really important facts to be brought to the attention of the tribal god—that is the ideal to which the nations of Europe in arms ought to strive. . . .

"Or shall we say that Christianity is like the neutrality of Belgium, which is under the guaranty of all the nations and inviolate in times of peace, but which must not be allowed to stand in the way of the interests of a people on the road to great things? Here again, I am impelled to point out the advantages of paganism and the system of tribal gods. Take the most practical people of antiquity, the Romans, and see how admirably the system worked in their case. They had a tribal god whom they called Janus, and whenever the Romans were at war the doors of the temple of Janus stood open. In times of peace the doors were closed. A thoroughly unsentimental people, the Romans, when they needed the help of their tribal god, opened the doors and presumably address their invocations to him. When peace came and they felt that they could dispense with his protection, they closed the doors upon him and went about their business."

KILLING THE BOYS—The provisions of Mr. Begbie's article quoted in the department of Letters and Art are being fulfilled in reports from the war seat, and other papers besides the *New York Evening Post* comment on the youth of those among the slain. The matter is driven home here:

"The German, like the French, standing army is, of course, composed of boys between the ages of eighteen and twenty-four. Each year a third of the army goes back to civilian life and a new third is recruited. None of these are, of course, married; hence there are few widows being made by the German fighting around Liège, if this is any compensation for the loss of the flower of the country's youth. It is only when the French and German reservists join the first line that married and older men are in action. This is, by the way, quite unlike the record of our own volunteer regiments in which so many of the men were married. As for the French and German non-commissioned officers, they are, of course, in large part professional soldiers and family men, like their officers. But their soldiers are too often mere boys just out of school, without the faintest appreciation, perhaps, of what the war is all about. In a sense, these armies are democratic, because the sons of rich and poor alike serve; the educated for a year only, and perhaps in crack regiments; but there is no class in France or Germany that will not pay a terrible price in young men for the inhumanity that is going on to-day."

WHY CHILDREN LIE

THE NUMBER OF PERSONS put to death in every land and age because of the lying accusations of children is "impossible to estimate," says H. Addington Bruce, in the September number of *The Pictorial Review* (New York), and he notes as an instance that "in our own country the Salem

AS OTHERS SEE US.

—Tutthill in the St. Louis Star

witchcraft delusion, with its sad record of persecutions and executions, was distinctly a product of children's lies." While, of course, the writer is willing to admit that "usually . . . children's lies are comparatively harmless to all except themselves," still they often result in "disaster" to others, and he cites various recorded cases in proof of this statement. This propensity to deceit among the young, he informs us, is "a phenomenon that has only of recent years been studied with the care it deserves," and he adds that "if there is any one thing that modern scientific research into the working of the child's mind has demonstrated, it is the absolute falsity of the old-fashioned doctrine that children lie from 'innate depravity' and that the only sure cure for lying is a sound flogging." Proper training alone, we read, is the safeguard of the child, described as being "an animate entity of nerves, tissues, and muscles co-ordinated and governed by an indwelling principle—call it spirit, soul, or what you will—that expresses itself to good or bad purpose according to the influences brought to bear in the course of the child's development." The writer goes on to say that:

"There may be, it is true, inherited defects of physical structure—especially defects of brain organization—that make a child peculiarly responsive to influences for evil; but even these can usually be counteracted by proper training. On the other hand, given improper training, the child with the best brain organization in the world is quite likely to develop into an inveterate liar and blackleg.

"And by the word 'training' is meant much more than the formal imparting of ideas of morality by pious exhortation.

Formal education in morality there should be, but it can not amount to much unless accompanied by the more powerful education of example and by an intelligent effort to study and meet the child's individual mental and physical needs.

"Particularly is it important—and this is something that parents nowadays often overlook—to reckon with the intense imaginativeness that is an essential part of the childish nature and which must be given a wholesome outlet, else it is almost certain to find vent in unwholesome ways—often in the concoction and dramatic working out of the most ingenious and sensational lies. This is especially likely to be the case if the circumstances of the home life are narrow and sordid or if the child is of an exceptionally emotional temperament."

In this connection the writer tells the story of a twelve-year-old girl with a talent for music who hoaxed her parents into the belief that the late President McKinley and his wife meant to adopt her and give her father a five-thousand-dollar job in Washington. This child had been carefully brought up and "taught to behave as a little girl should," and we read that:

"Not until the time of her cruel deception, did her father and mother have any reason to suspect her of being anything but a very good little girl. Unhappily, as part of their educational program, they had forbidden her to read story-books or books of poetry. . . .

"Forced to invent an ideal world of her own, the poor child found her happiness in picturing scenes and events wherein—in sharp contrast with the repression in which she was kept at home—she saw herself the center of interest. In this state of exaggerated day-dreaming the chance remark of her mother that some day she might play the piano well enough to be invited to perform at the White House acted as a suggestion that sank deep into her starving mind and formed the starting-point for a fantasy which, after she had seen Mr. and Mrs. McKinley. . . . became to her more or less of a reality. Her deception of her parents was not so much a deliberate, conscious lie as a hysterical act of rebellion against the fetters they had imposed on her imagination, in proof whereof is the interesting circumstance that among the things she bought with the money obtained from her father was a large collection of fairy-tales and novels!

"It was as tho she had instinctively understood and sought to remedy the condition that had made her a liar."

Among other cases in which the cause of lying is declared to be "the lack of proper material for the imaginings of childhood together with an abnormal desire to be the center of interest," the writer offers the story of one girl that pretended to have been kidnaped and beaten, and of another "who claimed to have been criminally assaulted." He speaks, too, of the *poltergeist*, or noisy ghost, "which amuses itself by knocking on walls and flinging furniture around," and tells us that "almost invariably when careful investigation is made, these amazing outbreaks are traced to some young boy or girl—usually girl." On discovery, their excuse is that "they did not know what made them do it," and, continues the writer—

"In most cases this plea is undoubtedly justified. It can not be too emphatically said that the natural tendency to regard such mischief-makers as merely naughty children deserving of severe punishment is wrong. They are, in reality, sick children, the victims of hysteria, and are impelled to their outrageous deceptions by forces of which they truly have no knowledge. As the psychologist, Stanley Hall, has so well put it:

"Without knowing it, these hysterical girls feel disinherited and robbed of their birthright. Their burgeoning woman's instinct to be the center of interest and admiration bursts all bonds, and they speak and even act out what with others would only be secret reverie. Thus they can not only be appreciated, but marveled at. Thus they can be of consequence, respected, observed, envied, perhaps even studied. So they defy their fate and wreak their little souls upon expression with abandon, and have their supreme satisfaction for a day, impelled to do so by blind instinct which their intellect is too undeveloped to restrain. And all this because their actual life is so dull and empty."

Another point made by the writer is that owing to the highly imitative nature of children "a considerable proportion of the lies told by children are at bottom due to nothing else than conscious or unconscious imitation of the doings and sayings of father or mother."

ANOTHER WAR TO WAGE

THERE IS A WAR for those of us who believe in reason—our eternal and holy war, says Mr. J. Lowes Dickinson. And it is laid upon us to wage it unceasingly in the future. Especially "in this dark hour of our defeat, let us not forget it." A war "for good instead of evil, for truth instead of lies, for love instead of hate." This is his contribution in *The Nation* (London) to the question of the morale of warfare, and he begins by drawing a picture of the present conflict:

"For the next few months, or it may be years, some fifteen millions of men in Europe, the physically best, those who should be the fathers of the next generations, will be engaged in killing one another, in starving the rest of the population, in stopping the production of useful and necessary things, in destroying the instruments of production, in pulling down all that has been laboriously built up during a quarter of a century of European peace. Not one of the men employed in this work of destruction wants to perform it; not one of them knows how it has come about that he is performing it; not one of them knows what object is to be served by performing it. The non-combatants are in the same case. They did not foresee this, they did not want it, they did not choose it. They were never consulted. No one in Europe desires to be engaged in such work. We are sane people."

Mr. Lowes Dickinson, who is a lecturer at Cambridge University, England, and the author of several notable works on phases of our present-day civilization, gives from the layman's point of view this notable reasoning against the reason of wars. He continues:

"For what, then, are these gamblers playing? Each says he is playing for safety. Each says the other is playing for power. We English believe we are resisting aggression. We may be sure the Germans do not believe it of us. We believe they are aggressors. We may be sure they do not believe it of themselves. Behind the action of all the governments is a theory—the theory of the balance of power. Behind the theory are passion—the passions of fear and of cupidity. Behind the passions is the whole long and tragic history of mankind. Of all this, common men are tools. The rulers play on them like pipes. And not only the rulers. Every journalist who has been sowing mistrust and hatred between nations, every historian who has used history to glorify or apologize for war, every man who has exalted passion at the cost of reason, is an accomplice in this crime. It is thus that war has come about. What can war achieve? It is no remedy for the disease it is intended to cure; it merely creates new conditions for another war. The catastrophe in which we are plunged must produce incalculable evils. It can not produce any good unless it should produce enlightenment. By enlightenment I mean the apprehension by peoples and governments of a different conception of policy to that which now prevails. The new conception is there, in the minds and hearts of all right-thinking and right-feeling people. It has not been able to control events, partly because peoples do not control governments, partly because peoples have not learned to cooperate with one another. But all men not blinded by theories know that the power to which governments sacrifice nations is an idol. In no real thing do the interests of nations diverge. What drives them into war is abstractions; and what gives the abstractions life will be engaged in killing one another, in starving the rest of the population, in stopping the production of useful and necessary things, in destroying the instruments of production, in pulling down all that has been laboriously built up during a quarter of a century of men. But into these realities the life of passion is only beginning to flow; along the old channels, once they are opened, it flows with fatal force. Let war be declared, and every individual in a nation is ready to lay down his goods and his life. That is why to some noble men war appears as a noble thing. But what makes it so is the passion that is misled into its service. That passion is needed for the real things, for good instead of evil, for truth instead of lies, for love instead of hate. To turn it into those channels, the friends of reason are always working. For the moment their voice will not be heard. But as this war pursues its dreadful course, as its fatal and foreseen consequences unroll, as the fact of what we are doing begins to penetrate from our senses to our imagination, as the dreadful awakening succeeds to the stunning shock, it will be for the friends of reason to drive home the lesson, first and chiefest into their own heart and brain, then, if strength be given them, into the conscience of mankind."

This date will mark the dividing line between motoring as it has been known and motoring as the future will know it.

The climax in motor car progress
 The utmost in motor car efficiency
 The maximum in motor car service
 The extreme in motor car luxury
 The practical things and the things
 worth while

For these and for all of the elements which contribute in the highest degree to the charms of motoring, the public has learned to look each year to the Cadillac.

Cadillac ideals, Cadillac engineering genius, Cadillac resources and Cadillac methods, are reinforced by the experience gleaned in the successful production of more than eighty thousand cars—the greatest number of the high grade type produced by any one maker in the industry.

The public, guided by a recognition of the Cadillac policy to avoid exaggeration and overdrawn statements and guided by its policy to under-claim rather than to over-claim, has always felt secure in accepting Cadillac representations at their full worth.

Therefore, when the Cadillac Company says that it is about to offer a motor car which marks developments and advancements so great, so vast, so widespread in their scope, that past achievements pale almost into insignificance, you are justified in looking forward to something which even the word "extraordinary" fails adequately to describe.

New pleasures and new comforts are in store.
 Luxuries of which you may have dreamed but for which you had hardly dared hope, are to become a reality.

Motoring will possess new charms. The word will have a new meaning and a new significance.
 You may draw a mental picture of your ideal car—of what it should be capable of accomplishing, of how it should perform.

You may place your expectations as high as you please.

We do not believe you will be disappointed.

Our formal announcement will be a revelation.

It will mark the dividing line between motoring as it has been known and motoring as the future will know it.

Cadillac Motor Car Co. Detroit, Mich.

CURRENT POETRY

PARADOXICALLY, the best war poetry written during the last few weeks has been peace poetry. Many American verse-writers have been moved to express rhythmically their indignation at the condition of European affairs; few of them have shown partizanship. And the two distinguished English poets whose patriotic verses are printed below have not succeeded in giving their words much fire.

The Laureate of Great Britain contributed this poem to the *London Times*, and it was cabled across to the *New York Times*. As a literary curiosity, it is not without interest.

Thou Careless, Awake!

BY ROBERT BRIDGES

Thou careless, awake!
Thou peacemaker, fight!
Stand, England, for honor
And God guard the right

Thy mirth lay aside.
Thy cavil and play
The foe is upon thee
And grave is the day

The monarch Ambition
Has harnessed his slaves.
But the folk of the ocean
Are free as the waves

For peace, thou art armed.
Thy freedom to hold.
Thy courage as iron.
Thy good faith as gold

Through fire, air, and water
Thy trial must be.
But they that love life best
Die gladly for thee

The love of their mother
Is strong to command.
The fame of their fathers
Is might to their hand

Much suffering shall cleanse thee
But thou through the flood
Shalt win to salvation,
To beauty through blood

Up, careless, Awake!
Ye peacemakers, fight!
England stands for honor
God defend the right

Mr. Stephen Phillips's poem is more forceful, but it is below the usual level of this sincere and accomplished writer's work. It also was cabled to the *New York Times*.

Liège

BY STEPHEN PHILLIPS

He said: "Thou petty people, let me pass
What canst thou do but bow to me and kneel?"
But sudden a dry land caught fire like grass,
And answer hurried but from shell and steel.

He looked for silence, but a thunder came
Upon him, from Liège a leaden hail.
All Belgium flew up at his throat in flame
Till at her gates amazed his legions quail

Take heed, for now on haunted ground they tread:
There bowed a mightier war lord to his hall:
Fear! Last that very green grass again grow red
With blood of German now as then with Gaul.

If him whom God destroys He maddens first,
Then thy destruction slake thy madman's thirst.

What the German, Austrian, Servian, French, and Russian poets are writing we can not yet know. Probably they are more concerned just now with rifles than with rime, with Mars than with the Muse. However, *The Fatherland* (New York) prints a poem by an American poet of German birth. The epithet applied to the Kaiser in the title is perhaps in questionable taste, for it is generally given to a ruler of no temporal kingdom. Also, only the heat of partizanship excuses the description of a great nation as "the wanton of the world." Still, angry men can not temper their words, and Mr. Viereck's poem is strong, vivid, and effective.

Wilhelm II., Prince of Peace

BY GEORGE SYLVESTER VIERECK

O Prince of Peace, O Lord of War,
Unsheathe thy blade without a stain.
Thy holy wrath shall scatter far
The bloodhounds from thy country's fane!

Into thy hand the sword is forced.
By traitor friend and traitor foe.
On foot, on sea, and winged and horned.
The Prince of Darkness strikes his blow

Crush thou the Cossack arms that reach
To plunge the world into the night!
Save Goethe's vision, Luther's speech.
Thou art the Keeper of the Light!

When darkness was on all the lands,
Who kept God's faith with courage grim?
Shall He uphold that country's hands,
Or tear its members, limb from limb?

God called the Teuton to be free.
Free from Great Britain's golden thrall
From guillotine and anarchy.
From pogroms red and whips that fall

May thy victorious armies rout
The savage tribes against thee hurled
The Czar whose scepter is the knout.
And France, the wanton of the world!

But thy great task will not be done
Until thou vanquish utterly
The Norman brother of the Hun.
England, the Serpent of the Sea

The flame of war her tradesmen fanned
Shall yet consume her, fleet and field
The star of Frederick guide thy hand.
The God of Bismarck be thy shield!

Against the fell Barbarian horde
Thy people stand, a living wall:
Now fight for God's peace with thy sword.
For if thou fail, a world shall fall!

Here is one of the best antiwar poems that has appeared for many a year. Mr. Griffin's energetic diction and graphic descriptions make his splendidly sustained poem a work of art as well as an argument. It was printed by the *Boston News Bureau*.

If!

BY BARTHOLOMEW F. GRIFFIN

Suppose 'twere done!
The lanyard pulled on every shotted gun.
Into the wheeling death-clutch sent
Each millioned armament.
To grapple there
On land, on sea, and under, and in air!
Suppose at last 'twere come—
Now, while each house and shop and mill is dumb
And arsenals and dockyards hum—
Now all complete, supreme,
That vast, Satanic dream!

Building
the Panama
Canal

In the construction of the "big ditch" hundreds upon hundreds of thousands of packages of **Grape-Nuts** food were purchased and sent to the lathmus for army officers, engineers, clerks and laborers.

A pretty good endorsement of this famous food, don't you think?

Great things are accomplished when brain and muscle are well-fed—well-trained.

Grape-Nuts
FOOD

has become a sturdy factor in many an enterprise that requires creation and upbuilding.

"There's a Reason"

Most every grocer sells **Grape-Nuts**—a food for muscle, brain and nerve.

15c the package—ready baked—ready to eat—crisp and appetizing—everywhere.

1915 Hupmobile

Car of the American Family

\$1200

Complete

For the third time the Hupp Motor Car Company has produced a car which will prove immeasurably superior, we believe, to any that assumes to compete with it.

The first Hupmobile 20 made for itself, and held against all rivalry, an immense following, at home and abroad.

The "32" put the Hupmobile into another class, and surpassed the "20" in world-wide popularity.

This new Hupmobile bids fair to eclipse them both, as the very utmost a motorist can desire.

A highly specialized, individualized, Hupmobilized motor car, which gives you, we believe, more service and comfort for your money than you can find if you comb the market a dozen times over.

Listen to the details:

Specifications

More Power

Motor, 3 1/4-inch bore by 5 1/2-inch stroke; cylinders cast en bloc, with water jacket space between barrels; valves 1 1/4-inch clear diameter, mushroom tappets, with special shape cams, very quiet; valve spring chamber closed by oil-tight cover, so that contacts are made in an oil-bath. New shape combustion chamber, larger valves and larger cylinder bore produce more power. Multiple disc clutch, with thirteen 13-inch plates.

New Type Carburetor

Horizontal type bolted directly to cylinder block. Gas passage between cylinders, so that intake manifold is heated its entire length, assuring complete vaporization of even the heaviest gasoline.

Improved Oiling

A system already highly efficient made still better. Pressure feed from flywheel to main bearings and connecting rod bearings; cylinder walls lubricated by mist from crankshaft.

Modern Ignition

Ignition from storage battery, with automatic spark advance. Type rapidly being adopted by progressive engineers.

Single Unit Electrical System

Generator and starting motor combined, driven by silent chain from front end of crankshaft. Supplies

current for starting, ignition and lighting. Makes motor non-stallable. Westinghouse 12-volt system.

Longer Wheelbase; More Room

Wheelbase, 120 inches; tires, 34 by 4 inches. Roomy five-passenger body; 2 inches more leg-room in front, 7 inches more in tonneau; full tufted upholstery; concealed door hinges, flush handles. Front springs, 37 inches long, practically flat; rear springs, semi-elliptic, 38 inches long, swung under axle; springs self-oiling. Brakes 14 inches in diameter.

Left Steer, Center Control

Steering wheel at left; gear change and hand brake levers at driver's

right. Speedometer, starting and lighting switches mounted flush in center of cowl board. Speedometer drive from transmission.

Non-Glare Dimmer Headlights

Hupmobile design. Upper half of headlight glass corrugated. Kills reflector glare, complying with many city ordinances and giving full illumination on road. One bulb in headlights, dimmed at will through resistance in switch. No side-lamps.

Equipment and Other Details

16-gallon gasoline tank in cowl; rain-vision windshield, fixed uprights, lower half adjustable for ventilation. One-man type top, attached to windshield. Crowned fenders, with flat edge and without beading. Tail lamp exclusive Hupmobile design. Illuminates license plate and entire width of road for considerable distance behind car. Non-skid tires on rear; demountable rims; carrier at rear for spare rim and tire. Lighting and ignition switches controlled by Yale locks. Speedometer. Roberail, foot rail and cocoa mat in tonneau. Color: blue-black with maroon running gear.

Price, f.o.b. Detroit, includes complete equipment.

Price in Canada, \$1400, f.o.b. Windsor, with complete equipment.

Improvements

Longer wheelbase
More room
Improved body
Improved upholstery
More power
Larger bore
Larger valves
Better carburetion
Improved combustion chamber
Special quiet cams
Valve tappets operating in oil
Improved motor lubrication
13 clutch plates
Intake manifold water jacketed
New type radiator
Improved steering
Easier clutch operation
Improved starting and lighting
Non-stallable motor
Improved ignition
Left drive
Larger pedal pads
Rear springs semi-elliptic
Longer front springs
Springs self-lubricating
Larger wheels
Larger gasoline tank
One-man type top
New windshield
Transmission speedometer drive
Lock on ignition and lighting switches
Automatic spark advance
Throttle lever on steering wheel
Ignition and lighting switches on cowl board
Exclusive non-glare dimmer headlights
Exclusive design tail light
Improved axle shaft and hub connection
Non-skid rear tires
Illuminated speedometer
Linoleum-covered running boards
New style top cover
New side curtains to swing open with doors
Crowned fenders
Heavier flywheel
14-inch brakes
Concealed hinges
Flush door handles inside

Complete with electric starter \$1050
and lights, demountable rims,
overhaul drive, 22 x 4; tire carrier at rear
With regular equipment of top, windshield,
gas lamps, etc., but without special equip-
ment noted above, \$940. Price f.o.b. Detroit.
Price in Canada, \$1230, f.o.b. Windsor, in-
cluding electrical and other special equip-
ment noted above.

Hupp Motor Car Company, 1243 Milwaukee Ave., Detroit, Mich.

REO

Motor Trucks

\$1650

Model J, Two-Ton Truck, including Chassis with Driver's Cab. Body Extra.

149 Different Lines of Business Find This The Ideal Motor Truck

Be honest with yourself, and your business. Sit down and figure out how much your present wasteful method of hauling is costing you—how much you could save by bringing the Reo Motor Truck to your business.

The actual figures will surprise you.

Perhaps you have imagined the first cost of motor trucks too high for you. The average cost of 54 leading makes of two-ton trucks is \$2701. The Reo Model J, a two-ton truck, everywhere acknowledged by experts as stronger and sturdier than other trucks of its rated capacity, sells for \$1650.

The First Cost Your First Saving

Right at the start your investment for a Reo Motor Truck is lower than the first cost of two teams and wagons. It easily does the work of three or more teams.

Only one driver is needed, instead of three or more drivers for horse equipment. The saving in labor is a big item.

You save in the cost of operation. The Reo Motor Truck "eats" only when it is working. It goes just as fast and carries just as big a load the last hour of the day as when it starts out in the morning.

But the saving in time is the big item. Reo Motor Trucks will

speed up every department of your business. As you deliver faster, you can build, sell, ship, assemble faster. Your whole business feels the spurt of this new form of energy.

Features That Mean Unbroken Service

The Reo Motor Truck is carefully designed to keep going day after day for years, without any lost time for repairs. It has exclusive features, found in no other motor trucks, that make this constant service possible.

A radiator built of 24 independent, interchangeable units. One or several units could be injured, instantly repaired or replaced, and the run continued. Or the truck will run until you are ready to repair it later.

Much more power than you will ever need is supplied by the Reo unit power plant, cushioned on a sub-frame away from road shocks or vibration.

Reo hydraulic governor keeps the truck to a safe speed. An irresponsible driver cannot go too fast, or allow the motor to race.

Reo right hand center control

and left side drive give the driver quick and easy access to and from the seat. No expert driver needed; no time lost in handling the machine.

Reo impregnable armored frame, built to withstand hard service—even collisions—without showing weakness or flaws of any kind.

Your choice of two lengths of wheel base, 130 or 146 inches.

Set Your Truck to Work

If you are paying for a Reo truck now, in wasted time and money, you should set it to work at once.

Look the facts in the face. Figure your present hauling costs, and write us about them. We will reduce our case to cold figures. Then we will ask you to decide on no other basis than your own profit.

Write us for any information on motor truck hauling that you need. A Reo Motor Truck catalog sent on request.

1155 Reo dealers, scattered from coast to coast, are ready to tell you about the Reo Motor Trucks and explain Reo service. Call on the nearest Reo dealer, and talk the matter over with him.

Lansing, Michigan

REVIEWS OF NEW BOOKS

MAJOR PUTNAM'S EARLY LIFE

Putnam, George Haven. *Memories of My Youth, 1844-1865*. Two portraits. 8vo, pp. vi.-147. New York and London: G. P. Putnam's Sons.

Major Putnam (a real Civil War major is George Haven Putnam, altho he himself never uses the title now) stands for what is best in American life. Soldier, scholar, publisher, man of affairs, he has had an experience that falls to the lot of few men. Looking back now from the goal of his seventieth year, he recalls events and personalities which possess rare interest for his own and later generations, even for those to whom the Civil War is a tradition fast becoming legendary. It is a modest, manly account of military experiences and of his earlier career in the middle of the last century that Mr. Putnam gives. He was no feather-bed soldier, but saw hard service. He saw that kind of suffering which elicited from General Sherman his terrible definition of war.

Not the least interesting portion of his military service, from 1862 to 1865, and including the campaigns of Louisiana, Sheridan in the Shenandoah, and the decisive battle at Cedar Creek, includes experience in Libby and Danville prisons. The author's story of the hardships and straits of hunger endured by himself and his companions in Libby fully confirms the sinister reputation of that sinister prison. Mr. Putnam here gives one chapter only to Libby and Danville, having already told that story in another volume more fully.

Mr. Putnam's practical experience in the war and the opportunities he had of meeting famous men served to equip him with a fund of original information of which he makes lavish use. There are graphic portraits from life, notably one of Lincoln, whom he saw and heard at Cooper Union when the future war President was beginning to rise into national prominence.

"The long, ungainly figure upon which hung clothes that, while newly made for this trip, were evidently the work of an unskilful tailor; the large feet and the clumsy hands of which, at the outset at least, the speaker seemed to be unduly conscious; the long, gaunt head, capped by a shock of hair that seemed not to have been thoroughly brushed out, made a picture which did not fit in with New York's conception of a finished statesman."

The plain, unheroic, physical personality of the speaker was, however, forgotten in the overmastering eloquence and earnestness which became apparent as the speech proceeded. The orator gradually gained absolute control of himself, "the voice gained a natural and impressive modulation, the gestures were dignified and natural, and the hearers found themselves under the influence of the earnest look from the deeply set eyes and of the absolute integrity of purpose and of devotion to principle which impressed the thought and the words of the speaker."

Of high interest and value as history is the author's account of the relations of Lincoln's Administration to the Governments of Louis Napoleon and Palmerston at the opening of the war. Mr. Putnam's narrative sets in a clear and interesting

light the dangerous crisis which the cause of the Union underwent because of the active sympathy for the Southern cause which existed among those who held power in France and England. We should like, were there space, to speak at more length of the author's story at first hand, of the secret international diplomacy precipitated by the famous *Trent* affair, which in the event of success might have destroyed the Republic.

The "Memories" are by no means confined to political and military affairs, but are concerned also with the author's sojourns in England, France, and Germany, and with the interesting early history of the house of Putnam, which has had so distinguished a part in the development of literature in America. Mr. Putnam's experiences as a student in European universities just before the Civil War induced him to come home and enlist, are not the least interesting part of the book.

VON BÜLOW'S REMINISCENCES

Von Bülow, Prince Bernhard. *Imperial Germany*. Translated by Marie A. Lewenz, M.A. With frontispiece. Pp. 342. New York: Dodd, Mead & Co. \$3 net.

Prince von Bülow is one of the distinguished men of Europe, and is the best known and most popular of the group of statesmen who have been at the head of affairs in Germany since the retirement of Bismarck. As Chancellor of the Empire his achievements were notable. He has had a large personal share in the policies which have resulted in the transformation of Germany, and his brilliant career has been coincidental with the political regeneration of his country and its definitive establishment as a great Power. The views and opinions of a man of this type are the result of a ripe and varied experience and have a special value for the student of contemporary affairs. When to these qualities are added literary form and the glow and coloring of historical imagination, there is little more to be desired.

Everything German—literature, art, politics, religion, philosophy—is so deeply rooted in the past that it is impossible to arrive at any adequate conception of the meaning of the present except in the perspective of history. The scholarly author of the work before us is well aware of this truth, and his conception of the great epochs and events that crowd the history of modern Germany are always outlined against the background of the past.

The opening pages of the book give a graphic account of the rebirth of Germany as a world Power, the remarkable development of the Empire's naval resources, and the growth of her commerce which established her as a rival of England, and an interesting discussion of the traditional British policy with regard to foreign nations. Other topics of world-interest which are discussed at length by the expert are: The Triple Alliance, the German policy of armaments, the subject of agriculture and protective tariffs, and the peculiarly involved relations of German political parties.

Each field were trampled, soaked,
Each stream dyed, choked,
Each leaguered city and blockaded port
Made famine's sport;
The empty wave
Made reeling Dreadnought's grave
Cathedral, castle, gallery, smoking fell
'Neath bomb and shell;
In deathlike trance
Lay industry, finance;
Two thousand years'
Bequest, achievement, saving, disappears
In blood and tears,
In widowed woe
That slum and palace equal know,
In civilization's suicide—
What served thereby, what satisfied?
For justice, freedom, right, what wrought?
Naught!—

Save, after the great cataclysm, perhaps
On the world's shaken map
New lines, more near or far,
Binding to king or czar
In festering hate
Some newly vacated state;
And passion, lust and pride made satiate;
And just a trace
Of lingering smile on Satan's face!

This poem (from the *New York Evening Post*) is lacking in unity, and the suggestion of a general strike against war is scarcely novel. But Miss Thomas's lines glow with passion, and have therefore a vitality which art alone could never give them.

The Woman's Cry

By EDITH M. THOMAS

"All the posters were printed in red. 'Red!' cried the women, and there was some weeping among them; but the men for the most part took it quietly, seriously, and with sad submission."
—*St. Petersburg newspaper*.

"Red!" cried the women by the Neva's tide,
And what they're crying by the Neva's tide
They're crying, too, in France, the Beautiful,
And 'neath the lindens of the Fatherland.
And farther yet, on ancient Danube's banks!
What boots it that you cry, O woman-souls,
Your strong ones going hence—(I mark it well
In "sad submission" they're going hence!)
Your strong ones are a herd, the lash is swung,
And dumb they go—they dream no other way!

"Red!" cried the women. I cry, too—in vain. . .
I know what I would do, if but my wit
Equalled my swelling heart—and if my tongue
The Pentecostal gift of tongues might seize—
Not speech of courts, nor sinuous subtle phrase,
But peasant power of straight appeal to hearts
Words like to glowing coals that neighbors pass
From heart to heart—words like the ringing ax
When the arm swings it through the heart of oak,
Words like the ferid plowshare, driven deep—
Might I but speak their native speech to them,
In some four countries of this world, gone mad,
The children of the soil should hear me cry:—
Now, wherefore are ye driven forth to War?
Ye have not made it, and ye hate no man.

That ye would go to hunt him to his death
(He hunting you—yet bearing you no hate!)
Stand in your fields, your shops, and do not go!
Be ye not "mobilized," but stand like stones;
And if to prison ye be haled, and if
They rain upon your hearts their leaden rain
Because ye will not serve, stand till ye fall!
Ye can but die—but so, die innocent,
Having yourselves, slain no man innocent!
So, fall, the protomartyrs Who Fought War,
Glorious and sacred on the lips of men
Who shall be, and their heritage Your Peace!
"Red!" cried the women. Let them cry no more.

1915

Over

New Stream Line Body—Electric Starter—Electric Lights

This announces the latest Overland—Model 80.

This season we shall build 75,000 cars. This increased production again places us in the enviable and supreme position of being able to give still more value for still less money than any other manufacturer.

Model 80 has a brand-new full stream line body. Its full sweeping lines blend and harmonize

perfectly with the balance of the symmetrical design.

The new crowned moulded fenders, new rounded radiator, new hood slightly sloped, and flush U doors with disappearing hinges, contributing the additional touches of exterior grace and modishness which distinguish costly imported cars.

The new tonneau is much larger—both in width and in depth.

The new cutably deeper and underslung spring qualities. This the highest pricing systems.

This model control.

(All U. S.)

Willys

\$1075
Model 80

—Larger Tires—Demountable Rims—Larger Tonneau

to consider-
g improved
easy riding
with one of
electric light-

The tires are larger this year, being 34"x4" all around. These tires can be quickly detached from the rims which are demountable. One extra rim supplied.

There is a powerful, economical and quiet 35 h. p. motor. The wheelbase is 114 inches long.

This car comes complete. Electric starter, electric lights, rain vision, ventilating built-in wind-

shield, mohair top and boot, demountable rims with extra rim, jeweled magnetic speedometer, electric horn, robe rail, foot rest and curtain box. This new model is now ready for your inspection in practically every city and town in the country. Dealers are now taking orders. Make arrangements for your demonstration immediately. Handsome 1915 catalogue on request. Please address Dept. 17.

The Willys-Overland of Canada, Limited, Hamilton, Ont.

Tiredom's Upper Class

Dear Sir :

It isn't extra price which marks the upper class in Tiredom.

Fanciful things don't count here. Nor does exclusiveness. Tires are mere utilities.

And Goodyear prices—due to mammoth output—count just as much as other Goodyear savings.

Real Aristocracy

The real aristocrats in Tiredom are No-Rim-Cut tires. They out-sell any other.

By exclusive features and extra quality they won the ruling place. These are the royalty of Tiredom as class is measured there.

Yet many makes of tires are selling for more than Goodyear prices.

Badges of Class

These things, in Tiredom, are the sole criterions of class.

No rim-cutting. We prevent that in a faultless way—a way which we control. It saves a ruin which is wrecking one old-type tire in three, as per our last statistics.

Fewer blow-outs. Our "On-

Air" cure—used by us alone—saves the major cause of blow-outs. It adds to our tire cost \$450,000 per year.

Fewer loose treads. A patent method—used by us alone—reduces this danger by 60 per cent.

Perfect anti-skids. Our All-Weather treads are tough and double-thick. They are flat and smooth, so they run like plain treads. Their grips are deep, sharp and resistless.

Lowest cost per mile. These features, plus low Goodyear prices, insure that to our users. And hundreds of thousands have proved it.

No Pose of Price

No-Rim-Cut tires don't pose as extra-priced. They once sold for more than rival tires, because of these costly features. But mammoth output and new efficiency cut that cost im-

mensely, and you get all the saving. Our average profit last year was 6½ per cent.

First we saved you rim-cuts, blow-outs, and loose treads. Now we save you in the price per tire. As a result, men now are buying, on the average, 125,000 Goodyear automobile tires per month.

True Extra Value

We know but two ways to get extra value for an extra price. The price of some tires will buy you a half-inch wider Goodyear. That extra size, of course, means extra service. Or the price of three tires, extra-priced, will buy you four of Goodyears. And four tires will surely outlast three.

But, size for size, you'll never find a better tire than Goodyears. In the four ways cited you'll find none as good.

Remember that. High price marks class in some things, but it's a detriment in tires. It adds to dead expense.

Any dealer will supply you Goodyear tires at Goodyear prices if you tell him that you want them.

Running boards; headlights in front; dark Saxon blue body; hinged bonnet with radiator supporting rod; gasoline filler cap extending through cowl; 38 other detail refinements.

What You Want to Know

What you want to know about the Saxon car is *what it will do* under the conditions in which you would use it.

The best answer is to be found in what the Saxon is *doing* under all sorts of conditions all over the country.

Over 6,000 Saxons are now in use in owners' hands. Everywhere they are making good.

Makes Good in Hands of 6,000 Owners

The test of owners' use is the hardest to which any car can be put. Here are some of the things that owners say: "No road too difficult for the Saxon." "Wouldn't trade my Saxon for anything on four wheels anywhere near the price." "I drive my Saxon right over places where other cars balk." "It costs me 16 cents a day to run it." "Works like a \$3000 car." "248 miles on seven gallons of gas." "Will do anything any other car will do and a little bit more," etc., etc.

Records of 27, 30, 33 and even 35 miles to the gallon of gasoline are common. Tire cost is amazingly low; repair cost practically nothing.

Wonderful Record in Public Tests

In difficult public tests the Saxon has also proved its staunchness and its economy.

On July 4 the Saxon demonstrated its independence of road conditions by completing a

30-day transcontinental trip from New York to San Francisco—3389 miles—averaging 30 miles to the gallon.

The same car previously ran 135 miles a day for 30 consecutive days—4050 miles—averaging 30 miles to the gallon and 150 miles per quart of oil, covering the entire distance on the original set of tires. In 60 days this car covered nearly 8000 miles, as far as the average owner drives in two years.

100 Saxon cars in as many towns all over the country made non-stop runs of 200 miles each—averaging 34.53 miles per gallon—less than one-half cent per mile for fuel.

Isn't This Commonsense?

If a Saxon will carry you 1,000 miles on \$5 worth of gasoline, why invest in a car that eats up \$15 worth in the same distance?

If a Saxon requires only \$1 worth of lubricating oil in 1,000 miles, why drive a car which uses \$3 worth?

If a Saxon tire costs \$10, why pay \$50 for a big car tire which will last only one-third as long?

Finally, if a Saxon at \$395 will go as far as any other car; if it will do what any other car will do and do it with equal comfort, why buy a car which costs two or five times as much to begin with and two to five times as much every day you run it?

Ride in the Saxon Today

The Saxon is ready—waiting for you. Don't put off the many and varied pleasures of motoring any longer. Think of the low price—consider the low upkeep cost, and then investigate the Saxon. If you can possibly do it today, take a drive in a Saxon. Our nearest dealer will be glad to give you this opportunity.

SAXON MOTOR COMPANY, Detroit, Dept. D.

 Thermoid

When Disaster Is Near—Thermoid Holds!

You can *trust* Thermoid Brake Lining.

Suit yourself on make of car. You are pretty sure to get good value. But be firm on the matter of brake lining. Brake lining is a small thing—until Death dances in the right of way. Most good cars are equipped at the factories with Thermoid. That's because automobile builders and engineers *know* that Thermoid is absolutely reliable. If these makers don't dare to experiment with other brake linings, is it wise for you to be indifferent when your brakes are relined?

Insist at the garage that Thermoid be used. Examine it yourself and see that the trade-mark is stamped on the goods. Don't drive your car another day until you know that Thermoid lines the brakes.

And when you buy a new car be assured that Thermoid is in the brakes.

Take that precaution for the sake of those who are to ride in the car.

The base of Thermoid is pure Canadian asbestos, interwoven and reinforced with solid brass wire. While in a comparatively loose state, this base has rolled into it, by giant

Thermoid
HYDRAULIC COMPRESSED
Brake Lining—100%

rolls, a wonderful friction compound which impregnates and coats every asbestos fibre. Then the whole mass is hydraulically compressed—a compression of 2000 pounds—which reduces it to a solid, hard, practically indestructible substance—Thermoid.

It is a brake lining all through—efficient until worn as thin as paper. Thermoid cannot be burned out. It cannot dry up and crumble. It cannot crack. And it wears indefinitely—so long that it is an economical brake lining, although surely no one will think of the cost of brake lining!

Every garage in the country has Thermoid—or can get it.

Our guarantee—Thermoid will make good—or we will.

PERSONAL GLIMPSES

THE POPE OF THE POOR

POPE PIUS X., whose death, caused it is said, by grief over the European war, occurred at the Vatican in Rome on August 19, began his life as the child of Italian peasants. From a barefoot tatterdemalion he rose within his span of seventy-nine years to a position that is considered by millions of people to be the most exalted in the world. Talent, displayed at an early age, was responsible for his great advance, together with his deep piety, his broad human sympathy, and his tireless energy. He was the "Pope of the Poor," always. The Brooklyn Daily Times narrates the events of his romantic and remarkable career:

His grandfather was a soldier in the papal army under Gregory XVI. His father worked in the fields and as communal carrier, struggling to maintain with his meager income the large family of two sons and six daughters. A small cottage was the birthplace of the Pope. He attended the parish school at Riese. His aptitude induced the family to send him to a school at Castelfranco, seven miles from home. To meet the expense, his father labored even more hours daily than had been his lot. The boy walked the long route to school. He was a faithful student, and by winning laurels justified the wisdom of the family in making sacrifices to further his education. Precious documents still preserved by his sisters are the certificates setting forth his eminence in the entire range of studies. They were especially proud of his proficiency in Latin. Joseph won a scholarship which enabled him to enter the seminary of Treviso and afterward that of Padua. He distinguished himself in the study of theology. In 1858, when 23 years of age, he was ordained a priest.

From the first his greatest concern was for the poor among his parishioners. He barely allowed himself necessary food, and even sold his horse that the proceeds might be used to relieve the conditions of the unfortunate. On one occasion he gave away his own dinner. A poor man came to say that his wife was ill, the doctor had said she must have broth, and he had not the means to provide it. Meat was boiling in a pot for Father Sarto's dinner, and, without hesitation, he gave it to the man. Reproved by his sister, he answered that the man's need was great and there was nothing to do but give him the food. Then he smiled benignly and assured her that the Lord would provide for them.

Until he was 31 he was employed as a country curate. In 1867 he was appointed parish priest of Salzano. There he worked faithfully for eight years and won the attention of those higher in authority by the tact and devotion with which he discharged his parish duties. He was made a canon of the cathedral, chancellor of the diocese and the spiritual director of the college. Thereafter he became dean of the chapter, served in an interregnum as vicar-general and was appointed suffragan.

In 1882 he passed to the diocese of Mantua, where for two years he was rector of the seminary. He attracted the attention of Leo XIII., who in 1884 created him bishop of that city. The diocese was at that time in a condition of ferment. There had been continued clashing between the episcopal and government authority, and there was in the field a strong political

force opposed to the Church. The tact, patience, and the kindly manner of the bishop harmonized these conflicting interests. The diocese of Mantua, which had been noted for its turbulence, became a model, and other bishops were exhorted to bring theirs to as high a standard.

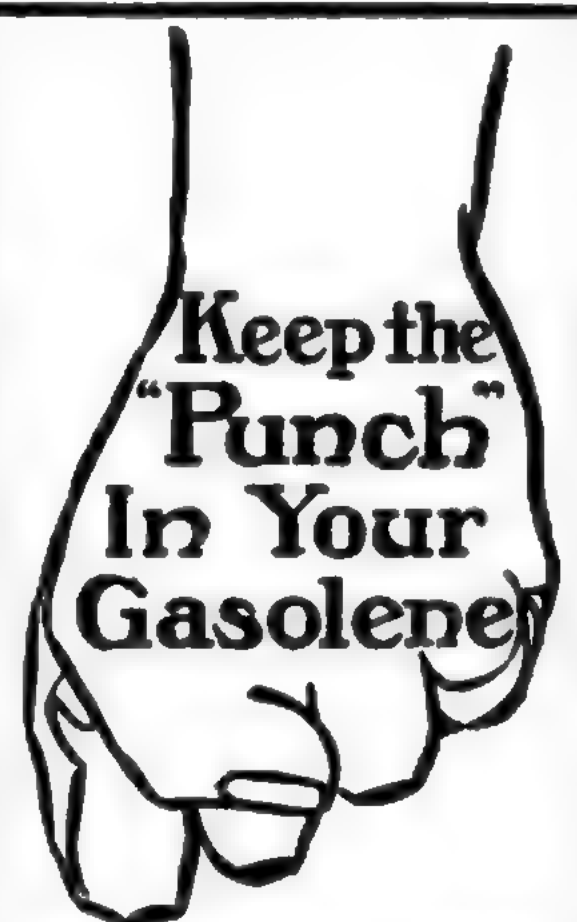

In June, 1893, he was made a cardinal and Patriarch of Venice. His work there in settling disturbed conditions and in reconciling church and state was the replica of his efforts exerted in every station in which he was placed. Here, too, he found himself at the mercy of the poor, whose prayers he could not hear unmoved. It is related that he even pledged his magnificent episcopal ring and other valuable possessions, always with the excuse that he needed nothing, while the poor had need of more than he could give them. But withal he was by no means incapable, in spite of his too-kind heart, and he is still spoken of as the best administrator Venice has had in 200 years. Of his election to the high office held at the time of his death, we are told:

When the Patriarch left Venice to attend the conclave called to elect the head of the Church the people hailed him as the next Pope. He remonstrated with them, saying that such an event was beyond the range of possibilities. In the conclave he was urged for the high office, but he put aside those who proffered their support and begged that they find another candidate. When the ballots began to turn strongly his way he became his own most strenuous opponent. He took the floor to entreat the Sacred College to desist from the idea of electing him, and strove to show wherein he lacked the requisite necessary to equip him to occupy the papal throne. But his words had a contrary effect. In the dignity, the humility, and the great breadth of learning disclosed in these discourses the Patriarch stood before his colleagues as the one man to be placed at the head of the Church. He was chosen on the sixth ballot.

His natural modesty and dislike for all extravagance resulted in some radical reforms being instituted in the procedure in the Vatican. He was above all intensely democratic, with little patience with convention or precedent. Peasants were as welcome to the Vatican as princes, and received his blessing quite as readily. Further:

With quiet decision he did away with many forms of etiquette which had endured for centuries. Early he abolished the custom requiring visitors to genuflect three times in coming into the presence of the Pope, to kiss the cross upon his right slipper, and to remain kneeling while in his presence. He would have none of it. Instead he greeted his visitors without formality, chatted in good old fashion, and usually accompanied them to the door when they retired.

Many incidents resulted from this independence of custom, and to the Pope they brought quiet amusement. For instance, he abolished the century-old custom of requiring every one to vacate the gardens or galleries of the Vatican when

Keep the
"Punch"
In Your
Gasolene

A Bowser Underground Outfit keeps the "punch" of your gasolene in. Saves the "gas" in gasolene. Keeps out dust, dirt and fire. Saves floor space. Delivers exact predetermined quantities of gasolene any distance into the car at a single stroke. Prevents leakage—spillage—loss. Adds to the efficiency of your car and garage.

BOWSER

Safe Oil Storage Systems

Cost soon saved in oil and power. Ride on "Bowserized" gasolene and note the stronger pull—the quicker action—the added mileage. Think also of the utter safety of your garage and the added convenience.

Also in Stores, Factories and Railroads

Saves oil, time and money here also. No waste. No "looming" at the oil barrel. No lost oil. No lost motion. Just speed, economy, efficiency.

Write today regarding the particular Bowser system for your garage, store or factory. Use the coupon.

To Dealers

We can now make Dealers an attractive proposition to handle our Private Garage Line. No stock to carry. Write for details.

The Extra Guarantee

Extra Experience
Extra Value
Extra Security
Extra Organization

INTO the crucible go the ideas of many men—of many firms—many great manufacturing centers—many countries. They melt and blend, and from their fusion comes a motor free of the dross of inexperience, of guesswork, of freakishness,—comes a fusion, clean, refined—a Continental Motor.

Continental Motors

Over one-hundred firms—American and European—use the Continental Motor in some of its several models. Weigh the importance, the significance, of their combined OKay! Judge the soundness of design that passes more than a hundred censorships; of the sureness of construction that five-score companies link their reputations with!

No motor ever designed has had so broad a foundation in experience. Has had so many years of success behind it. Has drawn so to itself the finest flower of the automobile industry since its very beginning.

This is the *extra* guarantee of experience that is back of every Continental Motor. Demand it in the car or truck you buy.

CONTINENTAL MOTOR MFG. CO., Detroit, Mich.

Largest exclusive motor builders in the world.

Factories: Detroit—Muskegon, Michigan

the Pope walked therein. His first ride through the grounds was in an open carriage, which he insisted upon having, even tho another precedent was shattered.

He abolished the custom of communicants kissing his ring when receiving communion from his hands, holding it to be a source of distraction for the communicant. Instead of being carried into St. Peter's or the Sistine Chapel on the sedia gestatoria, with the six palafreniere (white ostrich fans used to fan the Pope), he preferred to walk. He also did away with the prohibition against receiving any of the civil authorities of Rome or representatives of the Italian Government, and his warm friendship for King Victor Emmanuel III., dating from the period when he was Patriarch of Venice, did much toward alleviating the strained relations between the church and state, and may be the means of paving the way to an ultimate reconciliation.

BLOODLESS WAR AT HOME

WHY go abroad for war? See America first! It not only saves the expense of travel, but if you are satisfied with such appalling conflicts as have recently been fought in the neighborhood of Sea Girt, New Jersey, where the country has reeled with supposititious carnage and hypothetical destruction of life and property, you can enjoy all the thrills of combat without the slightest danger, and experience the feelings of a war correspondent without so much as a severed telegraph-wire to mar your content. The New York Tribune prints an account of this New Jersey war, sent by a survivor the day following some of the fiercest encounters:

Two battles were fought yesterday in the vicinity of Allaire and Allendale, and the countrysides are reeking with the theoretical blood of at least 600 men of the 5th Infantry, New Jersey National Guard, who gave their "lives" that their companies might be glorious in the eyes of those they left behind them. All of those who did not fall on the field of battle reported at sick-call to-night to have the pains of sunburn and blistered feet allayed.

The first battle was won by the "Blues," who captured a convoy of five wagons laden with supplies for the "Reds."

Ambushed in the woods, the "Blues" waited until the advance guard of the "Reds" had passed on ahead and then opened fire. Volley after volley sounded across the road, and the "Reds," realizing that mere supplies are nothing compared with life, retreated to the woods. Their discretion was rewarded and they were allowed to live, and the "Blues" made off with their supplies.

The "Reds" had their revenge when the "Blues" tried to repeat their previous tactics by springing what they intended to be a surprise at Allaire. A detail of "Reds" was there guarding a train of supplies that was blocked in transportation by a dynamited bridge. Two companies of the "Blue" army were dispatched to capture the train and supplies. Tired and dusty after their five miles' march, the "Blues" descended upon the "Reds" and the battle began. The

"Blues" believed that the detachment they were attacking consisted of not more than one company, the number of the original guard, but the "Reds" had received word of the projected attack from their scouts and had rushed out two more companies to aid in the defense.

The "Blues" made a gallant fight to rout the enemy, but the steady stream of blank cartridges the "Reds" poured down upon them had a telling effect and the "Blues" were compelled to retreat. There was no Washington to come to the rescue and snatch victory from the jaws of defeat, as in the battle of Monmouth, which was fought near the same spot many years before. There was nothing to do but retreat as fast as possible.

After the strife was over the dove of peace descended and the two detachments made their way back to camp. Bygones were bygones and hostilities were forgotten. The soldiers, tired and dirty, feeling like campaigners who count their experience by wars instead of battles, ate their dinner and "rolled in" and were asleep before taps was sounded.

THE MEN WHO FIGHT

IN *The Journal of the Military Service Institution* Captain G. de Grasse Catlin, of the Twenty-eighth Infantry, U. S. A., gives an account of the most picturesque of all the troops that are engaged in the European war, the French *chasseurs à pied*. The Captain spent some time not long ago in Vincennes, not far from the French capital, where is a small garrison of different branches of the service. He remarks particularly upon the hardihood of these small soldiers, who drill continuously, often under the worst possible weather conditions, showing "an apparent utter indifference to wet clothes, wet boots, colds, or rheumatism." Noticeable also is the great difference in size between the huge mounted dragoons and the extremely small stature of the infantry. He says:

When I spoke of this fact to a reserve officer, he would not agree with me as to the advisability of putting less weight on the horse, but insisted on the necessity of putting more impact power into the charge. Moreover, he told me that small men were selected for the *chasseurs* because of their greater endurance and better marching powers. Two or three days after settling in Vincennes the writer was inside the fort, talking to one of the officers of the battalion, when a detachment of men going to the battalion kitchen marched past. It is no exaggeration to state that it would be a physical impossibility for a man six feet or thereabouts to put his feet down as fast as did these powerful little men. They use this cadence everywhere, and at all times where they can set their own rate of march, and in the field keep it up for hours.

Captain Catlin found the officers in the garrison to be marvels of neatness, notwithstanding the extremely small pay that he knew them to receive. He speaks

Elgin Wonder Tales

The Horse That Fell at Klipriver Drift

A CORRESPONDENT of the London "Daily Mail" writes: "I purchased an Elgin in Capetown. I carried it with me during the Boer War, and it was broken by the fall of my horse at Klipriver Drift. I had it fixed in Johannesburg and it kept perfect time. I have carried my

GEORGE FROST CO., MAKERS, BOSTON

Books That Build Mental, Moral and Physical STRENGTH

The Heart and Blood-Vessels

Their Care and Cure and the General Management of the Body. By I. H. Hirschfeld, M.D. Get this important new book. It shows you how to be sound and happy, and avoid the discomforts and dangers of breakdown—How to reconstruct a mismanaged or "run-down" body. Plain, practical guidance along the lines of simple, natural living, by a physician of unquestioned authority. Cloth bound, \$1.25 net; by mail, with average carriage charges, \$1.37.

Personal Power

By Keith J. Thomas. In this book the author clearly points out ways to develop will-power, mental concentration, and winning personality. He gives practical directions for acquiring the faculty of reading men, and understanding human nature, including those basic impulses that move men to definite action. In a word—the book fits men for leadership. Cloth, 300 pages, \$1.75 net; by mail, with average carriage charges, \$1.87.

The Education of Self

By Dr. Paul Dubois, author of many standard works on mental science. "This book shows the priceless value, mental, moral and physical, of the habit and power of self-control. It tells the ordinary man or woman just how to go to work and how to continue, in order to secure the benefits of such a valuable habit of life. The discussion is always philosophical and charmingly direct and personal."—*N. Y. Times*. Cloth, 350 pages, \$1.50 net; by mail, with average carriage charges, \$1.62.

The Education of the Will

By Jules Payot, Ph.D. A famous book. Dr. Payot shows how one may begin to educate the will, and how the habit, once formed, will grow stronger each day. He is no theorist; he is intensely practical. Cloth, 450 pages, \$1.50 net; by mail, with average carriage charges, \$1.62.

Nervous Breakdowns

And How to Avoid Them. By Charles D. Muegrove, M.D. Any man who sets out to accomplish important, and therefore necessarily trying work, is obliged to equip himself with some knowledge of the nervous system—its possibilities, capabilities, and its liability to exhaustion. Truly, as Dr. Muegrove says, "It is the nature of finest fibre which accomplish the most, and it is they who are most liable to give way beneath the strain." Cloth, \$1.00 net; by mail, with average carriage charges, \$1.08.

Funk & Wagnalls Company

Power and Poise

of them as "fine examples of officers bearing the stamp of command and good breeding." Further, he remarks:

I was somewhat curious to see the working-out of military courtesy, especially in public places, where officers and men were thrown together. The absence of spectacular saluting spoke volumes for the good sense and humanity prevailing in the French Army. In public carriers, such as the trolley-cars and subway, there was never awkwardness or hesitation about what to do. If a soldier were seated and an officer entered, there was no unnecessary standing at attention, but were the officer, in entering the car, to pass a soldier standing on the rear platform, the fact that the man had paid for his ride did not cause him to seem unconscious of the officer's presence or to find a sudden interest in the landscape on the other side of the car, but up came his hand—if the crowd allowed him—with perfect promptitude and in a finished salute.

Officers salute their superiors with the same precision that their men use to them. All non-commissioned officers were saluted. The writer has seen some laxity by privates in saluting corporals, but never any in saluting sergeants. I was told that not much could be expected from corporals in maintaining discipline, as the familiarity engendered by their living with the men of their organization made this impossible. My informant also gave me this interesting news: if a captain, in inspecting his company, found something at fault with a private, he went after his corporal, not the private.

Probably the troops that arouse the greatest general interest in America are the British soldiery. Rudyard Kipling has given us an insight into the mental and moral make-up of Tommy that has left us with a friendly feeling for every Mulvaney and Ortheris in the ranks. The *Nashville Banner* sums up the advantages that British troops may be assumed to have in the war, as follows:

Great Britain has no such large standing army as those of the continental nations, but her soldiers have seen more actual service and have done more arduous campaigning than those of Germany.

Practically all of the British soldiers who survived the Boer War are still available for military duty. So are those who followed Kitchener in the Soudan, and some who went with "Old Bobs" from Kabul to Kandahar.

British soldiers have fought under the greatest difficulties in the mountain fastnesses of the Punjab, in the sandy deserts of Africa, on the barren veldt of the Transvaal, and in the tropical jungles of India.

Tommy Atkins has been much about the world and has encountered fierce adversaries—Boers, Afghans, Zulus, and last, but not least, "Fuzzy Wuzzy" of the upper Nile region:

"A poor benighted 'eathen.

But a first-rate fighting man.

Great Britain can raise an army with a nucleus of men who have seen harder service and done more actual fighting

than her present adversaries have. Her wars have afforded a splendid training for officers. Germany has no commanders with such experience in the field as Lord Kitchener.

All the world is wondering how Germany, with its intensively cultivated army, will fare on the field of battle. German faith in the country's military force is supreme and is expressed in the statement that "it is the most efficient fighting force in the world." There have been, however, some doubts expressed on the other side that seem to be not without point. These are mainly on the ground that in tactical skill and mobility this great force with its superlatively trained millions may fall somewhat short of the demands made upon it. The *Manchester Guardian* gives what is reputed to be the Japanese criticism of the German soldiers:

Japan is said to have declared that had the Russians been German: Japan would have beaten them in half the time required to win from Russia. The opinion is based upon the theory that the German soldiers are "pedantic." They have been trained to military life during forty years of peace under a system that has been superseded by the developments in armament. The German soldiery facing the rapid fire of the machine guns in the hands of experts may become, it is thought, far less imposing than the German soldier on parade or in tactical maneuvers. This is suggested because of the assumption that the German system of training and of massing in huge units opens them to peculiarly heavy losses from artillery fire. Such information as has come from the fortresses about Liège leads to the belief that the German theory of massing troops is still adhered to and that a system of attack which gives the soldier a chance to use his own initiative in protecting himself is not in the German code.

The Lowell (Mass.) *Courier-Citizen*, however, rallies to the Teutonic standard and criticizes the above statements as follows:

The assertion that Germany has a peace-trained army is also true of France in spite of the fact that French soldiers in small numbers have been at war in Africa. Russia has felt the sting of battle in recent years, but England has not called out great masses of reserves lately. The Germans may have a better trained reserve than the others, but when all these nations put their greatest strength into battle there will be thousands upon thousands who will be under fire for the first time, a sensation not wholly pleasant. German soldiers do not lack courage. Men the world over do not lack courage. But place any or all of them in one mass within range of well-aimed rapid-fire machine guns and courage may well quail. If Germany is still using the old style the coming test will be useful as an exposition of tactics. The carnage is certain to be staggering, but the result is yet to be forecasted in spite of Japan's light regard of German power.

A peculiar incident of the war is noted

**\$1085 INCLUDING ELECTRIC
STARTING & LIGHTING**

Nation-Wide Performance

YOU may have thought, as some did, that what we said of the new Regal was too good to be true. But nation-wide demonstrations have more than made good our statements. Here are actual facts of Regal performance—facts that far outshine our most enthusiastic claims. Read them—if only to see what's possible for a properly designed, properly built car at a popular price.

"Impossible Hill!"

16th Street Hill, Des Moines—locally called "Impossible Hill" because of the lack of straightaway to "get up steam"—has humbled many a high-powered car.

But! "... to our surprise the new Regal negotiated this hill, making the short turn at the bottom and going up over the hill at 18 miles an hour **ON HIGH**," recounts George Means, Des Moines Regal distributor, and adds: "It was something I had never known a car to do before."

20 Miles to the Gallon

"We averaged 20 miles to the gallon on the 1000-mile trip," writes the T. G. Northwall Company of Omaha. And remember this wasn't in a freak gasoline test, but "under all road conditions and taking every hill with a load on high." That's from a layman driver—not a skilled engineer with a head-full of economy tricks.

Up Lehigh Mountain—Bull Dog Grit

Downright grit—inexhaustible stamina—won Philadelphia to the Regal. Lehigh Mountain, both sides, witnessed Regal demonstration victories. Hills like Tam-O-Shanter, Speedway, Black Dirt, City Line and the rest were flattened out without exertion. "We climbed them in High Gear and did not have to start up with the motor racing until it was ready to jump out of the hood," is the testimony of William Bartleman.

New England Endorses New Regal

W. L. Russell, Boston automobile distributor, took nobody's say-so, but drove the car himself "through western Massachusetts," as he tells it, "up into Rocky Vermont, across the mountains into New Hampshire and back through eastern

Your copy of the new Regal folder is stamped and ready to mail when your name is affixed. It contains many new facts. Write today to

Canadian Factory: Berlin, Ontario

DEALERS—Good automobile merchants, whose standing is relatively as strong as ours, are men we want in the few remaining open territories. If you are such a dealer, write us today—or wire.

Massachusetts." And here's his verdict: "The car performed nicely, has exceptional power, perfect riding qualities, roomy comfort for 5 passengers, and there is nothing lacking, including striking beauty of lines."

New York, St. Louis, Kansas City, Indianapolis—EVERYWHERE

At 25 miles an hour, climbing Hospital Hill, Kansas City—as the Regal did—is an astonishing feat. It is almost the fastest speed this hill ever saw, J. F. Moriarty of the Moriarty Company relates; and, further, "the Regal performs on all our hills in whirlwind fashion. Congratulations on a great car and a beautiful one."

Crow's Nest, Indianapolis, distresses most cars, but the Regal's climbing gift took it up in **HIGH GEAR**. Mastering St. Louis Art Hill in high sold two cars to Bowling Green, Mo., men.

New York's love of beautiful things wreathed Regal with instant success—a regal success!

Hills of San Francisco and Seattle, altitudes around Denver and sands of Michigan were a few of a thousand Regal triumphs. We have the letters and telegrams. The statements came true.

Where you live, in all probability, a Regal performance-test was made. We'll be glad to tell you about it—or to make a special one for your benefit.

Impregnable Strength

Judge the \$3,000,000 company behind this great car by its seven years of known success, its ability, its factory production, its factory efficiency—know, by these facts, that your car has service-backing and that is insurance of motor car satisfaction. For it speaks impregnable strength.

by a correspondent of the New York *American*, who has recently been through several of the great Brussels hospitals and noted the condition of the wounded Belgian soldiers. These soldiers have carried on the defense of their country with a valiance which the fighting men of any nation might admire and envy. The writer remarks:

Two facts struck me very forcibly. The first was the very large number of Belgian soldiers wounded only in the legs, and, secondly, many of the soldiers seem to have collapsed through sheer exhaustion. In peace times one sees and hears little or nothing of extreme exhaustion, because in times of peace the almost superphysical is not demanded. War brings new conditions.

These Belgian soldiers were at work and on the march during two stupendous days, practically without a moment's respite. They went, literally, until they dropt. As a medical man, their condition interested me enormously.

What force of will to fight and struggle until the last gasp! The exhaustion one sees often in heat strokes and in hot climates is commonplace, but this type of exhaustion is, by itself, the final triumph of brave spirits.

The victims presented a very alarming appearance when first I met them. They seemed almost dead; limp, pale, and cold. Recovery usually is not protracted; in every case the men knocked out in this manner express a fervent desire to return at once to the ranks.

So many Belgians have been shot in the legs that this fact has aroused considerable surprise in medical circles. It is not a matter of chance.

When German prisoners came in and were interrogated, the explanation was forthcoming that orders had been given to fire low, no doubt in the belief that the man hit in the leg must be immediately *hors de combat*. This was certainly humane of the Germans, as such wounds heal speedily. The German wounded, on the other hand, have been hit for the most part about the body.

The Belgian doctors are splendid, and working magnificently. Two schools have been converted into hospitals. I saw the operating theater, beautifully equipped, made out of a class-room in twelve hours, only the blackboard remaining.

Another interesting item of the Belgian defense is given in a cable dispatch to *The Tribune*. It appears that the women of the country, not content with the traditional "women's part" in the conflict, are planning to take an active, first-hand share in the fighting, and are bent on proving themselves as valiant and able defenders as are the men. We read:

"The women of Belgium are giving their brave countrymen armed as well as moral encouragement in the heroic resistance wherewith they are opposing the invading Germans. Below are extracts from a letter from Mlle. Juliette Habay, of Brussels which throw new light upon the state of Belgian feeling and Belgian bitterness toward German aggression. Mlle. Habay,

who is herself a member of a woman's rifle corps, writes:

"Those Germans are killing our fathers, husbands, sweethearts and brothers, but don't think we can wait quietly at home without sleep and with tear-drops always in our eyes. No; we are learning to shoot with rifles. Here in Brussels great numbers of young girls have joined rifle corps, and a professor of arms is teaching us to shoot. At ranges our target is always the Kaiser, that monster. The Germans are getting nearer Brussels, and we women are all who are left to fight them. Children of fifteen and old men of sixty have gone to the front. But if these Germans do get into Brussels they will not take us alive. It is better to die Belgian than to live German."

IN GERMANIZED LORRAINE

THE name Alsace-Lorraine is familiar enough to American readers, as also is the story of the crape-draped statue in the Place de la Concorde, in Paris, which for nearly half a century has commemorated the sorrow France has felt over the loss of these provinces. Of Alsace-Lorraine itself, however, much less is known. In these forty-odd years, what has it meant to the Alsatians and Lorrainers, to be bereft of their native land and forced under the yoke of an alien civilization? The Alsatians, perhaps, have felt it not so hardly, for Alsace remained German until it was conquered by Louis XIV., and was confirmed the possession of France in 1697 by the treaty of Rhyswick; whereas Lorraine became French a century and a half earlier. In one of her very interesting books about the France that she knew and loved so well, Miss Betham-Edwards, *Officier de l'Instruction Publique de France* and author of many a delightful narrative of her adopted country and its people, gives us a picture of Alsace and of Lorraine as they are to-day, or, rather, as they were but yesterday, before the War of the Eight Nations had begun. In her chapter on "Germanized Lorraine" particularly (from "East of Paris," E. P. Dutton & Co., New York, 1902), we are shown how cruel can be the unnatural grafting onto one people of the manners and laws of another. The irreconcilability of the French and Germans has defied even the passing of two generations. Constant hardship has been suffered by the French inhabitants of the conquered provinces, and suffered patiently, rather than that they should be thought to be disloyal to their French memories. We read of one amusing example of this stubbornness, and of how German laws are evaded when evasion is possible:

At the railway station of Nancy I was met by a French family party, my hosts-to-be in a château on the other side of the French frontier.

We had jogged on pleasantly enough for

The House Beautiful—In STUCCO

Stucco Residence at Worcester, Mass.
CLINTON WIRE LATH Specified and Used

Because of its adaptability to the highest degree of artistic embellishment STUCCO is growing tremendously in favor for use in private dwelling construction.

CLINTON WIRE LATH

is the one form of metal lath advisable to use.

As a permanent support to the plaster in which it becomes thoroughly embedded CLINTON WIRE LATH has no equal.

It is your strongest guarantee of maximum safety from deterioration and is practically age-proof.

Don't let the indefinite term "Metal Lath" satisfy you. It means nothing and permits the use of inferior material. See to it yourself that CLINTON Wire Lath—galvanized, is specified.

SEND TODAY FOR "THE CLINTON STUCCO HOUSE BOOK." It is just what you need if you intend to build, for it gives vital facts about stucco you should be familiar with.

Cutting Business Costs

■ ■ ■

IN the competitive battle of producing and distributing goods, efficiency is becoming more and more a necessity. In the practical application of efficiency methods, in the reduction of operating costs, few departments yield more readily to betterment than transportation. In the delivery of products to railway, steamship, or consumer many wastes have been stopped.

Motor truck traffic engineers have accomplished wonderful results in economies and increased capacities. In almost every branch of road or street work they are demonstrating high efficiency.

In other departments of service the commercial vehicle is accomplishing remarkable work. A Western railway in process of construction through a wild and mountainous region is being graded entirely with motor trucks. These vehicles are found to be much less expensive than temporary construction tracks. The Coast and Geodetic Survey, Department of Commerce, are now engaged in determining the astronomic latitude of triangulation stations between Bartow, Texas, and the Pacific Coast. Although many of these stations are on mountains 10,000 feet high, the party with its equipment is being transported by a 1½ ton motor truck at half what horse-drawn wagons would cost. In similar work with a motor truck in 1912 it was found that the party could cover 75 to 100 miles per day over indifferent roads including frequent stops.

If you are operating horse-drawn vehicles for your factory or store, it will pay you to investigate the motor truck. It is probable that the self-propelled vehicle will enable you to cut materially the costs of your transportation. Whether or not you think it will, the subject is worth investigating carefully.

To aid our subscribers in making such an investigation, we maintain a Motor Truck Department. Manufacturers and merchants in all important lines of business have consulted us about motor trucks during the past few years. It is the object of our Motor Truck Department to put our subscribers in touch with the best traffic experts, especially with those experts most suited to serve their special needs. Write us, stating your requirements in detail, and we shall be glad to advise you. This service is open to Literary Digest readers and is conducted without charge.

MOTOR TRUCK DEPARTMENT

The Literary Digest

about half an hour, when the gentlemen of the party, with (to me) perplexing smiles, briskly folded their newspapers and consigned them, not to their pockets or rugs, but to their ladies, by whom the journals were secreted in underskirts.

"We are approaching the frontier," said Madame to me.

I afterward learned that only one or two French newspapers are allowed to circulate in the annexed provinces, the *Temps* and others, the names of which I forget; for the first and second offense of smuggling prohibited newspapers the offender is subjected to a reprimand, the third offense is punished by a fine, the fourth involves imprisonment. Now, as all of us know who have lived in France, the *Figaro* is a veritable necessity to the better-off classes in France, *The Times* to John Bull not more so. Similarly, to the peasant and the artisan, the *Petit Journal* takes the place of the halfpenny newspaper in England. This deprivation is cruelly felt, and is part of the system introduced by William II.

Custom-house dues are at all times vexations, but on the French-Prussian frontier they are so arranged as to provoke patriotic feeling. It may seem a foolish fancy for French folk, German subjects of the Kaiser, to prefer French soap and stationery, yet what more natural than the purchase of such things when within easy reach? Thus, on alighting at the frontier, not only were trunks and baskets turned out; we were all eyed from head to foot suspiciously. My hosts' newspapers were not unearthed, certainly; perhaps their rank and position counted for something. But one country girl had to pay duty on a shilling box of writing-paper, another was mulcted to half the value of a bottle of scent, and so on. There was something really pathetic in the forced display of these trifles, the purchasers being working people and peasants. All French goods and productions are exorbitantly taxed. Thus, a lady must pay three or four shillings duty on a bonnet perhaps costing twenty in France. On a cask of wine the duty often exceeds the price of its contents, and, according to an inexorable law of human nature, the more inaccessible are these patriotic luxuries, so the more persistently will they be coveted and indulged in.

Custom-house officials on the Prussian side have no easy time of it, ladies especially giving them no little trouble. The duty on a new dress sent or brought from France across the frontier is ten francs; and we were told an amusing story of a French lady who thought to neatly circumvent the *douane*. She was going from Nancy to Strassburg to a wedding, and in the ladies' waiting-room on the French side changed her dress, putting on the new, a rich costume bought for the ceremony. The officials got wind of the matter. The dress was seized and finally redeemed after damages of a thousand francs!

Those who are well-to-do are in this way continually embarrassed by what they consider unwarranted restrictions. Unlike their German oppressors, they have always looked forward for the deliverance that was to come out of France, and hence their view of their subjugation has been that of temporary sufferers in a state of

siege. The poorer members of the community gladly adapt themselves to German beer and cheese, soap and writing-paper, rather than to go without; but upon them, on the other hand, the blood tax has been a burden almost too great to bear. To avoid having their sons drafted for service in the Germany Army, they must either send them over the border into France never to return, or else pay a huge indemnity to the Government. This law is for rich and poor alike, but—

To the wealthy an occasional sight of their young soldiers in France is an easy matter. A poor man must stay at home. If his sons quit Alsace-Lorraine in order to go through their military service on French soil, they can not return until they have attained their forty-fifth year, and the penalty of default is so high that it means, and is intended to mean, ruin. There is also another crying evil of the system. French conscripts forced into the German Army are always sent as far as possible from home. If they fall ill or die, kith or kin can seldom reach them. Again, as French is persistently spoken in the home, and German only learned under protest at the primary school, the young *annexé* enters upon his enforced military service with an imperfect knowledge of the latter language, the hardships of his position being thereby immensely enhanced. No one here hinted to me of any especial severity being shown to French conscripts on this account, but we can easily understand the disadvantage under which they labor. I visited a tenant-farmer on the other side of the frontier, whose only son had lately died in a hospital at Berlin. The poor father was telegraphed for but arrived too late, the blow saddening for ever an honest and laborious life. This farmer was well-to-do, but had other children. How, then, could he pay the fine imposed upon the defaulter? And, of course, French service involved lifelong separation. Cruel, indeed, is the dilemma of the unfortunate *annexé*. But the blood tax is felt in other ways. During my third stay in Germanized Lorraine the autumn maneuvers were taking place. This means that rich and poor alike are compelled to lodge and cook for as many soldiers as the authorities choose to impose upon them. I was assured by a resident that poor people often bid worn-out men to their humble board, the conscripts' fare being regulated according to the strictest economy. In rich houses, German officers receive similar hospitality but we can easily understand under what conditions.

The annexed provinces are, of course, being Germanized by force. Immigration continues at a heavy cost. Here is an instance in point.

When Alsace was handed over to the German Government it boasted of absolute solvency. It is now burdened with debt, owing, among many other reasons, to the high salaries received by the more important German officials, the explanation of this being that the position of these functionaries is so unpleasant they have to be bribed into such expatriation. Thus their salaries are double what they were under French rule. Not that friction often occurs between German civil authorities and French subjects; every one bears witness

ANOTHER FEDERAL FLEET

SWIFT & COMPANY Owns 29 Federal Trucks

Several years ago Swift & Company bought their first Federal; since that time it has been a case of "another Federal" until they are now operating 29 Federal Trucks.

This is only one of the many instances where the purchase of one Federal has led to the installation of many more in the largest concerns in the country.

In purchasing Federal Motor Trucks, these large houses are buying business efficiency—an economical and thoroughly dependable means of reducing their haulage costs.

Your own transportation problem has been solved in some locality by Federal Trucks.

Our transportation engineering department has valuable data taken from the results of Federalized transportation in many different lines of trade.

Let us show you what Federal will save you in your business.

Reproducing Europe's Finest

When we secured the services of a great European engineer and made him a part of our company, he commenced his designs upon what has resulted in a masterpiece. The

LEWIS "VI"

♥ *Monarch of the Sixes* ♥

which we have produced from these designs is a reproduction of Europe's greatest 1915 automobiles.

The motor that drives the car is the same type as won the races Decoration Day at Indianapolis this year.

The car is electrically lighted and started, has a 135-inch wheel base which permits a great big roomy interior, and is hung on long underslung springs. Its users call it a \$3000 car for \$1600. It comes to you completely equipped with all the refinements that can possibly be desired with an automobile.

It is the largest, handsomest and most finely constructed car that \$1600 ever bought. Investigate it! The 1915 models are ready for delivery now.

to the politeness of the former, but it is impossible for them not to feel the distastefulness of their own presence. On the other hand, the perpetual state of siege is a grievance daily felt. Free speech, liberty of the press, right of public meeting, are unknown. Not long since a peasant crossed the frontier, and as he touched French soil, shouted, "Vive la France!" On his return he was convicted of *lèse-majesté* and sent to prison. Another story points to the same moral. At a meeting of a village council an aged peasant farmer who cried, "We are not subjects but servants of William II.," was imprisoned for six weeks. The occasion that called forth the protest was an enforced levy for some public works of no advantage whatever to the inhabitants.

In contrast to these sad pictures of these people and their life, the writer gives a pleasant picture of a country luncheon, at the home of some peasant friends near the French border. The hosts were of the moderately well-to-do farmer class, and yet—such is the genial freedom of the country—no stiffness or formality marred the pleasure of their visit. On the road thither the writer has occasion to note the differences in the twin provinces, and says:

The Lorraine villages are very unlike their spick-and-span neighbors of Alsace. Why Catholic villages should be dirty and Protestant ones clean, I will not attempt to explain. Such, however, is the case. As we drove through the line of dung-heaps and liquid manure rising above what looked like barns, I was ill prepared for the comfort and tidiness prevailing within. What a change when the door opened, and our neatly dressed entertainers ushered us into their dining-room! Here, looking on to a well-kept garden was a table spread with spotless linen, covers being laid as in a middle-class house. An armchair, invariable token of respect, was placed for the English visitor; then we sat down to table, two blue-bloused men, uncle and nephew, and three elderly women in mob-caps and gray print gowns, dispensing hospitality to their guests, belonging to the noblesse of Lorraine. There was no show of subservience on the one part or of condescension on the other. Conversation flowed easily and gaily as at the château itself.

I here add that while the French noblesse and bourgeoisie remain apart as before the Revolution, with the peasant folk it is not so. These good people were not tenants or in any way dependents on my hosts. They were simply humble friends, the great tie being that of nationality. The order of the feast was peculiar. Being Friday, no delicacy in the shape of a raised game-pie could be offered; we were, therefore, first of all served with bread and butter and *vin ordinaire*. Then a dish of fresh honey in the comb was brought out; next, a huge open plum-tart. When the tart had disappeared, cakes of various kinds and a bottle of good Bordeaux were served; finally, grapes, peaches, and pears with choice liqueurs. Healths were drunk, glasses chinked, and when at last the long lunch came to an end, we visited dairy, bedrooms, and garden, all patterns of neatness. This family of small peasant owners is typical of the very best rural population in France.

A Case of Lubrication In The Highest Degree

HAVOLINE OIL

"It makes a difference"

because it prevents frictional losses, promotes maximum efficiency in the motor and increases its serviceability.

The Facts In the Case

HAVOLINE is refined only from one uniform base crude oil of correct gravity and high quality. By our special process of manufacture the floating carbon and impurities are entirely removed, yet the life of the oil is preserved and its lubricating value enhanced, because the individual molecules are left intact. It burns up cleanly and evenly.

The Motorist's Verdict Proper Lubrication!

Because it forms an equally thick "cushion" of oil between the moving metals, decreasing the frictional loss and enabling the motor to generate its maximum power.

Buy the oil in the Blue Can. Tell us your make and
2 Five Gallon Cans to the Case. we'll tell you your grade

If your dealer cannot supply you, get it from us direct!

Ask your Garageman or write direct for testimonials of Havoline users owning your make of car. They're the Evidence. Write for the "Lubrican."

EUROPE'S HANDSOMEST KING

HORUM omnium fortissimi Belgæ sunt, wrote the great military expert Caius Julius Caesar twenty centuries ago, and we are learning to-day that his appraisal of that little country's temper was not far wrong. Attention focuses, however, upon their leader, the young King Albert, whose full name reaches the astonishing length of Albert Leopold Clement Maria Meinrad. He is said to be the handsomest monarch in Europe, and to be possess of an intelligence fully equal to the promise of his appearance. He is undoubtedly the prototype of the "King Egbert" who figures strikingly in the last half of H. G. Wells's "The World Set Free," who is a "king awake" and who is made to say: "For the first time in my life I am going to be a king. . . . I am going to be a real king, and I am going to abolish, dispose of, finish, the crown to which I have been a slave." Thus does "the young King of the most venerable kingdom in Europe" attest, in fiction, his determination to throw into the scale his influence, his kingdom, and his crown, for the world peace that is to come. Whether the picture that Mr. Wells has drawn be a true one or not, can not be said, but certainly his delineation of this stalwart young ruler is no more flattering than the actual one given by the *New York Evening Sun*:

He is tall—over 6 feet, in fact—well knit, broad of shoulder, and his face is a little chubby and pink cheeked. His hair is light golden, his features straight and manly, and all Europe calls him its handsomest king.

Albert is nothing if not modern. He has traveled a good deal and gained more by his traveling than forty American tourists could learn of Yurup in forty years. He made a long stay in the United States, spending much of his time in Washington and in the West, where he made St. Paul his headquarters. When he returned he wrote a book about his impressions of America, and in it he showed how thoroughly he was in sympathy with the people and institutions of our country. He made a trip around the whole world in his younger, unmarried days.

It is well known that Albert had no desire to reign. Like his father, the deaf Duke, he had the tastes of a country gentleman of moderate means and no desire to live beyond them. He has, in fact, a strong aversion to ostentation—his life when heir to the throne was embarrassingly simple. After his marriage it was proposed to lease the Duke d'Arenberg's palace at Brussels for him. But he could not resign himself to live in this sumptuous but far from home-like ancestral abode. Instead he chose the little town house of the Marquis d'Assche, Bellamy Storer's house when Minister to Belgium. There he and Princess Elizabeth lived a quiet and most uneventful life until their accession in 1909.

King Albert is credited by those who know him best as having the most up-to-date ideas concerning the functions of royalty. He is a steady worker, and his daily routine shows him to be busier than

the average business man. He rises at 6 o'clock every morning, breakfasts at 7 and at once proceeds to examine his correspondence and to answer the most pressing of his letters. He then devotes two hours to mechanical engineering, his favorite pursuit. Latterly he has given much time to the various new railroads projected in the Kongo.

The King, before he reached the throne, made a voyage to the Kongo. On his return he made a deep impression upon humanitarian Europe by his speech at Antwerp, announcing that he would head the movement in favor of the natives' welfare there, and would do everything in his power to change the cruel conditions then existing.

His impression of the Kongo also appeared in interesting book form. Albert has a breezy style of writing. He is witty, and his cabinets, they say, are somewhat afraid of his sense of humor. For a long while before he became king he was a regular reporter on a weekly paper, wrote stories, carried a police card, and took his assignments as meekly as any cub.

His other accomplishments—and they are many—include motoring and motor-cycling, aviating, riding and driving, shooting and fishing and soldiering. He is immensely popular, even with the Socialists of his Senate, and the people appreciate his democratic, businesslike attitude toward his position as their ruler.

COL. ROOSEVELT'S "SOCIOLOGY 4"

TO take care of your fighting force is only good generalship under any circumstances. It is small wonder, then, to learn of the consideration and thought that Colonel Roosevelt expends upon the "army" that follows him with unwavering faithfulness through his fiercest campaigns. This army consists at present, says the *Progressive New York Press*, of nine men, eight of them reporters on great New York dailies and one the representative of the Associated Press, furnishing news to the country at large. This is the true Roosevelt fighting force, upon which he depends more than upon any other single source of strength. He realizes this and strives his best to treat them fairly and squarely, assuring, through the sense of intimacy and good-fellowship he fosters, that his news will be caught from his point of view and reported without prejudice. *The Press* continues:

"My Class in Sociology 4" is what Colonel Roosevelt humorously calls these nine newspaper correspondents. Whether or not the relation is exactly that of pupil to teacher, it is certainly different from the relation which newspaper correspondents assume in dealing with most prominent public men.

When Colonel Roosevelt is in Oyster Bay "Sociology 4" meets twice a day—usually under the big porte-cochère of Colonel Roosevelt's ivy-clad, breeze-carest Sagamore Hill front porch. After a three-mile motor ride from Oyster Bay, the nine correspondents frequently, without even going through the formality of ringing the

SATISFACTION!

There is just one and only one human motive that causes men to buy things, and that motive is — satisfaction, contentment in possession, use and enjoyment.

WINTON SIX

Every Winton Six is practically built to order. Your Winton Six will be finished to meet *your* taste, giving it a personality and a distinction representative of a discriminating owner. It will be a car to command respect and win commendation wherever you may drive it, and you will enjoy a personal satisfaction above any you have yet experienced as an automobile owner. And that personal satisfaction is, after all, the only real reason for buying any car. Catalog upon request. The Winton Motor Car Company, 77 Berea Road, Cleveland. Branch Houses in 20 Cities.

FEDERAL

Double-Cable-Base-Tires

Thousands of motorists have proved every statement we make regarding the *exclusive* Federal Double-Cable-Base construction.

FEDERAL TIRES are not only as well made as the very best of other tires, but they possess an exclusive feature of construction that overshadows in *service importance* any other single development in the history of tire making. Motorists all over America are proving this, to their distinct advantage, every day.

Double-Cable-Base construction can be found in Federal Tires only. And the Double-Cable-Base eliminates, in one stroke, four common and costly forms of tire trouble.

Federal Construction Frees Motorists From Undue Tire Trouble and Expense

Who is there, among motorists, that does not know the expensiveness and the annoying inconvenience on the road of rim cuts, blow-outs and tube-pinching? And who is there that does not know the *danger* when, with the car moving rapidly, a tire blows from its rim? These things are not *fancies*. They occur all too frequently, and when they occur they rob motoring of its pleasure.

A full year's test of the Double-Cable-Base, in service all over America in the hands of thousands of motorists, *proves* that it *absolutely prevents* these troubles.

Wrapped Tread; Slow, Open-Steam Cure

All Federal Double-Cable-Base Tires are of the "wrapped tread" type—i. e., the carcass and tread, before curing, are wrapped with heavy cotton bands under strong tension, thereby adding the necessary compression to give the tread the utmost cohesion and ensuring an even flow of the rubber during vulcanization. This process permits of a long, slow cure at low temperature in open steam, as against a quick cure at higher temperature used in making molded tires. The wrapped tread tire, therefore, while highly resilient, is much tougher and far more durable than any molded tire possibly can be. This wrapped tread process, coupled with the Double-Cable-Base construction, makes Federal Tires distinctly Extra Service Tires.

Colonel's front door bell, stand under the shady structure and wait until the Colonel, whose work has been interrupted by the noise of the automobile, steps briskly out of the door. He is generally dressed in a kahki suit, and he begins telling the nine newspaper men what they want to know without waiting for the formality of being asked questions.

Altho newspaper men write more about Colonel Roosevelt than about almost any one else, they probably ask him fewer questions. Having learned to trust them, he tells them without reservation almost everything that comes to his mind. He warns them what to publish and what to keep to themselves. "There's no harm in your using that," he will say. Or, on other occasions, with a laugh: "This is strictly for Sociology 4." He tells them his views on the world-happenings of each day, his plans for the day or week, who his political callers have been or will be during the day, except in case they don't want their names to appear.

"I have also had some visitors who asked me not to make their names public," is his formula on the latter occasions.

The work of the nine staff correspondents at Oyster Bay these days is a strange combination of high-pressure work and idleness. They sleep late, swim in Long Island Sound, and breakfast and read the newspapers with intentional leisureliness. They know only too well that between five o'clock in the afternoon and eleven o'clock at night, an exceedingly strenuous "race with time" will begin.

On the stormy night of Colonel Roosevelt's return from Europe, for example, it was exactly 1 A.M. when he landed from William H. Childs's yacht *Joyance* upon the Emlen Roosevelt private dock in Oyster Bay. The first edition of all the newspapers of the nine correspondents had already gone to press. Whether the nine men could interview the Colonel and make the three-mile dash back to Oyster Bay in the thunderstorm in time to "long distance" their offices before the second editions was very doubtful. The nine correspondents had expected that this early-morning interview would not be very important. But as they clustered around the Colonel on the rain-swept, lightning-lit Emlen Roosevelt porch, he told them that he had had an emissary from District Attorney Whitman on the yacht, who had pleaded for the Progressive gubernatorial indorsement. Standing beside the Colonel, in the half-darkness, George W. Perkins and State Chairman Theodore Douglas Robinson insisted that the Progressives would not indorse Whitman. As the nine correspondents raced back to Oyster Bay they drew lots for the town's few long-distance telephones. One correspondent got the telephone in the chauffeur's private residence. Two more dropt out at a saloon which was known to be open. Three more went on to the Oyster Bay Hotel, and matched for turns at the single booth there. *The Press* reporter, thinking to save a few minutes, decided to chance a saloon near the chauffeur's house, and fortunately found it open. When newspaper readers all over the United States went down to their breakfasts just six hours later and read in their morning newspapers that District Attorney Whitman had sent an emissary

to Colonel Roosevelt, and that the Progressive organization leaders had advised Colonel Roosevelt against indorsing Whitman, none of them realized with what haste and difficulty the information had been obtained.

The most important single piece of news which the nine staff correspondents have given to the newspaper-reading public so far this year is perhaps the description of Colonel Roosevelt's attitude a month earlier regarding the indorsement by the State Progressive party of reputable Republican candidates having Progressive principles. For several weeks previous, the public all over the country had been wondering what the Progressive party in New York State was going to do about a Governorship candidate in case Colonel Roosevelt continued to refuse to run. Late one night, the correspondents of *The Press* and *The Herald* received long-distance messages from their New York City offices that a score of Progressives had left New York for Oyster Bay, intending to make another appeal to Colonel Roosevelt to run for Governor. Hurrying out to Sagamore Hill, the two correspondents learned that Colonel Roosevelt had given the leaders to understand that he (at that time) favored the indorsement of any one of several high-class possible Republican candidates of Progressive principles. The source of the two correspondents' information was unquestionable. But the information itself was absolutely unexpected, and had been conveyed to the correspondents in only two or three brief sentences. The source of it, also, had to be concealed. Hurrying back to Oyster Bay, the two men held a consultation with their seven companions as to how this information could be conveyed to the newspaper-reading public without the source of the information being given. Standing side by side at the telegraph desk of the Oyster Bay depot, the correspondents finally sent to their newspapers nine of the most widely different and most hastily written 1,200-word articles which have ever, perhaps, been based on the same item of news.

It is a pleasure to obtain a glimpse of the *genus reporterius* that does not show him in the yellow light of a hold-up man extorting intimacies from his victims by amateur third-degree methods. Possibly he is here a distinct species, so that, as we speak of the Washington or foreign or war correspondent, we should refer as well to the Roosevelt or Oyster Bay correspondent. At any rate, Sociology 4 is more than a name. It is an institution and, like every other close-knit human arrangement, has its definite code of unwritten law. We read:

One of these laws is that the Colonel's guests shall never be interviewed while they are on his grounds. The reason for the rule is obvious. It has been broken only once this summer. Late one night the staff correspondents, on unquestioned authority, learned that Colonel Roosevelt at a private conference at Sagamore Hill told the State Progressive leaders that he was not averse to the indorsement of high-grade Republican candidates with Progressive principles. When the correspondents motored up to Sagamore Hill

next afternoon, they found State Progressive Chairman Theodore Douglas Robinson in the act of leaving somewhat perturbedly. The correspondents, forgetting all about the rule, swarmed about the State chairman, plying him with excited questions while he in turn was accusing them of having sent to their newspapers information which was untrue. In the midst of the wrangle, Colonel Roosevelt hustled out of the house and, beaming on Sociology 4 through his spectacles, distracted their attention until the State chairman escaped. Colonel Roosevelt has since expressed himself for a straight Progressive ticket. But his amused treatment of Sociology 4 on that earlier occasion makes the staff correspondents believe that the information which they sent to their newspapers was authentic after all.

When Colonel Roosevelt goes to Washington, Pittsburg, or some other distant city, Sociology 4 accompanies him—usually having seats in the same car. That Colonel Roosevelt, ex-President and national leader, should be traveling all over the country in public Pullmans is, perhaps, the most striking evidence of how essentially democratic our present-day American life really is. The members of Sociology 4 usually arrange to get seats in the Colonel's car through John McElrath, the Colonel's political secretary. Most of them believed, until recently, that Colonel Roosevelt gave no particular thought to this arrangement. One of the staff correspondents, however, entering the car which took Colonel Roosevelt to Washington six weeks ago, found himself abruptly face to face with the Colonel without having prepared any greeting for him.

"Your berth back from Washington has been reserved for you, so you need have no concern about it," the Colonel said as he passed, leveling his forefinger at the tongue-tied correspondent, and making a slight inclination to take the place of a greeting. The Colonel that morning had ahead of him one of the busiest, most trying, and most crowded days of his life. The incident shows not only Colonel Roosevelt's thoughtfulness, but his tremendous grasp of detail.

On these train trips, as in all other dealings with Colonel Roosevelt, his relations with the staff correspondents are entirely informal and impersonal. They understand that his personal thoughtfulness for them is based merely on the inherent kindness which his nature prompts him to show to any man who is thrown with him constantly from day to day.

The work of the staff correspondents during these trips consists of getting the names and views of all politicians who confer with the Colonel, all incidents of the trip, his receptions by crowds at the different stations and in the banquet- and meeting-halls where he speaks. Copies of his speeches are usually furnished in advance to the correspondents. But they are supposed to catch any impromptu variations he may make. Their orders are never to let Colonel Roosevelt out of their sight if they can help it. They sometimes spend more nervous energy in obeying these orders literally than in writing their articles or solving the constantly changing and perpetually troublesome problem of telegraph communication.

The 100,000 New Yorkers, for example,

"Master Six"
5-passenger
Torpedo, \$2400

1915 Chalmers Cars

The "Master Six" of Them All

The new 1915 Chalmers "Master Six"—\$2400—will be produced in limited quantities for those who seek the fullest luxury of power and size in a motor car.

For 1915 the "Master Six" is offered in two new body types—both unusually beautiful and distinctive. In fact, we believe that in style and beauty the 1915 Chalmers will not be approached by any car in the American Market.

New Bodies of Exclusive Design

The four-passenger Torpedo pictured above is a most distinctive car. It has grace, exclusive style and dash. This beautiful, new body has a single door on either side. Front seats are divided. Doors are in the center of the body. This is a man's car of unusual style and smartness, built lower than usual, giving it a foreign, racy appearance, and making it distinctive among all cars.

On the "Master Six" chassis is also built a 7-passenger Touring Car—a big, roomy car, for those who desire an automobile of maximum carrying capacity. The lines of the 7-passenger body are the same as those of the Torpedo.

The only car at the last New York show with a body as distinctive in line as the Chalmers "Master Six" was a foreign car of international reputation; and the body alone was priced at \$1600.

The "Master Six" combines high power with striking style, unusual roominess and

complete convenience—in short, every essential luxury of a modern automobile.

Mechanically this is a new model of the "Master Six" that made the most noteworthy success of the 1914 season. With 1915 refinements, it offers even more than ever the limit of luxury in motor car manufacture.

The 1915 model will have the same power plant and practically the same mechanical features which gave the 1914 "Master Six" the reputation of being one of America's greatest motor cars.

The additional price, as in the case of the "Light Six," represents the actual cost of the added features and augmented quality.

Delivery Sept. 1st

These 1915 "Master Sixes" are ready for delivery beginning September 1st. We will distribute them as evenly as possible throughout our entire list of dealers, but there is bound to be more demand in certain sections than we can supply. It would be the part of wisdom to arrange to view these models immediately upon their arrival in your city.

Chalmers Motor Company

Detroit, Michigan

"Master Six" 7-passenger Touring Car, \$2400

Quality First

Chalmers Cars Are Real Quality Cars

Perhaps the greatest asset the Chalmers Company has is the monogram shown above.

Because this trademark is so valuable, because it has come to stand for so much in the automobile world, the Chalmers Company cannot afford to jeopardize the millions it has invested, by allowing a car to carry this monogram which does not in every way come up to the Chalmers standard of quality.

The Chalmers Company is not competing and never has competed with other cars purely on a "price" basis.

Our past experience has shown us that each year there are enough people to whom "quality" is first and "price" secondary, to buy more Chalmers cars than we can make.

So the Chalmers Company is one of those sure enough of its market to continue to produce cars on a "quality" basis rather than on a "price" basis.

The new prices, \$1850 for the Chalmers "Light Six" and \$2150 for the "Master Six," mean no more profit per car to us, but they mean something to you.

These new prices mean that Chalmers "Sixes" have never been over-priced. They mean that the Chalmers Company is raising prices, not for more profit per car, but they give the seeker of "quality" even a little more value in the future than in the past.

If you pay less than Chalmers prices for a motor car, you must be satisfied with less quality.

"Light Six"
6-passenger
Touring Car, \$1900

"Sixes" Exclusively

3,000,000 Miles of Proof.

Here is a proved 1915 car. Announced in May, over 4000 have already been sold and are in use throughout the country. These 4000 cars have been driven a total of over 3,000,000 miles and they have universally made good.

When this car was put on the market we offered it as a "Quality" not a "Price" car. We recommended it to the public not because it weighed a certain number of pounds, not because of any abnormal design, not because it was the most economical car to operate, not because its price was sensational.

But we said in offering it that we believed it to be the greatest all 'round automobile for the money offered since automobiles were first built. Our dealers on seeing the car agreed with us. And 4000 owners are now saying the same thing.

Proved Right By Use

This 1915 model has had an aggregate mileage great enough to prove beyond any question that it has strength for every emergency, power to spare, the easy riding qualities of cars costing much more; that its medium weight is scientifically distributed and its upkeep cost unusually low.

So here you have a 1915 car which has already demonstrated its ability to "stand the road." That is to continue to run silently and smoothly and to look like new after months of hard usage.

An Increase In Price

When we first announced this car, we priced it at \$1800. We have since added a few detailed improvements and made some changes in the equipment which have increased the manufacturing cost approximately \$50.

So, beginning August 1st, the price of the five-passenger model became \$1850. At the new price our factory profit remains the same.

Chalmers Motor Company

Detroit, Michigan

New 6-passenger Type

We are now making this car in a six-passenger model also. Its price is \$1900. This is a car of exceptional grace and roominess, with an entirely new, luxurious and distinctive body. The tonneau is fitted with Pullman disappearing seats. Doors are unusually wide. The body is a new type of exclusive Chalmers design.

The two models, like all Chalmers cars, are built complete in the Chalmers shops.

And we have never lost a sale to a prospective purchaser who visited the Chalmers factory and saw Chalmers cars in the making. Those people who have seen Chalmers cars being built realize that quality is something that is "built into" an automobile.

"Light Six" 6-passenger Touring Car . . .	\$1900
"Light Six" 7-passenger Limousine . . .	\$3300
"Light Six" 6-passenger Sedan	\$2850

"Light Six" 5-passenger Touring Car, \$1850

Quality First

Features of Chalmers "Sixes" for 1915

Chalmers Bodies—We call your attention especially to the Chalmers body design for 1915. The bodies of both the "Light Six" and the "Master Six" are distinctly original. They have been pronounced by experts to compare favorably in looks with the best European cars to which the world always looks for exclusiveness of body design.

Flexible Power—Both 1915 Chalmers "Six" motors are exceptionally long strokes. At two miles an hour "on high" or at express train speed, you feel the big reserve of pull and stamina. You never feel uncertain of a Chalmers "Six," and the need for gear shifting is rare.

Silence—Here are truly silent cars. No rattle. No vibration to tire your nerves and tear at the mechanism. Silence means absence of vibration and that is simply absence of wear.

Rideability—Chalmers "Sixes" ride well. They cling to the highest crowned road. That's because their weight is rightly balanced, because all torsion strains are taken up by big, strong, torque tube and rod. In building for strength and safety, Chalmers design leaves nothing to chance.

Molded Oval Fenders—Introduced by Chalmers last year and declared by owners the "handsomest fender built." Give fullest protection from dirt.

Tungsten Steel Valves—Will not warp or pit. Almost never need regrinding. Assure full and lasting power. Cost more, but are worth more.

Medium Weight—Both Chalmers "Sixes" are designed for lasting and satisfactory service. They are heavy where weight is needed; and do not carry a superfluous pound. In proportion to power, as economical as any.

Complete Equipment—All open cars have electric starter, Chalmers tailor-made top, rain vision windshield, Klaxon-made horn, demountable rims, full electric lights. No car carries better equipment or is more convenient.

who read their particular newspaper's admirable 1,500-word description of Colonel Roosevelt's Pittsburg speech last Wednesday morning, do not know that every one of those 1,500 words was written by a man whose hurrying pencil was gript between the three fingers and thumb of a bandaged hand and who was near to fainting from loss of blood. The correspondent while busily writing Colonel Roosevelt's speech at the big Exposition-Hall meeting had reached into his hand-bag under the table to get another note-book. His razor had slipped out of his case in the hand-bag. Its keen blade sank deep into his right middle finger. He bound a handkerchief around the cut. But the blood quickly forced its way through the linen and began spotting the table and even the sheets of paper on which all the correspondents were writing. As soon as the Colonel's speech was done, the correspondents, not being able to find a taxicab, ran through the dark Pittsburg streets for a mile until they reached the Western Union Telegraph office. There the other correspondents wanted the wounded man to dictate his article. But he objected that the hour was so late that the fellow-correspondent who helped him would not get his own story on the wire in time for the first edition. He sat down at a corner of a strange desk in the telegraph office and wrote his 1,500-word lead and description in little more than an hour with his bandaged hand. And an unusually accurate and complete account it subsequently proved to be, too.

Several of the present members of Sociology 4 are old Roosevelt correspondents who have served at various times and places in the past ten years in exactly the present capacity. Several are brand new. Recently the arrival of a new "student" gave the Colonel an opportunity to exhibit his wonderful power of memory of faces and names in an instance as remarkable as has ever been recorded of him. He had never seen this man before, and, it is safe to say, had never heard of his existence:

The new correspondent was introduced to Colonel Roosevelt on the steps of the Sagamore Hill porch during one of the twice-daily visits. The Colonel, as he shook hands, repeated the correspondent's name.

"Are you any relation to — — —?" he asked without any seeming effort of memory.

"I am his son," the startled correspondent answered.

"I knew your father in Albany in 1881," Colonel Roosevelt said.

Colonel Roosevelt's personal thoughtfulness for his followers—one of the qualities which, perhaps, has made him so successful as a leader not only in politics but in war—was shown, according to one of the nine correspondents, during the Colonel's unusually trying trip to Washington five weeks ago. The particular correspondent had been presented to Colonel Roosevelt only a week before.

Many political conferences on the train, the cheering, roaring mob, and rush for automobiles at the arrival in Washington, the announcement of the death of Riis

on the museum steps, the surging rush from show-case to show-case in the crowded museum itself, the visit to President Wilson, the American Geographical Society dinner at the hotel, Colonel Roosevelt's lecture at the Convention Hall, and the midnight political meeting at Progressive headquarters—made the day about the most strenuous that the correspondent had ever put in. In describing the experience afterward, the correspondent said that frequently, in a tired moment, he would look up to find that Colonel Roosevelt's eye was momentarily resting on him with a kindly flicker. The effect of this, the correspondent says, was to make him feel that if the Colonel could stand the strain, he could stand it, too.

AFTER THE BATTLE

MEN have long realized the barbarity of war, without much change in their susceptibility to war fever. Perhaps when they once realize clearly its ironic absurdity, which many writers have tried to show to them, they will finally turn from it. Charles Dickens took great pains to make clear the true nature of so-called civilized warfare, in his brief description of "a splendid charge":

There will be the full complement of backs broken in two, of arms twisted wholly off, of men impaled upon their bayonets, of legs smashed up like bits of firewood, of heads sliced open like apples, of other heads crunched into soft jelly by the iron hoofs of horses, of faces trampled out of all likeness to anything human. This is what skulks behind "a splendid charge." This is what follows, as a matter of course, when our fellows rode at them in style and cut them up famously.

And after the charge? A correspondent of the New York Tribune writes of the battle-field of Diest, Belgium. He says:

Across the battle-field of Diest there is a brown stretch of harrowed ground half a furlong in length. It is the grave of twelve hundred Germans who fell in the fight of Wednesday. All over the field there are other graves, some of Germans, some of Belgians, some of horses. When I reached the place this afternoon peasants with long mattocks and spades were turning in the soil. For two full days they had been at the work of burial and they were sick at heart. Their corn is ripe for cutting in the battle-field, but little of it will be harvested. Dark paths in their turnip-fields are sodden with the blood of men and horses.

The Belgians, in contempt of their marksmanship, had forced the Germans to the attack, which had been made from three points of the field simultaneously. The fighting had been fierce, but now that both sides had swept on, no one seemed to know how those in the fight had really fared. Only by the heaps of dead could one make estimate:

At least, there were most dead on the side toward the bridge. The charge of 300 Uhlans, who were held in check for a

Gearless Transmission's Triumph

\$1250

Roadster or Touring

New Model "9" Fully Equipped including Delco Electric Starter, Electric Lights and Horn

The New Cartercar and the New Cartercar Policy

WITH the advent of the new season, August 1st, 1914, the manufacturers of the gearless transmission Cartercars announce that their policy will be to concentrate all the energy of their present efficient organization on the production of but one model chassis and this on the embodiment of all the distinguishing features of the other Cartercars—yet better than any of them.

The Success Behind the Gearless Transmission

This Cartercar transmission consists of a flat copper disc revolved by the engine and a fibre faced wheel. They grip when rolled together, the edge of the wheel against the face of the disc and the result is transmission by contact instead of cogs.

For twelve years this form of transmission has earned the confidence of its makers and the public. It has proven itself equal to the emergencies and most satisfying under adverse conditions.

Model Nine has all the sturdy qualities of the gearless transmission combined with the added attractiveness of neat lines and complete equipment.

Beauty and Comfort

The cowl dash meets with perfect symmetry the tapered hood. The streamline effect, the deep cushions, the big tires, the extra roomy body, all add touches of grace and ease.

Model Nine Features

The Gearless Transmission.
Trim Streamline Body.
Colors: Raven Blue or Cartercar Gray.
Delco Electric Starter.
Electric Lights and Horn.
Economical, extra powered, Motor.
Big Tires, (33x4 ins.) Rear Tires, non-skid type.
Genuine Leather Upholstery.
Double Deck Seat Springs.
Dimming Searchlights.
New Instrument Board with all controls, fuel gauges, etc., in plain sight.
Horn Button on Wheel.
New Two Way Ventilating, Rain Vision Windshield.
Extra Safe Brakes.
Mohair Top.
New "Inside" Curtains.
License Tag Holders.
Extra Demountable Rim.

40% Better Performance

The motor is a marvel of power and economy.

The bore is 3½ inches and the stroke 5 inches; with the resultant increase in pulling power and the decrease in the consumption of fuel. The head is detachable, making access easy when necessary.

The gear ratio of Model "9" is 4 to 1, which makes the New Cartercar fully 40% better in performance on low as well as on high speeds. Backed by the flexibility and powerful leverage of the gearless transmission, it has a strength unsurpassed by any other car of any price.

The Biggest Value

If we did not confine our output to this one model chassis and at the same time greatly increase the production, we could not possibly sell this splendid Cartercar for \$1250. It is the biggest value ever offered in our twelve years' experience.

Write for Folder Describing Model "9." A card will bring it

A SWEEPING VICTORY!

Marking the End of
the Creations of Yesteryear—the
Styles that Were and Are No More.

\$1050

Gone for good are the knobs and angles and patchworks of ancient styles. They are swept away to the limbo of the wheezy "one lung" and the oil lamp by the sheer beauty of the new Detroit, absolutely the first actual European streamline in America; first high-speed, long-stroke, ball-bearing motor; lightest car of its class; biggest car for the money.

The 1915 *Detroit*

Other models, without starters, \$850 to \$925

JUST AS THIS NEW DETROITER made a clean sweep of everything that binds cars to the commonplace in design—

JUST AS THE FUEL-SAVING Detroit type of long-stroke, high speed, ball-bearing motor made a clean sweep at the Indianapolis race, driving the first four winners across the line—

JUST AS THIS MATCHLESS car fairly swept the convention of Detroit dealers off their feet when it was unveiled for the first time—

SO HAS ITS INSTANT POPULARITY won a sweeping victory everywhere. Dealers and buyers, from

coast to coast, are writing, wiring, coming.

HERE IS THE LIMIT OF beauty, durability, value. Thirty-five special features give the last extreme in refinement—and they all come in the list price—they are not "extras."

AND NOTICE THE NEW CONVENIENCES. Recording instruments combined in one unit, every control at your finger tips. Carburetor adjustment on the steering post; carburetor itself raised to an easily accessible point. Emergency light and cigar lighter. Red electric flash that warns against lack of oil. One-man top. Wide doors. And these are only five of the thirty-five.

The Detroit, like the Gold Standard, is the basis for calculating your money's worth. Send today for our illustrated folder. See a Detroit dealer. Put in your order early.

- Four 24-inch doors.
- Non-skid rear tires.
- 20-operation body finish.
- Fuel tank in cowl.
- Ventilating, rain-vision windshield.
- Ball-Bearings throughout.
- Multiple disc clutch in oil.
- Duplex tire carrier in rear.
- Tullite searchlights.
- Positive gasoline gauge.
- Electric-flash oil gauge.
- 20 to 25 miles per gallon of fuel.
- 100 miles to quart of lubricant.
- Willard L B A Battery.

short time by seventeen Belgians at a corner, seems, however, to have come near success. The derelict helmets and lances that covered the fields show that the charge pressed well up to the guns and to the trenches in the turnip-fields where the Belgian soldiers lay. On the German left mitrailleuses got in their work behind, and in the houses on the outskirts of the villages. Five of these houses are burned to the ground, and two others farther out are broken all to pieces and burned. In a shed was a peasant weeping over the dead bodies of his cows.

It would be easy now at the beginning of this war to write of its tragedy. The villagers have each a tale of loss to tell. All of the twelve hundred men in the long grave were men with wives, sweethearts, and parents. All the Belgian soldiers and others who were buried where they fell have mourners.

A letter which I picked up on the field and am endeavoring to have identified and sent her for whom it is intended will speak for all. It is written in ink on half a sheet of thin note-paper. There is no date and no place. It probably was written on the eve of battle in the hope that it would reach its destination if the writer died. This is the translation:

"Sweetheart: Fate in this present war has treated us more cruelly than many others. If I have not lived to create for you the happiness of which both our hearts dreamed, remember my sole wish now is that you should be happy. Forget me and create for yourself some happy home that may restore to you some of the greater pleasures of life. For myself, I shall have died happy in the thought of your love. My last thought has been for you and for those I leave at home. Accept this, the last kiss from him who loved you."

Post-cards from fathers with blessings to their gallant sons I found, too, on the field, little mementoes of people and of places carried by men as mascots. Everywhere were broken lances of German and Belgian, side by side; scabbards and helmets, saddles and guns. These the peasants were collecting in a pile, to be removed by the military. High up over the graves of twelve hundred, as we stood there, a German biplane came and went, hovering like a carrion-crow, seeking other victims for death.

In the village itself death is still busy. A wounded German died as we stood by his side and a Belgian soldier placed his handkerchief over his face. Soldiers who filled the little market-place may be fighting for life now as I write. As I write the enemy is in force not a mile away from them, and in a moment they may be attacked. It is significant that all German prisoners believed they were in France. The deception, it appears, was necessary to encourage them in their attack, and twelve hundred dead in the harrowed field died without knowing whom or what they were fighting.

Another story, also taken from *The Tribune*, is told by Guy Menzies, an English stockbroker, who came through Liège after the German occupation. He says that the Germans, altho they had gained the city, were not very joyful over their success, as they had before them the problem of getting out of the city again, the

A New Casement Operator

The bronze metal handle is all that is seen. Turning it opens or closes the casement window with ease and holds it firmly locked at any point. There is no interference with curtains or shades, or with window screens placed on the inside.

This device makes casements easy to govern and eliminates many objections to this very desirable form of window. Any dealer in Corbin hardware can tell you all about it. Or we will send you descriptive matter upon request. Let us hear from you.

A Momentous History of Events Leading Up to the Present European War From the French Viewpoint

FRANCE From Behind the Veil

By **COUNT PAUL VASSILI**

IN THIS VOLUME, written in frank and pungent style, is embodied the author's unrivaled experiences of the inner social and political life of France during the last fifty years. He opens his reminiscences with the meteoric reign of Napoleon the Third and his lovely Andalusian wife, the Empress Eugénie, and closes them "the day before yesterday" as it were.

"There is here much first-hand and entertaining gossip about the celebrities and notabilities of French society during the author's time."—*The Sun, New York.*

"Contains much that is momentous in history, simply and frankly told."—*The Evening Post, Chicago, Ill.*

"No man of the era which closed with the downfall of Napoleon III. had better opportunity for close investigation than did this diplomat, whose missions, mostly of a semi-official nature, were many, taking him to all the courts of Europe."—*The Globe-Democrat, St. Louis, Mo.*

Large Octavo, Cloth, \$2.75 net; by mail \$3.01

forts outside being capable of a cross-fire that would leave them little chance of making an exit save with heavy losses. He speaks of boulevards lined with Maxims, and of being astonished at the small amount of damage that had been done in the town. Two bridges had been blown up, and the other two were heavily guarded by the Germans. From Liège Mr. Menzies managed to make his way, with various narrow escapes both from the French and Germans, towards Verviers. He says:

After I had passed Vaux-sous-Chevremont I began to see some of the terrible ravages which the German advance had brought about. At Romsée village, with about five hundred inhabitants, every house had been burned down by the Germans.

At this point three corps were firing, and I had some marvelous escapes from their shells. The Germans were advancing from Hervé through Soumagne and Xhendelesse and were pillaging the village of Maquee. As I passed through, women and children were flying away from their homes with terror-stricken cries, not knowing where to go.

When I reached Fléron the people were so terrified no one would take me in for the night or give me any food. I had to push on as far as Berne. I started again at 4 A.M. on Monday, but I lost my way and got to Soiron.

There I saw more terrible traces of the fire of the forts of Liège. The German field-guns were lying by the side of the road disabled, with dead horses still in their harness. The ground was littered with hundreds of corpses of German soldiers that had not then been buried. The men were lying very close together, indicating that they were being put forward in close order. The wounds inflicted by the shell fire were terrible, and I hurried away from the scene as quickly as I could.

I got to my house at Petit Rechain at 8.30 Monday, having passed through Verviers. My friends were very scared and begged me to leave again as soon as possible.

I left Petit Rechain Wednesday, still on foot, and made my way for the Dutch frontier through Berneau and Moland. At Berneau as I passed through a great German army was encamped. There must have been nearly 100,000 men of all arms, among them were the Death's Head Hussars, of which the Crown Prince is the colonel. And I heard that he had been wounded in one of the engagements around Liège.

Near Verviers I saw two huge guns nine meters long being drawn along a road by thirty horses attached to each. At Magnée they were bringing up howitzers. The Germans were trying to make pontoon bridges over the Meuse at Visé, but as soon as they were completed I saw them destroyed by shot from Fort Pontisic. I was told this had happened twenty times before.

At Louvain we found the King in consultation with the general staff, his majesty dressed in a general's field uniform. He looked smiling and confident. The roads leading into Brussels to-night are crowded with mournful processions of Red Cross wagons bringing in the wounded, both Belgian and German walking by the side

of the carts, and comforting the sufferers were numerous priests and monks bearing a Red Cross badge. The scene was piteous and moved all beholders to tears.

Soldiers returning from the front are greeted along the road by innumerable women and children, who hand them bottles of wine, bread and meat, and do not forget to be repaid with a kiss.

RUSSIAN HEROISM

NOT unapropos of the present Eastern situation is the story printed by the *Kansas City Star*, written by a Russian Jew, Nathan Frutko. An exile from Russia, he tells of his former assignment, as a physician in the employ of that Government, to the district of Yakutsk, a huge province in northern-central Siberia. Here an epidemic of typhoid was raging, and thither journeyed the doctor with his staff of nurses and assistants. But the situation that faced them there was hopeless in the extreme. These poor peasants whom they were called upon to treat were dying not of typhoid, in reality, but of starvation, which had so weakened them that the ravages of disease could not be stayed by any medical skill. To the Government there was no appeal; and the one course of action which they took speaks eloquently for the caliber of these people who threaten soon to pour their hordes into the European arena. Of the situation in Yakutsk and the realization of their helpless plight, Dr. Frutko says:

Heavily the day wore through. Evening brought us again together in the Government house, a weary and harassed company, men and women alike, half frozen at heart, and helpless. I sat alone, responsibility heavy upon me. What could be done? Where get food to stay the epidemic. For I was under no illusions. I knew the cause of the sickness—and the Government knew. Cold and starvation were the priests that hourly led victims to the sacrifice, victims whose weakened bodies could no longer resist the contagion.

But it was not of mere whim that the rulers forbade the giving of food to these helpless ones. It was, in a new form, the old drama of dancing peasantry which Catherine the Great had had played before the envoys of France. Humble folk die in darkness and the world sees not; but gifts that may save them from death must be gathered in the light, and the world sees. Greater Russia must be kept content; the great world must remain uncriticizing. Thus the bitter fact of hunger was a state secret. Of no avail to petition the Government, rich with bursting barns. What to it were the deaths of a few Yakutsk peasants weighed in the balance with its own peace and desire for respect? South and middle Russia, if they knew, would help. But how let them know? To publish to them, or to the world outside, the story of this starvation would mean a life sentence to Siberia. But—

"Friends," I called suddenly to my assistants, "these Yakutsk must be saved. You are young; your lives will mean much

to Russia. I have lived long enough. Further life under present conditions is impossible. Life in Siberia will not be bad for me. I will make public this need and this guilt. And so, a pen and ink."

The letter was written and addrest to my friend, the publisher of the largest and most widely read of all the newspapers of U—sk. In those pages all Russia would read of the famine and the fever. Help would come.

"Let me at least carry the letter to the station," begged one of my loved nurses. "May I not have some small share of the service?"

She took the letter, her eyes shining with eager joy, and I lay down to rest.

Weary tho I was, however, sleep would not come. I was still wide of eye when late in the night I heard a heavy fall. I ran to the door whence the sound had come, the door of the nurse who had taken the letter to the station. I knocked. There was no answer. I tried the latch; the door was locked. My assistants coming up at this moment, we broke through the door. The body of the nurse lay upon the floor. A stream of blood reddened the edges of a folded paper lying near her. In it she had written:

"Dear Doctor: I have destroyed your letter and replaced it with one I wrote myself. I have been thinking of suicide, at any rate, so I decided to save you for another time."

"Be happy, old colleague. Do not be sorry at seeing me dead. Life in Russia is impossible. Even if you consider my death a weakness, do not blame me."

We looked with reverence at the face of this woman. In her death she had saved many lives.

LO, THE POOR CORRESPONDENT!

DOUBTLESS, if one but knew, the fevered daily newspapers 'deserve as much sympathy as blame in their present attempt to report the war for a bloodthirsty nation of peace-lovers. Let them take heart, however, for one of their brethren, on the *New York Evening Post*, has taken pity on them. He has constructed for them a cast-iron, indestructible, hammerless, incontrovertible cable dispatch, such as may be used time and again, with varying head-lines, and such as will satisfy all readers, including all foreign born, including the German-Americans:

PARIS, OR BRUSSELS, OR BERLIN (as the case may be).—Another notable victory over the enemy was scored by a French (or Belgian or German) infantry regiment at a point somewhere between Iceland and Sicily. Our troops were outnumbered four to one, but our guns carried four times as far as the enemy's artillery and fired four times as fast. They retired with a loss of six thousand men. Our own losses are three men killed and seven wounded, owing entirely to revolting treachery on the part of the enemy. After a desperate encounter the country was cleared of the enemy. Prisoners report that the enemy has no stomach for fighting. Bridges thrown across the river were repeatedly

Greater Value—Lower Price

Model 48-Six—\$1650

48 H. P. Delco electric cranking, lighting and ignition. Wheel base, 125 inches. Tires, 36x4 inch, non-skid in rear. Equipment: mohair top, top hood, ventilating windshield, speedometer, electric light on instrument board, sight feed oil gauge. Extra demountable rim, tire carrier at rear and electric horn.

Two New Models for 1915

48-Six—\$1650

Six Cylinders

Olympic "46"—\$1375

Four Cylinders

Both Models Center Control. Left Drive. Both Fully Equipped

Thirteen years of constant study of the buyers' needs, thirteen years of continuous development in factory efficiency are expressed in these two Jackson models. We believe they represent the utmost in automobile value. In them is incorporated the maximum of strength, endurance power and comfort. No other cars can possibly offer you more. They are silent cars—you can hear them running but you have to listen. And you get Jackson quality, Jackson strength, and the wonderful ease of riding that makes the Jackson the first choice of those seeking solid comfort.

The 48-Six a Distinct Triumph

Into its manufacture has gone everything that our long experience has taught. We are proud of it. Its long stroke motor, of European design, unites smoothness, silence and extreme flexibility. It will speed up from a walking pace on high gear to 50 miles an hour within a few hundred feet. It is amazingly economical. Cranking, lighting and ignition are by the Delco system.

Note the beautiful stream-line body—not an angle from front to rear. It is big and roomy. Its finish is superb. Its upholstery yields soft, luxurious comfort. No car at any price offers you more.

Like all Jacksons, this model has *four full-elliptic springs*. This again means comfort and tire economy. You rarely see a shock absorber on a Jackson car. Jackson tire economy is proverbial.

Before you buy any "Six" find out all about the Jackson 48-Six. It meets the demand for a "Six" of medium size—built to stand up better than any car we know of. Get our announcement telling all about it, or, better still, let the Jackson dealer show it to you.

The Olympic "Forty-Six" for 1915

is a powerful, sweet-running four, a notable successor to the popular "Olympic Forty." Refined and simplified construction, stream-line body, larger motor.

This car can be driven faster over rough roads than any car of similar size and power. This is due to the four full-elliptic springs, which absorb road inequalities and give a new ideal of comfort. Time and time again Jackson owners have demonstrated that Jackson spring suspension has from 33½ to 100 per cent more flexibility than other types. Don't be satisfied with reading this statement. Make the Jackson dealer prove the extra comfort to you.

The motor is of the same long stroke type that has made the Jackson famous. It is notable for its silence. Larger than the motor of last season, it provides an immense fund of reserve power that makes "No hill too steep—no sand too deep."

A carburetor of improved type in connection with other refinements still further increases the fuel economy of this motor. Fuel is carried in rear tank and fed by vacuum system.

The brief specifications just hint at the remarkable value in this car. Let us send you the catalog that tells the whole story. Write and we will gladly advise you of the nearest Jackson dealer.

The Tire that is Puncture-Proof—Guaranteed

ABSOLUTELY this pneumatic "vanadiumized" rubber tire ends the most provoking of all tire troubles — it is **PUNCTURE-PROOF**

Wrapped within the body of this tough and sturdy tire are impenetrable but flexible layers of small, segregated steel discs shielding the inner tube from puncture.

This is guaranteed. The Lee Zig Zag is truly a non-skid tread—scientifically the best and safest. Lee Tires yield an amazing mileage—they wear, wear, wear.

shattered by our artillery. This makes our victory over the enemy twenty miles this side of the river all the more remarkable. Maneuvering skilfully between a mountain and a river, both of which, we assure our readers, are to be found in any respectable atlas, our men made repeated charges through the corn-fields and well beyond into the vineyards which recur at regular intervals between Rotterdam and Lisbon. Similar victories are reported from along the entire front, which we can go so far as to say is facing the enemy without venturing to specify where the enemy is.

SENATOR VEST'S SPEECH

DOWN in Johnson County, Missouri, they are erecting in the county courthouse a commemorative tablet to a man who made a speech there once about a dog. It wasn't a real speech; it was just a few words addressed to the jury by a man who was a lover of dogs, and who was trying to prove that killing a man's dog is a real and tangible injury to the man. The lawyer who made the address was the late Senator George G. Vest. All through the trial, so tradition states, the Senator paid scant attention to the defense, the evidence, or the witnesses. The *Kansas City Journal* continues:

When the time came for the attorneys to argue the case, the Senator opened no ponderous legal tomes. He cited no learned decisions and appealed to no venerated "authorities." He merely stepped forward to the jury box, and in a conversational tone, without any attempt at oratorical effect, delivered this masterful little etching of eloquence, which has passed into a classic in the literature of the law and the humanities:

"Gentlemen of the jury: The best friend a man has in this world may turn against him and become his enemy. The son and daughter that he has reared with loving care may become ungrateful. Those who are nearest and dearest to us, those whom we trust with our happiness and our good name, may become traitors to their faith. The money that a man has he may lose. It flies away from him when he needs it most. Man's reputation may be sacrificed in a moment of ill-considered action. The people who are prone to fall upon their knees and do us honor when success is with us may be the first to throw the stone of malice when failure settles its cloud upon our heads. The one absolutely unselfish friend a man may have in this selfish world, the one that never deserts him, the one that never proves ungrateful or treacherous, is his dog.

"Gentlemen of the jury: A man's dog stands by him in prosperity and poverty, in health and in sickness. He will sleep on the cold ground, when the wintry winds blow and the snow drives fiercely. He will lick the hand that has no food to offer. He will lick the sores and wounds that come in the encounter with the roughness of the world. He guards the sleep of his pauper master as if he were a prince.

"When all other friends desert, he remains. When riches take wings and

reputation falls to pieces, he is as constant in his love as the sun in its journey through the heavens. If fortune drives the master forth, an outcast in the world, friendless and homeless, the faithful dog asks no higher privilege than that of accompanying him to guard him against danger, to fight against his enemies. And when the last scene of all comes and death takes his master in its embrace and his body is laid away in the cold ground, no matter if all other friends pursue their way, there by his graveside will the noble dog be found, his head between his paws and his eyes open in alert watchfulness, faithful and true even to death."

It is also part of the history of the case that the jury, not with unwet eyes, gave a verdict for the Senator's client without leaving the jury box.

WAR-RIDDEN JOURNALISM

"A BIG European war will be a fine thing for the newspapers," remarked a big business man in Philadelphia the other day. Probably a good many other people who have seen wild-eyed newsboys selling copy after copy of the latest extra in no time at all are of the same opinion. With extras coming out several times a day, and nearly every one buying them morning, noon, and night, one would think that war would be a big daily's favorite form of international pastime. The contrary is true, however, as a contributor of the *Philadelphia Public Ledger* explained to the misinformed business man:

Alas! Others may see your ointment, but you alone can observe the fly swimming around in it. The ink is scarcely dry upon the printed testimony of one newspaper manager to the effect that the Spanish-American War had cost his publication a tidy three-quarters of a million net.

The editor of the *London Post* told me his paper had twenty correspondents in the Boer War and cable-rates were then \$1.20 a word from Cape Town. That African conquest was the biggest menace to newspaper dividends which London has experienced in a generation.

I saw dispatches come from Manila during our insurrection there which cost \$3,000 a column. That included the price paid the special correspondent for sending one article.

Yes. A convention of newspaper proprietors would as quickly indorse a great war for their own money-making purposes as a farmers' grange would vote to employ a pack of wolves to guard their sheep.

Innocent, but.—A bad case of highway robbery, tried several years ago before Chief Baron Green, on the last day of the Ennis Assizes, resulted in an acquittal. The Chief Baron, addressing the sheriff, said:

"Mr. Sheriff, is there any other indictment against this innocent man?"

"No, my lord," was the reply.

"Then you'll greatly oblige me if you don't let him out until I have half an hour's start of him on my way to Limerick."—*Tit-Bits*.

INVESTMENTS AND FINANCE

HOW LONDON MET THE FINANCIAL CRISIS

DESPITE our neutrality and our remoteness from the scene of conflict, the first shock of Europe's plunge into war was sufficient to close our stock exchanges and force our Government to emergency measures to save our financial structure from collapse. To England, one of the actual combatants, the immediate financial effect was naturally even more paralyzing. How this crisis was met we are told by a London correspondent of the *New York Journal of Commerce*. In addition to the shutting down of the stock exchange, all the banks in the country were closed for five days by royal proclamation in order to check the panic and to give the banks time to deal with the situation, probably unparalleled in history. The condition of the Bank of England is summed up as follows:

"The deposits in the London banks amounted to £1,000,000,000 and their acceptances £400,000,000. A run had commenced on the Bank of England, in the form of persons presenting notes of £5 and more to be exchanged for gold. The bank's gold holding had already been heavily reduced by foreign demand, and it could not face further heavy withdrawals without some drastic action.

"In the three days from Wednesday, July 29, to Saturday, August 1, the bank's note issue increased from £29,706,000 to £36,105,000, a rise of £6,399,000, while the holding of coin and bullion decreased from £38,131,000 to £27,622,000, a decrease of £10,509,000, and the ratio of reserve to liabilities dropt from 40 per cent. to 14 per cent., this being a record slump."

To meet this situation the bank-rate was raised to 10 per cent. "for the first time since 1866." The writer goes on to explain:

"To understand the difficulty faced by the Bank of England, it must be explained that in this country paper currency such as is used in the United States is practically unknown. Our smallest denomination of paper money until yesterday was the £5 note, equivalent, say, to your \$25. Bank-notes were only used by the very rich. The large majority of the working classes have never seen a bank-note and the vast majority of the general public have used bank-notes only on special occasions. They have been accustomed all their lives to doing their business with coins—gold, silver, and copper—and gold coin is in common use to the same extent as \$10 and \$20 bills in New York.

"Now, on the morning of Friday, July 31, the banks began to exercise a certain amount of discrimination in passing out gold against checks presented for payment. Imagine what this meant to the population, which was beginning to get alarmed about the financial situation. War seemed inevitable with Germany, the Stock Exchange had closed to prevent 50 to 300 failures; everybody was getting uneasy; and then the banks began to show an inclination to pay bank-notes instead of gold coin. The result was that the public immediately took the bank-notes to the Bank of England, where they knew they could get gold coin for the notes. The Bank of England, being obliged to hold

on to its gold in view of the war, had to do something to meet the situation, and this is what was done.

"The obviously necessary thing was to issue notes for small amounts of £1 and 10s., equal to \$5 and \$2.50, and, if necessary, to issue these notes in excess of the legal reserve. But the Bank of England was unprepared physically to meet this situation. It had no small notes. They had to be designed first, in a manner not easily counterfeited; the plates had to be made, special paper had to be selected, manufactured, and delivered; special machinery had to be got to work; and so during this unprecedentedly long bank holiday the Bank of England has been busy night and day printing the new bank-notes.

"Meanwhile the public had to be educated to the use of bank-notes instead of coin; they had to be taught by the newspapers and by proclamation posted in the streets that these slips of paper marked as 'One Pound Notes' are equivalent to £1 in gold and that the banks will give them £1 sterling for the piece of paper. At the same time the public has been taught that the Government needs the gold at present because we are at war and that anybody who insists on having gold instead of paper is aiding the country's enemies. Citizens of the United States who are accustomed to bills will scarcely realize what a revolution this simple change in currency represented to the poorer classes."

The public, however, adapted itself readily to the change, and "when the banks opened it was found that the panic had stopt." The next step was to reduce the bank-rate from 10 per cent. to 5 per cent.

In another dispatch the same correspondent, discussing the war situation in more general terms, remarks:

"Perhaps the most terrible personal side of the question is the separation of fathers and sons from those who are utterly dependent upon them for the wherewithal to buy food, and food will be scarce and dear. This is the case not only with Germans and Frenchmen who have joined the flag of their country, but also of the volunteer forces of this country."

And again we read:

"So far the trade conditions of the country have not been reduced to a chaotic state, but this is an inevitable development. It must be understood that England has not experienced a mobilization of her forces (such as has occurred in the last few days) since the Crimean War. The whole country is dislocated for the purpose of transporting and feeding the troops and for provisioning the Navy. Train services have to be arranged to meet the requirements, not of the public, but of the military, and the fear of famine has led many civilians to enter into arrangements to provision their homes for months ahead. Such conditions have never been experienced in living memory, and many level-headed men have been staggered by the sudden developments of the last few days.

"What will have happened to trade and finance before the war ends nobody can foretell. If the war stopt to-night, and peace was declared for all eternity, there would still be hundreds of financial and commercial failures before the end of three months; but the war may last for months,

and what will be the state of business affairs then, nobody can tell."

THE DUTCH RIVAL OF STANDARD OIL

What is called a "world-wide struggle for mastery of petroleum," is now going on, says the *New York Times Annalist*, between the Standard Oil and the Royal Dutch Oil Company. That paper's correspondent in Amsterdam notes that prices for the stock of this company in the week of June 5 "touched the highest point in the company's history." The advance, to some extent, was due to a dividend having been declared at the end of the year of 33 per cent., which, with an extra dividend declared earlier in the year, made a total distribution of 48 per cent., against 41 per cent. for the preceding year. The writer says, further, as to this company and its competition with Standard Oil:

"The strength of these shares is the more noticeable because it has been manifested in the face of lower petroleum prices all over the world. Since the middle of April the prices of crude oil in the United States have shown the same sharply declining tendency that has been noted on this side of the ocean. In Russia the price of oil rose to its highest point, 26¼ cents per 36 pounds, in March. Since then it has fallen to 18½ cents per 36 pounds. In Galicia it is \$1.62 per 220 pounds, and in Roumania the price is barely \$1.56 per 220 pounds, a decline of 6 cents from last year's average.

"The oil industry seems more and more to be passing into the control of the Standard Oil Company and the Royal Dutch-Shell combine. The great rivalry for supremacy in the petroleum markets of the world will have to be fought out, in the end, between these two mighty concerns, both of which are striving to expand and penetrate to every corner of the globe.

"In this connection, the agreement reached between the Standard Oil Company and the Chinese Government is of the utmost importance. If the exploration of the oil-fields of Yen-Ch'ang, Yen-An-Fu, and Chengtefu, as well as of the Provinces of Shensi and Chihli, results in a profitable operation of the fields, the American-Chinese corporation will be established on such terms that practically the entire Chinese oil market will come under the control of the Standard Oil Company. This would be a great blow to the Asiatic Company, the distributing concern of the Royal Dutch-Shell group, which, during the last few years, has been a strong competitor of the Standard in the Far East.

"The Royal Dutch-Shell group, however, is likewise very active in pushing forward its spheres of influence all over the world. Rumors are current that this group is trying to acquire a share in the operation of the oil-fields of Mesopotamia. According to the reports, the Deutsche Bank intends to begin exploiting these fields in cooperation with the Royal Dutch-Shell combine and the Pearson group.

"In other parts of the world the Royal Dutch-Shell group is also making progress. A few years ago efforts were made to acquire an interest in the rich oil-fields around Tampico, Mexico. Under the reign of Huerta permission was obtained to begin operations in this district and the La Corona Oil Company was organized at The Hague, with a capital of 5,000,000 florins. The company has been very successful in striking oil. In the beginning of this year one of its wells in the neighborhood of Panuco began to gush 15,000 barrels a day. Subsequently its flow increased to

Safety—In Times of War

In times like these prudent investors desiring wholly safe securities naturally turn to mortgages on the land.

First mortgages on well located, improved city real estate in the United States, or their more modern equivalent, first mortgage real estate bonds, are investments which are proof against all the disquieting influences which a great conflict causes.

There is no better, sounder and more solid basis for an investment than improved real estate. The land is the foundation and the source of all value. It will always be there, and always be valuable. A roof over one's head is the first necessity of life. First mortgages and first mortgage bonds secured by such property are by their very nature non-fluctuating securities.

During the 32 years since this House was founded, the securities we have sold have successfully met the test of such periods as that through which we are now passing. This is attested by the fact that no investor has ever suffered loss of either principal or interest on any security purchased of us.

The bonds are in denominations of \$100, \$500 and \$1,000, and the mortgages in amounts of \$3,000 upward. Write for information, indicating whether you are chiefly interested in mortgages or in bonds, and

Guaranty Trust Company of New York

140 Broadway

Capital and Surplus, \$30,000,000

THE advertising columns of The Digest now give the investor news of investment offerings almost as quickly as the daily papers.

This affords the advertiser an opportunity to schedule copy for these pages and to reach quickly the investing public throughout the country. Many attractive bond issues are decided upon and sold within two or three weeks, so that this service fills a real need.

We advise those of our subscribers seeking advice or enlightenment on investments to write to any of the bankers represented in our columns.

Many financial houses maintain special bureaus of information and advice for prospective investors. A small investor will receive exactly the same service as the large investor.

The Literary Digest

Its Marvelous Motor Makes the CHANDLER \$1595

LIGHT-WEIGHT SIX

A Really Great Automobile

Other Chandler Motor Features:

Oiling system completely contained within the motor. No outside piping. Oil pumped from main reservoir into reservoirs above all main bearings, into chain compartment and thence into every working part. Individual oil trough under each connecting rod. Fly wheel completely enclosed. Instant accessibility of all parts. Cylinders and water heads finished in pearl gray baked enamel with aluminum and nickel fittings.

The Chandler weighs only 2885 lbs., fully equipped. It runs 18 miles or more per gallon of gasoline, 700 miles per gallon of oil, and 7000 miles per set of tires. Speed, 3 to 55 miles per hour on high. Climbs every famous demonstrating hill in America on high. Possesses every high-grade feature found on high-priced sixes.

MAYBE you have had in mind two or three cars, some one of which you planned to buy this summer.

Now what was it that led you to set aside for later decision these two or three cars? Was it the large number of them you see on the street? Was it the story of tremendous production? Was it the shape of the hood and the lines of the body? Was it the upholstery and finish?

The Chandler has *all* these qualities. There is no car more graceful, more beautiful in design. None at anything like its price that is more handsomely upholstered and finished. But, *beyond these* qualities, it has a *marvelous* motor that you cannot get in any other car.

We are safe in assuming you want a six-cylinder car, for nearly everybody paying more than \$1200 wants a Six. We are safe in assuming you want a *light* six, for hardly anybody wants the expense of carrying around a lot of unnecessary weight.

Now then, figuring that these two points express your attitude, why not base your principal consideration on the *motor*, the heart and life of the car?

What makes a car a source of real pride, or perhaps of annoyance? The motor! Consider the *motor first*, then, in choosing your car.

Consider the *Chandler* motor. Chandler owners all say it is a really marvelous motor. Chandler dealers all say the same. Engineering authorities say the same.

And—this is important—it is the *exclusive* Chandler design and Chandler make. It is not a common stock design motor found in *different* makes of cars. You cannot get it in any other car.

We have been building six-cylinder cars and six-cylinder *motors* for eight years. We know six-cylinder construction. Isn't it only reasonable that knowing how to build six-cylinder *motors*, we should also know how to build the *rest* of our car equally well?

The answer is found in this: We have built Chandler reputation and success to a point demanding annual production of *thousands* of cars, and not a single mechanical weakness has developed in this car. Not a word but of praise has been heard of the comfort and *roadability* of the Chandler, and the beauty of its design and finish.

The Chandler pioneered the way in the light six field. It proved that a high-

grade six of moderate size could be built to sell for less than \$2000.

A whole host of light sixes followed. More are following now. And still they come.

But what of the *motors*? How many are the builders' exclusive design?

The Chandler has made good everywhere. And because, first of all, under the hood there is a marvelous motor. It's the motor that makes the Chandler a really great automobile.

The profit-sharing price for the new 1915 models, seems almost impossible but it's true. Touring car or roadster \$1595. For Fall delivery handsome limousine, sedan, coupe and cabriolet.

There is a Chandler dealer in every principal city and many smaller cities and towns. Get in touch with the one nearest to you now. Study the exclusive Chandler motor, give the car a genuine test, find out what other owners say of it. Then select your car. If you don't know your Chandler dealer, write us at once for catalog and booklets, and we will try to arrange for you a thorough demonstration.

CHANDLER MOTOR CAR CO., 808-838 E. 131st St., Cleveland, Ohio

New York City Office, 245 West 55th Street—Cable Address, Chanmotor

100,000 barrels a day. It is now maintaining a daily average of 30,000 barrels. In March, 1914, the oil in stock, produced by this one well, amounted to 1,200,000 barrels, and the first shipment was made at the end of that month. The present unsettled situation around Tampico, of course, severely handicaps the operations in this district, but as soon as normal conditions return the Mexican acquisition will undoubtedly add greatly to the production of the Royal Dutch-Shell combine.

"This group, also, has invaded America and is pushing its way vigorously. Concrete evidence of this is that in San Francisco a new concern has been organized under the name of the Valley Pipeline Company, with a capital of \$10,000,000. Mr. W. Meinske-Smith, formerly organizer of the business of the Shell Transport and Trading Company in Japan and China and at present chief representative of the Royal Dutch-Shell combine in America, has been appointed manager.

"The various auxiliary companies of the group are heavily increasing their production. The Astra Romana, one of the subsidiaries in Roumania, produced, during last month, 47,663 tons, against 35,898 tons a year ago, and the Tarakan Oil Company and Moeara Enim, both subsidiaries working in the Dutch East Indies, produced respectively, the former during last month 26,000 tons, against 19,525 tons in the preceding year, and the latter 31,586 tons during the first quarter of the year, against 28,018 tons for the same period of last year. The production of the Bataapche Petroleum Company and the Anglo-Saxon, the two biggest subsidiary companies of the combine, is only published at the end of the year, but it may be taken for granted that their figures will show the same progress.

"Of great importance for the position of the Royal Dutch Oil Company in the Dutch East Indies, in which part of the world it has played, up till the present, a dominant rôle, will be the question as to whom the Djambi concessions will be granted. In 1912 the Dutch Government invited applications for the exploration and exploitation of these concessions, and on that occasion the Standard Oil Company backed the establishment of a Dutch company under the name of Dutch Colonial Oil Company in order to be in a position to apply for the concessions. No decision has as yet been taken by our Government, and because the offerings are binding up till January 31, 1915, it is feared that decision on this important matter will be deferred until then. The general opinion is that the Royal Dutch Oil Company has the better chance of obtaining the concessions."

RIISING COSTS IN THE GOVERNMENT OF CITIES

Close observers frequently call attention to the growing burden put on taxpayers by city governments. Costs have been rising for several years, and are relatively greatest in the largest municipalities. A recent report from the Census Bureau points out the per capita expenditures in cities for purposes other than public service enterprises, the operation of 195 cities being covered, these cities having had, in 1912, at least 30,000 population. The per capita payments for all these cities averaged, in that year, \$17.34. This is an increase of 33.2 per cent in ten years. The payments included comprise those made for general government for protection to property, health, streets, charities, hospitals, education, recreation, etc. With the 195 cities classified into five groups according to population, the following are some of the facts *Bradstreet's* summarizes:

"The first group comprises those cities having a population of 500,000 or over in the year 1912; the second those having between 300,000 and 500,000 inhabitants; the third, having a population of from 100,000 to 300,000; the fourth, those with from 50,000 to 100,000 inhabitants, and the fifth, cities having from 30,000 to 50,000 people within their jurisdiction. The last mentioned group, comprising the smallest cities, in point of population, of those considered, had per capita payments averaging \$11.69. The expense per head of population rose with the number of inhabitants, being \$12.06 for cities of the fourth group, \$14.22 for the third group, \$19.99 for the second, and \$21.24 for the first group, which comprised the largest cities; that is, those having a population of 500,000 or over.

"When we come to consider the expenses for certain specific governmental activities in detail, we find the above express conclusions generally true, tho there are some variations as regards the relative costs in larger and smaller cities respectively. For example, the per capita payment for fire-department service for the 195 cities increased from \$1.30 in 1902 to \$1.62 in 1912, but the expenses were heavier in cities of the second and third groups than in any of the others, tho lower in the fourth and fifth groups than in the first one. The figures are: For cities in the first group, the largest in population, \$1.58; for those in the second group, \$2.02; for those in the third group, \$1.68; for those in the fourth group, \$1.50; and for those in the fifth group, those lowest in population, \$1.38. The range of variation in cost was wide, the expense per capita rising from \$0.45 in Newport, Ky., a city in the fifth group, to \$3.65 in Omaha, Neb., a city in the third group. Philadelphia, which is one of the large cities in the first group, had a low cost of fire protection for its size, viz., \$0.91, or one-fourth that of Omaha. The per capita cost of police protection increased from \$1.84 in 1902 to \$2.04 in 1912. Here the expense rose in proportion to the size of the cities, taken by groups, tho some of the municipalities in the third and fourth groups exceeded in expense that of the highest city in the third group. The per capita expenses under this head were: For cities in the first group, \$2.75; for the second group, \$2.14; for the third group, \$1.53; for the fourth, \$1.26; and for the fifth, \$1.06. The city of lowest per capita cost was Lincoln, Neb., in the fifth group, with \$0.48, while the highest cost was \$3.43 for San Francisco, in the second group.

"The expense for education shows the largest advance for the decade, rising from \$3.61 in 1902 to \$5.02 in 1912. Under this head the expenditures per head of population show a progression from the smaller to the larger cities, taken by groups, with one exception, the fifth group showing a slightly higher per capita cost than the fourth. The expenditures per capita were as follows: For cities in the first group, \$5.55; for those in the second group, \$5.30; for those in the third, \$4.57; for the fourth, \$4.29; and for the fifth, \$4.34. The lowest per capita expense was \$1.66 for Tampa, Fla., and the highest \$8.97 for Pasadena, Cal., both in the fifth group, which, as has been said, contains the smallest cities in point of population. In the case of educational expenditure per capita, the cost for the highest individual city in each group decreased in inverse ratio to the population, with the single exception that the highest city in the second group was lower than the highest one in the first group."

Majority Rule.—"I never like to drink from a public cup."

"Go ahead, stranger, it's all right. Everybody uses it."—*Life*.

First Mortgages

Security—Stability—Income

It is pretty safe for the individual investor to follow the lead of the Savings Banks. As a rule, they invest about half their funds in real estate mortgages and half in corporation bonds.

Ward-Harrison first mortgages have two important qualifications: they are high grade mortgages and they yield the investor 5 1/2%. They are a first lien on producing farms in the fertile Black Lands of Central Texas. We loan 35% to 50% only on our own conservative valuation. We then sell the original mortgage, which has coupons attached like a bond, payable through your own Bank and the National City Bank of New York.

Let us explain mortgage buying to you. Send for our interesting, illustrated booklet, D-5, and list of offerings.

Our Valuations are Your Protection

Why the Bon Marche Stores, Seattle, Wash., Purchased Two More $\frac{3}{4}$ Ton Lippard-Stewart Trucks after they Had Used Three of the Same Capacity for 7 Months

This fleet averages approximately 50 miles a day under severe conditions

Remarkable Work Over the Hills of Seattle

The appearance of the original cars and the favorable comment they created for the Bon Marche stores; their remarkable quietness after 7 months of service on wearing grades; their low operating expense and surprisingly low cost for repairs, led to the second purchase.

We have furnished chassis with various types of bodies for over seventy lines of business.

We have furnished from 1 to 12 cars for over

30 Department Stores	5 Druggists	15 Manufacturers
10 Wholesalers	12 Dairies	10 Funeral Directors
18 Grocers	6 Laundries	5 Delivery Service Cos.
10 Butchers	5 Hardware Stores	5 Contractors
5 Florists	5 Liquor Dealers	15 Public Service Cos.
11 Bakers	5 Bottlers	5 Clothiers

THE SPICE OF LIFE

Too Much.—POLLY—"When they came back from their wedding trip he had just \$2.60 in his pocket."

PEGGY—"The stingy thing!"—*Boston Transcript.*

The Cause Discovered.—A Swede was working for a farmer, who demanded punctuality above everything else. The farmer, according to *The Youth's Companion*, told him that he must be at work every morning at 4 o'clock sharp. The "hand" failed to get up in time, and the farmer threatened to discharge him. Then the "hand" bought an alarm-clock, and for some time everything went along smoothly. But one morning he got to the field fifteen minutes late. The farmer immediately discharged him, in spite of his protestations that his alarm-clock was to blame.

Sadly returning to his room, the discharged employee determined to find out the cause of his downfall. He took the alarm-clock to pieces, and discovered a dead cockroach among the works.

"Well," he soliloquized, "Ay tank it bane no wonder the clock wouldn't run—the engineer bane daid."

His Maiden Effort.—The following advertisement, appearing in the advertising columns of the *New York Herald* for August 18, deserves a wide circulation. Its author may have to admit a few failings, but he at least need not acknowledge any lack of self-confidence:

JAPANESE, 25

IMMATERIAL MILLIONNAIRE!!!

Humbles while he humbles, esteems while he esteems, obliged to necessary; he is immaterial millionaire in brains property, as well as moral character if ever there is one; his brain is like operation of wireless telegraph for business news; his eyes are like microscope or x-ray for business inspection; he is like live wire for general business operation, in which is like electric current or running water over standing board; he is like dead wire for terrific storm; compass of his life's journey, right points out his vocational destination even tho he is jack of all trades for business only; he is like magnet for business society, as well as personal sociality; he is like live engine in himself, its indicator sight points out (+) degrees more and more, second by second, minute by minute, as if doing of second hand of watch; at present he is like new moon as human light, but firstly his wonderful applied higher mathematics; secondly, enormous practical and theoretical engineering; science knowledges; thirdly and lastly, invincible will with invention; genius may lighten him perhaps as full moon some future day in electrical and mechanical business which are closely related to each other, as if king and queen in modern and future technological world; his future may crown perhaps your meritorious business, for will sacrifice everything of himself for sake of business; victory in the survival of the fittest; seeks tactic field in large manufactory or laboratory, where his full qualifications closely will be appreciated but sorrow to close having no reference, for this is his maiden advertisement for his new life in the magnificent new world. Address Diamond Under Sands. 111 Herald.

Woman's Work.—SHE—"Don't you think we would better go back through England again on the way home?"

HE—"But we did England."

SHE—"I know it. But since we were there think of all the lovely new ruins the suffragettes have made."—*Life.*

His Favorite Style.—"How will you have your eggs cooked?" asked the waiter. "Make any difference in the cost of 'em?" inquired the cautious customer with the brimless hat and the rugged beard.

"No."

"Then cook them on the top of a slice of ham," said the customer, greatly relieved.—*Tu-Bits.*

Where Autos Fail.—A farmer was recently arguing with a French chauffeur who had slackened up at an inn regarding the merits of the horse and the motor-car.

"Give me a 'orse," remarked the farmer: "them traveling oil-shops is too uncertain fer my likin'."

"Eet is prejudiced, my friend," the chauffeur replied; "you Engleesh are behind 20 times; you will think deafairnt some day."

"Behind the times be blowed!" came the retort; "p'r'aps nex' time the Proosians are round Paris and you have to git your dinner off a steak from the 'ind wheel of a motor-car, you Frenchmen'll wish you wasn't so bloomin' well up-to-date!"—*Sacred Heart Review.*

The Reference Librarian

At times behind a desk he sits,
At times about the room he flits—
Folks interrupt his perfect ease
By asking questions such as these:
"How tall was prehistoric man?"
"How old, I pray, was Sister Ann?"
"What should one do if cats have fits?"
"What woman first invented mitts?"
"Who said 'To labor is to pray?'"
"How much did Daniel Lambert weigh?"
"Don't you admire E. P. Roe?"
"What is the fare to Kokomo?"
"Have you a life of Sairy Gump?"
"Can you lend me a postage-stamp?"
"Have you the rimes of Edward Lear?"
"What wages do they give you here?"
"What dictionary is the best?"
"Did Brummell wear a satin vest?"
"How do you spell 'anemie,' please?"
"What is a Gorgonzola cheese?"
"Who ferried souls across the Styx?"
"What is the square of 985?"
"Are oysters good to eat in March?"
"Are green bananas full of starch?"
"Where is that book I used to see?"
"I guess you don't remember me?"
"Haf you Der Hohenzollernspiel?"
"Where shall I put this apple peel?"
"Où est, m'sie, la grand Larousse?"
"Do you say 'two-spot,' or 'the deuce?'"
"Come, find my book—why make a row?"
"A red one—can't you find it now?"
"Please, which is right? to 'lend' or 'loan'?"
"Say, mister, where's the telephone?"
"How do you use this catalog?"
"Oh, hear that noise! Is that my dog?"
"Have you a book called 'Shapes of Fear'?"
"You mind if I leave baby here?"
—Edmund Lester Pearson in the *Secret Book.*

6% On Your Money

Where can you find a better, more conservative investment than these — absolute — non-fluctuating—

FIRST MORTGAGE Gold Bonds

secured by first mortgages on high class, new apartment buildings located in a fine renting neighborhood. All titles guaranteed and all bonds certified to by Trust Company. Denominations \$50—\$500—\$1,000—\$5,000. If you have \$50 or more to invest, don't fail to send for our circulars explaining this plan whereby you can participate in all the advantages of large investments.

FIRST GOLD MORTGAGES

These pay 5% and 6% and are in great demand by those having larger sums to invest where safety is assured. Guarantee policy with every mortgage. Send for free booklet.

1915

Mitchell

Light Four

\$1250

A Revelation in 1915 Automobile Values

Never before have such unprecedented values been offered as in the 1915 Mitchell Light Four. Here is a car that is literally crammed with value. It represents the best "Buy" in Motordom today.

Look where you will—but if you once see this wonderful car you will be compelled to admit that it is the greatest on the market today.

The Mitchell 1915 Light Four is a John W. Bate masterpiece. John W. Bate is the greatest authority in the automobile world—he is responsible for more radical changes—he has achieved more than any other man living. He has built a car that has solved every motor problem—one that is motor simplicity and efficiency in the highest degree—

Light Weight But Safety First

Safety and Durability have not been sacrificed in the 1915 Mitchell Light Four.

Read These Remarkable Features:

Light Weight
Accessibility
Economy
Chrome Vanadium Steel Construction
Long Stroke, High-Speed
L-Head Motor
Three-point Motor Suspension
Full Floating Rear Axle
Two-unit—Three-point Construction
Silent Electric Starter
Electric Lights
Silent Chain Drive Shaft to Generator and Distributor
Positive Helical Gear Drive to Cam Shaft
Water Pump on Fan Shaft
Dimming Search Lights—Non-Clare System
Electric Horn
Speedometer
Gasoline Gauge
Mitchell Power Tire Pump
One-Man Top
Integral Rain Vision Two-Piece Windshield
Quick-Action Side Curtains
Crowded Fenders
Portable Exploring Lamp
Demountable Rims
Extra Tire Carrier in Rear
Stream Line Body
License Brackets

It's a light weight car—yet one that will ride rough country roads as well as smooth city boulevards and not acquire the expensive "garage habit" either.

Rough every day going is anticipated in the "Bate two-unit three-point suspension construction"—twists and jars will not throw essential parts out of order—accidents are also prevented—

An Economical Car

Because the cost of keeping it on the road is small—its repair bills are infrequent and gasoline cost moderate—

Fewer parts than used in most cars to get out of order—more drop forgings—more *hand work*—all these help keep the car running and make the Mitchell an economical car.

Saves Gasoline

Because gasoline energy is turned into mileage with less loss than in ordinary cars—

Friction is reduced to a minimum—the offset crank shaft *prevents friction* and secures *all* the gasoline energy for turning the wheels.

The *perfect* cooling of the motors insures *complete combustion*—no gas is wasted—

The beautiful simplicity of the car insures the maximum of smooth running with a minimum of resistance.

Accessible

Of course all cars are accessible—their makers say so—

But lift the hood of the Mitchell 1915 Light Four and see what accessibility and simplicity really mean—

You can see for yourself even if you're not an expert—compare what you see there with what you see under the hood of other cars.

The *real* accessibility of Mitchell cars enables the adjustment of a part *before* a repair becomes necessary—when a repair is required a Mitchell car does not have to be *entirely dismantled*—the 75% of repair time employed in dismantling a car is thus saved. But of prime importance is the longer life of the car this accessibility assures.

Smooth Riding

Like riding on velvet—because the weight is evenly distributed and carried low—and the springs are extra long—extra strong and resilient. The upholstery is *luxuriously comfortable*. Ask your dealer for a demonstration that will tell the real story—

Saves Tires

Because *each wheel* carries its full share of the load—no set of wheels more than another—wheels are properly and perfectly aligned—no side motion to rub the tread off.

Finally

In appearance the 1915 Mitchell Light Four is as snappy a car as you ever saw—long, low, rakish—with all the up-to-the-minute accessories. Finished in rich dark Imperial-French blue—nickel trimmed.

There are 35,000 Mitchells in use today.

Maybe a Mitchell owner lives near you. Write us and we'll tell you—Mitchell owners can tell you more about the Mitchell reliability than we can.

Get the Personal Touch

Ask for a demonstration. If there isn't a Mitchell dealer in your town, write us—we'll arrange a demonstration for you without obligation on your part.

But, if you're going to buy a car, be sure and *see the Mitchell*—ride in one—drive it yourself—Get the Personal Touch. Never before was so much real motor value crammed in any car.

We have a complete set of booklets—literature—interesting and illuminating.

Please write for them.

August 17.—The Belgian capital is removed from Brussels to Antwerp.

Japan agrees to confine all her operations to the China Seas.

The rumored engagements and areas of fighting are as follows: Germans moving in the direction of Wavre, Belgium, are said to be repulsed; the French lose heavily between Namur and Dinant; the Liège forts, battered by the German sigo-guns, are taken; the French War Office reports the capture of German heights on the Alsatian frontier; a strong supporting French line is reported established from Thann through Gerney to Dannemarie; Austrians claim a cavalry occupation of over 150 miles of the Russian frontier; two Austrian ironclads reported sunk and another on fire in the Adriatic, after a conflict with the French; Turkish troops march toward Greece across Bulgarian territory; Montenegrin troops cross the Bosnian frontier and occupy Tchaïntza after a fierce battle; the Servians repel Austrians near Lyna.

General Foreign

August 13.—Provisional President Carbajal and members of his cabinet abandon Mexico City and seek refuge at Vera Cruz.

August 14.—Fifty-seven officers and marines are landed in Nicaragua on account of expected political disturbance.

August 15.—General Obregon and the victorious Constitutional army enter Mexico City in triumph.

August 17.—The Argentine Republic opens an office in New York to receive deposits for credit in Buenos Aires without discount.

August 19.—Pope Plus X. dies at the Vatican. Carranza appoints his cabinet and repudiates Carbajal's \$10,000,000 bond issue.

Domestic

WASHINGTON

August 13.—The Senate ratifies 18 out of Secretary Bryan's 20 peace treaties with foreign nations.

August 14.—The State Department is asked to notify foreign governments that the Panama Exposition will not be postponed on account of the war.

August 17.—The Senate passes the House bill to admit foreign ships to American registry, but refuses to admit them to coastwise trade.

The President nominates Frederic C. Howe, of New York, as Immigration Commissioner at Ellis Island.

August 19.—Attorney-General James C. McReynolds is nominated by the President to fill the vacancy left in the Supreme Court by the death of Justice Lurion.

GENERAL

August 15.—The Panama Canal is opened informally with the passage of the government vessel Ancon from the Atlantic to the Pacific.

In Montana and northern Idaho a thousand men struggle to suppress devastating forest fires.

August 15.—The sixth death from bubonic plague is reported at New Orleans.

August 18.—Troops are mobilized at Wilmington, Delaware, to quell race riots there.

Women's Rights.—"Look at her," said the ironmonger, indicating a departing customer. "She sent her wringer here to be repaired. I promised it her for this week, but couldn't keep my promise. Now she wants me to pay a charwoman who came unnecessarily—half a crown, and tuppence tramfare. Then she wants me to pay the laundry bill for the clothes."

The ironmonger breathed heavily.

"But that's not all. Her husband dines out on wash-days, and as he dined out on a wash-day which wasn't a wash-day—y' understand?—she says I ought to pay for his dinner. No, she doesn't ask anything else. And they call 'em the weaker sex.'"—*Tu-Bita.*

\$50 Saved Last Winter in this Chicago Home!

Read This Startling Letter

This past winter I enjoyed, for the first time, ideal heating, and at the same time saved fully \$50. To my mind the Underfeed is so far ahead of the topfeed, that there really is no comparison, and when you come right down to facts, the topfeed is an expensive proposition, even as a gift. I would not think of going back to a topfeed any more than I would think of leaving Electric Light for Candles. Wishing you success, I am,

Yours very truly,

R. E. DICKINSON,

2210 Estes Ave., Chicago.

Mr. Dickinson's experience, as given above, is similar to that of over 25,000 other users of Williamson heaters. A saving of one-half to two-thirds of your coal bills is the positive result with the Underfeed.

What Others Say About It

If you want further proof we'll send you the names and addresses of over 2,000 Underfeed users—some right in your vicinity—who know by experience that clean, even, economical heat is obtainable only with the Underfeed. Here are what just six out of 25,000 users say: "Coal bill \$16.22 for seven rooms." "\$5.40 to heat four rooms." "Reduced coal bill from \$109 to \$53." "Heats two flats for \$30 per year." "Heats ten-room house for \$25." "Saved \$122 a season."

Cut-Out View of Furnace

WILLIAMSON NEW-FEED UNDERFEED Furnaces and Boilers

Cut Coal Bills 1/2 to 2/3

With the Underfeed, coal is fed from below. All the fire is on top. Smoke and gases are burned up, making more heat. You can use cheap slack soft coal or pea and buckwheat sizes of hard coal and secure same heat as highest-priced coal with no smoke, smell and dirt. No other furnace or boiler does this. Soon pay for itself. Adds to renting and selling value of any building. Adapted to warm air, steam and hot water. A saving of 50% in coal bills guaranteed with a Williamson New-Feed Underfeed when properly installed and operated. If you are going to build or want to cut down your high cost of heating, send the coupon for full information. Write today—NOW.

MEAD CYCLE CO., Dept. K172, CHICAGO

THE LEXICOGRAPHER'S EASY CHAIR

In this column, to decide questions concerning the current use of words, the Funk & Wagnall New Standard Dictionary is consulted as arbiter.

Readers will please bear in mind that no notice will be taken of anonymous communications.

"I. R. B." Moscow, Idaho.—The phrase "He laughed him to scorn" is explained by Dr. Murray as follows: "With dative of person and *to* with subject expressing the effect, as in 'To laugh him to scorn.'" The verb in this phrase is now apprehended as transitive, and with object and complement or adverbial phrase meaning to produce a specified effect upon (a person) by laughing. *Scorn* is, therefore, a noun and not a verb in the infinitive as has already been inadvertently stated.

"G. G. W." Cleveland, O.—The personal equation, in popular use, connotes the characteristic temperamental qualities of the individual.

"L. S." Baltimore, Md.—The differences between (Thank you, no, not "among." See the NEW STANDARD DICTIONARY, p. 287, col. 1), *color*, *shade*, *hue*, and *tint* are noted under *color* (p. 529, cols. 2 and 3), which is defined as "any one of the hues observed in the rainbow or spectrum, or one of the tints produced by the blending of those rays; sometimes, technically, limited to primary colors, and then distinguished from *hue* (a compound color), *tint* (diluted with white), and *shade* (mixed with black).

"J. L. C." Washington, D. C.—The phrase "in respect of" means "with reference to," or "as relates to or regards." With these meanings the phrase is in good use to-day. Used to mean "in comparison with," the phrase is obsolete English of the sixteenth and seventeenth centuries. "With respect to," which means "with reference or regard to (something)," is in good use to-day.

"J. R. C." Greenfield, Ohio.—We spell *Jupiter* and *Saturn*, etc., with capital initial letters. Why not spell *Earth* and *Sun* also with capital initials?

Because they are not personifications. When they are, they take the capital too, as *Terra*, *Sol*, etc.

"W. E. K." Canton, Kan.—What is the origin of the expression "In the neck of the woods"?

The NEW STANDARD DICTIONARY defines *neck of the woods* as "colloquial Western U. S., a settlement made in a well-wooded district."

"M. C. D." Prosser, Wash.—Bouvier's Law Dictionary says the Latin term *et alius* is used in law to mean "and another." The abbreviation *et al.*, sometimes in the plural *et als.*, is affixed to the name of the first plaintiff or defendant, in entitling a case where there are several joined as plaintiffs or defendants. But it gives no reason for the addition of *s.*, the sign of the English plural to the Latin, which is common in other Latin abbreviations, as *lbs.* for "pounds."

"L. S. H." Norfolk, Va.—"In Arnold Bennett's 'Your United States,' I find the following: 'In my honest yearning to feel myself a habitué.' Are the words 'a habitué' to be preferred to 'an habitué'?"

The pronunciation of *habitué* determines which form shall be used. Both are correct, but when *habitué* is given the French pronunciation "an" should be used before it, not "a."

"E. W." Philadelphia, Pa.—"Kindly inform me which mark of punctuation is correctly placed in closing a sentence which opens with 'Will you kindly'—a period or a mark of interrogation."

As the sentence is interrogative, since it makes a request, a note of interrogation should follow it.

"P. K." Newport, R. I.—"Please tell me which word in the parentheses in the following sentence is correct: 'In the following sentence there are three (two's, to's, too's): Two men went to the bank too.'"

The sentence you submit is erroneous in form and statement of fact. The writer confuses phonetics with orthography. There are not three words of the same spelling, but three having the same sound in English. Therefore, the sentence to be correctly stated should read: "There are three words in English which are pronounced 'tu' (u as in rule)."

"L. J. R." Stoughton, Mass.—"Kindly give me the correct pronunciation of 'equipages.' I can not find the word in any dictionary of pronunciation. I can find only 'equipage'—accent on the first syllable. Does the accent change to the second syllable and do you know of any authority for such? Every one I know puts the accent on the first for the plural as for the singular."

There is no difference in the position of the accent in the singular or in the plural of the word you submit. "Equipage" is pronounced *ek-wi-pij* (e as in pen, i's as in habit). In the plural change the last syllable to *pi-hiz* (both i's as in habit).

"P. Z." Lake Charles, La.—"(1) Please advise me the proper salutation to use in addressing a business letter to a *femme sole* with whom one is not at all acquainted. (2) Also, in the case of 'Mrs. C. A. Jones & Son.'"

(1) Miss A. B.—Dear Madam. (2) In a case of this kind, there are two forms of address—

(a) to address the principal partner and ignore the "and Son"; or (b) to address the concern as a business corporation assuming that it is conducted by men on the assumption that the founder of the concern took in her son to conduct the business. In such a case, use "Mrs. C. A. Jones & Son—Dear Sirs."

"H. S. D." Norfolk, Va.—"What was the date of the month of the first Saturday in February and August, 1911, '12, and '13?"

February 4, 1911, February 3, 1912, February 1, 1913; August 5, 1911, August 3, 1912; August 2, 1913.

"J. H. N." Chicago, Ill.—"Can you inform me of any way by which a person in one room, with closed doors, can see what is going on in an adjoining room?"

The only device of the kind that approaches your need is the *camera obscura*, which is a structure large enough to hold spectators who can view an image of what is going on outside on a white table within. This, however, is not what we understand you to want—a device that might be fitted in one room that would reflect in another what is going on in the first room.

WARNING!

BEWARE OF SUBSCRIPTION SWINDLERS!

Swindlers are at work throughout the country soliciting subscriptions for popular periodicals. We urge that no money be paid to strangers even tho they exhibit printed matter apparently authorizing them to represent us, and especially when they offer cut rates or a bonus. THE LITERARY DIGEST mailing list showing dates of expiration of subscriptions is never given out to any one for collection of renewals. Better send subscriptions direct, or postpone giving your order until you can make inquiry. If you have reason to suspect that the members of your community are being swindled, notify your chief of police or sheriff, and the publishers, and arrange another interview with the agent at which you can take such action jointly as may seem proper.

America's Greatest "Light Six" \$1485

A "Light Six" That's Different

—that has been carefully, painstakingly designed on sound engineering principles.
—that is complete in every respect, having every feature of the highest priced cars.
—that has more than one horsepower to every 55 pounds of weight.
—that will throttle down to one mile an hour on high gear.

—that has speed enough to touch the mile-a-minute mark.
—that will travel from 22 to 25 miles on one gallon of gasoline.
—that has been accurately built and expensively finished.
—that will maintain the reputation of its predecessors. Such is

THE HAYNES

America's Greatest "Light Six"

Specifications in Brief

Unit power plant, 3-point suspension, 6-cylinder $3\frac{1}{2} \times 5$ in bloc motor, actually developing 55 brake horsepower. 121-inch wheelbase
Left-hand drive, center control
Weight, 2950 lbs., giving more than one horsepower to every 55 lbs. of weight
Leece-Neville separate unit starting and lighting system. Ignition from storage battery through Remy distributor and coil
Economical Rayfield carburetor

Vacuum gasoline system with gas tank at rear of chassis
Splash and force feed lubrication
Forced water circulation
Clutch, three-plate dry disc type lined with Raybestos
Transmission, selective sliding gear type, three speeds forward, one reverse
Haynes full floating rear axle
Exclusive arch frame construction
Low center of gravity and long sweeping body lines

Crowned fenders
34x4" tires, Firestone demountable rims
Motor driven tire pump
Stewart-Warner Speedometer
Improved one-man top, Collins curtains
Clear and rain-vision ventilating windshield
Tire carrier at rear of chassis
Clear running boards
Electric horn under hood
Headlights with dimming device

In addition we build Model 31, "Big Six" with 65 brake horsepower and 130-inch wheelbase—\$2250; Model 32 Haynes "Four" with 48 brake horsepower and 118-inch wheelbase—\$1660.

DELCO

ELECTRIC CRANKING LIGHTING IGNITION

Simplicity is the Keynote of the Delco System

Study the wiring diagram illustrated above.

It shows all the wires there are in a Delco equipped automobile.

Note the simplicity of it—the apparent strength and character indicated.

You will find slight deviations from this diagram to meet the engineering and manufacturing requirements of the various motor car companies. But, in all essential details the diagram is standard.

The Delco System is a complete electric cranking, lighting and ignition system.

It includes also—

A reserve ignition—

A connection for horn and extra lights when desired—

A dimming feature for headlights—

A protective circuit breaker to prevent possible damage from short circuits—

A locking device for both ignition and lights.

The automatically controlled generator provides a high charging rate at low car speed and lower

charging rate at high speed, thus insuring a well-charged battery under ordinary operating conditions, and preventing over-charging at the hands of a fast driver.

The automatically controlled ignition insures a properly timed spark at all engine speeds.

And with all these features the Delco System is remarkably free from complications.

It has less wiring, in fact, than was once used for ignition alone.

This combination of efficiency and simplicity is made possible by the single unit, single wired, grounded system.

The Delco System was the pioneer in the electric cranking field.

Three years ago the first electrically cranked car appeared.

It was Delco equipped—and it revolutionized the automobile industry.

Today 154,000 owners are driving Delco equipped cars.

The Dayton Engineering Laboratories Company, Dayton, Ohio

1—Delco-Exide battery made to withstand rough usage and give constant, efficient service.

2—Combination Switch—controls entire electrical system. Strong, simple and very compact.

3—Motor-Generator, furnishing current and power for starting and lighting and including entire ignition system.

These three units comprise the entire Delco System — cranking, lighting and ignition

THE LITERARY DIGEST

PUBLIC OPINION (New York) combined with THE LITERARY DIGEST

Published by Funk & Wagnall Company (Adam W. Wagnall, Pres.; Wilfred J. Funk, Vice-Pres.; Robert J. Cuddihy, Treas.; William Neid, Sec'y), 354-360 Fourth Ave., New York

VOL. XLIX., No. 10

NEW YORK, SEPTEMBER 5, 1914

WHOLE NUMBER 1272

TOPICS OF THE DAY

THE GERMANS IN FRANCE

THE FIRST ROUND of the great international battle ended, so our editors agree after studying the censored and conflicting dispatches from Europe, "with the honors on the German side," tho there is equal unanimity in declaring that "the round is not decisive." Not only are there reports from Berlin telling of victories, but as the *Syracuse Herald* notes, "the announcement by the French War Office of the two or three days' engagements in southwestern Belgium and along the borders of Lorraine and Alsace leaves no doubt that the Anglo-French Allies have sustained serious reverses." The power of the German military machine, our editors now declare, has not been overestimated; tho halted and perhaps seriously delayed at Liège, it has now, as the *Philadelphia Ledger* puts it, "rolled back the Allies' defense from Switzerland to the North Sea." On August 3, it will be remembered, the German advance guard entered Belgium. The Belgian Army, with French aid, kept the Germans from entering Brussels till the 20th, and then retired behind the forts at Antwerp. The Kaiser's forces then overran practically all of Belgium, took Namur, fought the British near Mons, pressed the Allies south over the border at several places, and succeeded in occupying Lille, Roubaix, and Valenciennes on the first line of French defense against an invasion from the north. At the same time the French towns of Longwy and Lunéville, farther east, were occupied after hard fighting, and the French invasion of Alsace and Lorraine was checked. Berlin reports of three specific victories are thus summarized by the *New York Tribune*:

"A German Army under Crown Prince Rupprecht of Bavaria routed the French in the district east of Lunéville and Cirey. Further north in Lorraine, at Diedenhofen, on the Seille River, an army under the Prussian Crown Prince Wilhelm defeated the French advanced corps and drove them back in the direction of Longwy. Still farther north, at Neufchâteau, in the Ardennes forest region of southern Belgium, an army under the Grand Duke Albrecht of Württemberg pushed the French west toward the Meuse River near Sedan and Mézières."

The *Tribune* concludes that the war entered upon its second stage when the Germans "made good with their plan of seizing Belgium as a base of operations against France," and "arrived in full force" at the first line of French defenses. Later reports seemed to indicate a German advance through or past this line, and a possible German attempt to turn the Allies' left wing, and make a dash for Paris. The *New York Evening Sun* presents a

more detailed description of what it calls the "failures" of the French counter-offensive in the first stage of the campaign, which should be read with an occasional reference to the maps in our issues of this week and last. To quote:

"The first failure was that of the Eastern French Army facing the German Army of the Rhine. This offensive had two different phases. One contemplated a movement through southern Alsace by Belfort and the passes of the Vosges, the other an advance by Lunéville between Metz and Strassburg and toward the lower Rhine at Mayence. The plain purpose was to roll back any German forces in the region and by defeating them compel the Germans to weaken their great army in western Belgium.

"In both Alsace and German Lorraine the offensive was temporarily successful. Saarburg, on the railroad between Metz and Strassburg, was occupied. French bulletins reported successes, including the capture of Mulhausen in Alsace. Then, suddenly, with no explanation, the French advance was reported to have terminated and the retiring troops were placed beyond Lunéville near Nancy. The only conceivable explanation for this was that the advancing force had been utterly defeated, if not routed. This the German bulletins squarely affirmed, claiming the capture of 150 cannon, while French rumor pointed to the failure of an army corps to do its work and the disgrace of a general.

"Much more obscure is the story of the repulse or rout of the French columns sent against the Army of the Moselle, evidently established in the Ardennes west of Luxemburg and north of Longwy, Verdun, and Stenay. Evidently the attempt was made to strike German corps advancing through the difficult Ardennes region. French bulletins admit the retreat of their columns beyond the Semois toward Verdun. German dispatches announce a crushing victory at Neufchâteau, even more complete than in Lorraine, with the capture of generals and many thousands of soldiers and the rout of the French.

"Finally, in Belgium around the Sambre and the Meuse and north of Maubeuge, an Anglo-French attack upon the German Army of the Meuse, coming south from Brussels, seems to have receded after desperate and possibly indecisive fighting because the sudden and utterly bewildering fall of Namur exposed the French flank on the Sambre to the German advance.

"In sum, a French offensive against the Germans in three directions has come to grief. Following it the French and British have fallen back upon the lines prepared over long years by French engineers as the first line of defense in France. If the Allied armies have not been demoralized they have still the advantage of forts, field works, rivers, and hills in their favor, with complete railway lines to insure reenforcement and communication.

"On the other hand, if, as the Germans assert, their Army of the Moselle has routed the French force in front of it, the prospect is that a German advance between Verdun and Maubeuge will

TERMS: \$3 a year, in advance; four months, \$1; single copy, 10 cents; postage to Canada 85 cents a year, other foreign postage \$1.50 a year. RECEIPT of payment is shown in about two weeks by date on address label, subscription including the month named. CAUTION: If date is not properly extended after each payment, notify publishers promptly. Instructions for RENEWAL, DISCONTINUANCE or CHANGE OF ADDRESS should be sent two weeks before the date they are to go into effect. Both old and new addresses must always be given. DISCONTINUANCE: We find that many of our subscribers prefer not to have their subscriptions interrupted and their

files broken in case they fail to remit before expiration. Nevertheless, it is not assumed that continuous service is desired, but subscribers are expected to notify us with reasonable promptness to stop if the paper is no longer required. PRESENTATION COPIES: Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

BELGIAN SOLDIERS—AT REST AND AT WORK.

very shortly compel the Allies to fall back, if not upon Paris directly, upon the Rheims-Laon-La Fère barrier far in French territory.

"To the Germans' credit now are the conquest of Belgium and the defeat of the French counter-offensive. If the defeat was a rout they may have plenty of time to get to the Paris forts before the Russian advance becomes dangerous enough to compel weakening their western armies."

Even tho the French may be falling back upon their original line of defense, according to a prearranged plan, the *New York Evening Post* is observant enough to note "the very serious consideration that they must take up their original task under the depressing sense of preliminary defeat."

The German victories, rejoices the *New York Staats-Zeitung*, "are very real, very clear cut, and decisive—"

"German territory has been swept of the French and the German nation may repeat in unison: 'Lieb Vaterland, magst ruhig sein.'"

"The shadow of the German Army spreads further toward its goal. The imperial hosts swarm into France, gray-clad and strong, unutterably strong. It is the strength of cold steel and cold, calculating intelligence."

The German war machine, declares the *New York Globe's* military expert "shows that its capacity for offense is terrific. . . . No other army in Europe could have made the progress it has made against the Allies in Belgium and on the Franco-German frontier in this time." The *New York Times* thinks it "well-nigh impossible to overrate the efficiency of the German nation in war." The most conspicuous elements in the German victory which appear in the dispatches are, according to the *Springfield Republican*:

"First, the wonderful organization which the world has long recognized, and which has made possible the swift massing of a superior force in a good strategic position, and, secondly, the proverbial difficulty in effective combination between allies. No doubt the Belgian field army intact has value, and will keep a considerable German force occupied in observing Antwerp, but the Allies got nothing like the full benefit of their numbers, and were taken in detail and pushed aside. It must be considered, too, that the most populous parts of Germany, with corresponding military resources, lie near the scene of hostilities, and that in a given time more troops could be sent into this area from Germany than from France. From now on conditions will be somewhat more equal in this respect, and while the French can put into the field only 4,000,000 men to 5,500,000 for Germany, they are enough for a stiff defense if their generals can keep their heads and avoid another Sedan. Every day gained by the French is a battle lost for the invaders."

With the same thought in mind which is express in these last

words, the military expert of the *New York Times* declares that the military value of the German invasion of France "is much less than appears at first sight." The Allies, he explains, "in the furtherance of their general plan of campaign, might even give up the strong Abbeville-Rheims line and leave open to the German Army a line of advance on Paris, unobstructed by permanent fortifications, without any serious loss of military strength." For the Germans are not only fighting the Allies; "they may also be said to be fighting against time."

"They can not afford such Pyrrhic victories as would be required for a slow occupation of France by driving the allied armies back from one defensive position to another. In order to be free at an early date to concentrate sufficient force against the Russian invading armies to stop them and to drive them back out of Germany, the Austro-German armies on the French border must bend every effort to inflicting a decisive defeat upon the Allies without delay, even at the expense of enormous loss of life."

The outlook, thinks the *New York Herald's* "military correspondent," is that Russia will soon solve her problem of occupying East Prussia, crossing the Vistula, and taking or passing the German fortresses obstructing the path to Berlin. And several of our newspapers are profoundly impressed by the reported Russian successes in East Prussia, and the steady westward advance of the Czar's huge host. The German General Staff, the *New York Tribune* observes, "has held Russia in light esteem as an aggressive factor in warfare, altho admitting her enormous strength on the defensive," but "with the Russian forces penetrating fifty miles into East Prussia after only one week of fighting that estimate will have to be revised."

"Russian successes may go far toward offsetting the French reverses reported in southern Belgium and along the Lorraine boundary. Now that the Colossus of the North has got into action, the Allies, even tho worsted in the first big engagements in the west, can continue their defense with good cheer. They have only to hold fast. . . . Pressure from the east will ultimately break the grip of the Germans on France."

But the *Springfield Republican* sees less significance in the reports of Russian victories, and says:

"East Prussia is not of first-rate strategical importance, for the very reason that its position, cut off between Russia and the Baltic, is so exposed and weak that it has been marked off in advance as a liability. The real line of defense is behind the Vistula, which is a great river with a breadth of two-thirds of a mile in places, and to safeguard East Prussia Germany depends mainly upon the offensive. To the Russians the advantages of overrunning it are mainly political and moral."

RUSSIA'S PROMISE TO POLAND

RUSSIA'S PROMISE of a reunited and autonomous Poland in exchange for Polish loyalty to the Russian cause in the present crisis is regarded by some of our editorial observers as nothing but a shrewd war-time proclamation that will never be redeemed at its face value. Others, however, see in it not only the approaching realization of Poland's dream, but the promise of a new day for other subject nations of Europe. Among the papers reflecting the first point of view we find the *New Orleans Times-Picayune*, which remarks that Russia "has never yet let go a mile of conquered territory of any district or people it has once taken under its charge and control"; the *Springfield Republican*, which reminds us that "Russia has made pledges before and broken them"; and the *Boston Transcript*, in which we read:

"Words cost little and they can always be 'interpreted in the light of facts.' If the war goes against Russia the promise to the Poles can be quietly put aside as rendered impossible by the course of events. If Russia wins, the promise may be modified 'in view of existing conditions.'"

The second point of view is hinted in the *Newark News* when it remarks: "If Russia's offer to restore political autonomy to the united Poles is the first step toward a repartitioning of Europe along sane and natural lines, the great war has begun to yield its fruit." And it is more than hinted in the following paragraphs from the *New York Evening Sun*:

"This promise does not apply merely to the 12,000,000 people who live in that restricted district, no larger than New York State, which bears the name of Russian Poland and contains the ancient capital of Warsaw. Reading the rescript, there is no mistaking the fact that it is equally instinct with hope for the 5,000,000 Poles now subjects of a Hapsburg and the 3,000,000 Poles who own reluctant submission to a Hohenzollern. . . .

"And if Poland is to be reestablished, why not Bohemia, with its millions of Slavs, not fewer than 8,000,000, including the Slovaks on the marches of Hungary west of the Carpathians? . . .

"It would take from Germany at least three provinces and from Austria half its population, if to the freeing of the Poles there was added the logical work of liberating all Slavs. Austria would disappear from the map of Europe. There would appear at least three Slav States in its place: Poland, Bohemia, and Serbo-Croatia. To Slavdom there would be added not fewer than 30,000,000 Slavs, bound by ties of race, religion, and common hatred of the German.

"Such in its wider aspect is the meaning of the rescript of the Czar. In it is to be found much warrant for the German assertion that at bottom the present war is a struggle between Slav and Teuton."

The Czar's promise is in the form of a manifesto issued by Grand Duke Nicholas, Commander-in-Chief of the Russian Army. This manifesto says in part:

"A hundred and fifty years ago the living body of Poland was torn to pieces, but her soul survived, and she lived in hope that for the Polish people would come an hour of regeneration and reconciliation with Russia.

"The Russian Army brings you the solemn news of this reconciliation, which effaces the frontiers severing the Polish people, whom it unites conjointly under the scepter of the Czar of Russia. Under this scepter Poland will be born again, free in

THE FRANCO-GERMAN BORDER.

At the north, a German Army from Luxemburg took Longwy after a long siege and advanced toward Paris via Verdun. Lunéville, further south, was also taken by a German force advancing eastward on the road to Paris. At the extreme south the French crossed through the passes of the Vosges (the mountain range between France and Alsace), and took Mulhausen and Altkirch. This invasion, however, was checked and the French forces were compelled to retire. There has been fighting with varying results all along the Alsatian border. The important military movements which have taken place along the Franco-Belgian border farther to the north may be traced on the map of Belgium which appeared last week.

her religion, her language, and autonomous. Russia expects from you only the loyalty to which history has bound you."

Count von Bernstorff, German Ambassador at Washington, says that Russia was driven to this step by a revolutionary movement in Poland which had already established a provisional government in Warsaw. St. Petersburg dispatches, however, state that the immediate result of the manifesto has been an enthusiastic rallying of Poles to the Russian arms. And in the opinion of the *New York World* this enthusiasm is not misguided, because "if Russia wins now, it would be the wise course for her to keep her pledge. Her allies would demand it."

The *New York Herald*, after praising the Czar's new attitude toward Poland, suggests another reform to round out the record. We read:

"If the Czar would complete the work he has so nobly begun and would win the undivided support of the greatest moral force in the world, American public opinion, he has the power to do it in his hand. He has only to extend to the Jews in Russia the rights he has just conferred on the Poles—the rights to civil and religious liberty."

JAPAN'S SHARE IN THE WAR

VISIONS portending evil for our future in the Pacific rise in the minds of some editorial observers as Japan wages war on Germany because she is England's ally and because she has the opportunity to recover her "stolen spoils of war" in China after nineteen years of "watchful waiting." But in the judgment of the *Philadelphia Public Ledger* and others "the effort to parade the Japanese war bogy in this country is unpatriotic and deplorable," and it adds that any persons who "try to wheedle the public into believing that Japan's position is a menace to us, and a threat against us, deserve public condemnation." Editorial observers who view the matter differently say, however, that such utterances as this proceed from "an almost hysteric pacifism," while there are

"BRAVE LITTLE JAPAN" (17)

—Darling in the *Des Moines Register and Leader*.

those who, like the *Boston Herald*, believe that our "equanimity" or "anxiety" at Japan's action "depends absolutely on whether we believe or disbelieve the assurances of the Japanese and British Governments" that "Chinese integrity" and the "open door" shall be preserved. The Boston daily sees no reason why we should not "accept their declarations as sincere," and the *Chicago Herald* tells us that "on the assumption that in time of war no nation is to be credited with honesty, these assurances amount to nothing," but "on the reasonable assumption that there is still such a thing as national good faith, they may be taken as clearing up the Far Eastern situation for the present."

The events that led to to-day's state of affairs are set down by the *Portland Oregonian* as follows:

"Under the treaty by which China and Japan ended the war of 1894-5, China ceded to Japan southern Manchuria, including the Liao Tung Peninsula and Port Arthur. Russia, France, and Germany demanded that Japan relinquish the territory on the mainland and content herself with Formosa and an increase in the indemnity. The three Powers then proceeded to help themselves to Chinese territory. Russia took Port Arthur and adjoining country, France took a slice of country along the Mekong River adjoining Tonkin, and Germany took Kiaochow, the murder of two German missionaries serving as a pretext. After some friction with Russia, England was quieted with Wei-hai-wei, within striking distance of Port Arthur.

"There was some excuse for the action of Russia, for Japan's acquisition of territory on the mainland gave Russia a strong rival for power in that region and blocked her way to an ice port. France, as Russia's ally, was bound to help her.

Germany had no interests in China and was bound by no obligations to an ally. It later developed that her action was inspired mainly by dread of the 'yellow peril.' Germany, however, was expanding her commerce in all directions and was planting naval stations at convenient points. Therefore, she took Kiaochow."

Now that Japan is fighting to take Kiaochow back, *The Oregonian* assures us that we need feel "no apprehension in this country," and it adds that "the sincerity of Japan's desire to cultivate the good will of the United States has been proved by the pains she has taken to disabuse our minds of suspicion . . . and particularly by the patience with which she has endured constant irritation about immigration." Among other journals that believe we have nothing to fear because of Japan's entrance into the fray are the *Kansas City Journal*, the *Indianapolis News*, the *Springfield Republican*, and the *New Haven Journal-Courier*, which sums up the whole matter thus:

"There can be no reasonable cause for worry on the part of the United States Government over the Far Eastern situation. Chinese integrity is to be respected and the policy of the 'open door.' That the interests of the United States in the Eastern Pacific will not suffer, we have good cause to believe. American diplomacy has effected such a comfortable situation for the United States. We may trust that just as satisfactory understandings may be maintained in future between us and the Tokyo Government. Jingoes and alarmists should be powerless to change the American public view in this respect. In the meantime, this Government expresses no judgment on the Japanese ultimatum to Germany or on the state of war that has ensued. It looks on as a strictly neutral power."

Observers who do not share so satisfied a view of the situation, as, for instance, the *Boston Transcript*, note with a feeling of uncertainty that "when Japan secures Kiaochow, which she undoubtedly will, the hegemony of Asia will have passed from Great Britain to Japan." While admitting that Japan's procedure is "forward-looking and statesmanlike," the *Spokane Spokesman-Review* thinks it "will win no new friends in the United States," and the *Los Angeles Times* says:

"Japan's entry into the war at this stage is little short of alarming. Her contract with England, such of it as has been published, called for no such intervention. . . .

"It is not stretching imagination too far to assume that England has hastily made new and wider treaties with Japan—and that Japan does not expect to come out of the fray empty-handed. For the joy of dealing a deadly stroke to the German eagle and mulcting him of his Far Eastern possessions England has given a hostage to fortune and mortgaged the future.

"And in that future the interests and welfare of these United States have a large stake."

The *San Francisco Chronicle* ventures the belief that when the situation at home "becomes more hopeful, if it does, England may find herself not a little worried over Japanese ambitions in regard to China." And for us, the *Chicago News* remarks that "with Japan in the Samoan and Ladrone Islands, where the United States also has possessions, it would be a near neighbor of ours and perhaps a troublesome one." Reasoning along a similar line, the *Chicago Tribune* says:

"Unquestionably the entry of Japan affects the United States. President Wilson wisely preserves our strict neutrality.

"We are against war as war, feeling none of the impulses toward it. And yet it is wise to say with regard to Japan that this generation of Americans is not willing to make trouble inevitable for the next. . . . We never saw the glories of militarism so completely flattened into a sodden mass; but with every consideration urging us to peace we must recognize the obligations of one generation to another."

The *Washington Post* agrees with this view, saying that "Japan's action against Germany's holdings in China is significant of its desire to increase its own force, power, and influence in Asia and upon the Pacific, and the United States can not regard with indifference the disturbance of the equilibrium of power in the Pacific." In order to protect "our commerce on

very ocean of the globe," this journal says, in addition, "it is time for this country to have a navy as powerful as that of Great Britain and Japan combined." But the *Baltimore American* differs on this point, arguing that "the rivalry of Japan and the United States need not assume other than a normal commercial character," and it concludes:

"The success of England, with the considerable participation of Japan in that success, would undoubtedly be used by Japan in any future controversy with this country, as ground for the non-interference by her ally in the prosecution by Japan of the lines of her interest. Japan is seeking bigger game than Manchow. It is seeking to have the yellow race put upon a parity with the white. With this broader question the United States will have much to do. But sufficient unto the day is the evil thereof."

GETTING ALONG WITHOUT IMPORTS

THE SIGNS of "panic" among our manufacturers in the steel trade, the textile and other industries, resulting from the fact that certain "raw materials" are wholly supplied by some of the countries at war, promptly windle, says a writer in the *New York Evening Post*, on the discovery that we can produce all these necessities ourselves. He infers consequently that "the extraordinary commercial incidents of the war will teach our business community more lessons than one," and among others hopes that they will learn how to utilize their own home products and the ingenuity of their own home experts, to provide the small materials of manufacture whose production they have been surrendering to Europe." The steel trade, for instance, we read, has been buying ferromanganese from Germany and the textile interests have "relied almost entirely on the German chemists" for dyes. For the moment they throw up their hands helplessly at the outbreak of war. Next the electrical industry is heard from with the complaint that "the platinum supply from the Ural Mountains was cut off and that certain carbons and metal filaments, made by German manufacturers and essential for the arc light, could not be obtained" after existing supplies should be exhausted. The writer goes on to relate that:

"The drug and chemical trades were as quick in coming into view; an astonishing number of indispensable materials for these industries appeared to have their single source of production in Germany. Emphasizing the situation, one large retail firm in New York received notice from a German wholesale drug distributor doubling the price on 1,000 articles supplied by it. Drug dealers here trebled their price of such products as citric

acid, tartaric acid, carbolic acid, gum camphor, and dandelion root, and warned consumers of an impending failure of supplies. In quick succession, the same word came from manufacturers of glass, soap, matches, artificial fertilizer, gunpowder. In all these industries, potash is an essential raw material. Natural potash is a German monopoly, and with war begun, the supply was necessarily absolutely blockaded."

"Misgiving" spreads then to the manufactures of photographic materials, to the glove, shoe, and hat trades, and we read that "nobody outside the trades had suspected to what extent they depended on continental Europe for their particular kinds of material." Even certain kinds of felt roofing were affected "for the curious reason that the rags from which it has been made are imported from Belgium," and, "as a highly interesting climax, London raised alarm over the Transvaal mines," because gold there is extracted by the cyanid process and cyanid of potassium is "a by-product of German potash." The writer then inquires:

"What is to be said of this new and extraordinary turn in the situation? Are these trades, each with a fair chance of expanding its business into neutral markets relinquished by the fighting European States, to sit down despondently and give up production? The chemists and working experts smiled quietly at the suggestion, and presently it began to be pointed out that of all these various raw materials entering into the trades enumerated above, there is not one that is an absolute monopoly with Europe. Dyestuffs and acids can be extracted from American coal-tar as well as from the coal-tar of Europe; what is required is the effort and the enterprise. Manganese ores are in sufficient supply in this country, in India, and South America to keep the steel trade going—already the per ton price of this commodity has fallen from \$150 to \$100 a ton, after rising in a week from \$38 to \$150. Potash is manufactured in this country, tho it costs more than the natural product. Cyanid may be extracted from it here, and as for hats, shoes, gloves, and rags, substitution of domestic for European material is easy if not convenient. Carbons we are perfectly able to make at home."

If this be so, says the writer, why "this stir and commotion over the 'embargo on raw materials'?" And he offers two "main explanations" as follows:

"One is, that in the first alarm, the purely temporary obstruction of all shipping communications, due to the presence of German cruisers on the ocean and to the deadlock in foreign exchange, was confused with the much more serious obstruction of access to central Europe. The other is, that American manufacturers had grown lazy, and allowed their chemists to be distanced by the patient experts to whom the German Government . . . had for years given every possible encouragement."

NEUTRALITY—AND WAR LOANS

THAT OUR GOVERNMENT is making the international law of the future by its disapproval of loans to the nations at war is the opinion of the *Springfield Republican*, which reminds us that the present law "does not forbid loans of money to a belligerent state by private citizens of a neutral state." This journal notes also that "no war of any magnitude in the past has been financed without resort to neutral money markets," yet it adds that "in recent years publicists have been more and more disposed to condemn aid of this character to a belligerent." *The Republican* emphasizes the fact nevertheless that "American bankers are not forbidden" to float loans, and that the statement of Secretary Bryan on the question merely shows that "the Government as a government resolves that if loans are made to any belligerents they will be made wholly without its moral sanction." France, Austria, and Switzerland are the countries that, according to the press, are interested in American loans, and the Washington dispatches inform us that Secretary Bryan's pronouncement is the reply to an inquiry of the Swiss Government. It reads as follows:

"Inquiry having been made as to the attitude of this Government in case American bankers were asked to make loans to foreign Governments during the war in Europe, the following announcement is made: There is no reason why loans should not be made to the Governments of neutral nations, but in the judgment of this Government loans by American bankers to any foreign nation which is at war is inconsistent with the true spirit of neutrality."

The policy indicated in Secretary Bryan's statement is sound, the *Springfield Republican* believes, "even if advanced," and "it signifies that the neutrality of the United States Government is to be more than technically correct." The verdict

of this journal is widely indorsed, but there are also editors who insist that "for the people of a neutral country to lend a belligerent money is no worse than for them to sell wheat." Finally we read of financial authorities who hold that nations at war must finance themselves and consider any suggestion that we should lend them money as a bad "business proposition." The *New York Sun*, which defends "the rights of a neutral State in furnishing money or supplies to a country at war," says that "it is fortunate for us that the policy enunciated by Secretary Bryan was not in force one hundred and forty years ago," for if it had been "the thirteen colonies would have been unable to negotiate loans with the French, Dutch, and Spanish bankers who provided money for our Revolutionary War." However, *The Sun* inclines to the belief that there is "little likelihood, even had such loans been approved, that American money would have gone into them save at great concessions," because even in time of peace "American investors have never taken kindly to European State bonds." For all that *The Sun* is positive in its stand that—

"There is nothing in international law or usage to prevent bankers from supplying funds or merchants from selling food products and the like to a belligerent. Germany and France borrowed freely in neutral States in 1870. The same is true of Russia in 1876, of China in 1894, of Japan and Russia in their late conflict, and there are countless other instances. Protests from the other combatants on such occasions are unusual because they themselves may need money and their objections might close the doors upon their own negotiations."

"The questions of loans and supplies were covered by the Hague Convention of 1907 on the rights and duties of neutral States and Powers on land. Article 18 expressly excepts 'supplies or loans made to one of the belligerents' from among things prohibited to a neutral State."

Of similar mind is the *Boston Herald*, which points out the "careful distinction" to be made "between our Government's

Copyrighted, 1914, by the International News Service.

PLENTY OF WORK IN SIGHT.

—McCay in the *New York American*.

NOW THAT SHE'S ALONE.

—Darling in the *Des Moines Register and Leader*.

lending money to a belligerent and our people's doing so." The former, says this paper, "which nobody proposes, would be a grievous violation of neutrality," and we read that—

"Lending a country money differs in effect little from extending credit to such a nation. And the Government would hardly think of compelling American merchants to exact cash payments for everything they sold to the French people, or to their Government.

"All that such a foreign Government wants in the United States just now, in exchange for bonds, is a credit balance on which it may draw in payment for foodstuffs, coal, and such other supplies necessary for the maintenance of the war as may be ferried across the ocean. Since most of the supplies for Europe must come from the United States, such a loan would really mean their purchase on credit, the American investor by buying the bonds would bridge over the period between the immediate transaction and that time in future years when the foreign nation itself could pay the bill."

Among the journals that sharply disagree with the foregoing point of view is the *Philadelphia North American*, which says that "the Wilson Administration never appeared to better advantage than in its prompt condemnation of the plan" to make a loan to France, and it adds:

"This position is justified by the principles of morals and the best interests of civilization. True, some authorities on international law hold that the flotation of loans in neutral countries on behalf of belligerents is permissible; but that does not relieve the operation of sordid immorality.

"The present war in Europe is a catastrophe to humanity. In its inception and its conduct it is an enterprise which the

ents" for economic reasons as well as because of our neutrality are the *Washington Star*, *Times*, and *Post*, the *New Orleans States*, and the *New York Herald*, while we read in the *New York Journal of Commerce* the statement of "a leading Wall Street banker" that "the warring nations will not get any assistance from American bankers, because we haven't any money to lend and because war loans are not attractive as a business proposition."

MR. McREYNOLDS'S PROMOTION

IN SELECTING his Attorney-General to fill the place in the Supreme Court made vacant by the death of Mr. Justice Lurton, President Wilson made an appointment

which seems to most editors "respectable but not ideal," as the *New York World* (Dem.) puts it. This first break in the Wilson Cabinet is not expected to change in any way the policy of the Department of Justice, since Mr. McReynolds is to be succeeded as Attorney-General by one of his assistants, Mr. Thomas Watt Gregory, of Texas. The fact that Mr. McReynolds has made his reputation as a prosecutor, rather than on the bench, causes the *Philadelphia Telegraph* (Rep.), *New York Press* (Prog.), and *Richmond News Leader* (Dem.) to regret his elevation to our highest tribunal. They doubt whether he can substitute the "prosecuting state of mind" for the judicial, no matter how earnestly he tries.

And they point out that he must either sit in judgment upon important cases he has had a hand in preparing, or be barred from sitting in cases which present issues serious enough to make desirable the opinion of the whole court. The *Rochester Post Express* (Rep.) goes further, declaring that as Attorney-General, Mr. McReynolds "has had several unfortunate experiences and has shown tendencies that disqualify him for useful work on the bench." And another Republican daily, the *Pittsburg Gazette-Times*, notes "his strange tactics in the New Haven case, and his mischievous interposition in California's white-slave scandal and fuel prosecution," and recalls that he "is known to be at radical variance with the Supreme Court's view as to what constitutes effective dissolution of monopolistic corporations, as was evidenced in the American Tobacco affair, and to be at sword's point with the Interstate Commerce Commission and its counsel as to its methods of investigation."

Those editors who think Mr. McReynolds will add to the "progressiveness" of the Supreme Court argue from his break with his then superior, Attorney-General Wickersham, over the Tobacco Trust dissolution. As the *New York Evening Post* notes in a sketch of Mr. McReynolds's public career:

"He contended that in any dissolution proceeding the constituent parts of the trust should be disposed of to independent

THOMAS WATT GREGORY.

The Texas lawyer who succeeds Mr. McReynolds as Attorney-General of the United States.

United States, absolutely neutral and happily isolated, should utterly condemn. To finance one of the belligerents would be to prolong and tacitly to approve the strife.

"Morally, if not legally, that course would be a violation of neutrality. If those who argue for the French loan think it is a neutral proposal, let them attempt to promote one for Germany or Japan, and see what the judgment of this nation will be."

That "Americans should not finance the war" is the judgment also of the *Philadelphia Public Ledger*, which contrasts our position toward Europe with what it was toward Russia and Japan in 1905. We read:

"During the Russo-Japanese War, American money was freely subscribed for Japanese loans, and the aid thus given was gratefully acknowledged by the Japanese people. Possibly, tho it is not so probable, a Russian loan might also have found purchasers in this country, altho in 1905 the Russian securities would not have been considered so safe an investment.

"In the present emergency, however, the relations of the United States with the belligerents are far more critical than was the case in 1905, and the same sort of friendliness that was shown Japan at that time could not be extended to Germany, or Great Britain, or to France, without arousing resentments at home and abroad which would bear fruit in complications which it is the policy of this nation to avoid."

Other journals that are opposed to "war loans to the belliger-

shareholders, and that the Supreme Court decree was far too gentle in its terms. His stand won the approval of radicals of both parties, and it is said to have been largely responsible for President Wilson's selection of him to head the Department of Justice, when the new Administration came into power."

This fact and "his public and forensic utterances" expressing "advanced views on the trust question" suggest to the *Philadelphia Press* (Rep.) "that Mr. McReynolds will add to the Supreme Bench a rather radical element." Yet the *New York World* says that "while Mr. McReynolds may not be classed as an extreme reactionary, he has repeatedly exhibited mental traits and inclinations that have given much comfort to reactionaries." Both these dailies, however, agree that the McReynolds appointment is neither strong nor particularly weak. And a large number of their contemporaries coincide in this opinion, among them journals like the *New York Times* (Ind.), *Philadelphia Public Ledger* (Ind. Rep.), *Boston Transcript* (Rep.), *Buffalo Express* (Rep.), and *St. Paul Dispatch* (Ind. Rep.). Yet the *Philadelphia Inquirer* (Rep.) would have us remember that, "curiously enough, some of the best judges on every bench have been those who entered upon their work without much approval, while some supposed to be ideal jurists have notably failed."

Among those to whom the McReynolds appointment seems most admirable and who believe it meets the general approval of the country are the *Philadelphia Record* (Dem.), *Nashville Banner* (Dem.), *Cleveland Plain Dealer* (Dem.), *Albany Knickerbocker Press* (Ind.), and *Indianapolis News* (Ind.). The *Plain Dealer* thinks it "eminently proper" that President Wilson should have chosen a Democrat to succeed Justice Lurton. As the latter was a Democrat the party's representation on the court is not increased, there being still but three Democrats to six Republican justices. It is also appropriate, comments the *Nashville Banner*, that Mr. McReynolds, like Justice Lurton, should come from the Sixth Federal Circuit and the State of Tennessee. The solid reasons advanced by all these papers

for praising President Wilson's first Supreme Court appointment are to be found in the *Indianapolis News's* editorial review of Mr. McReynolds's public career and equipment for public service. We quote:

"He was born at Elkton, Ky., on July 23, 1862, and was educated at Vanderbilt University, and in the law department of the University of Virginia. From 1900 to 1913 he held a professorship in Vanderbilt, resigning that position to enter the Department of Justice as a subordinate. Mr. McReynolds has been a careful student of trust laws, and on beginning government service he found a field in which to test his knowledge. He was employed in the prosecution of some of the most important antitrust suits of recent years, among them being the case against the Beef Trust. He came prominently into public notice, however, during the prosecution of the Tobacco Trust. It was then that he, as an Assistant Attorney-General, developed ideas contrary to those of his chief, Mr. Wickersham. The successful termination of the Tobacco suit was due largely to the energy and application of Mr. McReynolds.

"Since his selection by Mr. Wilson for the chief post in the Government's legal department, Mr. McReynolds has been engaged in the Harriman lines dissolution case, the Bell telephone case, and the New Haven investigation. He acquitted himself creditably in the Bell case, and altho his attitude in the New Haven affair was criticized by some, it was honest and sincere and undoubtedly promoted a peaceful solution of that railroad's legal troubles. Mr. McReynolds will go to the Supreme Court equipped with a broad knowledge of trust laws. His studious career, rounded out by activity in the service of the Government, prepares him for judicial service."

Mr. Thomas Watt Gregory was named to succeed Mr. McReynolds, according to the *New York World*, on the strength of his work as Special Assistant Attorney-General, and in particular his handling of the New Haven case. By his appointment, observes the *Syracuse Post-Standard* (Ind.), "Texas has two places in the Cabinet." For, as the *New York Evening Post* notes, tho Mr. Gregory was born in Mississippi in 1861, he began his law practice in Texas, and won his first reputation as a special counsel of the State in antitrust prosecutions.

FOREIGN COMMENT

WAR THE RECONCILER

THE heat and passion which characterized the Home Rule controversy has passed away in view of the national peril incident to the present European war. The colonies and dependencies of the Kingdom are rallying to the flag, and even India, where there has been so much smothered disaffection, has awakened to the sense of patriotic responsibility. The labor troubles in London have been peacefully settled, and we read in the *London Times*:

"A highly important factor in keeping the industries of the country as near to their normal state as possible in the circumstances is the settlement, for the time, at any rate, of serious labor disputes. The London building trade strike, which a week or two ago looked like leading to a national lockout, has been ended, and the men have gone back to work. Marine engineers have resumed their employment, and ship repairers, laying aside all differences with their employers, have patriotically declared that their whole resources are at the service of the country. The dockers and transport workers have withdrawn their demands, and miners and coal trimmers have forgotten their own troubles in this moment of national emergency. The Scottish coal-owners have announced to the miners in Scotland that, in view of the existing situation, they will not proceed with their claim for a reduction of wages. To all these workers must be added the railway men, who were preparing for a struggle later in the year, but have put all smaller matters aside, and are doing their part to prove to the world the quiet strength and unity of all classes of British people in this time of national stress."

In addition to this peaceful ending of domestic broils comes news through the same London organ that the outlying territories of the Empire are also showing themselves equal to the occasion. On this subject we quote as follows:

"Canada, Australia, New Zealand, India, all are coming forward to support the old flag. Canada offers 20,000 men for an expeditionary force, and men unable to join such a force are begging to be accepted as volunteers for garrison duty in India or elsewhere. From Australia comes the same splendid story. The Commonwealth's offer of 20,000 men has been accepted. The Australian Premier has issued a statement to the people, in which he says: 'We owe it to those who have gone before to preserve the great fabric of British freedom and hand it on to our children. Our duty is quite clear. Remember we are Britons.' From India comes news that some of the ruling Princes are offering their services in Europe. These are splendid and inspiring proofs of the unity of the Empire."

Mr. Redmond's patriotic speech in Parliament to the effect that Irishmen stood shoulder to shoulder with Englishmen in the struggle for the Empire was received with enthusiastic approval by the press, including *The Times* and *The Chronicle*, and the Home Rule Bill will be allowed to pass without controversy. This was agreed upon by the leaders of both parties at the last session. The prominent Home Rule paper of Ireland, the *Portadown News*, comments on this session as follows:

"All parties meet under a flag of truce. All avenues of

escape from the *impasse* on the Home Rule Bill are closed by the simple fact that Mr. Redmond's consent is essential to any plan of procedure that may be adopted, and that he does not intend to yield an inch. Indeed, he has very strong ideas of his own as to what constitute an observance of the truce, and he is forcing it on the Government. He argues that the Bill has passed from the House of Commons, and has therefore ceased to be a matter of controversy, and he says that as its passage into law will be automatic when Parliament is prorogued and members want to wind up the session, the only 'uncontroversial' course open to the House is to let the Bill pass, postponing all talk of an Amending Bill till the winter session. Other Irish sections in Parliament are warning him

to stand firm to this decision or to admit his unworthiness to fill the leadership. Mr. Redmond is profiting by the armistice to prevent any sort of arrangement being arrived at to meet the views of Unionists, either on the provisions of the Bill or as to the date at which it shall come into force. The *impasse* at present is complete, and there is only too much reason to fear that in the sequel the Home Rulers will force the Government to attempt to sweep the Ulster Unionists aside, and risk the consequences.

"I may briefly record some of the proposals of terms for a temporary settlement which have recently been put forward. The *Radical Westminster Gazette* advocates the plan of offering immediate exclusion of the four counties, leaving the question of Tyrone, which, it says, is the difficulty, to be settled after the war. If this were acceptable, the Amending Bill would be passed

with the agreement of all parties. But it gives no guaranty whatever as to the ultimate fate of Tyrone, while it would definitely abandon Fermanagh and the other counties—an impossible suggestion. According to the *Manchester Guardian*, the fair course would be that the Home Rule Bill should receive the Royal assent, with the proviso that before it comes into operation Parliament will have had time to discuss and pass an amending Bill. It is doubtful if it would be sufficient merely to postpone the appointed day to secure that delay, and a little measure 'hanging up' the Home Rule Bill would be a necessary accompaniment. Every scheme but the last involves the entire sacrifice of all that Ulster has been contending for, and only needs to be mentioned to be rejected."

Mr. John Redmond's conciliatory proposition is, however, repudiated by the "Irish Volunteers," an Irish-American organization which recently held a mass-meeting in Celtic Park, Long Island City, New York. This organization avows its sympathy with the German Emperor, and in so doing claims to represent "the sentiment of the overwhelming majority of the Irish people in the United States." At Celtic Park was passed the following resolution:

"We repudiate and denounce as treason to Ireland John Redmond's statement made in the British Parliament on August 3, that the Irish National Volunteers will hold Ireland for England; we know that the majority of the Irish people throughout the world would welcome the landing of a German army in Ireland as their liberators, and we fervently pray that the fortune of war may bring such an event about, or that the destruction of the British Navy may enable Irishmen themselves to accomplish the freedom of their country."

"ONE TOUCH OF POTSDAM . . ."

SIR EDWARD CARSON—"A marvelous diplomatist, this German Kaiser."

MR. JOHN REDMOND—"Yes, he's made comrades of us when everybody else had failed."
—*Punch*.

CANADA TO THE COLORS

"THERE was neither Liberal nor Conservative in the House at Ottawa," says the *Toronto Globe*, when the Duke of Connaught opened Parliament wearing a general's field uniform of khaki, and reminded the legislators that England was asking for their help. The leader of the opposition, Sir Wilfrid Laurier, presented a motion proposing that the Dominion be prepared to carry out the Duke's suggestion. "Our answer is 'Ready, ay, ready,'" were his words and they were seconded by the Conservative Premier, Sir Robert Borden, who concluded the debate in the following terms:

"Canada speaks with one voice. The voice of a united parliament is the voice of a united people. As to our duty, all

ANSWERING THE CALL.
—*Daily Province* (Vancouver.)

are agreed. We stand shoulder to shoulder with the mother country. With firm hearts we abide the issue."

The general press of Canada are in accord with this decision. Thus we find the *Toronto Globe* repeating the incident of British Ambassador Goschen's final colloquy with the German Chancellor:

"'Why should you make war on us,' said the successor of the great Bismarck, 'for a scrap of paper?'"

"'Because,' replied Ambassador Goschen, the nephew of the old Gladstonian Liberal, 'because that scrap of paper bears the signature not of Germany alone, but of Britain as well.'"

On which this powerful Canadian journal comments as follows:

"The die was cast. For that 'scrap of paper' all the nations of Europe, all the dominions of the British Empire, India, Japan, the ends of the earth and the islands of the sea—English-speaking civilization everywhere is plunged into the welter of carnage and waste and poverty. The price of it is beyond all reckoning. The cost of it is not in fabulous money, but in rivers of blood. The pain of it will run through the months to a million hearts. But that price for the words of 'a scrap of paper' Britain will pay to the uttermost farthing. That word was the pledge of Britain's honor."

Canadian patriotism approved of Sir Edward Grey's management of the dilemma in which he was placed, and this leading organ of the opposition speaks of British subjects beyond the sea as follows:

"They saw from beyond the seas Sir Edward Grey seem to procrastinate, to negotiate, to temporize, to see if by any craft of diplomacy a way might be found by which peace with Germany might be kept and honor with Belgium held unsullied. But when the choice had to be made the greatest diplomat of the world said, 'Britain shall keep her word.' They watched, too, when, on the floor of Parliament, the Prime Minister flung back Germany's bargaining terms for the violation of the pledged word to Belgium, and called them 'infamous proposals.' It was

indeed 'a scrap of paper,' but its signature was a pledge to little Belgium which Britain did not break."

Ontario's wealth and prosperity impose this duty on the great eastern province of the Dominion with double emphasis, declares *The Daily Star* (Toronto), and we read:

"There is no British country anywhere that can afford to leave undone anything that it is in its power to do to uphold Britain's arm in this conflict. Nor is there any British community anywhere more prosperous than Ontario, more fortunately circumstanced, less likely to have to endure the worst evils that attend war, and, therefore, no British province anywhere is better able to offer voluntary and substantial support to those who are fighting for a free world against armed autocracy. The benefits of democracy have been so well demonstrated here that we are in a good position to help defend and extend the principle."

"Canada is bound most strictly to take part in any wars, anywhere, which threaten the integrity of the Empire," observes the *Patrie* (Montreal), a French paper of independent political platform. To quote further:

"In such wars of England as do not involve Canadian interests, or as do not require Canadian assistance, our cooperation is not obligative tho we should probably always offer it, if for no other reason than to affirm the solidarity which should be maintained throughout every section of the British Empire."

From the far western provinces comes the same call to arms, and from the heart of Saskatchewan the *Saskatoon Phoenix*, in an editorial headed "The Kaiser's Crime," speaks guardedly of the issue in these terms:

"We do not believe that Germany was arming directly against Great Britain; her attitude at the commencement of the war indicated that she calculated on British neutrality, and the protracted inaction of her navy shows that she has not gone so far in her madness as to commit naval suicide. She knows she has no chance whatever of success upon the sea; her navy was intended to operate against Russia and France, not Great Britain. The Kaiser and his military advisers miscalculated and blundered badly—that's all."

"And *The Phoenix* still stands for Anglo-German friendship, for good feeling and mutual service between British and German peoples. We have no love for military Germany, the Germany of the mailed fist, sword, and armor. We have no respect whatever for autocratic government, for rulers who oppress their subjects in the name of divine right, or for constitutions in which the people have no place."

"Had we not better let all that sort of thing drop, and go in for a new deal?" asks the *Ottawa Journal*, referring to the bickerings of the Laurier and Borden journals over the question of aiding the mother country by adding to her fleet. This writer proceeds:

"Some conservative papers are pointing out with vigor that the Liberal party blocked the Borden Government's aim to build dreadnoughts for the British Navy in good time, and some Liberal voices are retorting that the Borden Government blocked Laurier's scheme to build Canadian cruisers, and also declined later the proposition of two fleet units."

"The Liberal leaders did not think there was as much emergency as the Conservatives thought. The event has proved the former wrong, but events might have proved the other side wrong; it was a matter of judgment, not one of lack of British patriotism—and now that everybody knows that trouble has arrived, let the only thought or speech be that Canadians shall act unitedly for the Empire without back talk, glad to banish such a question from the arena of party politics, and heartily resolved, Liberals and Conservatives alike, to do the best we can for our British cause."

Bishop Badka, the Ruthenian prelate whose diocese is in western Canada, published a pastoral, subsequently read in the churches of Winnipeg and other places under Ruthenian jurisdiction, in which he exhorted all Austrians settled in Canada to return to Europe and join the colors, their expenses to be paid by the Austrian Government. The clergy were also exhorted in this pastoral to pray for the success of the Austrians and the

discomfiture of the allies. These facts were published by *The Manitoba Free Press*, with the following comment:

"The unconscious disclosure made in that episcopal proclamation of failure to recognize that the first duty of allegiance is to Canada and to the Empire of which Canada forms part was a striking demonstration of the menace to our country's future there is in the continuance of educational conditions that fail to promote the making of all who come to this country into Canadians. Every Manitoban of foreign origin who is intelligently desirous of what is best for his own and his children's welfare and advancement is against the continuance of those conditions and is on the side of making this a country peopled only by Canadians cherishing a Canadian national ideal."

THE WAR—A RACE WAR

THE UNKNOWN WRITER who wished to parody the "Iliad" of Homer wrote the famous *Batrachomyomachy*, or battle of the frogs and mice, one of the first race wars of which we have any poetic record, and now we are told by the clever journalists of Europe that a frog and mouse war is being carried on in Belgium. It is a struggle, we are told, between the Slav and the Teuton, and Germany found it necessary to protect and support Austria against the inrunning tide of Pan Slavism which through the operation of Serbia, backed by Russia, threatened to supplant the reign of Pan-Germanism. Thus Mr. Sidney Low, writing in the *London Daily Mail*, states the case of the Slav menace as follows:

"The break-up of Austria or its enfeeblement would leave Germany more exposed to the menace, as she deems it, of the tremendous mass of Slavonic population which impends upon her eastern frontier. Austria was formerly the bulwark of Europe against the Turkish hordes from Asia. To-day, in German eyes, she plays the same rôle, with a difference. She is supposed to be the bastion that protects central Europe against that other semi-Asiatic flood—for so it seems to the Germans—that is gathering to pour through the southeastern gates. In Germany they do not believe in the 'Illyrian' idea. They think that the Serbo-Croats, and Slovenes, and Ruthenians, if they were wrested from the Hapsburg monarchy, would merely become Russian protectorates, if, indeed, they were not incorporated with the Muscovite realm.

"There are Serbs who have very much the same impression themselves, and they do not find distasteful the 'United States of the Slavs,' which will combine all members of the race. 'There are 180,000,000 of us that might be brought together in one political association.'

"This may appear fantastic enough, no more practical than Pan-Germanism or Pan-Islamism, or the other panisms which are the stuff for wild poets and wilder professors. But to vast numbers of highly practical Germans—statesmen, soldiers, manufacturers, plain business people—the Slav menace does not present itself as a mere fantasy. They believe that this mighty reservoir of humanity must break westward and southward; all the more so since Japan has banked it off from the open waters eastward. They do not forget that Germany, as well as Austria, has many Slav subjects still imperfectly assimilated. They have a vision of Bohemia, Ruthenia, Moravia, established as Muscovite outposts, with the Cossacks overrunning Posen and Pomerania, and with Danzig and Stettin converted into harbors for the Czar's battle-ships."

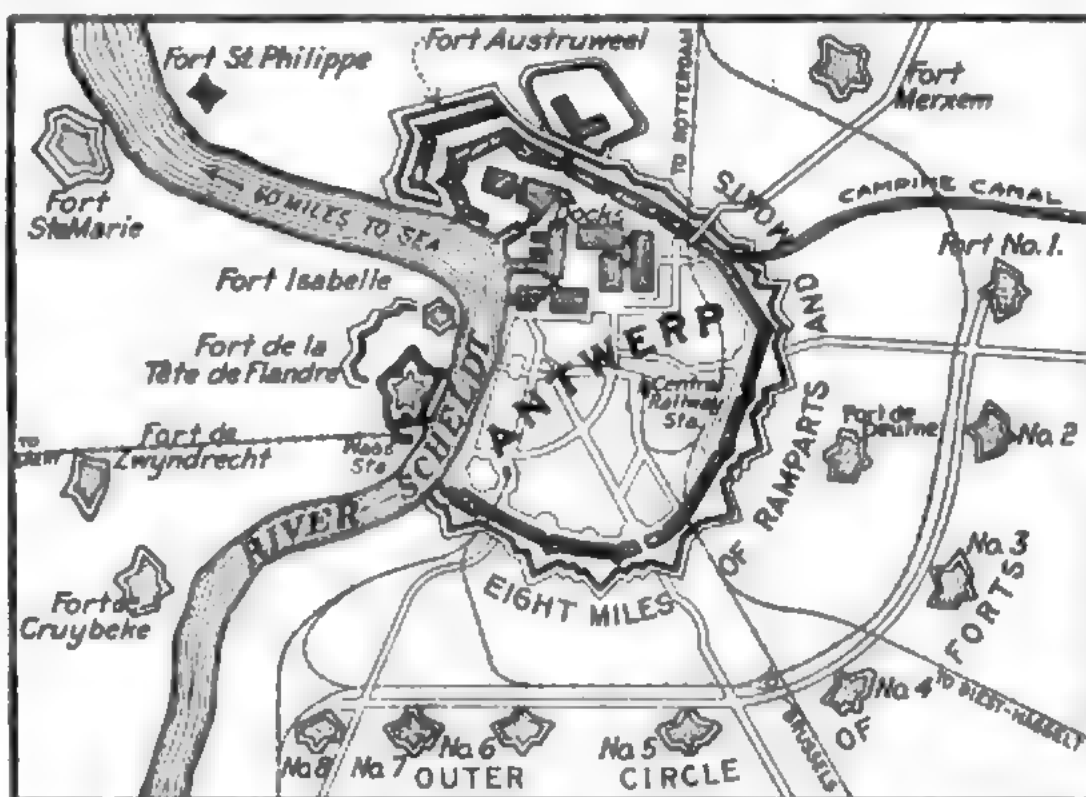

It appears to be quite certain that the subjects of Francis Joseph are largely of the Slavic race, and that the army of the Dual Monarchy is really honeycombed with the spirit of Pan Slavism. It is thus that the crumbling Empire of Austria has felt the necessity of Germany's aid in repelling the inroads of Russian aspiration. Thus, Mr. R. J. MacHugh, who acted as special correspondent in the Servian Army, writes to the *Daily Telegraph* (London) as follows:

"It is not without significance that in the recent Balkan War large numbers of Czechs, Slovaks, and other Slav subjects of Austria found their way to the Servian Army. The leader of the

Czech party in the Austrian Parliament spent many weeks at the Servian headquarters during the campaign, and was the confidant and adviser of the staff on many points. In the event of Austrian defeats occurring during the war, revolts will break out in the Slav provinces of the Dual Monarchy, and the Austro-Magyar troops of the Emperor Francis Joseph will have to fight not only a foreign enemy, but a rebellion at home."

THE RETREAT TO ANTWERP

THE RETREAT of the Belgian forces to Antwerp has been pronounced by the military experts of the *Figaro* of Paris to have been a masterly piece of precaution and strategy, and this view, we are told, is shared by many other European journals. We read in the paper cited that nothing could have been wiser than to forsake the unfortified town of Brussels, and to become intrenched in a city like that of Antwerp, which is surrounded by a strong palisade of almost unassailable redoubts. Moreover, with the establishment of the Belgian headquarters at this point of defense the people of Holland

ANTWERP AND ITS FORTIFICATIONS.

are said to have felt their neutrality was more than ever safeguarded and assured. To quote from the paper mentioned:

"By the encampment of a large force of European allies on the northwest of Belgium the safety of Holland is more than ever assured. Holland is a country which depends altogether upon the support and the neutral policy of adjacent monarchies, hence the relief which was experienced by the Queen of Holland when forces of France and Belgium took up their position as a kind of outpost in Antwerp. Antwerp, as is shown on the map, is very well protected by fortifications, against which the German cavalry will throw themselves in vain, and there is every reason to think that the occupation of this town by the allies will do very much toward steadying the balance of power in Europe, and in guaranteeing the safety and peace of outlying nations who might be threatened by the perturbation of this terrific war."

The first German demonstration against Antwerp took the form of a night attack on the sleeping city by a Zeppelin, which dropt eight bombs. The result, according to the dispatches, was the killing of ten civilians, four of whom were women, the wounding of eight others, and the damaging of many buildings. Much indignation has been expressed in some quarters over this slaughter of non-combatants in their sleep, and the Belgian Government, we read in a Washington dispatch to the *New York Times*, has determined to make it an international issue on the ground that the attack constituted a violation of Article XXVI of the Fourth Convention of The Hague. This article provides that "the officer in command of an attacking force must, before commencing a bombardment, except in cases of assault, do all in his power to warn the authorities." The *New York Staats-Zeitung*, however, maintains that our newspapers

"have no right to join in a hypocritical cry of protest," and declares that, if the bombs were falling on Berlin or Strassburg instead of on Antwerp, "the matter would be dismissed with the statement that such is war."

VINDICATING THE KAISER

THE CAMPAIGN now raging in Europe has naturally roused a good deal of recrimination among the nationalities concerned. The Germans claim that the Kaiser

has been misunderstood and traduced as a disturber of the world's peace. In justice to the representative of Teutonic power, culture, and militarism, we deem it right at a time when our Berlin and Vienna exchanges fail to reach us punctually to quote the bright and patriotic New York organ of Germanism, *The Fatherland*, in which Prof. Herbert Sanborn, a scholar of distinction, educated in Germany, writes:

"For years reports have been spread continually in America (if not always through English agency, at least in the interest of English influence in America) that the present German Kaiser is an insane or fanatical believer in the doctrine of the divine right of kings; that he has the obsession to realize a world-empire in the spirit of a Caesar or a Napoleon. He has been pictured to a democratic, peace-loving people as a tyrannical war-lord, a menace to the peace of the world with his dreams of territorial expansion. In point of fact, however, as all those familiar with the true circumstances are fully aware, no man has been more maliciously slandered than Emperor William II., the few monarchs have shown themselves throughout a long reign more consistently on the side of peace than he. Even in the present crisis he did not choose to fight until forced by his enemies to do so, his envoy pleading with the Czar for peace until the very last.

"The English press have not only never lost an opportunity to criticize the German Emperor as an exponent of the 'divine right of kings,' insinuating adroitly that there are points of similarity between this sovereign and their own reactionary Charles I., but malicious parallels have also been drawn between the Czar and the Kaiser until the average American, for whom the two words are equally foreign, has apparently confused them, so that many things true of the former are now falsely ascribed to the latter. Furthermore, the expression 'divine right of kings' is susceptible of various interpretations.

"The Kaiser, it must be understood, places a devout trust and reliance on the power of a just and omnipotent God, that has largely gone out of fashion in most parts of Europe among rulers and subjects. He believes that every man in this world holds his position, whatever it may be, for some purpose, not contrary to the will of God but by divine grace; that every

man has peculiar social and religious duties corresponding to the station in which God has placed him."

Of the German invasion of Belgium, Dr. Sanborn speaks as follows:

"Belgian neutrality was violated by Germany in her death-struggle; but it would be a national crime to have respected it, horrible as it appears to the moral English and American press. Discussions pro and con. remind one of the famous ethical discussion as to whether a lie is ever justifiable; and we must realize that there are certain abnormal circumstances, as a sane ethics has always recognized, where ordinary every-day standards of morality do not apply. If a burglar intent on murder holds his bosom friend in front of him for protection, and the friend, when requested by the policeman to get out of the way, fails to do so, then he must be removed by force. Germany knew that the Frenchified Belgians were only too eager to help the French, and claims, furthermore, to have unimpeachable evidence that France had violated both Belgian and Dutch neutrality before German troops had started for the border.

"The claim made that all Europe is waging a war against German imperialism, not against German culture, even tho the claim were made in all sincerity, would still be mistaken, for it is perfectly plain that German culture depends for its maintenance upon the former. Without her present means of protection, there can not be the slightest doubt that already her splendid civilization would have been subtly undermined or destroyed. It would have indeed been a great blessing to Germany, and hence to the world, if she had not been obliged to defend herself in this way, if she might have devoted all her vast energies and resources to other things of intrinsic importance, but such a Utopia is merely the dream of those who do not see that, at the present stage of civilization, there are some questions that it would be extremely dangerous to submit to the

opinion of a majority of the nations. The 'common sense of most may hold a fretful realm in awe,' so long as merely material values are at stake, but uncommon sense is necessary for the adjudication of many important claims."

Another college professor, Dr. Kuno Francke, of Harvard University, maintains in the columns of the *New York Times* that "fundamental justice is to be found on the German side," and that "Germany has been forced to fight for her life." The real roots of the conflict, he says, are to be found in France's irreconcilable attitude over the loss of Alsace-Lorraine, in England's jealousy because Germany was menacing her commercial and industrial supremacy, and in Russia's hostility toward Austria's influence and aspirations in the Balkans. The thoughtful observer, he says, "should look beyond the immediate occasion of this world-conflict and try to understand its underlying causes."

THE RESULT OF ALL THESE FINE ALLIANCES.

—Amsterdamer.

SCIENCE AND INVENTION

THE LINE-UP IN THE AIR

THE relative aerial strength of the countries engaged in the present European war is discussed and graphically illustrated in *Aero and Hydro* (Chicago, August 8). This publication believes that the contest now raging is to include, as an incident, the first great "war of the air." The supremacy of Europe, perhaps of the entire world, may be decided for many years to come before the conflict ends, and in bringing about this result, the writer thinks, the aeroplane and the dirigible will play spectacular parts. To say that, combined, they can swing victory into defeat, or defeat to victory, he does not consider an exaggeration. Yet, he acknowledges that the real value of aero equipment of the most complete and efficient kind available remains to be learned by actual service. Which nation's aerial force will prove the strongest can only be guessed. We read:

"Numerically, France and Russia combined are stronger aerially than Austria and Germany united. The great air battles will undoubtedly be between these countries: France and Germany opposed, Russia opposed to Austria and Germany, with Serbia's small equipment on the defensive against Austria. Great Britain's . . . aerohydros, land machines, and dirigibles will probably not cross the channel for land fighting.

"In the naval battles we may see the aerohydros of France and England united against the similar equipment of Germany and Austria, with Russia's principal hydro equipment close to her own shores on coast-defensive duty.

"France is undoubtedly supreme as far as her numerical strength with land machines is concerned. She could, within a few months, add to her present quota of 745 land machines 250 to 400 others and the pilots to man them. Russia's present equipment of 680 land machines could not be increased by privately owned planes, as aeroplane ownership in Russia is a government monopoly. Germany could add 200 machines and pilots to her total of 540 land machines within a very short time; but little increase could be made in Austria's 130.

"The total strength of France, Russia, and Serbia combined, in land machines, is at present 1,443. Germany's and Austria's total is less than one-half as great—670. It must be borne in mind that these figures include all flyable machines owned by the governments. Many of them are old rebuilt machines that were new from three to four years ago, but they are none the less serviceable for some purpose. There are more old machines in the French equipment than in any of the other countries, Russia's equipment being the newest.

"Germany's dirigible strength is the greatest and Austria's is very important. Ten Zeppelins were recently ordered by the latter country, but have not yet been delivered. Combined, the dirigible forces of Germany and Austria total at least 26. These include two Zeppelins in Austria and eight in Germany, varying in cubic-meter capacity from 17,700 to 22,000.

"France has an excellent fleet of dirigibles, however; some of them are exceedingly fast, and, besides holding the dirigible

speed record, French military dirigibles hold the world's duration record—35 hours 19 minutes. This record was recently made by the 9,000 cubic-meter *L'Adjudant Vincenot*, breaking the record of 34 hours 59 minutes previously held by a *Zeppelin* of 22,000 cubic-meter capacity. But France lacks the weight-carrying dirigibles of Germany, having but one of the *Zeppelin* type—the *Spiess*. Russia is equally ill equipped in that particular."

ORNAMENTAL TELEPHONES—Why should we not have telephones in decorative forms, as well as electric lights? *The Transmitter* (Baltimore, July) sees a reason for looking forward to something of the kind, in what it calls "the craze for disguising useful articles so that they may also seem ornamental. This, it says, "has struck almost every line of manufacture, and one is led to wonder how the telephone managed to escape." The writer goes on:

"We see phonographs that look like writing-tables, lunch-boxes that look like richly bound books, and common carriers of candy decked up in pink silk ribbons calculated to make Solomon in all his glory look like a lady of fashion in a last year's gown.

"As has been observed, the telephone—perhaps because it's not bad-looking now—seems to have escaped. Styles may come and styles may go, but the desk set we have with us always. Altho it is black of body, it has a bright, shining face turned up to greet us each morning, and its everlasting green cord makes us think of springtime.

"It seems to invite and at the same time challenge the gentle ministrations of the landscape artist. The very simplicity of its exterior gives one a feeling that there is a day of reckoning in store for the telephone when the decorators and beautifiers get in a few of their fine licks.

"Then we may expect to see the simple little telephone instru-

ment blossom as a rose. There's an idea for you! Why not, indeed, make the telephone like a rose? The base could be disguised as a flower-pot, the transmitter lost in a brilliant array of flowering petals, the receiver a cluster of opening buds, and the receiver cord a trailing tendril.

"From flowers it is but a short jump to other things to appeal to the artistic taste. A lover of statuary could have the telephone for his library-table fixed up as a famous general on horseback. The transmitter could be concealed in the horse's head, and the message whispered in his ear—a most appropriate place. The receiver, of course, would be the rider, and the person talking could easily imagine himself receiving a message from a courier of old. The receiver cord would serve admirably for reins.

"No need to stop here with the idea. A book-lover could have his transmitter and receiver bound up in a couple of books. When he wanted to hold a telephone conversation he would simply pick up his cherished volumes from his desk and proceed.

"If all this should come to pass, where would it lead to? It is hard to say. Chances are that it would lead most people to making unkind remarks."

THE RELATIVE STRENGTH OF SOME OF THE EUROPEAN NATIONS IN AEROPLANES AND DIRIGIBLES.

FIGHTING THE ARMY WORM

NEUTRALITY in the European war by no means exempts the United States from fighting. There are no treaties with insect pests, and against them the warfare must be ceaseless and without quarter. It is not often, however, that the Government is forced to fight at its very doors, as it has recently been doing against the army worm. In the month just past this destructive pest which has done much damage throughout the Northern and Eastern States, invaded even the nation's capital and chewed up lawns in the shadow of the Department of Agriculture and of the Capitol itself. Instead of receiving appeals by mail, writes Oswald F. Schuette in *Leslie's Illustrated Weekly* (New York, August 13), the Entomological Division of the Department was suddenly confronted by irate citizens who marched down in person to demand help against the invaders. He goes on:

"Aside from the seventeen-year locust, there are few insect pests that swarm in such compact formation as the army worm. It is an ugly-looking, naked, brownish-black caterpillar about an inch and a quarter long and a quarter of an inch in diameter. It gets its name from the regimental formation of its invasions. Its legions run into the millions, and lay observers will tell you that they have seen such numbers swarm across sidewalks from one lawn to another. An accurate census might reduce these estimates, but they do swarm in exceeding numbers, and when they have finished with a lawn it looks for all the world as tho it had been seared by fire.

"They feast on fields of wheat, oats, corn, timothy, and other grasses. Nothing seems too tough for their jaws, altho they will not eat clover. Just why this is not palatable to their voracious appetites is not known. The army worm is inclined to feed by night and hide in the ground by day. But when in vast numbers it must work both day and night in order that more ground may be covered in search of food. It is under these conditions that it travels from lawn to lawn or from field to field.

"This caterpillar is the young moth, whose spread of wings when fully developed is about an inch and a half. This moth, known as the true army worm, bears the technical designation of *Heliothrips unipuncta*. Its wings are brown with a white spot on the center of each forewing. It has two near relatives—one, the fall army worm, known as the *Saphygma frugiperda*, and the other, the Western army worm, known as the *Uroa gasteria*.

"The female moth lays her eggs in matted grass and weeds, concealing them as far as possible by shoving them down into the sheaths of the blades of grass. She lays from fifteen to twenty in a cluster. These hatch in eight or ten days, and the newly hatched caterpillars start promptly to work. It takes them about three weeks to attain their full growth, and during that time they eat most voraciously. They then burrow into the ground, where they are transformed into the brown pupae and emerge two weeks later as adult moths. In the Northern States there are two or three generations a year, while there are as many as six in the South."

This summer's outbreak, we are told, seems to have covered most of the North east of the Rocky Mountains. The pests are believed to be the result of swarms from the Southwest. Their appearance at Washington was unheralded and the department experts have been unable to discover the source. The first appearance of the moth was in the train-sheds of Union Station, where hundreds of their broken wings were found, but the entomologists do not assert that the moths were transported by rail. To quote further:

"In trying to combat the pest, the department sent out immediate warnings with instructions for fighting them. If the worms have not yet attacked a field, the experts advise that the most practical way to keep them out is to plow furrows in front of them, throwing the furrow in the direction from which they are traveling. The worms will fall into the furrow and when this is full they may be killed either by dragging a log back and forth in the furrow or by destroying the worms in holes previously dug at intervals of 20 feet in the bottom of the furrow and in which they will collect. Kerosene poured on them in the holes will destroy them.

The instinct of the army worm is never to turn back. Taking advantage of this instinct, the farmer traps it in deep trenches dug across its line of march.

"If the worms are already in the field the experts have worked out a pleasant compound consisting of the juice of one-half dozen oranges, 50 pounds of wheat bran, one pound of Paris green, and enough diluted molasces to make a stiff dough. This is to be scattered among the worms. But even with this delicacy it is difficult to tempt them from the greener food, and the department declares that it is difficult to drive the caterpillars out of the field without seriously injuring or even destroying the crop. Care must be taken to keep this poisonous compound from children or domestic animals.

"The worms at first are almost always localized in some definite breeding-place in the field, and immediate efforts should be taken to eradicate them in these small areas before they have had time to spread. The normal breeding-place of the army worm is in rank grass, such as is usually found along the edges of swamps or in spots of pasture land that have been over-fertilized. They are practically never found in swamps because the worm needs a reasonably dry place in which to breed. Clean cultivation, rotation of crops, cleaning up of fence corners, close pasturage, and the burning over of waste grass land in the spring or fall are good measures to prevent a recurrence of the army worm.

"For small areas like lawns and private grounds the Paris green-orange juice compound may be used. Equally efficient is the application of a spray of one pound of arsenate of lead dissolved in twenty-five gallons of water. If the powdered arsenate of lead is more easily obtainable, one pound of this may be mixed with eight pounds of flour and dusted on the grass where the worms are feeding. But it must be remembered that arsenate of lead is a deadly poison to men and animals, as well as to army worms.

"Not one in a thousand of this summer's army worms produced a second generation, according to the experts of the Department of Agriculture. This is due to the activities of a tachinid fly, *Winthemia quadripustulata*. This fly lays a tiny white egg on every army worm it can find. When the egg hatches a microscopic maggot quickly burrows into the worm, and then it is all off with its victim."

CLEAN STREETS AND MOTOR TRAFFIC

PREVENTION IS ALWAYS preferable to cure, and if we can prevent our city streets from becoming dirty we shall be doing a better job than when we employ even the latest and most sanitary methods in removing the dirt after it has been acquired. It is asserted by the Automobile Chamber of Commerce, in a statement sent out from New York through its Commercial Vehicle Committee, that an important step toward this prevention of dirt has already been taken in the increasing replacement of horse-drawn traffic by motors in cities; and the complete banishment of the horse as a tractor is suggested as advisable from this standpoint. Mr. H. W. Perry, secretary of the committee, takes as his text the reports recently issued by the Chicago Commissioner of Public Works in connection with a municipal investigation. From data furnished by these reports Mr. Perry calculates that one million dollars a year could be saved by the city of Chicago on street-cleaning alone, if her business houses and private citizens would substitute motor-

trucks and automobiles for the 80,000 horses now used in the city. He says:

"Aside from the excrement of the animals, the constant wear of the pavements by the horses' shoes and the iron-tired vehicles, observes the report, 'has a tendency gradually to wear out the

surface of the pavement, which must be removed by the street-sweepers. This source is of special importance in macadam pavements, as it is this material that forms practically all of the dirt which is removed from pavements of this class.'

"No attempt was made by the investigators to determine the extent to which horses are responsible for disease in the city or the financial losses to the community from this source, but it is likely that the aggregate is much larger than the expense due to street-cleaning. Stables afford the most common breeding-places for flies, those disseminators of typhoid and intestinal diseases, while the dried street filth blown about by the wind carries all sorts of germs into every home, office, and factory in the city.

"More than 600,000 tons of manure are produced yearly by the 82,000 horses, mules, and cows maintained in the city. All of this has to be carted through the streets, and a considerable quantity is spilled from the wagons to lie in the streets until swept up by the street-cleaners.

"This report, embracing more than 100 printed pages and many elaborate tables of data, is both comprehensive

and exhaustive and contains much information of value. In connection with the investigation, traffic censuses were taken at 1,400 street intersections, with the result that 'it has been definitely determined that the density of horse traffic is the principal factor which determines the number and frequency of cleanings which one street should be given.'

"It was found," continues the report, 'that within the last three years the number of auto-driven vehicles in the central portion of the city has increased over 300 per cent., and that the number of one- and two-horse-drawn vehicles throughout the city has remained practically constant. The census on hand of automobile and street-railway traffic has been used as a factor in determining the minimum cleanings which a street requires. The amount of dirt attributed directly to automobiles or street-railways is inappreciable.'

"Several important conclusions may be drawn from the facts given: First, that the substitution of motor vehicles for horse-drawn vehicles will reduce the cost of street-cleaning, lessen the wear of street pavements, and help materially to decrease the city death-rate; secondly, that the use of motor-trucks by the street-cleaning department will effect further savings in the cost of street-cleaning and ash and garbage disposal; thirdly, that the elimination of horses will preserve street pavements; and fourthly, that replacement of macadam pavement by more permanent pavement will lower the cost of street-cleaning and maintenance.

"Referring to street repairs, the report makes the important observation that 'where the cost of repair and maintenance is equal to or even greater than the annual interest cost on new work, it is more desirable that new pavements be laid where possible.' The average cost of repairing and improving 55 miles of macadam county roads within the city limits is estimated at \$750 a mile. This represents 6 per cent. interest on \$12,500 a mile. It would seem to be good policy, then, to substitute permanent pavements for those macadam roads as quickly as possible.

"Altho removal of dead animals is a source of some small

TRENCH FOR TRAPPING ARMY WORMS.

After the furrow is made 18 inches deep, holes are sunk in the bottom. The worms collect in these depressions and are destroyed.

revenue to the city, the loss of the animals is a heavy burden on the owners and community at large. During the year ended August 1, 1913, the contractors removed 9,253 dead horses. If those may be assumed to have been worth \$100 apiece when they died, largely as a result of excessive heat in midsummer and icy and snow-covered streets in winter, they represent a loss of nearly one million dollars."

WILD MEN, OLD AND NEW

THE REPORT that in the woods, near Naini Tal, India, there has been found a wild girl with hairy skin and the manners of an ape, leads *The Lancet* (London, August 1) to discuss the credibility of the similar stories that have been current for centuries, often finding their way into current fiction, as in Kipling's "Jungle Stories," and a recent novel describing the adventures of a young European reared by African apes. The most famous of such tales date from the sixteenth century, when roads were few and desert and forest were everywhere. The story of the boy of the Ardennes is still perhaps the classical tale of the type. To quote *The Lancet*:

"De Humière, huntsman to Charles IX. in 1563, . . . had killed a dozen wolves when he noticed a she-wolf approaching, followed by a naked child, about seven years of age, who showed a desire to tear the huntsmen with her teeth. The story gained credence at the time from the fact that a mother had some years earlier abandoned an infant girl at the same spot. Simon Goulard tells of a little girl discovered in Hesse, who walked on all fours and made noises like those of a bear. She was ultimately taught to speak. The newly discovered Indian child is supposed by the natives to have been brought up by bears.

"It is to medical men that the task of educating these remarkable creatures was usually confided. Thus at the end of the eighteenth century the famous Virey, and then Dr. Itard, an able physician and well-known physiologist, undertook the education of a child known as the 'savage of Aveyron,' which had been taken in 1799 after evading capture for months, as he leapt or crept from branch to branch of the trees in the wood of La Bassine.

"The boy, stark naked when captured, appeared to be about 12 years old, and his body showed the cicatrices of a number of wounds, which led to the inference that an attempt had at one time been made to kill him. He was well built, active, had piercing eyes, and was ambidextrous, but the conformation of his arms and hands was that of a savage. He ran occasionally on all fours, grew in time somewhat stout, and was always dumb, but not deaf. He preferred raw to cooked food, and detested beds and clothes.

"Itard's patient attempts to awake his faculties were only partially successful, but led to a number of very interesting observations being made on him. He lived 20 years of a semi-civilized life, and died, still unable to use articulate speech, in 1828. His career is an ample commentary on the simple life of the noble savage of Rousseau. His character was not bad, but not brilliant. He loved freedom and loathed all forms of alcohol, but was not conspicuously grateful or amiable. His was really not a case of savagery, for any savage, even the lowest, is the inheritor of a mass of tradition and behavior, and this creature came, as it were, fresh, and unconditioned mentally, into the world. We may most fitly compare him to the mentally deficient or to the morally retarded. The kindly Dr. Itard doubtless christened him Victor, in allusion to the many difficulties which in his case had to be overcome. . . . Victor's health was good. He caught smallpox almost as soon as he came within the zone of civilization, but he recovered with remarkable rapidity, and refused all the medicines of the day with savage doggedness.

"The cause of his death, which occurred early in life, is not noted in the documents accessible to us. Probably he died from sheer boredom in Paris, where he was on show.

"Tradition is full of stories of beast children, from Romulus and Remus to Valentine and Orson. These legends are rather of the nature of totem stories than of actual records of fact, but they point to a belief that animals take kindly to human children. It is no uncommon sight, indeed, to see a very small baby on good terms with a fierce dog. But the idea that a little boy could escape the onset of wolves in a French forest in 1799 is credible unless, as we are led to believe, he was able to climb

trees and to remain in them for long periods. The story of Victor of Aveyron would stagger credibility were it not so well authenticated by eminent French medical men of the early nineteenth century."

MASSES OF GAS IN SPACE

WE KNOW THAT SPACE contains solid bodies of all sizes, from huge suns down to particles of meteoric dust. That it contains also masses of gas is asserted by J. Meunier, writing in the *Revue Scientifique* (Paris, July 11). Mr. Meunier believes that the erratic behavior of certain comets, especially the sudden alteration in the shape, direction, and number of their tails, may be accounted for by collisions with these gaseous masses, and that recent photographs of comets give evidence of their presence. He even suggests that they may influence terrestrial weather. Writes Mr. Meunier:

"The planets move in a narrow zone, near the plane of the ecliptic, while comets have orbits whose inclination to this plane is sometimes great. It varies for the periodic comets, from 3° to 162°. Consequently these bodies reach regions of the solar system to which they alone penetrate. They burn; for their spectrum is that of the hydrocarbon flame. The theory that attributed to this spectrum an electric origin received a notable setback when the earth passed through the tail of Halley's comet in May, 1910.

"These incandescent masses, penetrating into new regions, act, so to speak, as explorers. When they are discovered, at vast distances from the sun, they appear generally as nebulous disks, more or less vague and either show no tail or only a tiny one. As they get nearer, the tail becomes more evident, and always appears under varied aspects. Here are some examples chosen from among recent comets that have been photographed. The Borrelly comet appeared on July 24, 1903, with a tail broken into the form of a bayonet. The Giacobini comet of 1905 had on December 24 a narrow tail, bounded by two convex edges, like an elongated flame drawn through the air. The next day, as if the resisting medium had disappeared, it opened into a fan, as if explosively; some days later, it sent out two fine rays, which were afterward multiplied.

"The most remarkable recent comet was undoubtedly Morehouse's of 1908. Discovered in September, it first showed variations of brilliancy. All at once, on October 15, without any warning, there was detached from it a mass more luminous than its own disk. This mass formed an angle like a mass of smoke issuing from the smoke-stack of a locomotive when a blast of wind strikes it. . . . The following night there was a new surprise—an explosion that drew it out into a double spiral. On the left side of the first spiral was seen an incombustible globular mass of gas, forming an obstacle and leaving a well-marked place. This is not due to a photographic accident, for it appears also on a photograph taken by Max Wolf at Heidelberg. In November the Morehouse comet was no less astonishing; on the 15th the extremely long and brilliant tail rolled up in a twisted form; on the 17th the disk put forth a sort of handle on the right side; on the 28th this had disappeared, but the principal twisted tail formed with two other side tails an acute trihedral angle.

"So many different appearances would surely not have existed if these bodies had been moving in a homogeneous medium, free of gas. Everything is explained in the simplest manner by the intervention of gaseous masses, and may be reproduced experimentally with ease by means of flames. . . . The gaseous masses, doubtless of different chemical composition, may be considered as residues of the original nebula that escaped the phenomena of combustion which consolidated the matter that forms the stars, including the numerous asteroids. . . . I will add only one fact. Starting from the preconceived idea that comets move in empty space, formulas have been calculated representing the variation of their brilliancy as a function of their distance from the sun. Although some observations have seemed occasionally to confirm these formulas, others have shown a striking lack of agreement with them. This has been noticed in the case of the present Kritzinger's comet.

"Let us not despise the indications that these wandering bodies give us in their erratic courses. Interplanetary space, which contains solid bodies—the meteorites—is not wanting also in gaseous masses, and these doubtless play their part in the weather phenomena of our atmosphere."

ART IN INDUSTRY

ART and technology are usually regarded as occupying opposite poles. Doubts may have been suggested by the striking work of such sculptors as Rodin and Meunier and by that of an occasional painter of industrial subjects, but it has remained for a writer in *Prometheus* (Leipzig, July 25) to show that the industries offer on all sides examples of beautiful decorative motives, which have for the most part been neglected by artists.

In the first place, the author reminds us, industrial objects have long been utilized in coats of arms, trophies, and emblems. Helmet and sword, plow and spade, hand utensils of all sorts, keys, anchors, even whole ships and locomotives may be found on the armorial bearings of various States and cities. All these may be quite the reverse of artistic. But, in addition, we now frequently have industrial motives used for pure ornament.

As a first example, the writer points to the various forms of windmills, all of which are designed on beautiful geometrical lines. Next he shows us various decorative parts of modern machinery, some of the most graceful being taken from a sausage-machine. All these are shown in the accompanying illustrations.

Another group may be made by cross-section of various parts among which he shows sections of ordinary wire draft-cables and of telephone-cables. All of these are interesting artistically because they were not designed to be beautiful, but to be useful. Their beauty is a direct consequence of their structure. It is this intimate relationship between the way in which a useful object is formed or assembled and the pleasure given by it to the eye that is at the foundation of the best art. —Abstract made for THE LITERARY DIGEST.

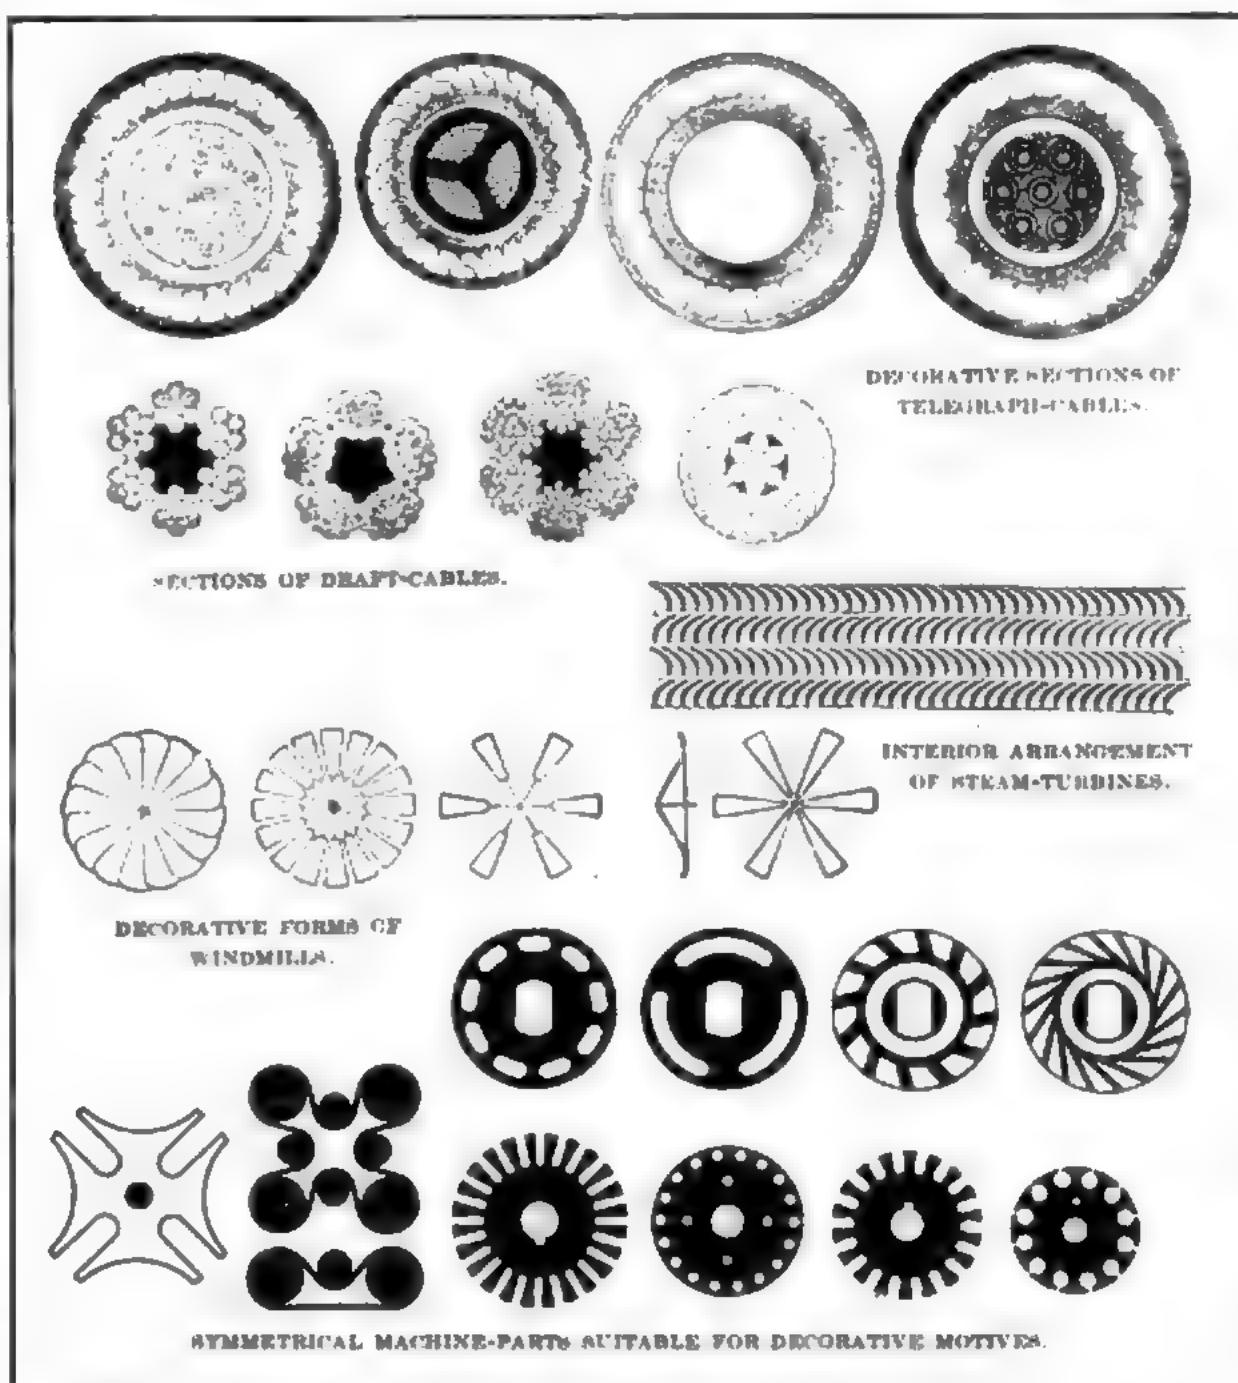

PERPETUAL ELECTRIC CURRENTS?

STUDENTS of mechanics, who are accustomed to say that perpetual motion is impossible, mean by this to assert only the impossibility of such motion accompanied by the performance of work. Work is done by overcoming resistance, and resistance brings motion to a standstill. If no work is done, and there is no resistance, the motion will keep on indefinitely, because there is nothing to stop it. Thus the orbital motion of the earth goes on steadily. We are not sure whether anything is stopping it or not; if not, it will doubtless continue. What is true of material motion is also true of the flow of electricity. An electric current with no resistance to stop it would also doubtless continue indefinitely. That such a current is not altogether theoretical appears from a recent investigation by a well-known Dutch physicist, thus editorially described in *The Scientific American* (New York, July 25):

"It is true of some discoveries—not of all—that after they are brought to light they seem almost self-evident. What must happen if an electric current is started, say by induction, in a closed circuit having a vanishingly small resistance? The energy is not dissipated as heat, since the heat produced is proportional to the resistance, in this case zero. There is no other obvious way in which energy would be dissipated, and

the only conclusion left open to us seems to be that the current would continue indefinitely.

"That this hypothetical case should actually have been realized must be a surprise even to any one who may, at some time or other, have gone through the argument given above. Yet this is what has happened. Prof. Kammerlingh Onnes, the

Dutch physicist, famous for his researches on low temperatures, has shown that several metals, when cooled to a definite temperature, low, but still above the absolute zero, cease to have any measurable resistance, and that a current started in a lead coil by induction continues indefinitely so long as the coil is kept cooled with boiling helium. Such a coil behaves like a permanent magnet, deflecting a magnet needle brought into its neighborhood. If the coil is connected up to a galvanometer there is an instantaneous deflection, and the current dies out in the circuit, which now includes a resistance.

"In Prof. Kammerlingh Onnes's experiment a lead coil was used, which at room temperature had a resistance of 736 ohms. In liquid helium the resistance fell to less than a twenty-billionth of this, and the current was over one-half ampere. At 6 degrees absolute there is a somewhat abrupt fall in the resistance of the lead, to practically zero. For each of several metals tested there is such a point. In the case of mercury it is 4.2 degrees, for tin it is 3.8 degrees absolute.

"It had been the hope of physicists that very low temperatures would furnish us a means of producing very powerful magnetic fields, by the use of conductors cooled to very low resistance, and carrying large currents. But in this they have met with some disappointment. It has been found that when the cooled conductor is placed in a strong magnetic field, its resistance once more rises to a finite value.

"Prof. Kammerlingh Onnes's discovery is, at any rate from the point of view of pure science, one of the most remarkable events in the progress of science during an epoch abounding with important developments. Whether it will have any direct practical application it is impossible to foresee at present, but indirectly, through the increase in our understanding of matter and electricity which is bound to follow from this discovery, there can be no doubt that many important material advantages will be gained."

LETTERS AND ART

MR. WELLS ADJURES US

IF PURE LITERATURE is destined to take a slump while the war lasts, its makers must find other occupation for their pens. Mr. H. G. Wells is early in the lead with "An Appeal to the American People." He appeals because he discovers that we "have already reached a stage where a certain magna-

or distributed in any manner. It is of supreme importance, he declares, that Europe should ask us what we are going to do throughout the struggle and what we will do at the end:

"One thing we are told you mean to do, a thing which has moved me to this appeal. For it is not only a strange thing in itself, but it may presently be followed by other similar ideas. Come what may, all the liberal forces in England and France are resolved to respect the freedom of Holland.

"But the position of Holland is a very peculiar one in this war. The Rhine runs along the rear of the long German line as if it were a canal to serve that line with supplies; then it passes into Holland, and so, by way of Rotterdam, to the sea.

"So it is possible for any neutral Power such as you to pour a stream of food supplies and war materials, by way of Holland, almost into the hands of the German combatant lines. Even if we win our battles in the field, this will enormously diminish our chance of concluding this war, but we shall suffer it. It is within the right of Holland to victual the Germans in this way. We can not prevent it without committing just such an outrage upon the laws of nations as Germany was guilty of in invading Belgium. And here is where your country comes in.

"In your harbors lie a great number of big German ships that dare not venture to sea because of our fleet. It is proposed, we are told, to arrange a purchase of these ships by American citizens to facilitate by special legislation their transfer to your flag, and then to load them with food and war material and send them across the Atlantic, through the narrow seas that, at the price of a cruiser and many men, we have painfully cleared of German contact mines, to get war prices in Rotterdam and supply our enemies.

"It is, we confess, a smart thing to do. It will give your people not only huge immediate profits, but also a mercantile marine at one coup.

"But it will certainly prolong the war, and so will mean the killing and wounding of scores of thousands of young Germans, Englishmen, Frenchmen, and Belgians who might otherwise have escaped. It is entirely within your legal rights, and we will tell you frankly now, we shall refuse to quarrel with you about it, but we ask you not to be too easily offended if we betray a certain lack of enthusiasm for this idea.

"And beyond such enterprises as this, what are you going to do for mankind and the ultimate peace of the world? You know the Czar has restored the freedom of Finland and has promised to reunite the torn fragments of Poland into a free

kingdom, but probably you do not know that he and England have engaged themselves to respect and protect from each other and from all the world the autonomy of Norway and Sweden and Sweden's vast tempting stores of mineral wealth which lie so close to the Russian boundary.

"We ask you not to be too cynical about the Czar's promises, and to be prepared to help us and France and him to see that they come true. And in regard to Scandinavia, remember this is not only Russia's promise, but ours. This war is more than a war of armies, it is a great moral upheaval. You must not judge of the spirit of the Europe of to-day by the history of her diplomacies.

"When this war is over all Europe will cry for disarmament. Are you going to help them or going to thwart that cry? In England we shall attempt to extinguish the huge private trade in war material—that Kruppism which lies near the root of this monstrous calamity.

"We can not do that unless you do, too. Are you prepared to do that? Are you prepared to come into a conference at the end

Copyrighted by Underwood & Underwood, N. Y.

ONE REASON FOR PEACEFUL OCCUPATION.

The Town Hall of Brussels would have suffered destruction, together with the city's other beautiful buildings, had not the Government yielded without a struggle.

nimity" is becoming to us in our relation to European affairs. The form he wishes this magnanimity now to take is to refuse to "pour a stream of food supplies and war materials, by way of Holland, almost into the hands of the German combatant lines." To do this, he declares, will prolong the war, and "so will mean the killing and wounding of scores of thousands of young Germans, Englishmen, Frenchmen, and Belgians who might otherwise have escaped." The climax of his appeal is couched in these words: "Are you going to play the part of a merely numerous Little people, a cute trading and excitable people, or are you going to play the part of a great nation in this life-and-death struggle of old-world civilization?"

Mr. Wells is writing a series of articles on the war for the *New York World* and the *London Daily News*, but he emphasizes in a postscript that this one is not copyrighted; any one may reprint it as a whole or in part; as a book or a pamphlet, to be sold

of this war, to insure the peace of the world, or are you going to stand out and make difficulties for us, and, out of our world of perplexities, snatch advantages; to carp from your infinite security at our allies, and perhaps, in the crisis of our struggle, pick a quarrel with us on some secondary score?"

Mr. Wells pictures the state of Europe as having been an armed camp for many years, "with millions of men continually under arms, with the fear of war universal poisoning its life; with education impoverished, social development retarded, with everything pinched except the equipment for war."

"What does it matter now who began the thing - which was most to blame? Here it is, and we have to deal with it. But we English do assert that it is the Government of the German Emperor which, for the last forty years, has taken the lead and forced the pace in these matters, which has driven us English to add war-ship to war-ship, in pitiless competition to retain that predominance at sea upon which our existence as a free people depends, and which has strained the strength of France almost beyond the pitch of human endurance, so that the education and welfare of her people have suffered greatly, and so that Paris to-day is visibly an impoverished and overtaxed city.

"And this perpetual fear of the armed strength of Germany has forced upon France alliances and entanglements which she would otherwise have avoided. Let us not attempt to deny the greatness of Germany and Germany's contributions to science, art, and literature, and all that is good in human life. But evil influences may overshadow the finest people, and our case is that, since the victories of 1871, Germany has been obsessed by the worship of material power and glory; scornful of righteousness, she has been threatening and overbearing to all the world. . . ."

Mr. Wells has the assurance of ultimate success and makes a large promise in the name of Europe:

"Now that this war is begun, we have resolved to put an end to militarism in the world forevermore. We are not fighting Germany; it is the firm resolve of England to permit no more fresh-conquered provinces to darken the future of Europe. Whatever betide, all Germany will come out of this war undivided Germany still. . . ."

"We have no hatred of things German and of the German people. But we are fighting to break this huge fighting machine forever, which has been an oppression, such as no native-born American can dream of, to every other nation of Europe.

"There, shortly and plainly, is our case and object. Now let us come to the immediate substance of this appeal.

"We do not ask you for military help. Keep the peace, which it is your unparalleled good fortune to enjoy so securely. But keep it fairly.

"Remember that we are fighting for our national existence, and that in the night, even as this is written, within a hundred miles or so of this place, the dark ships are feeling their way among the floating mines with which the Germans have strewn the North Sea, and our sons and the sons of Belgium and France go side by side, not in hundreds nor in thousands, but in hundreds of thousands, rank after rank, line after line, to death.

"Even as this is written a harvest of death is being reaped. Remember our tragic case. Europe is full of a joyless determination to end this evil forever, as she plunges grimly and sadly into the cruel monstrosities of war. Assuredly, there will be little shouting for the victors, whichever side may win.

"At the end, we do most firmly believe that there will be established a new Europe, a Europe ridged of rankling oppressions, with a free Poland, a free Finland, a free Germany, and, in the Balkans, those little nations settled in safety and peace."

FIGHTING TO MUSIC

THE CZAR'S SOLDIERS refuse to fight without music. Deprived of this inspiring force, they would be dull, cowardly, brutal, and inefficient, says Ivan Narodny in *Musical America*. From music they "absorb a magic power of endurance and forget the sufferings and mortality." Napoleon added the effect of Russian music to the rigors of a Russian winter as the cause of his defeat. Mr. Narodny quotes from the note-book of the Man of Destiny this entry: "The weird and barbaric tunes of those beastly Cossack regiments simply infu-

"THEIR FIRST SUCCESS."

"At Morfontaine, near Longwy, the Germans shot two fifteen-year-old children who had warned the French gendarmes of the enemy's arrival."—*The Newspapers*.

—*Forain in Le Figaro (Paris)*.

riated the half-starved Muscovites to the maddest rage, and they wiped out the very cream of the army." The writer makes out the musical contingent of the Russian Army as double the size of America's armed force:

"The army bands of Germany, Italy, and France are insignificant institutions as compared with the Russian bands, for in the former cases they are but showy luxuries of the parade, while in the latter music is considered a vital necessity. There is not a single regiment or battalion of the Russian regular army that does not possess its regimental band or orchestra.

"An average Russian army band or orchestra has from forty to fifty musicians; the orchestra of certain guard regiments contains sixty. As there are over a thousand Russian regiments, exclusive of the navy and military schools, the army of Russian military musicians is about fifty thousand men. If one adds to this the twenty to forty musical pupils of a regimental orchestral school and the musical companies of battle-ships and various cadet schools, the number reaches one hundred thousand, which is twice the size of the United States standing army. Each musical company has a conductor and his assistant, both being graduates of one of the national conservatories of music.

"These 100,000 uniformed musicians are maintained for the sole purpose to provide every regiment with all the necessary musical entertainment; but they cost the treasury a big sum of money annually. The so-called *musykalnaya kammanda*—the musical company—of a regiment, is, in spite of its martial appearance a great educational and ennobling factor of the army."

Mr. Narodny gives a page out of his personal experience of the Russo-Japanese war:

"I had occasion to hear the soldiers demanding the bands to play when, for strategic reasons, music was temporarily forbidden. I remember distinctly how, one evening before the great battle at Mukden, a group of soldiers urged the band of their

regiment to play such pieces as Tchaikowsky's Slav March, Schumann's 'Träumerei,' etc. It was rather pathetic to hear one of the soldiers saying:

"Whether I am to be shot or I have the luck to remain alive, I know not—but I must hear my favorite march this fatal night. It's a stimulation to action, a solace to the soul."

"I was told the soldier was killed and he whistled, dying, the favorite march he had heard the evening before. There were occasions when the battle was raging, yet the musical company was still playing. I was told that in one regiment thirty-nine musicians had fallen, but the last—a flutist—continued still playing to the beats of the bandmaster until they were taken prisoners."

"The Russian army surgeons have explained that had it not been for regimental music, the moral and physical conditions of the army would be 40 per cent. worse. Music has grown to become a vital factor of the army life and disposes a soldier's mind to a state where he is likely to forget deprivations and danger. It inspires him to display his most heroic faculties and thus makes of an uneducated muzhik a brave patriot and fatalist, to whom life is worth nothing. The power of stirring music is marvelous in such cases and it has a spiritually intoxicating power."

If German music can be made effective to inspire her enemies to fight against her, our own neutrality will not be questioned on the grounds of our small contribution mentioned by the *Boston Transcript*:

"A London dispatch mentions among the striking incidents of the day the passage of a Highland regiment through the Strand to the strains of 'Marching Through Georgia.' That stirring tune, which puts quickness into the most laggard feet, has long been a favorite in the British Army. It has been sung in India to cheer a weary march, and is called for both in the mess-room and at the camp-fire. 'John Brown's Body' is more especially the enlisted man's song, but both officers and men delight in the martial strains that commemorate Sherman's exploits. Indeed 'Marching Through Georgia' seems to have caught the fancy of soldiers everywhere. The Germans know it, and when the Japanese entered Port Arthur in 1895, their bands played 'Marching Through Georgia.' This American tune having obtained its cosmopolitan vogue a generation ago, its employment by belligerents is free from complications of neutrality."

BOOKS ON THE EUROPEAN CRISIS

IT MAY BE a small matter but surely one worth pondering that the librarians tell us they are being swamped by requests for books about peace. It argues hopefully for the future; meantime *The Times* of both New York and London have prepared lists of books that will assist readers in following the war news. The book most discussed is perhaps General Bernhardt's "Germany and the Next War," now to be had in translation. It gives a provision of what in many respects is now taking place. The New York Public Library has recently issued a Bulletin on these books, which we may take as perhaps the source of *The Times* article. A book whose title has an ironic ring is found in the question, "Is War Now Impossible?" by M. Bloch, a Polish banker. To come to some of the books that bear upon the concrete situation which the world is facing:

"In every country directly concerned the writers of books have been anticipating the events of the past two weeks. The most recent and startling among these is General Bernhardt's 'Germany and the Next War,' already mentioned. Indeed, Germany has been the center of discussion for her own writers, her friends, and her enemies, and the interest at present seems to focus on the analysis of her preparedness and her strength; according to the head of the circulating department of the Public Library, the demand of readers is almost wholly for books about Germany and Belgium, with surprisingly few requests for those concerning the other Powers. Some of the best of the recent books bearing on Germany's position and reviewing the economic growth of the country in the past few years are 'Pan-Germanism,' by R. G. Usher; 'Imperial Germany,' by Prince von Bülow; 'The Anglo-German Problem,' by Charles Sorel; 'The German Emperor and the Peace of the World,' by A. H. Fried, and 'William of Germany,' by Stanley Shaw. For the casual reader there is Price Collier's 'Germany and the Germans,' which is fluent and entertaining."

The lists published in the London *Times* furnish more material for the reader in foreign languages:

"The standard work on the history of German unity is H. von Sybel's 'Die Begründung des Deutschen Reichs,' 7 vols., 1890-4, with English translation (to 1866), 5 vols., 1890-1. Apart from this, the best reference is to the several chapters in the 'Cambridge Modern History.' One of the most important of all books is Treitschke's 'Deutsche Geschichte im Neunzehnten Jahrhundert,' the most weighty exposition of the gospel of systematic Anglophobia among the educated classes in Germany. General Bernhardt's 'On War of To-day' has been translated, two vols.; and attention should be drawn to the late Professor Cramb's lectures on 'Germany and England' (1914).

"Special mention, too, should be made of M. Henri Moyssset's 'L'Esprit Public en Allemagne' (1911) and M. Jules Huret's series on 'L'Allemagne Moderne,' e.g., 'Rhin et Westphalie,' 'De Berlin à Strasbourg,' 'La Bavière et la Saxe.'"

The New York *Times* gives a number of titles covering the position of France and England in the discord of Europe, beginning with André Tardie's "France and the Alliances":

"A curious and very entertaining description of the siege of Paris in 1870, with some enlightening comment, is furnished in E. B. Washburne's 'Recollections of a Minister to France.' A book by President Poincaré describes 'How France is Governed,' and there are three books about Alsace-Lorraine well worth the time of the reader who would understand the morning's cable dispatches: Novikof's 'L'Alsace-Lorraine, Obstacle à l'Expansion Allemande,' 'Quarante Ans Après,' by Jules Claretie, and Hinzelin's 'Images d'Alsace-Lorraine.'

"Spenser Wilkinson, a well-known authority on military affairs, has labored long to arouse England to his sense of her international position. His most popular book, 'Britain at Bay,' is thoroughly English and in so far informing. The Hon. George Peel has written of 'The Enemies of England,' and there are two books entitled 'England and Germany,' presenting both sides of the question, one being by Austin Harrison, and one under the editorship of Ludwig Stein."

As the drama progresses our attention will be concentrated more and more on Russia, and that country is little understood:

"'Modern Russia,' by G. I. Aleksinski, is a fairly comprehensive survey of her present internal conditions and policies. The Russo-German frontier, which has suddenly forged into prominence, is described by Poultney Bigelow in 'The Borderland of Czar and Kaiser.' 'Russia, Her Strength and Weakness,' is by Wolf von Schierbrand, and offers a judicial estimate which will prove of keen interest at the present moment, while Sir D. M. Wallace is the author of a recent volume on the same subject. Russia from the Englishman's point of view is presented ably and with a good deal of keenness by Maurice Baring, a writer on Russian subjects, well known in London. His 'The Mainsprings of Russia' has just appeared in England, having been preceded by two earlier books, 'The Russian People' and 'A Year in Russia.' The internal affairs of the land of the Czar are just at present a matter of much speculation, and there are several books which offer many opinions and some information on the subject, the least bitter and distorted by prejudice being Carl Joubert's 'The Fall of Tsardom,' Carl Rambaud's 'The Case of Russia,' and Rudolf Martin's 'The Future of Russia.'"

The general purview is furnished by the list from the London *Times*:

"The fullest history in English covering the whole period is the 'Cambridge Modern History,' Vols. IX to XII, with full bibliographies. For the general reader this may be on too large a scale and too full of lengthy, if necessary, digressions to enable him to obtain a clear impression of the broad sweep of the history of the time. Such an impression may be obtained from Prof. Alison Phillips's 'Modern Europe,' which remains the most readable general introduction to the history of the nineteenth century, and may be recommended for the period 1815-1876. The period from 1870 is dealt with more fully by Dr. Holland Rose in his 'Development of the European Nations, 1870-1900.' For the earlier years may also be recommended Mr. Alison Phillips's recently published 'Confederation of Europe,' which covers the period 1813 to 1823, during which was made the interesting experiment in an international system

for establishing peace which is usually associated with the name of the Holy Alliance. Prof. C. McL. Andrews's 'Historical Development of Europe' (two vols.) is excellent, but is less illuminating than Professor Phillips's work, in so far as it traces the development of each country separately and does not give the diplomatic history of Europe as a connected story. A lucid study of international politics from Sadowa to Kirk-Killiseh will be found in Mr. M. Fullerton's 'Problems of Power' (1913). In French the 'Histoire Politique de l'Europe Contemporaine' (English translation in 1904), by Professor Seignobos, is an admirable summary, but too concise to be easy reading. The standard French work on a large scale is Lavisse and Rambaud's 'Histoire Générale,' Vols. X-XII."

LOOKING FORWARD FOR LITERATURE

ONE PROPHEMIC imagination in England dealing with the literary future of Europe sees a Neo-Romantic movement as a result of the war. The prophet is Mr. Ford Madox Heuffer, and he is only doubtful about forecasting the day of its arrival. He fancies we are in for eight years of war, at least "wars between one set of allied nations or the other, or between one isolated unit and several." He believes that Germany will disappear, and as he is of German descent on one side, we are left pondering on what feeling is parent of the belief. The political side of his speculations, which appear in the *London Outlook*, are of less novelty, however, than his reflections on "the effects of war on national temperaments." He begins by imagining Germany entirely wiped out:

"What would be the inevitable literary product? I think that the immediate literary product—the product during the war and for five years after—would be an immense outpouring of rimed, accentuated, and very patriotic verse—like Arndt's *Sword Songs*. And, along with that would go a revival of ideas of death, of the supernatural, of the romantic-religious. You would, in short, get a revival parallel to that shadowed by Bürger's 'Lenore.' I do not mean to say that you would again have demon horsemen and demon lovers and lakes and meres; but you would get the equivalent in feeling, since similar emotions will have been stirred in the hearts of the German peoples. Let us imagine the Slavs triumphant. From them you might expect an immense outpouring of rimed, not very accentuated and largely drunken verse, abounding with words like 'Hopak! Klopak!'—verses immensely overshadowed by the ideas of death, of pillage, of flames, of violations, of orgies among shambles. Italy, I suppose, will continue, amid the tranquillity of a neutral nation, to turn out violent, unrimed, unscanned poems about automobiles, bursting shells, the explosion of undermined bridges. It remains to be seen whether unrimed informal verse will hold its own. It depends on the duration of the war, I dare say. If, as some weighty authorities hold, the war lasts three years there may well be an end of *vers libre*; all the French poets will have been killed in the ranks, and the law of price per thousand being suspended in these islands all the British *vers libre* poets will have died of starvation or will have found other jobs.

"I do not know what will happen in this country; the proper expression in times of war would be the arising of Mr. Rudyard Kipling—and one might well have a worse form of expression. But Mr. Kipling has arisen already, so I do not see how the forces of nature can go any further. I dare say the infinitely superior demeanor of the public compared with its foamings at the date of the Boer War in its early days may be due to the fact that in Mr. Kipling's ballads it got all that sort of thing off its chest so completely that there is no more to come. And I am bound to add that the immense and admirable efficiency of the

Administration in these days may well be due in a large measure to the exhortations of Mr. Kipling's muse."

From these premises, which he admits to be "fairly obvious" as to what would happen if the war lasts three years, he passes on, somewhat flippantly at first, to consider the effect of shorter duration:

"It is unnecessary to speculate on what will happen if, according to the students of the Yellow Press, the war only lasts a

SCENE OF BELGIUM'S LAST STAND.

If subjected to the Germans' bombardment, this wonderful jewel of the Middle Ages, the Cathedral of Antwerp, would suffer beyond repair.

fortnight; for in that case trade would become so overwhelmingly good that there would not be—not ever, not ever!—a penny to spend on books, pictures, concerts, or any frills, and the arts would die in the blaze of a glorified Park Lane and a Bayswater in apotheosis. But, no; let us say that the war lasts one year six months and seven days, which would be to split the difference between three years and a fortnight. . . . Well, at the end of that time there would be raging through the world a blaze of poems—sentimental from the Germans, violent and filled with the shadow of death from the Slavs. Poems like those of Béranger might come from France; like those of Thomas Campbell from this country. In the meanwhile Italy will have collared all the 'technique' of the world, and I guess it will push the theory of *vers libre* further and further.

"So that, when tranquillity comes again, we shall have *les jeunes* of that distant day clawing on to Italian methods with more intensity than even yesterday they showed. Italian methods we shall then have along with Slav violence, deathliness, and reaction from orgies. For when the reaction from the orgies that will distinguish their poems during war falls upon the mournful Slav temperament, you will find that most of their poems will purport to be written by dead men. In addition, there will be the dash of German sentimentalism, which will run all over Europe because it has so strong a flavor."

RELIGION AND SOCIAL SERVICE

POPE PIUS X.

THE DYING APPEAL of Pope Pius X. to the warring nations reminds *The Catholic Universe* (Cleveland) of "the prayer of Our Lord over Jerusalem and its coming visitation." "The key-note of the Pontiff's whole life was to restore all things in Christ." Therefore there was a poignant

ligature between the sundered communions. Of Roman Catholics proper there are eight or nine millions in Hungary; all South Germany is preponderantly Catholic; Austria proper and Bohemia overwhelmingly so. The millions of Catholics arrayed on either side are, in fact, not far from evenly balanced. On each side the crucifix is borne to the wounded and extreme unction administered to the dying. It is a Catholic war.

"The Pope is said to have been especially grieved over the Austrian attack upon Serbia at a time when the Holy See had just concluded an arrangement with the latter state guaranteeing religious liberty to Catholics within its borders—chiefly the Malissori or 'mountain men' of Albania annexed after the Balkan wars and treated at first with shocking cruelty, but including Uniates and others. That Austria, so long the paramount power in the Holy Roman Empire, still so closely allied to the Vatican that it has the veto over a Pope's election, should assail Serbia at a time so unpropitious for the Church added poignancy to the sorrow of the Pontiff."

Impelled by his great charity, writes *The Catholic Universe*, Pius X. "sought to shield the people from the misery and destruction of war." This is shown in his dying exhortation to the whole world:

"At this moment, when nearly the whole of Europe is being dragged into the vortex of a most terrible war, with its present dangers and miseries and the consequences to follow, the very thought of which must strike every one with grief and horror, we whose care is the life and welfare of so many citizens and peoples can not but be deeply moved and our heart wrung with the bitterest sorrow.

"And in the midst of this universal confusion and peril we feel and know that both fatherly love and apostolic ministry demand of us that we should with all earnestness turn the thoughts of Christendom thither 'whence cometh help'—to Christ, the Prince of Peace and the most powerful mediator between God and man.

"We charge, therefore, the Catholics of the whole world to approach the throne of grace and mercy, each and all of them, and more especially the clergy, whose duty furthermore it will be to make in every parish, as their bishops shall direct, public supplication so that the merciful God may, as it were, be wearied with the prayers of his children and speedily remove the evil causes of war, giving to them who rule to think the thoughts of peace and not of affliction.

"From the palace of the Vatican, the second day of August, 1914.

"PIUS X., Pontifex Maximus."

If one studies the life of this churchman, observes the *Boston Pilot*, one is impressed by its remarkable unity:

"There was no change in it with the new dignity. His life as Pope was but the continuance in the holy purpose which he had set before him even as a seminarian—to reestablish all things in Christ. That became the motto of his pontificate, a new motto, but an old one too, since it had guided all his priesthood.

"His interests as Pope were, on a larger scale, the interests of his first years as a priest and bishop. His reforms as Pope, his masterly encyclicals, all find their counterpart in his work as Bishop of Mantua and as Patriarch of Venice. There had been then nothing which did not occupy his zeal. The improvement of the seminaries, care for religious instruction, interest in social betterment, Catholic congresses, the chant, the Catholic press, all these activities were but the forerunner, prepared him perhaps, for dealing with the same problems not merely for one diocese, but for the universal Church.

"Well prepared was he, therefore, for the office of Pope. When he came to the Fisherman's throne there was with those who did not know the real man a feeling of mistrust. Knowing him but as a humble bishop, albeit Patriarch of Venice, there was the wonder if he would be able to face the great problems of the Church's government. How needless were such fears is now a matter of history. Not in vain had he been a bishop.

"THE PEACE WHICH PASSETH ALL UNDERSTANDING."
—Carter in the *New York Sun*.

grief in the fact that his eyes must close upon a warring world. "The war killed him," declares the *New York World*, and the declaration is supported by a consideration of the great numbers of the Catholic faith engaged in it. *The World* makes a survey of these elements which are seen to be drawn from almost every country now engaged:

"The Irish in the allied armies are mainly Catholic. France, in spite of its political differences with the Vatican, is a Catholic country, more devout than it was ten years ago, or five. The Pope's beloved Italy, not yet involved in the war but likely to be so, is of the old faith. So is Belgium. Even in the empire of the Czar the millions of Poles are Catholics, while the dispersed fragments of the Uniate Church, practising the Greek rite under Roman authority, among the Russian Ruthenians, are viewed with especial tenderness by all Popes as representing the most promising effort ever made to unite Eastern and Western Christianity.

"Upon the Galician side of the border the Uniates have not been subjected to oppression and still form a great and prosperous church of 3,000,000 adherents; half a million more are in Hungary, and the sect ramifies into Croatia and Serbia, a living

Fearless, saintly, knowing that to God alone must he give the account of his stewardship, he was in practise a man of one single purpose, and that purpose was to serve the Church.

"From the first encyclical in the October of 1903, when he laid so much stress on the building up of a pious, learned, and zealous priesthood, through his urging of frequent Communion, his insistence that even the little ones be given the Bread of Life, his famous *Motu Proprio* on Church music, his care for catechetical instruction, his crushing of the spirit of Modernism, his establishment of the Biblical Institute, his reform of the Breviary, his move for the codification of the Canon Law, his letter on the Social question—in all these messages Pius X. is not a learned visionary, but the same old practical parish priest who has the whole world as his parish.

"To review his papacy is to marvel at it. Perilous times they were. The troubles in France, in Spain, in Portugal, brought sorrow to his heart; but in his relations with these governments he was as far as the things of God were concerned a man of iron that could not be swerved from the path which he knew: he must walk for the sake of the souls that looked to him for the Bread of Life."

The *New York Evening Post*, in considering the late Pontiff as an ecclesiastic, makes use of the opinion of the Italian historian Ferrero that "if it should ever be that the Church should have a Pope who remained in his impulses and in his outlook upon the world simply a parish priest, the majestic power of the papacy could not fail to be impaired for the time being and its grandeur temporarily eclipsed." It can not be denied, adds *The Evening Post*, that "Pius X. always had upon him the marks of the excellent parish priest." It was this quality, we learn from an interview with Mgr. Lavelle in the *New York Sun*, that fitted him to the needs of his times.

"It is quite natural at the present time to compare the characters and administrations of Pope Leo XIII. and Pope Pius X.

"BY ALLAH, I MAY HAVE TO INTERFERE IN THE NAME OF HUMANITY."

—Kessler in the *New York Evening Sun*.

The former, without neglecting the internal work, gave great and most successful attention to the advancement of Catholic interests with the world outside the Church. When Pope Leo ascended the throne there was considerable criticism of the Church and the papacy among non-Catholics, mainly because of political questions which had been rife during the administra-

tion of his predecessor. When he died these antagonisms had largely, almost entirely, passed away, and the whole world united in its respect and grief for the deceased Pontiff.

"Pope Pius had other work to do. There is a story told, for which I can not vouch, but which is at least probably true, to the effect that after the Austrian veto had eliminated Cardinal

"MY BELOVED JEWS."

—Thomas in the *Detroit News*.

Rampolla as a Papal possibility in the last conclave, Cardinal Satolli urged the selection of Cardinal Sarto. He said in effect that Pope Leo XIII. had emphasized the external policies, and that the great need of the Church now was for some one in whom the spirit of piety and devotion was overwhelming and who would labor almost exclusively for the greater spiritualization of both clergy and people. He then proposed Cardinal Sarto and urged his election, claiming that the Venetian Patriarch was the best embodiment that could be found of the qualities most needed for the time.

"The very first encyclical of the new Pope voiced this very idea, calling upon the entire Catholic world to unite in renewing all things in Christ. This was the key-note of the eleven years during which he governed the Church."

WAR OPPORTUNITY OF THE JEWS

THE NOVEL proposal that the Jews of the United States shall combine "to frame a policy for the international welfare" of the race and to assure it "justice when the world peace is made" is put forth by *The Jewish Advocate* (Boston). This is the duty of American Jews, we read, because they are "the only large group of Jews who are in a neutral position at this time," and because the Jews in Europe, "compelled to slaughter each other in battles for ends from which they have nothing to gain," find it "no doubt difficult to concentrate attention upon the need for a constructive Jewish policy." *The Advocate* urges Jewish organizations in all parts of the country to meet in convention and take advantage by cooperation of this opportunity for "turning evil into good," which shall not recur for many generations. "Hence," this journal adds, "we urge our contemporaries to take up this issue, and we ask rabbis to replace their expected New Year's sermons with plans along this line." The necessity for action on the part of the Jews is argued from the fact that "whoever wins, the Jews are not likely to profit by the victory unless they take the initiative," and we read:

"A Russian victory would merely send them out of the frying-pan into the fire, while if the independence of Poland were re-established, the Jewish position would be worse than it is to-day. For the Poles are admittedly anti-Semitic, and would, if anything, become more so after such a triumph. The annexation of the Russo-Polish province by Germany would take the Jews out of the fire, but—into the frying-pan, for we owe modern scientific Jew-baiting to Germany. In the Levant we have seen that the Greek victory has been to the disadvantage of the Salonika Jews, while of the other Jews in the Balkans we can

not claim that any group has gained a distinct advantage from their military patriotism."

Because of the war, *The Advocate* points out, "the majority of Jews in Europe can not even lift a finger" to prepare themselves against the time "when the Powers come together to make peace and reparcel their possessions." The burden, therefore, falls upon the neutral American Jews, and we are advised that—

"From the American Jewish view the framing of such a policy is most desirable. During the war the Jews in this country are being plainly used, as far as they permit themselves, 'to manufacture sympathy' for nations who in normal times award them with 'the order of the boot.' After the war the Jews of the United States will be asked to bear the burden that will weigh like lead on the shoulders of the Jews everywhere. A large percentage of the Jewish young men will have been killed, and with whatever Power rests the victory, the result of changing the map of Europe will result, as far as funds permit, in mass Jewish emigration, for the Jews live in disputed territories, or along frontiers, therefore the changes will affect them intimately. Their communities will be broken, their strong men dead, their families impoverished. Hence the burden will be thrust upon the American Jew. He will be asked to give money, and he will be asked to set himself the task of stretching the immigration laws in order to receive tens of thousands of war victims. This in turn will lead to an upheaval in every American Jewish community, similar to that which was witnessed here in 1881-2, 1891-2, and 1900-7."

It is plain, consequently, *The Advocate* holds, that "the American Jew has a personal as well as a sentimental reason for seeing to it that . . . the Jews receive proper treatment from those who assemble around the peace table," and it adds:

"In order to accomplish this, the first step is the uniting of the Jews in this country for that purpose. That is not the same thing as uniting them for all purposes, but for one understandable purpose. For that reason a conference of all Jewish forces should be convened. No one man, and no one body, can dictate such a policy, nothing permanent can be accomplished by political intrigue, however well meant. The Jewish policy should be every Jew's policy, and to make it so, every type of Jew must be represented in framing it, and in a representative way be responsible for it."

ENGLAND'S PRIMATE ON THE WAR

ENGLAND'S RELIGIOUS FEELING toward the war was expressed by the Archbishop of Canterbury in his sermon at Westminster Abbey on August 2. England had, of course, yet two days before deciding upon her own active entrance into the scene, but she was feeling the beat of the European war pulse. Dr. Davidson does not take a pessimist's view of the future, tho he recalls the blighted hopes of previous years and the depression that might legitimately follow. The opening of the Great Exposition in Hyde Park in 1851 raised before people of that day "the happy auguries of a new and blissful era which had broken upon the world with the dawn of that May day, the inauguration of an abiding Temple of Peace." Tennyson celebrates the event in these lines:

So let the fair white-winged peacemaker fly
To happy havens under all the sky, . . .
Till each man find his own in all men's good,
And all men work in noble brotherhood,
Breaking their malled fleets and armed towers.

We quote in continuance from Dr. Davidson's sermon printed in full in *The Guardian* (London, August 6):

"Such were the hopes, such the expectations of not a few. And what happened? Englishmen must have thought them over with a grim feeling in the icy trenches of Sebastopol, or in the noonday glare upon the ridge at Delhi. And they formed a startling memory for many others besides Englishmen, for our gathering in 1851 was cosmopolitan, and some of the strongest speeches and the rosiest prophecies came from other nationalities than our own. What did those prophets think, a little later, about Magenta and Solferino? How were their hopes illustrated, later still, on the hillside at Gravelotte or in the corn-fields of Sedan? What are we to say of Plevna, of Port Arthur? The

strifes were hotter, some of the fields were bloodier, than any that our grandsires had known."

Now, what does it all mean? asks the Archbishop. "Is it that the hopes of 1851 were a crazy delusion, and that war is so inveterate and essential a habit of the people of the earth that to look for peace is a fanatical and baseless dream?" He wonders if the European telegrams of the days preceding the call to conflict are "the final answer to a childish fantasy":

"My friends, I do not believe it for a moment. To think so would, as it seems to me, be to belie Christian faith, Christian promises, Christian hope. This thing which is now astir in Europe is not the work of God, but of the devil. It is not the development of God's purposes; it is the marring of them by the self-will, the sheer wrongness of man. What is happening must be due somewhere, somehow (I am not now attempting to judge where or how), to the pride, the high-handedness, the stubbornness of men's temper undoing and thwarting the handiwork and will of God. We have got to set ourselves, slowly it may be, but determinedly as the generations pass, to eradicate and make unendurable the temper among men from which such things spring, to 'shrivel the falsehood from the souls of men' in the name of the Prince of Peace, Who still goes forth conquering and to conquer. And, never let us forget it, we have in these latter years done something substantial on that pathway. A hundred years ago, no more than the barest handful of people could have been found in England, or Germany, or France who believed in any arbitrament except war. And now? Why, notwithstanding all our shattered hopes and, as we are tempted to murmur, our unanswered prayers, there are, beyond all question, tens of thousands of thoughtful people in Europe and America, as well as in England, who are throwing themselves with an eagerness which they rightly believe to come from God into the furtherance of the 'more excellent way.'"

Speaking of the temper of the people necessary to bear the strain of future events, he says:

"But there are deliberate efforts that we must with our whole strength evoke and multiply at an hour of tension such as this. Steadiness and self-control are, at such an hour, not desirable only, but sacredly imperative; the sternest individual self-discipline and self-surrender; that is what we can each contribute to the common good. Emotions, however natural in ordinary days, held in check now with a stern grip as we brace ourselves to the exercise of a quiet, straightforward, purposeful Christian manhood and womanhood, the manhood and womanhood, that is, of those who are making their own the steady sense of the Fatherhood of God revealed to us in the life and death and abiding presence of our Lord and Savior Jesus Christ. There must—there absolutely must—be no selfish rivalries in great or little things, no taking advantage of one another in the affairs of common life at a time when ordinary rules are out of gear. Bear ye one another's burdens—it applies very palpably, does it not, to our business and financial matters?—bear ye one another's burdens and so fulfil the law of Christ. The law of Christ. It is in that law, in that sublime example, thought out and applied to our present-day intercourse that we are at such times upheld and guided and made strong under the good hand of our Father which is in Heaven. It has been well put—rather unexpectedly, perhaps—by Professor Huxley thus—'Whoso calls to mind what I may venture to term the bright side of Christianity—that ideal of manhood, with its strength and its patience, its justice and its pity, its helpfulness to the extremity of self-sacrifice, its ethical purity and nobility—is not likely to underrate the importance of the Christian faith as a factor in human history.'"

"And one more suggestion. Whatever we may be called upon to do or bear—whatever the strain upon courage, or, what is sometimes harder, upon patience—do let the sobering, steady influence of times like this bear fruit all our life through. That can well come true. Some of us will remember the poet's picture drawn a few years ago in the days of the South African War of the careless, self-indulgent, easy-going lad—

Whose gods were luxury and chance,

gaining permanent strength from the enforced self-discipline of strenuous days. They bring to us all a genuine opportunity. Use it—

The yoke he bore shall press him still,
And long-engrained effort goad
To find, to fashion, and fulfil
The cleaner life, the sterner code."

CURRENT POETRY

THE defense of Liège, according to the reports sent out by the Belgian Government, was skilful and brave. It was this gallant defense that inspired Stephen Phillips's poem which we have already quoted. It has also been the subject of some good American verse. Among the best is the following spirited ballad, which appeared in the New York *Evening Sun*. Whether or not Mr. Burnet's narrative is historically correct is after all a small matter; people no longer get their history from the poets.

The Battle of Liège

BY DANA BURNET

Now spake the Emperor to all his shining battle forces,

To the Lancers and the Rifles, to the Gunners and the Horses:

And his pride surged up within him as he saw their banners stream!

"Tis a twelve-day march to Paris, by the road our fathers traveled,

And the prize is half an empire when the scarlet road's unraveled—

Go you now across the border, God's decree and William's order—

Climb the frowning Belgian ridges With your naked swords agleam!

Seize the City of the Bridges—

Then get on, get on to Paris—

To the jeweled streets of Paris—

To the lovely woman, Paris, that has driven me to dream!"

A hundred thousand fighting men

They climbed the frowning ridges,

With their flaming swords drawn free

And their pennants at their knee.

They went up to their desire,

To the City of the Bridges,

With their naked brands outdrawn

Like the lances of the dawn!

In a swelling surf of fire,

Crawling higher—higher—higher—

Till they crumpled up and died

Like a sudden wasted tide,

And the thunder in their faces beat them down and flung them wide!

They had paid a thousand men,

Yet they formed and came again,

For they heard the silver bugles sounding challenge to their pride,

And they rode with swords agleam

For the glory of a dream,

And they stormed up to the cannon's mouth and withered there, and died. . . .

The daylight lay in ashes

On the blackened western hill,

And the dead were calm and still;

But the Night was torn with gashes—

Sudden ragged crimson gashes—

And the siege guns snarled and roared,

With their flames thrust like a sword.

And the tranquil moon came riding on the heaven's silver ford.

What a fearful world was there,

Tangled in the cold moon's hair!

Man and beast lay hurt and screaming.

(Men must die when Kings are dreaming!)—

While within the harried town

Mothers dragged their children down

As the awful rain came screaming

For the glory of a Crown!

So the Morning flung her cloak

Through the hanging pall of smoke—

Trimmed with red, it was, and dripping with a deep and angry stain!

And the Day came walking then

Through a lane of murdered men,

And her light fell down before her like a Cross upon the plain!

But the forts still crowned the height

With a bitter iron crown!

LOOK FOR THE RED AND WHITE LABEL

"He lives down on the river road, in the shabby, weather-beaten house on the left. You can't miss it."

Shabby and weather-beaten! A striking landmark, no doubt. The porter at the railroad station didn't mean to give the place a black eye, but that is what he did. Too bad the owner hadn't used

Dutch Boy White Lead

mixed with Dutch Boy linseed oil and tinting colors. Then the directions might have been, "That fine looking house on the left." There's nothing like timely white-leading to enhance the value of buildings and keep them a credit to the neighborhood.

They had lived to flame and fight,
They had lived to keep the Town!
And they poured their havoc down
All that day . . . and all that night . . .
While four times their number came,
—Pawns that played a bloody game!—
With a silver trumpeting,
For the glory of the King,
To the barriers of the thunder and the fury of the flame!

So they stormed the iron Hill,
O'er the sleepers lying still,
And their trumpets sang them forward through
the dull succeeding dawns,
But the thunder flung them wide,
And they crumpled up and died,
They had waged the war of monarchs—and they
died the death of pawns.

But the forts still stood. . . Their breath
Swept the foeman like a blade,
Though ten thousand men were paid
To the hungry purse of Death,
Though the field was wet with blood,
Still the bold defenses stood,
Stood!

And the King came out with his body-guard at the
day's departing gleam—
And the moon rode up behind the smoke and showed
the King his dream.

The Sunday Magazine of the New York Times calls attention to the warlike character of nearly all the poetry of Servia. The Servian peasants compose ballads of war and sing them to the *gusle*, their violinlike national instrument. The latest edition of Dr. Robert Underwood Johnson's collected poems, published by the Bobbs-Merrill Company, contains a metrical paraphrase of several poems of a modern Servian writer. Even now some Serb, resting from a day of fighting, may be chronicling some picturesque deed of the war in this fashion. The poem quoted commemorates an event of the Montenegrin War of 1876-78.

Luka Filipov

BY ZMAI IOVAN IOVANOVIĆ

Paraphrased by Robert Underwood Johnson

One more hero to be part
Of the Servians' glory!
Lute to lute and heart to heart
Tell the homely story;
Let the Moslem hide for shame,
Trembling like the falcon's game,
Thinking on the falcon's name—
Luka Filipov.

When he fought with sword and gun
Doughty was he reckoned;
When he was the foremost, none
Blushed to be the second,
But he tired of the taint
Of the Turk's blood, learned restraint
From his sated sword—the quaint
Luka Filipov.

Thus he reasoned: Though they fall
Like the grass in mowing,
Yet the dead Turks, after all,
Make a sorry showing.
Foes that died remember not
How our Montenegrins fought
Our unbroken freedom—thought
Luka Filipov.

So, in last year's battle-storm
Swooped our Servian falcon,
Chose the sleekest of the swarm
From beyond the Balkan;
Plucked a pasha from his horse,
Carried him away by force,
While we cheered along his course:
"Luka!" "Filipov!"

To the Prince his prize he bore
Just as he had won him—
Laid him at the Prince's door,
Not a scratch upon him.

"Prince, a present! And for fear
He should find it lonely here
I will fetch his mate," said queer
Luka Filipov.

Back into the fight he rushed
Where the Turks were flying.
Past his kinsmen boldly brushed,
Leaping dead and dying:
Seized a stalwart infidel,
Wrenched his gun, and like a spell,
Marched him back—him heading well
Luka Filipov.

But the Moslems, catching breath
Mild their helter-skelter,
Poured upon him hail of death
From a rocky shelter,
Till a devil-guided ball
Striking one yet wounded all:
For there staggered, nigh to fall,
Luka Filipov!

Paused the conflict—all intent
On the two before us;
And the Turkish regiment
Cheered in hideous chorus
As the prisoner, half afraid,
Turned and started up the glade,
Thinking—dullard!—to evade
Luka Filipov.

We'd have fired—but Luka's hand
Rose in protestation,
While his pistol's mute command
Needed no translation!
For the Turk retraced his track,
Knelt and took upon his back
(As a pedler shifts his pack)
Luka Filipov!

How we cheered him as he passed
Through the line, a-swinging
Gun and pistol—bleeding fast—
Grim—but loudly singing:
"Lucky me to find a steed
Fit to give the Prince for speed!
Rein or saddle ne'er shall need
Luka Filipov!"

So he urged him to the tent
Where the Prince was resting—
Brought his captive, shamed and spent,
To make true his jesting.
And as couriers came to say
That our friends had won the day,
Who should up and faint away?
Luka Filipov.

A collected edition of Katharine Tynan's poems has been announced. It is sure of a hearty welcome, for this poet's conscientious exercise of her great talent has secured for her a large and devoted following. Her ability to produce beautiful effects by means of the simplest, most colloquial phrases is excellently displayed in these charming lines. They appear in *The Designer*.

The Return

BY KATHARINE TYNAN

'Twas worth the years of exile just to recapture
The old delight, the wild bliss of coming back.
I can praise God that I have known the rapture
Before the night darkened upon my track.

Nigh on twenty years in a foreign city,
And the best hour, that hour in fog and rain,
Going home, and my heart singing its ditty
In time to the creaking scow and the throbbing train.

Oh, the yellow streets and the poor, sad people
Trudging to their dreary task in a pallid gloom
Down below the black house-walls, under spire
and steeple,
And I speeding fast to the sun, and I going home!

Sorry I was for the poor souls that weren't going,
As tho' I traveled to Tirn'anogo, where no man
grieves.

My love you are and my heart's delight, and the
west wind blowing,
And I coming back to you bearing my sheaves!

If the Dish Were to Fit the Food

A lover of Puffed Grains—Puffed Wheat and Puffed Rice—says they ought to be served in a golden dish with jewels on the side. Such royal foods as these, he says, should have a royal setting.

Do you realize how much these bubbles of grain have added to the joy of living? When we were children, we had no such morning dainties. For those old-time suppers we had no such morsels to float in our bowls of milk.

The children of today can all have them.

BATH ROOM

KITCHEN WALLS

**Enamel Paint
for Home Tinkering**

Take a look around your home and see the number of places fairly crying for RIPOLIN Enamel Paint.

Use it on that iron bed, on crib, on bathroom and kitchen walls, on wicker or enameled furniture—in fact everywhere you want a handsome white finish that will stay white without repainting.

To clean, simply use a damp cloth once in a while. Don't be afraid of harming RIPOLIN—it will stand any amount of rubbing and scrubbing—never discolors.

There's no substitute for RIPOLIN Enamel Paint. Flows like cream—is self-spreading—no wrist-tiring labor in brushing it out—no danger of clogging up corners—no hurry for fear it will dry before you are ready, and show laps. RIPOLIN is "look-proof."

Just do the best you can—then RIPOLIN will take care of itself. A 50c. can will give you fifty dollars' worth of satisfaction. It coats interior or exterior woodwork or metal with a clear, smooth finish like fine porcelain. It is used by all expert decorators, but you do not have to be an expert decorator to use it.

RIPOLIN is made in Holland by the old Dutch hand process. A gallon will cover from 500 to 700 square feet, depending upon the surface. Your painter or decorator will tell you the quantity needed.

That brilliant high gloss finish is unexcelled for the kitchen, pantry or wherever a glass-like surface is desired. Then again, for halls, reception rooms, libraries, wherever the softer effects are preferred, RIPOLIN is obtainable in a beautiful eggshell finish, or even an absolutely flat finish. Any desired tint can be obtained by mixing pure color ground in oil with white RIPOLIN—a buff or light green shade is excellent for kitchen walls.

Send 50 cents to-day for large trial can, with brush—enough to give a thorough test—try it out in your own home—then you be the judge. With it we will send the colored strip of tin, and the book showing residences, exclusive clubs, and painted luncheon finished with RIPOLIN. Also name of the RIPOLIN dealer in your territory.

PERSONAL GLIMPSES

HERR KRUPP IN ENGLAND

IT was only two short years ago that England became the laughing-stock of Europe and America through her panic fear of Zeppelin espionage and invasion. All the paragraphers and quip-writers on both sides of the Atlantic had their fun with her, and every change was rung on the undignified figure that she cut. The events of this eventful summer have changed all that, and now the opinion is growing strongly in France and England that a more profound respect for the possibilities of a German spy system would have been a most valuable thing. There have been rumors that France, once in a state of war, found the country honey-combed by spies, and England is slowly coming to have suspicions of a similar state of affairs with regard to herself. In witness of this is an article appearing in the *London Daily Mail*, which—whether with reason or not it is impossible to say—points to a most humiliating strategic trick of which she may have been the victim. The Berlin correspondent of that paper raises the question, Why did Herr Krupp visit England in June and, accompanied by German experts, go so painstakingly through the British ship-yards and gun-works and examine the British armament in detail? At the time the matter was explained casually and to the satisfaction of every one; but now another and a much-to-be-dreaded explanation seems probable. The writer remarks:

Before our senses are numbed by the clash and din of titanic killings on land and sea—before we lose the faculty of remembering the past in the staggering attempt to grasp the present—I would like to take Englishmen back to an event which happened in their unsuspecting midst exactly two months ago. A most sinister event, in the light of what has happened since, and one designed as hardly any other could be to persuade the most skeptical among us that the war Kaiser's plans for the sacking of Europe were deep laid, deliberate, and stealthy. It reduces to criminal absurdity the German contention that Armageddon was kindled at Serajevo.

I refer to the strange visit paid by Herr Krupp von Bohlen und Halbach, the head of Krupp's, between June 14 and 23, to Birkenhead, Barrow-in-Furness, Glasgow, Newcastle-on-Tyne, and Sheffield. His charming wife, the Cannon Queen and proprietress of Krupp's, accompanied him. That bolstered up the fiction that the visit was "private and unofficial." But in order that the inspection of the Firth, Laird, Vickers, Brown, Armstrong, Whitworth, Cammell, Laird, and other establishments should not be strictly informal, Herr Krupp von Bohlen brought with him his chief technical expert, Dr. Ehrenberger, of Essen. There was a fourth member of his party—Herr von Bülow,

DEPT. No. 17, 2338-2342 THIRD AVENUE NEW YORK

a kinsman of the former Imperial Chancellor, who until recently—perhaps yet, for all I know—represented the Krupps in London.

Herr Krupp von Bohlen's previous visits to England have been undoubtedly private in character. Both he and his wife were fond of London, and liked to come to us informally, to live quietly like well-born people of means at a fashionable Piccadilly hotel. In recent times they came primarily to sit for the late Sir Hubert Herkomer. Never until the visit of June did they come accompanied by their experts. They came this time, in other words, strictly for business. And it is not a comforting reflection to think that they accomplished their business thoroughly.

There can be no manner of doubt that Herr Krupp von Bohlen's last sojourn in these isles was at the direct instigation of somebody higher up. There is but one person in Germany who could send him on such a mission. And that some one is the Kaiser.

Herr Krupp von Bohlen is not in the habit of "traveling" on behalf of his gigantic firm. The tour of England, as a matter of fact, was the first of the kind he ever made. He undertook it because the necessity of spying out the armament secrets of Great Britain had suddenly become a matter of vital significance to Germany; and he came at the behest of the Krupps' great family friend, the Emperor, who, as we now know, preached peace while plotting war.

The genesis of the Krupp investigation of the state of preparedness of our facilities for manufacturing land and sea armaments is no less remarkable than the investigation itself. Early in May certain of the firms above mentioned received a delightfully courteous letter from the Master of Essen, announcing his intention to visit England during the season. Frankness incarnate, the letter suggested that an inspection of establishments making articles similar to those manufactured by Krupps would naturally be of the greatest interest.

The recipients of Herr Krupp von Bohlen's letters forthwith communicated with our naval and military authorities. It was agreed that, subject to the elementary precautions advisable in such circumstances, there could be no harm in extending to the Essen visitors the hospitality for which, I fear, we are sometimes all too famous. They came and they saw. Whether they conquered remains to be seen. Doors, at any rate, were flung wide open to them. There was even some speechmaking. The fact that the utmost possible care was exercised that the lynx-eyed Dr. Ehrensberger and Herr von Bulow did not see too much does not alter the underlying gravity of the visit itself. At the time Birkenhead, Barrow-in-Furness, Glasgow, Newcastle-on-Tyne, and Sheffield thought it passing strange that Herr Krupp von Bohlen should suddenly desire to look us over. Intervening events, I venture to believe, have given them furiously to think.

Herr Krupp von Bohlen lost no time in reporting to the Kaiser the wonders he had been privileged to inspect in England and Scotland. By prearrangement, undoubtedly, he came directly from them to Kiel, where William II. was extending a

PROTECTION

Against
Burglary

Against
Fire

Against
Decay

Once your house is properly painted it is insured against decay. Decay is just as destructive as fire. Paint, to serve its real purpose, must protect—a pleasing effect is only a by-product. Buy your house paint with this thought in mind, then you will think about quality as well as color.

Sherwin-Williams House Paint has in it the staying, weather-resisting properties that give a house protection. It has wonderful covering power, it holds its color and it everlastingly sticks to its job. It is real insurance. It insures protection from the elements; it insures value in your property; it insures beauty and distinction.

There is a special Sherwin-Williams product for every surface in and around the home. Here are a few. The Sherwin-Williams dealer near you carries the full line.

SWP

(Sherwin-Williams House Paint)

Shingle Stain

It brings out the natural beauty of the wood. Sinks in thoroughly and protects the shingles.

Flat-Tone

A washable oil paint for walls, ceilings and woodwork. Produces rich, soft, flat color effects on new or old walls.

Porch and Deck Paint

A pure linseed oil paint that dries with a tough, wear-and-weather resisting film. Get a can and renew your porch floors, seven colors.

hearty welcome to Vice-Admiral Sir George Warrender's battle-ship and light-cruiser squadron. The Kaiser always demands prompt reports from special emissaries. Grand-Admiral von Tirpitz was at Kiel, too, to hear what the Master of Essen had gleaned in guileless Albion. And while the issue of peace or war with England hung in the balance at Berlin, a fortnight ago, Herr Krupp von Bohlen hurried up from Essen to take part in the momentous councils of the Kaiser with his military and naval chieftains. Can we doubt that what he learned in this country in June was his principal contribution to the deliberations?

Guileless, too, I remember now that I sought an interview with Herr Krupp von Bohlen at Kiel. It was the day before Serajevo. I knew of the true British hospitality which had been showered upon him. I thought perhaps he might be inclined to indulge in some glittering generalities suitable for publication. I know now why he dispatched a polite young secretary to my hotel with the message that the "nature of Herr Krupp von Bohlen's visit to England made it quite inappropriate for him to discuss it in public."

A REFUGEE FROM EUROPE

THE ordinary autumn conversations—better, monologues—on the subject of "our little trip abroad this summer," illustrated with picture post-cards and more or less out of focus kodak prints, will be somewhat varied this coming season, and widely different from the kind usually educed for the benefit of evening callers. The American tourists whose summer tours have ended in catastrophe are many in number, running well up into the thousands. At this writing the majority of them are still marking time in obscure and reasonably safe corners of England and France, watching the titanic struggle from afar, with their naturally excited interest in the turn of events somewhat dampened by their fears for a safe return to the United States. The annual American invasion of Europe has turned into a rout, and Germany is doing most of the touring on the Continent just now. Of the accounts that are given by arrivals here of their more or less hair-raising experiences abroad, one of the most complete and coherent is that of a young woman who managed by hook and crook to escape from Paris at the very moment that trouble broke out, and to conduct the party of twelve, for whose safety she was responsible, intact and unharmed to neutral ground and thence aboard ship. The writer, Miss Ona Brown, in her story, written for the Philadelphia Public Ledger, gives an admirable picture of Paris as it appeared on the eve of war. She writes:

Never has Paris been more beautiful for the summer tourist than we found it upon our arrival on the afternoon of Sunday, July 29. We were driven through the

crowded gay streets to the Hôtel Regina, just across from the Louvre and overlooking the Tuileries Gardens.

About 10 o'clock on Wednesday night I went with some friends to take home a guest whom they had for dinner. We took a taxi-motor and instructed the chauffeur to give us a spin down the grand boulevards before starting for our destination. When we reached the Place de l'Opéra we found the streets crowded with excited people. I noticed that there were no chairs and tables out in front of the Café de la Paix—something unheard of in my knowledge of Paris. We told the driver to take us down the boulevards to the Place de la République and back.

When we started in that direction we found the sidewalks congested more and more the farther we went. By the time we reached the Porte St. Martin, which is in the vicinity of the leading newspaper offices, we found the middle of the streets a seething mass of pedestrians, taxi-motors, and carriages of every description. We would hear a loud cry on one side of the street, and there would be a grand rush in that direction, then loud talking in another place, and a counter-rush that way.

One of my friends became frightened and ordered the chauffeur to turn back. That was impossible at the time, but in a few minutes about forty mounted policemen galloped up from behind and opened up the way so that we succeeded in getting out.

We returned and told our experiences the next morning, thinking we had seen a lively demonstration of disapproval of Mme. Caillaux's acquittal. The next day we heard that Austria and Serbia were at war, but did not connect the news with our experience on the boulevards.

We continued our sightseeing, and I noticed that my purse was full of paper money, and wondered what had become of the gold. Friday morning I divided the party into groups for shopping and went to a dressmaker's. She began to tell me of the dreadful rumors of war which were running rife in Paris, and of the pitiful state of the shopkeepers because of their inability to do business because they had no change. It came to me like a flash that the calling in of gold meant distress and war. I went immediately to the American Express office and cashed \$3,000 in checks.

I was assured by the paying-teller that all their checks would be honored and that I need have no uneasiness.

While I was putting the bills in my purse I heard one American offer a \$10 bill for \$7 in French money and another beg the teller at the next window to give him \$40 in French money for a \$50 English note. The teller explained that there were people who could not get money on their letters of credit at the banks, and that they were flooding the American Express office begging for money. Within a few moments I realized that the terrible European war-cloud had burst, and that we were in the midst of it. The realization of my responsibility in having six young girls, five married women, and one small boy all dependent upon me almost staggered me, but here was no time to lose.

It was a situation calling for quick thinking and much ingenuity, as well as immediate action. Miss Brown, her faith

Barreled Sunlight

3243 plants are now filled with this sunshine

The Electrical Testing Laboratories, New York, found that Rice's Gloss Mill White gave 19% to 36% more daylight, depending upon the conditions in the plant. (Read the Kellogg letter below.)

It reflects the light, instead of absorbing it. It throws daylight into dark corners. It saves greatly on electric lighting bills. It enables employees to work better, because they can see better. Moreover, it is the most sanitary interior paint. It can be washed with soap and water without killing the gloss.

Rice's Mill White requires less frequent repainting because it stays white longer than any other gloss paint. Another striking economy and convenience is that it can be applied over cold water paint.

Why it is better than imitations

Rice's is the original Mill White; all others are imitations, and they can imitate only for a short time. For this is the only Mill White made without varnish. For that reason it does not crack and scale like others; it does not flake off with the jar of machinery. It is made by a special process, discovered and owned exclusively by the makers.

Imitation "Mill Whites" may look as good when first put on. But six months' exposure will prove their inferiority. By that time many are so yellow that they might be yellow paints. Repeated tests have shown, without a single exception, that Rice's remains white longer than any other.

GUARANTEED TO REMAIN WHITE LONGEST

These are far from being mere claims. We give an unequivocal guarantee, with every trial, that if Rice's does not remain white longer than any other gloss paint—applied at the same time and under similar conditions—we will give, free, enough Rice's to repaint the job with one coat. In other words, you can prove our claims, in your own case, at our risk. You cannot lose under this guarantee.

Even more liberal test offers will be made to those having 20,000 square feet, or over, to cover. Tear out the coupon now—before you turn the page and forget.

On inside concrete and brick, one coat of Rice's Granolith makes the best possible primer for a second coat of Rice's Mill White.

RICE'S GLOSS MILL-WHITE

U. S. Gutta Percha Paint Co.
29 Dudley St., Providence, R. I.

What a Few Users Say

Sanitary conditions in our plant have improved wonderfully. We should judge we are getting 30% more light than before.—Kellogg's Toasted Corn Flakes Co., Battle Creek, Mich.

We are indeed astonished to note the vast amount of daylight created by this paint—especially where we were formerly forced to use electric lights all day. Now find it entirely unnecessary. Apprecably surprised to observe how easy it is to keep clean.—Kno-tair Hosiery Co., Philadelphia, Pa.

The most practical interior finish we have ever used on walls and ceilings. We imagine will show an increase of between 20 and 25% in light.—R. J. Reynolds Tobacco Co. (Makers of Prince Albert.)

Find it very satisfactory, indeed. Gillette Safety Razor Co.

The best thing we know of.—H. Doherty Silk Co., Paterson, N. J.

She can end that Corn

End it in two days.

Blue-jay would stop the pain the moment she applied it. Then it would gently loosen the corn. In 48 hours, the whole corn would lift out, without any pain or soreness.

Blue-jay, each month, ends a million corns in that way. No hard corn can resist it. Since this invention it is utterly needless to suffer from a corn.

Yet thousands of people still pare corns, or use some old-time treatment. They simply coddle corns, and every little while they become unendurable.

Try this scientific way.

See how Blue-jay stops the pain. See how it undermines the corn. And see, in two days, how that corn forever disappears.

After that, so long as you live, you will never let corns bother you.

My Beauty Exercises

will make you look Younger and More Beautiful than all the external treatments you might use for a lifetime. No massage, electricity, vibration, astringents, plasters, straps, filling or surgery—Just Nature's Way.

Let me teach you how to exercise your facial muscles so that you can make your complexion clear and beautiful (through invigorated circulation), lift sagging muscles, obliterate resultant wrinkles, and fill in hollows in face and neck.

Double chins disappear quickly, leaving the flesh firm. Results come soon and are permanent. No one too young or too old to benefit.

My Beauty Exercises are supplemented by special work to make the figure more *shapely* and *youthful*; instructions to beautify the hair, eyebrows and eyelashes, hands, nails, and feet.

No matter how tired, five minutes of my Facial Exercise will freshen your face wonderfully.

Write today for my New Booklet on Facial Beauty Culture, Body Culture and New Beauty Suggestions—FREE.

KATHRYN MURRAY

Dept. 139, 209 State Street, Chicago
The First Woman to Teach Scientific Facial Exercises

in the Peace Palace yet undestroyed, decided accordingly that The Hague was the safest vantage-point to reach, and at once set about making her arrangements for an orderly retreat to the Netherlands. There was not even time for consultation with her party at the hotel. Forthwith she went direct to the ticket department of the American Express office to put her plans instantly into effect. There, she says, she was confronted by an apparently hopeless situation, for the counter was lined seven and eight deep with frantic Americans, their hands full of notes, trying to purchase any kind of a ticket, in order to get their paper money changed. Fortunately, Miss Brown was well known in the office, and was able to catch the eye of the head of the department. As soon as he could speak with her, he advised her to wait until next day and to take the noon train from Paris, as that was an express, and by taking it her difficulties would be minimized. The first step, however, was by no means the end of her troubles. To get her party safely aboard the morrow's train was a gigantic task in itself. She describes her labors:

When I arrived at the hotel I found that the members of my party had also heard the rumors and that Mrs. Webster had received a telegram from Mr. Webster at Hamburg, saying that the *Imperator* would not sail, and telling her to wait for further instructions. We answered, asking if she could not go to The Hague with me, but had no reply. I also wired my hotel in The Hague that they must provide a place for us.

When I told my party that I had made arrangements to take them to The Hague, some of them preferred to go to Switzerland. But I had no desire to be bottled up in Switzerland, near the scene of actual warfare, with twelve people to take care of perhaps for an indefinite length of time, with a limited amount of money—and at the mercy of Swiss hotelkeepers.

However, not wishing to assume the entire responsibility of the decision, I went immediately to the American Consul for news and advice. He told me that there was no immediate danger or cause for alarm as to our safety, even if we remained in Paris, but assured me that I would make no mistake in taking the party to The Hague.

Everything was quiet around the hotel at dinner-time, and for several hours afterward. People were repeating the rumors, but did not seem excited.

We went to our rooms early to pack our trunks. I had arranged for the American Express to call for them early the next

New Typewriter

It no longer costs a big sum to own a good typewriter. It is just like the usual one, but with the wonderful, practical Bennett with all important typewriter improvements: variable spacing, adjustment for line spacing, 44-character standard keyboard. It does the work of a \$100 machine.

On Approval—Satisfaction Guaranteed

The Bennett is so easily carried and packed. Very compact. Has only 250 parts. Other machines have as high as 2100 parts. Quality guaranteed—made by same men who make expensive E. I. Fisher Billing Machines. Turn out neat work, and makes clear carbon. Sent on 10 days' trial. Money back unless satisfied. Write for catalog today. Live Agents wanted.

Don't Stop Gardening Now

There's no need of it. When, with great reluctance, you see the vines, plants and flowers withering, dying and going to seed, do not consider the season for fresh, wholesome, home-grown vegetables gone. You can

Grow Delicious Vegetables Throughout the Winter

by using Lutton's Miniature Glass Gardens. Thousands have learned to appreciate the easy luxury of winter vegetables and flowers grown right at their back doors. So can you. The expense is a trifle. For only \$10.50 you can get

Our Special Sash For Home Gardeners

Anybody can set it up. Anybody can garden in it, for the complete planting instructions sent with each frame are simple and explicit.

Price complete (single glazed) ready to put together, freight prepaid anywhere in the United States. **\$10.50**

This sash and frame is 8 ft. 4 in. long and just wide enough to put in a 3-ft. space with southern exposure. The large lights of extra-heavy glass allow the maximum of life-giving sunlight. Strongly made, easily ventilated. Double glazed if desired, for \$1.00 extra.

We also manufacture regular 2, 3 and 4 sash frames and a new special portable greenhouse. Write today for catalog.

Select Your PEONIES This Fall from Farr's Great Collection

Rich with the warmth of its glowing colors, intoxicating in its delicious fragrance, the great, big flowers of the Peony make a universal appeal to human interest.

Farr's Collection of Peonies

consists of over five hundred distinct varieties and includes all the rare novelties of England, France and Japan. I have spared neither effort nor expense to make this collection the finest in the world, and the many years' study I have given to the Peony enables me to describe accurately in my catalogue both form and color, and guarantee my plants true to name and description.

My Book, "Farr's Hardy Plants"

is an inspiration to the grower and lover of Peonies, Irises, Phloxes, and other hardy plants. I have an abridged edition ready for immediate use. A copy of the new edition will be mailed as soon as it is off the press; write me, so that one may be reserved for you.

101 Garfield Avenue, Wyomissing, Pa.

morning and store them until further instructions.

About 12 o'clock I heard a great commotion on the streets and, having a room on the court, I started out in the hall to see what had happened. There I met Mrs. Cockrell, who had come to call me to her balcony overlooking the Tuileries Garden and Place de Rivoli. A howling mob, presumably of students, had marched down the side street (Rue des Pyramides), next to our hotel, had draped the Joan of Arc statue in the center of the Place de Rivoli with flags, and were singing the "Marseillaise." This was done again at about 4 o'clock in the morning. Men could be seen working all night long in the Tuileries Gardens.

On Saturday morning we found the great open space of the Tuileries Gardens, from the Lenore to the Place de la Concorde, literally filled with cannon, placed, we supposed, for convenient transportation. People were hurrying to and fro in the hotel corridors long before daylight. Excited Americans were discussing the situation with loud voices. Lone women were asking advice as to where to go and what to do about money. The Austrian girl who kept the keys on our floor was weeping bitterly because she had received orders to leave France immediately and take nothing with her.

I had asked the night before for my bill to be ready, but when I went downstairs, no one was in the office, and everybody was clamoring for bills. I waited as long as I could without getting it, then started for the American Express to get Belgian and Dutch money which Mr. Hansen had promised me the day before. I did not dare leave Paris without enough money for any emergency.

Those who have been importuned in Paris by taxi-motor- and cab-drivers at every turn will fully appreciate the state of affairs when I say that when I stepped outside the hotel there was not an unengaged vehicle of any kind to be had. I walked to the American Express, bought two additional tickets for Mrs. Webster and her daughter, left a deposit for the forwarding of any cablegrams that might be sent us, and asked my ticket man once more if he was sure the 12:35 train would go through to The Hague. He gave me my seat reservations, assured me that it would be the last direct train out of Paris through Belgium, and advised me not to miss it.

Wishing to relieve anxiety at home, I went to the Commercial Cable Company to send a message that we were going to Holland and was told that there were 2,500 private cables and telegrams stacked up which could not be sent that day. I went to two other companies, and was refused. At last I found the Western Union, and was assured that the wires were clear and that the message would go without delay.

I hurried back to the hotel and found the bill still not ready, and the whole force in confusion. Finally I got a statement and paid it.

The waiters had been ordered to their respective companies. One elevator boy and the night porter had gone and the youth who stood on the sidewalk to call cabs told me he was leaving after lunch to join his regiment at Versailles.

I had previously instructed the party to stay in the lobby and be ready to leave

Unharmed in the Midst of the Great Salem Fire because Roofed with J-M ASBESTOS ROOFING

"The Roll of Honor"

Flying sparks and burning embers were literally showered upon the roof of this raw cotton storehouse of the Naumkeag Steam Cotton Co., located in the midst of the recently flame-swept area of Salem, Mass.

Buildings all around it were burned to the ground, as the photograph shows.

Yet, this building was absolutely unharmed because protected by J-M Asbestos Roofing.

What greater proof of a roofing's fire-resisting ability could possibly be demanded?

There is a lesson to be drawn from every great catastrophe.

The lesson to you of the great Salem fire—where whole sections were actually wiped out—because buildings were roofed with wood shingles or other "fire-assisting" roofings—is this:

Do not use wood shingles or other inflammable roofing.

Do not be deceived, by low first cost, into buying anything but J-M Asbestos Roofing—the roofing of known quality—the roofing that will not fail you should the fire test ever come—the roofing that spells economy for you because of the years of service it affords and the fact that it never requires painting or repairing.

If you prefer shingles, use J-M Transite Asbestos Shingles. They will give you absolute fire protection, and a stone roof that cannot disintegrate. Add greatly to artistic appearance because of their attractive and permanent colors.

our hotel at 11 o'clock. The omnibus came on time and we left as quickly as we could get twenty pieces of hand baggage on top and the party inside.

When we arrived at the station we could not get near the sidewalk, but finally our omnibus edged its way in. When I alighted, the most welcome sight I ever beheld was the chief of the station porters within an arm's reach of me giving last instructions to another porter. I slipped 10 francs into his hand, and told him if he would get a barrow for our luggage and a porter to convey it to the train and find our seats I would double the amount. He worked for his tip. I had the party stand together near the door out of the way of the luggage and impress upon them the necessity of staying together. The chief porter returned, with another man, the luggage was quickly loaded, and the two men made way for us by pushing the barrow ahead while we formed a solid phalanx behind.

To appreciate fully the efforts that Miss Brown put forward to accomplish even this partial success, it must be remembered that most of the tourists in Paris, like those whom she describes as starting out for a Cook tour to Versailles, had as yet failed to grasp the full measure of the danger and discomfort that lay before them. Even in her own party there was for some little time no uniformity of conviction in the expediency of her flight. She remarks of the unmarried members of the little group:

None of the girls seemed to realize what it might mean to miss that train, and one of the girls had cried because I took her away from the hotel five minutes before she had an engagement to meet a young man who had shown her many courtesies, who was coming to bid her good-by. I am telling her yet that if we had waited we might have missed that head porter. However, she has become more than reconciled. While we were waiting for the train to leave, another of the girls met an unsophisticated Englishman in the corridor who wished to know the cause of the "remarkable excitement." He informed her that he had just arrived on the Continent to take his holiday!

The girls did not realize the effects of the war until they were unable to buy kodak films and chocolate candy. But we felt that those inconveniences were very small considerations compared with the distress in which many of our fellow countrymen found themselves.

On arrival at The Hague the party found everything delightfully different from the panic and chaos of Paris. With utmost celerity and comfort they were taken to their hotel and made at ease. Calling the next morning upon the American Minister at the capital, Miss Brown was agreeably surprised to find him to be Dr. Henry Van Dyke—"the most princely gentleman it has ever been my good fortune to meet." She was assured at once that her party was not in the slightest danger there, and was promised the earliest intelligence that might be of importance to her in regard to

Make Two Rooms Out of One!

With your mind's eye, just look about your house. Now, really, don't you need another room here or there? A den? A children's playroom? A sewing room? Why not divide a large room—make two rooms of it? Then, too, there's the attic and the basement: Why don't you partition off a room or two there with

UTILITY

The Only 5-Ply Wall Board

Think of the five layers of tough fibre boards, cemented into one permanent sheet with hot asphalt under tons of pressure—thoroughly moisture proofed outside.

We use 5 layers because it gives us that much more strength than the usual 2 or 3 layers. Takes the place of lath and plaster. Does away with their dust, dirt, and muss. Anyone who can use a saw and hammer can nail Utility Wall Board to studding and joists.

Free Samples and Book

Marietta, Ohio

the sailing facilities. Other refugees were now arriving almost hourly from different points of the Continent, all having had more or less unpleasant experiences:

Four young men who had filled their automobile full of women and children had their car and chauffeur requisitioned, and were compelled to take first one train and then another, and finally walk across the border, carrying heavy luggage with them. Many had changed cars six or seven times in a day's travel, and had stood for hours packed in narrow corridor trains, with no food and no place to sit. We heard of an American woman who became separated from her maid when she had gone to look for baggage. She came to Amsterdam without a change of clothes and without money enough for a week's board.

The greatest inconvenience was about money. In Holland, as in Paris, the silver and small change seemed to have disappeared as if by magic.

Holland passed an emergency law, making paper money legal tender and making it a penal offense to refuse it. But at the hotel, at the embassy, and everywhere I went I saw American men of affairs, who had been accustomed to having all the money they wished, in desperation, because they could not get one cent on any kind of a letter of credit. Thanks to the American Express, and the fact that I had provided myself with plenty of checks of small denominations, I had no trouble either in Paris or in Holland. But I made it a rule to cash a check every time I thought of it, in order to be sure to keep plenty of money on hand.

At news that England was almost certain to become involved in the war, the worried young lady made inquiries at once at the Holland-American Line offices, in Rotterdam. Nothing could be done in advance, but she was advised that there was extreme likelihood that many of the passages already engaged would not be taken up, and so might be secured for her party at the last moment. But even at this juncture the party came marvelously close to catastrophe, as she relates:

When I returned to The Hague that night I picked up a Dutch paper with an advertisement in English from a transportation company organized to meet the emergency. It stated that upon the advice of the United States and Canada, arrangements were being made for ships to sail immediately for New York. An address was given in Rotterdam, and a postscript stated that American Express checks would be accepted, and that it was advisable to book passage before Wednesday night.

The next morning, after I was dressed, it came to me like an inspiration not to apply for that passage without consulting Dr. Van Dyke.

When I showed Dr. Van Dyke the advertisement, he threw up his hands and said that it had just been brought to his attention, that he had found it to be a bogus company, and some Americans had already been victimized.

We were constantly hearing rumors that the Holland-America liners would not sail. But on Thursday morning five

It's Human

—Yet has a watch-like accuracy. One operator can stamp and seal Six Thousand Envelopes per Hour.

Pence Mailing Machine

will pay for itself in a short time with any concern that mails over 500 envelopes per day. Great claims have been made for mailing machines. No other machine made can compare in all around efficiency with The Pence.

Think Over These Points:

- Only one operator required.
- Seals and affixes stamps on 6,000 envelopes per hour.
- Places stamps in any desired position.
- Affixes as many stamps as desired.
- Uses stamps as furnished by the government in rolls.
- No cost for re-rolling stamps.
- Records every stamp used.
- You can seal with it alone.
- You can stamp with it alone.
- You can stamp and seal with it in one operation.

It took us two years of actual daily use in a number of offices to prove to ourselves that The Pence was positively the best mailing machine in the world.

We want you to prove to yourself the truth of our claims right in your own mailing department so you can see wherein The Pence saves you money and produces the most perfect work of any mailing machine on the market.

Write now and tell us about your mailing department and we will show you where The Pence is different and will fit into your work.

Your Opportunity

The spirit of unrest due to the high cost of living has prompted Postmaster-General Burleson to conduct experiments in ten cities in all parts of the country to ascertain whether the residents in these cities could be induced to buy foods by mail in cooperation with the Post Office Department.

The Postmasters in these cities are unanimous in declaring that this experiment has proven a great success. You, too, should avail yourself of the great convenience of mail order food buying. Of course you will have to apply at your local Post Office for information about perishable foods such as eggs, butter, etc. In many instances you will be able to save considerably in the cost of your food and be assured of fresh supplies at regular intervals. Again, you can secure by mail, products of certain localities, which are noted throughout the country, and which are not sold in regular grocery stores, due to limited supply or to the fact that they can not be carried in stock excepting for short periods.

If you are interested in the mail order food business, either as a producer looking for customers or as a consumer, we will be very glad to send you full information. We have on hand the names of producers of specially selected nuts, hams, bacons, sausages, grape fruit, apples, oranges, tea, candy, dried fruits, etc.

Mail Order Food Department

The Literary Digest

of the party and I went to Rotterdam to investigate conditions, and try again for a Holland-America passage. In the meantime, I had cashed checks every time I passed an American Express correspondent bank and had enough Dutch money to make a cash deposit on my passage.

When we arrived at the office, we found that Germany had just signed an agreement to allow the *Nieuw Amsterdam* to sail unmolested, provided the line agreed to take no German citizens aboard. Three of the party stayed at the counter as a constant reminder of our application, while I took the other two with me to the American Express office to get more money. When we returned, we found that berths had been given us for eight. Before we left, two more had been placed, and we were assured that we stood a fair chance for three more the next day.

When we arrived at The Hague there was great excitement in the party when they were told we had secured passage. But I believe that some of the girls were secretly disappointed not to have the distinction of being conveyed home by Uncle Sam's ships.

Early Friday morning we were all off for Rotterdam with our luggage, determined to camp with the Holland-America Line all day in order to secure the three more berths necessary to take the entire party home. The cabin clerk was faithful to his promise, and gave us the additional room. We met Americans all day, some going on our ship, and very happy, others much discouraged over conditions and their inability to get money on letters of credit.

At 7:40 p.m. we were on the dock in an eager, surging mass of Americans ready to go on board, when the gates were opened.

We sailed at 3:20 a.m. The first day out was exciting. Many people on board feared we might be intercepted and turned back at any moment. As we passed out into the Channel we were approached by four Dutch torpedo-boat destroyers. They warned the captain of the mines in the Channel. At about 10 o'clock we were hailed by three English destroyers, who came racing toward us from the distance like veritable fiends. As soon as they saw our colors and passed greetings they allowed us to proceed. When we reached Dover we stopt. An English patrol-boat drew up, an officer came aboard and examined our papers. We saw what seemed to be in the mist a whole fleet of war-ships in the direction of Calais. Later on in the day we were stopt again by three English torpedo-boats, and I heard an officer say through the megaphone, "Any one aboard who speaks English?"

The captain answered, "Ay, ay, sir." The man with the megaphone then said, "Have you seen any German warships?" The captain answered, "No." Then we were warned of the dangers in the Channel, and told to draw nearer the shore as we approached Plymouth.

At Plymouth we stopt by special arrangement to take on the royal mail, and found a few passengers waiting for us, who had been unable to reach Rotterdam to board the ship. At last our bow was turned toward the broad Atlantic, and we felt that we were really homeward bound.

THE SPICE OF LIFE

Too Well Prepared.—"My dear old fellow! What's the matter? The sea's like a duck-pond!"

"I know, old boy—but I've taken six—different—remedies."—*Punch*.

He Knew.—THE "SWANKY" ONE—"I'm smoking a terrible lot of cigars lately."

THE OTHER (with conviction)—"You're right, if that's one of them."—*Tit-Bits*.

Weather or No.—"Now tell us," sternly demanded the young legal luminary whose brow overhung like the back of a snapping-turtle, addressing the cowering witness, "what was the weather, if any, upon the afternoon in question?"—*Puck*.

Prerequisites.—"Tommy," said the Sunday-school teacher, who had been giving a lesson on the baptismal covenant, "can you tell me the two things necessary to baptism?"

"Yes'm," said Tommy, "water and a baby."—*Western Mail*.

Parallel Case.—"Oh, doctor, I have sent for you, certainly; still, I must confess that I have not the slightest faith in modern medical science."

"Well," said the doctor, "that doesn't matter in the least. You see, a mule has no faith in the veterinary surgeon, and yet he cures him all the same."—*Sacred Heart Review*.

Can You Blame Her?—"How is the law made?" asked the instructor in United States history.

"Oh," replied the maiden, cheerfully, "the Senate has to ratify it; and then the President has to—has to veto it; and then the House of Representatives has to"—she hesitated for a moment, and knit her pretty forehead.

"Oh, yes! I remember now," she said. "The House of Representatives has to adjourn until the next session!"—*Youth's Companion*.

Strategy.—Hans and Fritz, two small boys, had gone to the rink to skate. Hans's overcoat hampered him and he wanted to get rid of it. The German coat-room person does not check your coat unless you pay your fee. The fee was only a penny, but Hans did not have the penny. He was at a loss.

"Huh! it's dead easy," spoke up Fritz. "Give me your overcoat. I'll take it to the man at the checking place and say I found it. He'll put it away. When you are ready to go home you go to him and ask if anybody has turned a lost overcoat in to him. Then, of course, you'll get yours."—*New York Evening Post*.

IMPORTANT TO SUBSCRIBERS CONCERNING VACATION CHANGE OF ADDRESS

When notifying THE LITERARY DIGEST of a change in address, subscribers should give both the old and the new address. This notice should reach us about two weeks before the change is to take effect.

TIMKEN

AXLES & BEARINGS

Over the Rough Spots

Thirty miles or more per hour. Suddenly, a hole in the road ahead. Too late to slow down. Bump! go the front wheels as you brace for the shock.

An instant more you are over the rough spot and spinning along smooth road.

Your Front Axle Takes All the Shocks

All the time—at high speed or low—your safety and that of your family or friends depends on the sturdiness of the front axle. The I-beam, spindles, bearings, steering arm, cross-rod and knuckles must stand up to the weight and the shocks and vibration.

Those Who Ride on Timkens Feel Safe

And well they may. For the men of the Timken-Detroit organization have been working together for years on just two problems that are really one.

(1) Determining with each car builder for each particular model of his

car the design of the one axle that will perfectly correlate with all the other parts of the car and give the utmost in use-service-value to the car owner.

(2) Manufacturing that axle for that car from steels that are best, each for its special purpose. Heat-treating each piece to bring out its best. Machining and grinding to an accuracy that means longest possible life of satisfactory service.

Talk With the Man Who Rides on Timkens

How Timken men have succeeded in co-designing the right axle for the car and in making each axle in the most efficient way, can best be judged by talking with owners of Timken-equipped cars and, best of all, with repair men who know the inside of all makes of cars.

Ask us for the "List of Cars," the "Axle Primer," and the "Bearing Primer"—they'll tell you many interesting things about the motor car. Write Dept. C-5, either Timken Company, for these Three Timken Booklets. No salesman will call. They'll be mailed free, postpaid.

INVESTMENTS AND FINANCE

BUILDING RAILROADS IN AFRICA

WHAT Louis R. Freeman calls "the railroad conquest of Africa" is discussed by him in an interesting article in *The Review of Reviews*. Vast schemes are in contemplation for the Dark Continent. At present their accomplishment is confined almost wholly to the northern and southern ends, but altogether some 25,000 miles of road have been constructed. Along the coast the beginnings have been made of railways at several points between the northern and southern ends of the vast continent. Under construction are now nearly 2,000 miles. Mr. Freeman believes that at least one line will traverse the entire length of the continent before any north and south transcontinental road is ever built in Asia, Australia or America. Most important of these African systems is that in the South, of which Mr. Freeman says:

"Three administrations—the Cape Government, the Central South African (representing the Transvaal and Free State Governments), and the Natal Government—taken over and consolidated under State management at the time of the South African Union in 1910, form one of the largest systems under the direction of a single man in the world. The work of W. W. Hoy in bringing order out of the South African railway chaos, and making the lines under his management the leading factor in the development of their tributary territory, is worthy of comparison with that of James J. Hill in the American Northwest. The fact that the States of the South African Union—hitherto very backward in agricultural development—have more than doubled their production of fruits and grains in the last five years is the best commentary on the success of the regenerative movement led by the railway.

"South African railway construction was inaugurated with the beginning of a sixty-three-mile line from Cape Town to Wellington in 1857. Intermittent development continued until 1872, when the Cape Colony Government took over all of the completed lines. Active railway extension may be said to date from that time. Early South African construction was almost entirely directed toward one objective—the great mining and consuming centers in the north. First Kimberley and its diamonds, was the goal; then the Rand, with its gold. Kimberley was the magnet which deflected the western line through the Karoo, the most arid district in South Africa, instead of across the fertile regions to the southwest. Kimberley was reached in 1884, and a few years later, following the discovery of gold on the Rand, lines were built to connect with those constructed by the Boers in the Transvaal and Orange Free State. The main part of the Transvaal business, however, was done by a line that had been pushed through Natal from Durban, which offered a much shorter route to the coast.

"These three systems all figured prominently in the Boer War, the Afrianders for some time holding not only their own lines in the Transvaal and Orange Free State, but considerable lengths of the Natal and Cape Colony lines as well. The control of rail transportation was the fiercest object of contention during this sanguinary struggle, as a result of which such portions of the lines as fell within the war zone were greatly damaged, principally through the

dynamiting of bridges and culverts. Practically all of this part of the South African system has been rebuilt throughout since the war.

"Generally speaking, all of the South African railways, like most pioneering ventures, were run at a loss during their earlier years. With the tremendous wave of advancement and prosperity which swept over the country following the discovery of gold on the Rand, this was changed, and up to the time of the war—1899, 1900—all of the roads, in addition to financing heavy extensions, paid handsome dividends. The heavy slump which followed the war was responsible for several lean years for the railways, and it is only since about 1907 that they have been paying as well as in the '90s.

"The most striking fact in connection with the growth of the South African railways has been the way in which their development has followed that of the mines. It was the locality of the gold and the diamonds which dictated the route of the trunk lines, and it has been the carrying of supplies to the mining centers which has been the main source of the prosperity these railways have enjoyed for many years.

"Active extension was kept up by all of the South African systems during both good and bad years, so that in 1910, when they were consolidated at the time of the formation of the Union of South Africa, they had a total of over 7,000 miles open to traffic. Of this, 3,320 miles were in Cape Colony, 998 in Natal, 1,728 in the Transvaal, and 987 in the Orange Free State. The combined systems at that time represented a total expenditure of over \$225,000,000. Since 1910 from one to two hundred miles of new line have been opened each year, at an increased capital expenditure of from \$12,000,000 to \$20,000,000 annually. The total mileage at the present time is very close to 8,000, with construction in progress or sanctioned that will bring the aggregate up to 10,000 miles within a very few years. This does not include the 3,000 miles of the Rhodesian system, which will be referred to presently."

ELECTRIC POWER IN COAL MINES

A striking fact in industrial electricity is the increasing substitution of electric traction for steam and mule power in coal mines. Electricity is coming more and more into use in mines, not only for haulage, but for hoisting, pumping, ventilating, lighting, driving compressors, and for furnishing power to breakers. *The Journal of Commerce* says that "where there was one electric locomotive in the anthracite mines of Pennsylvania a decade ago, there are now a dozen." Where formerly were hundreds of feet of trolley wire, "are now many miles." Millions of dollars have been spent on electrical locomotives, power-houses and heavier rail. The writer says further:

"The network of tracks in the anthracite mines has spread until the underground mileage exceeds that of the so-called "anthracite roads" on the surface. Some 15,000 horses and mules are still employed in and around the anthracite mines, but this is 1,500 less than the high figures in 1905. Compressed air, steam, and electric locomotives are rapidly replacing them, but especially the latter. In the decade since 1903 the number of electric locomotives in the anthracite mines has increased from 84

**The easiest car in the world to drive—The 1915 Maxwell
\$695—Fully Equipped, and with 17 New Features**

- | | | |
|---|---|--|
| 1. Pure stream-line body. | 10. Tail lights with license brackets attached. | 16. Instrument board, carrying speedometer, carburetor adjustment, and gasoline filler. |
| 2. Adjustable front seat. | 11. Gasoline tank located under dash cowl. | 17. Improved steering gear; spark and throttle control on quadrant under steering wheel; electric horn with button mounted on end of quadrant. |
| 3. Simms high-tension magneto. | 12. Crown fenders with all rivets concealed. | |

HOLDS THE ROAD AT 50 MILES AN HOUR

If you have never driven an automobile, the 1915 Maxwell is the car for you. If you have driven cars you will appreciate this automobile. This "wonder car" is driven from the left side, and has but two pedals. The two levers are in the center. The foot accelerator has a heel rest. The spark and throttle control are under the steering wheel. The front seat is adjustable to your individual leg length.

The Maxwell has real power. The Maxwell is one of the greatest hill climbers in the world. It will throttle down to 4 miles an hour on high gear, and pick up to 50 miles an hour in a comparatively few yards. This means little gear shifting, with less wear on both car and driver. See this full five passenger, beautiful, graceful family car at the Maxwell dealer nearest you. Write for beautiful 1915 Maxwell Catalogue.

WAR correspondents of almost every New York newspaper carry Corona Folding Typewriters. This is proof positive that the quickest way, the easiest way and the best way to write is the Corona way.

THE CORONA Folding Typewriter

has practically every feature of the standard \$100.00 machine, yet costs considerably less. For personal use it will do for you what any typewriter will do. It weighs only 6 lbs. and when folded fits into a case about the size of a small shoe box. Let us send you Booklet No. 80 giving full particulars. Write for it now.
Corona Typewriter Company, Inc.
(Formerly Standard Typewriter Co.)
Grosvenor, N. Y.

to 707, that of steam locomotives grew from 49 to 575, and of compressed-air locomotives from 67 to 163. In the volume of work done, electricity is now in the lead.

"Managers of anthracite coal mining companies say that the mules will never be entirely superseded. There will always be certain kinds of work which can be done more satisfactorily and more economically by animal muscle than by any form of mechanical power. In the gangways producing small quantities of coal the installation of electricity would be impracticable and wasteful. But the resources of the large mining companies have enabled them to install electric haulage systems which are not possible in the case of the small, individual operators, and the economy thus effected tends to keep down and steady the retail price.

"The use of the new force has brought with it the employment of a new class of skilled labor and the necessity for heavier tracks, and the mobilization of longer trains of mine cars than the mules could haul has tended to a greater complexity of operation. For a ten-ton locomotive a rail weighing 25 pounds to the yard is prescribed as a minimum, but a 45-pound rail is recommended. With the miles of track that have to be laid and relaid, this means a great expense.

"Electric traction also introduces new engineering tasks in the matter of grades. The number of mules can be increased at certain places to meet the exigencies of the grades, but the capabilities of a locomotive remain constant, and grades have to be reduced accordingly. Tho it can climb a 12 per cent., or even a 15 per cent., grade with heavy rails, a locomotive can not be called upon to perform economically, on long runs, against grades of more than 6 or 7 per cent. Consequently there has been a great deal of work and great expense incurred in levelling the floors in the gangways.

"In a mine gangway the location of the trolley-wire is not as simple a matter as it is above ground, for space is very limited. The wire must be installed in such a manner that it will cause the least possible interference with the free passage of men and animals. The character of the overhead work has an important bearing upon the successful operation of the locomotive.

"A mine-haulage system has to have a regular schedule, and keeping such schedules involves employing well-paid men who are capable of running things smoothly. One needs only to pay a visit to the mines to see how the whole aspect of mining has been changed by the introduction of electricity."

CURRENT EVENTS

European War

August 20.—The van of the German Army arrives at Brussels.

The French are reported to have retaken Mülhausen in Alsace.

August 21.—The Germans enter Brussels in force.

The French soldiers in Lorraine are hard pressed and reported to be falling back steadily.

August 22.—Japan is said to have abandoned hope of a reply from the Kaiser to her ultimatum and is preparing for war.

The Treasurer of Brussels refuses to satisfy the German demand for a war levy of \$40,000,000, claiming it to be a flagrant violation of The Hague treaty.

The still holding Mülhausen, the French line east of the Vosges Mountains, is badly shattered.

August 23.—Japan declares war upon Germany. Germans occupy Lunéville in France.

Zeppelin 28 is officially reported to have been destroyed by French shells in the Department of Meurthe-et-Moselle.

Reports from Austria indicate a withdrawal of troops from Serbia and Bosnia, in preparation for concentration against the Russian invaders.

August 24.—The situation in France and Belgium is reported to be as follows: The French War Office admits a defeat along the border and says that Lunéville, Blamont, and Cirey are in the hands of the enemy and that the French forces are entrenched around Nancy. The army from Amance and Dieulouard is attacking the German forces which marched into the Duchy of Luxemburg. Another army from the region around Sedan is attacking the German corps marching between the Lesse and Meuse rivers. A third army from the Chimay region is moving to attack the German right between the Sambre and the Meuse. It is supported by an English army which set out from around Mons. The battle on the French side has been going on for more than twenty-four hours. The French lines are engaged in desperate conflict and the losses on both sides are heavy.

The Russian Army is said to have taken Gumbinnen, Ortelburg, Johannsburg, and Insterburg, and to be advancing on Königsberg.

August 26.—The French Cabinet resigns in a body and is reconstructed on broader lines to meet the demands of the present emergency.

It is reported that the left of the Allies' line, to the north, has fallen back slightly, but that the center holds firm, advancing steadily.

General Foreign

August 20.—General Carranza enters Mexico City as a Provisional President.

August 21.—The first formal congregation of cardinals is held in Rome, to arrange for the electoral conclave.

August 22.—The body of Pope Pius X. is entombed in St. Peter's, Rome.

August 23.—Generals Carranza and Zapata confer with regard to future harmonious action.

Domestic

WASHINGTON

August 22.—The Senate passes a bill for the purchase of 15,000,000 ounces of silver. The Vice-President establishes a precedent by adjourning the Senate until Monday, owing to the lack of a quorum.

August 24.—The United States Steel Corporation, the Standard Oil Company, and the United Fruit Company, notify the Government of their intention to put their fleets under the American flag.

August 25.—The House adopts resolutions requiring the attendance of absentees and imposing salary reductions for failure to comply.

David R. Francis, ex-Governor of Missouri, declines the post of Minister to Argentina.

GENERAL

August 20.—The women's peace parade movement in New York City receives the approval of the President.

August 21.—Colonel Roosevelt withdraws his indorsement of Harvey D. Hinman for Governor of New York.

August 25.—Arrangements are perfected for the opening of four public markets in New York City on September 1, for the sale of food supplies direct from producers to consumers.

Would You Take
a \$10,000 Automatic
Sprinkler System
Free—

—OR—
Would You Prefer
a Free Pair of
Nice Gold Cuff Links
?

ANY business man is skeptical naturally of an offer of a very expensive present—something which he would have to pay many thousand dollars cash for if he bought it from the manufacturer. He is convinced that investigating such a proposition would be a waste of his time.

If offered such a choice as the above, he would undoubtedly take the gold cuff link offer in preference to the improbable sounding offer of a \$10,000 business equipment—sprinkler system or anything else.

We have given away a great many sprinkler systems. But we have never done so until we had made clear how it is possible to do so in each individual case. It cannot be made clear in an advertisement.

Talking generalities about the sprinkler system paying for itself by savings on premiums only results in confusion. You should write us for information about your building, the amount of insurance you carry and the rate. Then we can make clear to you—in your own particular case—why and how we can give you an automatic sprinkler system absolutely free—a system we must pay cash for to the sprinkler companies.

When you understand fully how your business will be protected from a demoralizing fire you will let nothing stand in the way. You will not miss the chance of getting this free equipment.

Changed conditions in the sprinkler field may absolutely have nullified any previous investigation you may have made. Don't let any misinformation about sprinklers deter you from writing. Get authoritative facts from us and you will not have to say some day that you have paid for a sprinkler system without getting one, since you read this advertisement.

HARRY LAUDER,

World-famous Scotch Comedian, says:

"Tuxedo, for mildness, purity and fragrance, **THE** tobacco for me. With my pipe filled with good old **TUXEDO**, all my troubles go up in smoke. In all my world-wide travels I've yet to find its equal as a slow-burning, cool-tasting, sweet-flavored tobacco. **TUXEDO** satisfies me completely."

Harry Lauder

Tuxedo Keeps the World in Good Humor

Here is a man whose life work is to make millions of people happy. In pursuing his call, he travels the wide world over. He is a great lover of his pipe, and in all sorts of corners of the earth he has tried all sorts of tobaccos.

What is his unqualified statement in regard to

Tuxedo? Read it again: "*I've yet to find its equal.*"

This is the frank and candid opinion of thousands and thousands of experienced, judicious smokers. Tuxedo is absolutely the best all-around tobacco that modern tobacco science can make.

Tuxedo

The Perfect Tobacco for Pipe and Cigarette

The original "Tuxedo Process" of treating the world's premier smoking tobacco leaf—high-grade Kentucky Burley—puts Tuxedo absolutely in a class by itself. No other tobacco *can* be like Tuxedo, because no other manufacturer knows the "Tuxedo Process."

SAMPLE TUXEDO FREE—

Send us 2 cents in stamps for postage and we'll mail you prepaid a souvenir tin of TUXEDO tobacco to any point in U. S. A.

Address
TUXEDO
DEPARTMENT
Room 1189
111 Fifth Avenue
New York

Illustrations are about one-third size of real packages.

The Process brings out the unsurpassed mildness, delicate fragrance and mellow flavor of the Burley leaf in a way that has never been successfully imitated. At the same time it refines the tobacco until every trace of harshness and "bite" disappears.

You can smoke pipeful after pipeful of Tuxedo without the slightest throat-irritation or tongue-bite. This mild, delightful tobacco affords thorough, wholesome enjoyment. It is restful and refreshing, comforting and cheering—all that perfect tobacco should be.

A host of famous, successful men smoke and endorse Tuxedo. They have undoubtedly tried its imitations. Their unanimous preference for Tuxedo—the original granulated Burley tobacco—is worthy of your consideration. Will you try Tuxedo for one week?

TOPICS OF THE DAY

DARKEST SIDE OF THE GREAT WAR

IF BARBAROUS ATROCITIES must accompany a war in this year of Our Lord involving great nations representing the finest flower of Western civilization, then American public opinion, as represented by the press, is well-nigh convinced that there can be no such thing as "civilized" warfare.

"Besides the familiar accusations that the Germans are killing priests, women, and children," says the *New York Evening Post*, "we are asked to believe that Belgians have dragged German women naked through the streets by the hair of their heads; that a Belgian boy killed in cold blood the commander of the Germans in Louvain; that the Austrians killed twenty young girls in a single house, besides executing sixty Serbian prisoners in one place and mutilating dead bodies elsewhere." And from Germany come stories of unprintable Russian barbarities and excesses in East Prussia. Even if 90 per cent. of these are to be discounted, the residue, declares *The Evening Post*, "is still a horrible indictment of the ease with which the human being turns into a beast." Of necessity most of these stories come through London, and they tell of a war of savage inhumanity waged by Germany in Belgium. Many of our editors are skeptical. They remember how punctilious German armies have been in previous wars, and note the far from savage temperament of the

German. There has been nothing in the history of the German race, declares the *St. Louis Globe-Democrat*, "to lend credibility to stories of such atrocities." So this paper speaks for many of its contemporaries in asking Americans to wait till both sides have had a chance to present their case. And the *Macon Telegraph* reminds us

that "there is no more expert liar in existence than the excited patriot." On the other hand, such papers as the *New York World* and *Tribune* and *Springfield Republican* are convinced, largely through the stories of the burning of Louvain and the aerial bombardment of Antwerp, that Germany has forgotten or deliberately trampled upon the rules of civilized warfare. True, says the *New York World*, "the ruthless customs of war permit an invading army to shoot in cold blood peasants who arm themselves for the defense of their homes." But, it adds, "no theory of reprisals, however extreme, can justify such acts" as are charged up against the German

Entered at the New York Post-office as Second-class Matter

"The chief purpose of the revised rules of war is to protect non-combatants, especially women and children, from the severities of warfare, and to safeguard private property. The recognized way to meet illegitimate resistance is to arrest and shoot those who resist, sparing the non-resisting women and children. The burning of Louvain, with its priceless art treasures, was not alone a brutal and wanton destruction of private property. It was also a barbarous punishment inflicted on the innocent and defenseless elements in the community. Moreover, it had no appearance of military justification. Many towns have been destroyed in war in order to reduce the resources of an enemy. But Louvain was evidently reduced to ashes in a fit of brutal and tyrannous passion.

"We noted a week ago the reported levies of war taxes of \$40,000,000 on Brussels and of \$10,000,000 on Liège as violations of the spirit and letter of the rules of war. Reports of other such levies continue to come in. These exactions do not offend humanity so much as does the violence done to male non-combatants and to women and children in the razing of a city. Yet unless such contributions are levied solely for the current needs of the occupying force and are collected through existing agencies of taxation, they are forbidden by the laws of war. If levied in excessive amounts, they are simply a form of pillage. . . .

"Antwerp has been twice attacked by *Zeppelins*, altho the city is not invested and no notice of bombardment has been served on it. The discharge of bombs under these circumstances is against the laws of war. It has no legitimate military object. The victims of the bombs being mostly women and non-combatants, the air-ship bombardment is nothing but a naked act of barbarism.

"Furthermore, in spreading floating mines in the North Sea, Germany has been guilty of an infraction of the Hague agreement respecting the use of such mines. The treaty says: 'It is forbidden to lay unanchored automatic contact-mines except when they are so constructed as to become harmless one hour at most after the person who lays them ceases to control them.' Yet Germany has sown such mines all through the North Sea, and several Danish merchant ships and English fishing ships have recently been destroyed by them. Here again neutrals and non-belligerents have suffered most from illegitimate methods of warfare.

"It is deplorable that the one nation which has brought the militarist system to its highest point of efficiency should take the lead in rebrutalizing war and multiplying its horrors. . . .

"It is a strange commentary on Germany's military development that the Franco-German War of 1870-71 was fought through with a careful observance of the rules of war on the German side. But this war, now only begun, has been marked by a series of lapses into military indecencies."

Of the offenses here specified, but two have aroused great feeling in this country—the burning of Louvain on August 26, and the killing of non-combatants in Antwerp by bombs dropped from *Zeppelins* flying over the city. An account of the destruction of Louvain appears in another department on page 450, but of the cause of burning there are two stories. Belgians, says the London *Morning Post's* correspondent, declare that since the unopposed occupation of the city, the civil population had given no cause for offense, but the Germans were enraged by a defeat at Malines, where they had mistakenly fired on some of their own troops. To quote *The Morning Post*:

"The attack upon the unarmed population came suddenly. The Germans firing in the street and going from house to house, pillaging, ravishing, murdering, and setting houses on fire. Neither age nor sex was respected. Almost all the clergy were shot, including one English and one American clergyman. The monstrous work continued through the night."

But according to an official dispatch from Berlin, this is what happened:

"In consequence of a sudden attack of Belgian troops from Antwerp the German garrison at Louvain was withdrawn and went to meet the enemy, leaving only one battalion of last reserves and the army service corps behind them. Thinking this the retreat of the German forces, the priests of Louvain gave arms and ammunition to the populace for use against the German troops.

"The German garrison had no suspicion of this when out of cellars and doorways in various quarters of the city came

shots in a perfect fusillade. Many Germans were wounded. This street-fighting lasted for twenty-four hours between the German soldiers and the Louvain citizens. Meanwhile parts of Louvain were set on fire. People met with arms were considered as manifestly guilty of infringement of the rules of war and were shot."

And in the New York *Staats-Zeitung*, which represents a large body of German-American opinion, Mr. Herman Ridder declares that "as an act of war" the burning of Louvain "was justified as a measure of punishment and as a warning against the perfidious activities of civilians in fields from which they should absent themselves." Any army at war, writes Theodore Sutro, editor of the New York *Morgen Journal*, "whether English, French, Russian, or American, would have done the same thing under like circumstances. This is not only permitted by international rules of warfare, but is imperative as a matter of protection."

Yet most American dailies printed in English, while admitting that the sniper may be handled without mercy, say that they draw the line at the destruction of a beautiful city and the slaughter of innocent non-combatants. And indignant protests appear in such papers as the New York *Sun* and *Evening Post*, Worcester *Gazette*, and Syracuse *Post-Standard* in the East, and the Cleveland *Plain Dealer*, St. Louis *Globe-Democrat*, Salt Lake *Tribune*, and Ogden *Standard* farther West.

Likewise in the case of the air-ship attack on Antwerp, which was briefly discussed in our issue of last week, editorial sympathies seem to lie largely with the Belgians. According to Dr. Louis L. Seaman, who writes of the incident in this week's *Independent*, more than 700 houses were damaged on the occasion of the first *Zeppelin* visit on the night of August 24, and "the exploding bombs killed ten innocent men and women and severely wounded eleven." In his opinion, "the object was the assassination of the sleeping royal family. This is not war, but murder." When Count von Bernstorff, the German Ambassador to the United States, was asked for his opinion, he replied that he considered the bomb-dropping "justifiable, because Antwerp is a fortress which we are besieging." And a German reserve officer in this country further explained the incident from the German standpoint in a lecture at New York University. The New York *Times* quotes him as saying:

"It is not to be denied that this first use of a *Zeppelin* spread fear and terror even tho innocent persons may have suffered. One must not forget, in considering this Antwerp incident, that as the Belgian king is commander-in-chief of his army, and therefore liable to military attack, it would not have been contrary to any rules of civilized warfare if the bombardment had resulted in his death. But further, authoritative sources confirm the fact that stores of food and ammunition magazines exist in the center of the Belgian city below the houses, and therefore the guilt for the destruction of private houses and for the killing of civilians must be charged to the Belgian military authorities, who should have placed these stores of food and ammunition, against which the German attack was probably directed, in military strongholds outside the city itself. The German rules of warfare proscribe the placing of all military perquisites in the fortifications themselves, and the residential parts of cities are thus not made liable to attack."

Several of our editors agree with the Richmond *News-Leader* that none of the belligerents except Great Britain and Belgium is bound by the terms of the Hague convention, relating to this subject, "and all are free to use dirigible bombs and aeroplane rapid-firing guns as they please." But the New York *World* will neither excuse nor palliate Germany's offense. It says:

"Antwerp was not besieged. The required notice to non-combatants had not been given. Even when these steps are taken, military attack is supposed to be aimed at military defense, not at houses and hospitals."

And this bombardment appears not as a military necessity, but as "a crime against humanity," to a host of other papers, including the Springfield *Republican*, New York *Times*, *Sun*, and *Evening Post*, Newark *News*, Philadelphia *Record*, Washington

A TROOP OF GERMAN UHLANS IN BELGIUM.

Note how inconspicuous are the service uniforms of these famous cavalymen. A peculiar and tragic interest attaches to this picture, for from the house shown at the extreme right four peasants who fired on German troops were taken out and shot.

Star and Post, *Baltimore News and Sun*, *Chicago News and Herald*, and *Knoxville Sentinel and Herald*.

There are other "atrocities" complained of by the Belgians, and included in the protest which is to be made to the United States as a neutral Power. Dr. Seaman, in the article already mentioned, cites some of them:

"The Germans have broken the rules of the Hague tribunal and have fired upon the white flag and upon Red Cross ambulances. A Red Cross officer was killed while burying German dead. Children and old men have been bayoneted. The soldiers burned villages of non-combatants, thereby repeating the tactics of the Boxer wars, when Chinese villages were burned and their inhabitants murdered, when the ransom demanded by punitive expeditions was not paid."

But the press of this country pay comparatively little attention to these charges. They remember that the Germans are invading a hostile country, and that while many unpleasant things may happen, many more will be reported. They are also mindful that if the Russians occupy East Prussia, similar stories may be reported from the other side. Bearing on the general question of German conduct, Mr. Sutro, of the *Morgen Journal*, would remind us that "the Germany Army has always been very punctilious," and "that the most impressive lesson that is inculcated in disciplining the highly trained men and officers of the German Army is that they must, above all, abstain from the atrocious acts with which they are now charged by the allied enemies of Germany." And we have the word of General Gallieni, in command of Paris, that the Germans have been treating the British and French wounded as well as they have their own men. Nor can the German reports of atrocities in Belgium be ignored. Besides the persistent accounts of "sniping" and treachery, a Berlin dispatch quoted in the *New York Times* says that "German soldiers returning from Belgium cruelly mutilated increase the German people's exasperation against the revolting atrocities of Belgian civilians." And in East Prussia we hear, from the same source, of "horrible atrocities."

Summing it all up, the *New York Evening Post* says the Germans may be "carrying on an inhuman war, but so are all the others."

"There is no such thing as humane war. No war ever was that did not drag down women and children, in Europe usually by the thousands. Dead women have been found in the wreck left by every army that ever fought in Europe—and children, too. The invaders who are halted at a crossroads by fire

from a near-by village can not stop to inquire before unlimbering their batteries if all women and children have been removed; they can not ask whether their shells will destroy innocent houses a mile in the rear of their immediate target. Never was there a war in which an enemy was not accused of atrocities. . . .

"It is true that there are certain laws laid down for the creation of a more humane warfare. . . . We would, of course, be the last to palliate needless cruelties or wanton destruction. But if certain Belgians, certain Russians, Austrians, and Germans have not kept their passions in check, if they have murdered dozens instead of legally slaughtering by the tens of thousands—why, the chances are that it is the system, not the men, who are at fault. Such things will be so long as Christianity is unable to banish from earth that which is the sum of all wickedness."

MACHINERY OF THE WAR

AMID THE GRIM RECORDS of Europe's war received from day to day, our editorial observers note certain distinctly "modern features" of the conflict. There are the "aerial fleets," for instance, which, we are assured, prove to be of "utter insignificance," while the cavalry horse keeps his historic glory; and we read in the *New York Press* that "British and French horsemen have been a tower of strength to the armies of the Allies, and the German Uhlans have borne in almost every case the first brunt of the Kaiser's victorious advance." Among other discoveries is the fact that without the automobile "the speedy mobilization of the continental armies, and the rapidity with which huge supplies of ammunition and commissary material are delivered to troops at the front would be impossible." We read, moreover, of the significance and importance of modern field artillery, and of the monstrous German siege-guns that were used for the first time at Namur, which fell in three days. To quote a London correspondent of the *New York American*:

"The German advance into France, despite the numerous fortresses, would have been impossible without the siege field-guns, which no one knew the German Army had until a week ago. Its thirteen and one-half inch guns are bigger than the greatest guns used on some United States superdreadnoughts.

"Bear in mind, the effectiveness of such a gun on a stable land platform is increased about 100 per cent. over the floating platform of a battle-ship at full speed."

In considering the field artillery, which is "practically the third hand of an effective army, the others being the cavalry and infantry," the *Brooklyn Times* calls attention to the fact

A BRITISH ARMED AND ARMORED SEA-PLANE.

A GERMAN AEROPLANE GUN ON A MOTOR-CARRIAGE.

TWO WEAPONS NOW IN USE FOR THE FIRST TIME IN A GREAT WAR.

150 to 180 miles away, and these main stations communicate with the Eiffel Tower Station in Paris inside of a radius of 500 miles.

"What the ordinary high-power motor-car has done to aid the General Staff of the contending armies has been shown in news dispatches from the front, picturing General Joffre, of the French forces, here, there, and everywhere, looking after French defenses in a racing car driven by a winner of a French Grand Prix. In the swift and secret dispatch of the English expeditionary army to the Continent, motor-cars were used in many instances in preference to railway-trains to transport the troops to their embarking point. In Belgium, large bodies of German troops have been moved in similar manner."

Turning, finally, to the most novel and most disappointing of "modern features," the *Syracuse Post-Standard* says that "beyond question the most spectacular feature of present-day warfare is the assault from the upper air," and yet "the England, France, and Germany are well equipped with aerial vessels, the destruction they have wrought has been practically negligible." And this journal adds:

"In war the dirigible is especially dangerous. Its enormous size, from forty-five to fifty feet in diameter and about 500 feet in length, makes it an excellent target. At a distance of a mile or two a rapid-fire gun should not find it difficult to wing an airship, even the moving at a high speed. The thing is especially vulnerable for another reason. 'There are,' says *The Engineering Record*, 'no non-burning gases possessing any considerable lifting power.'

"Air-ship raids will not figure dangerously in the tactics of the nations at war either by land or sea."

An expert's opinion on this matter is found in *The Aeroplane* (London), which says editorially that—

"In reality, the small amount of fighting in the air may be put down to two main causes. First, because aeroplanes avoid one another purposely; and, secondly, because there is no such thing as a proper fighting aeroplane.

"There are two good reasons for aeroplanes avoiding one another. The first and most important is that the duty of a scout is scouting. He is there to get information about the enemy's forces. If he is met by an enemy's aircraft before he gets his information, he is very unwise to become involved in an avoidable fight, and when once he has got his information it is his first duty of all to get back with that information at all costs. The second reason is that while it takes a brave man to fly over hostile country at all, a man of altogether exceptional bravery is needed to go deliberately into a fight with another aircraft unless he has some obvious advantage over the machine he is attacking. A soldier may take his chance of being shot on the ground, or an aviator may risk having his machine damaged by fire from the ground by coming too low for a short while in search of important information, but getting mixed up in a battle in mid-air when it can be avoided is quite another matter."

NEW EFFORTS TO RAISE RAIL-RATES

WITHIN THIRTY DAYS "the colossal character of the blunder" of the Interstate Commerce Commission in deciding the Eastern freight-rate case, the *New York Globe* remarks rather acridly, becomes more or less apparent to that body, and this journal considers as "cheering" the report from Washington that the ruling is to be recalled and reversed. The great event of war's outbreak in Europe, continues *The Globe*, had no more meaning for the Commission "than a new revolution in Ecuador or Santo Domingo would have had," and in consequence it "calmly handed down an award based on conditions which had already become obsolete." We read further that "the decision of August 1 was made by deaf, dumb, and blind men, locked up in a bomb-proof," and that "the Commission should be glad of an opportunity to blot its memory out." More tranquil is the *Newark (N. J.) News*, which believes it is "self-obvious" that the rate case should be reopened "on account of conditions in trade caused by the war." If the roads can make a reasonable case, it adds, "they are entitled to prompt relief. *Per contra*, if the predicted American industrial expansion comes because of the war, they may expect to face a readjustment equally corresponding." The decision of August 1, it will be remembered, allows the requested 5 per cent. freight-rate increase, with qualifications, to lines operating west of Pittsburg and Buffalo to Chicago; but not to lines east of Pittsburg and Buffalo to the seaboard. *The Wall Street Journal* thinks that

"It would do the Commission's dignity no harm to reopen the case and to modify the decision to the extent of granting at once, by way of a small general increase in rates, the relief that the Commission itself concedes they have needed for several years and obviously must need now more than ever. If it should later develop that, by reason of both the rate increase and the adoption of the other remedies suggested by the Commission, the railroads were obtaining too much, the Commission has always the power to reduce rates, with or without formal complaint from shippers."

That the railroads themselves have no intention of applying for a rehearing of the freight-rate case is the statement of *The Wall Street Journal*. It finds confirmation of its belief in the fact that all the Eastern trunk lines, following the Pennsylvania's example, are to file new tariffs for increased passenger rates. This is done to follow out the instructions of the Commission that each class of traffic should bear its share of the general operating expense. At the same time this journal informs us that "the railroads by no means disapprove of the efforts put forth in banking and investment quarters to secure

a rehearing," and, as stating the position of the railroads, cites the remarks of "a prominent Eastern executive," who says in part:

"We have told the Commission everything we could about the rate situation, and the reply was that we were wrong. . . . The best course open to us is to say nothing, but go ahead attempting to apply the remedies the Commission prescribed.

"We are at work on proposed increases in interstate passenger-fares for all the territory between New York and Chicago. This is in response to the Commission's opinion, expressed in the Eastern rate decision, that each class of traffic should bear its due proportion of the general operating expense. As a matter of fact, that is impossible.

"I don't know just how popular the idea of raising passenger-rates will be with the Commission's constituents. What is a more immediately practical question, I don't know just how we are going to avoid trouble with State commissions and laws where the interstate passenger-rates we propose to raise compete with

SOUTH AMERICA AS OUR WAR PRIZE

NOTHING SHORT of "tens of millions of dollars a day" in business awaits the American exporter and manufacturer in Central and South America, says the *Norfolk Virginian-Pilot*, and, too, "is to be had almost for the asking." All that is needed to utilize properly "the commercial opportunity of a century," this journal adds, is that Americans "go after the trade in the right way and with sufficient vigor and energy." This observation is enthusiastically echoed by many editors in various sections of the country. Nevertheless there are less sanguine observers, such as the *New York Journal of Commerce*, which grants that South America must supply certain of its needs from our store during the war, but notes that "if we increase our capacity materially in lines

where European competition has been too much for us in the past, when that competition returns, as it is sure to do, we may find ourselves outdistanced again on account of the cheaper production and lower prices of other countries." And yet, this journal goes on to say, "there may be a new incentive for energetic rivalry," and if we proceed "with caution and close calculation, we ought to gain an advantage much of which we can hold and improve upon as the result of experience." We have shown certain deficiencies in handling South-American trade hitherto, it appears:

"There has been complaint in the past of failure to adapt goods to the requirements of the markets sought and to exercise care in their packing and their prompt and regular shipment and delivery. There has also been neglect of the terms of credit and payment customary in Latin-American countries, which European dealers

have been assiduous in complying with. Their success in this trade has been largely due to attention to such matters."

An authoritative analysis of the matter appears in a published statement of William M. Benney, chief of the foreign department of the National Association of Manufacturers. Mr. Benney is reported by the *New York Tribune* as saying:

"Most of the writers for the daily press have called attention only to the possibilities of increased trade with Latin America on account of the great war. If we look at the trade of Germany with the ten republics of South America, for instance, we find that large as that trade is, it falls far short of the volume of our own sales to Germany.

"On the other hand, the United States is a large buyer of German goods, and while the shutting off of these German imports means embarrassment for some of our industries, it also affords opportunities for larger sales of domestic competing products in many lines. Germany also has a valuable trade with Canada, Mexico, Cuba, and Central America.

"We have, then, the following possibilities in the western hemisphere in the national balancing of trade:

Possible loss of sales to Germany in one year...	\$338,000,000
German sales to United States, 1913.....	\$185,000,000
German sales to the ten republics of South America, 1912 or 1913.....	166,820,000
German sales to Central America, 1912.....	4,060,000
German sales to Mexico, 1912.....	11,914,000
German sales to Cuba, 1912.....	7,573,000
German sales to Canada, 1913.....	15,500,000

Possible sales to German customers in the western hemisphere.....	\$390,867,000
---	---------------

THE PATHS OF THE INVADERS.

Germany presses on into the heart of France, but the Russian hosts move more slowly toward Berlin and Vienna. The arrows note the general direction taken by the different armies of invasion. At the left is (1) the German turning force which drove back the Allies' left flank on the way to Paris; 2, 3, and 4 show the general position of the several German armies which have been battling against the center and right of the Allies, coming from Belgium, Luxemburg, Lorraine, and Alsace; 5 and 6, respectively, are the German and Austrian invasions of Poland; 7 is the strong Russian force moving on Lemberg and invading Austria; 8, at the north, shows the Russian movement across East Prussia. While Paris is but 170 miles from Brussels, 180 from Nancy, and 130 from Lille, Berlin is 225 from Thorn and 335 from Königsberg. Vienna is 370 miles from Lemberg.

purely intrastate rates based on two-cent law. But in time we will go further and ask the State legislatures to repeal or amend their passenger-rate laws."

The roads are protesting, too, against the Government's proposed emergency tax of 10 per cent. on all passenger-tickets and mileage-books. If this tax be imposed, say railroad authorities, it will be impossible for them to increase their passenger-rates, even if, as Washington report has it, the roads are to be allowed to make a 10-per-cent. raise. Meanwhile, as a reply to the railroads, we may quote from the *New York American* as follows:

"The public was pretty well satisfied that the regulation of passenger-rates—State and national—was complete in the densely populated districts of the East. But the alert passenger-agent has discovered that the traveling public saves a little by buying round-trip tickets, and that little he proposes to recapture if the Interstate Commerce Commission will allow it.

"The usual explanation, full of 'no actual change,' 'merely' this or that, 'simply putting the round trip on the one-way basis,' etc., is put forth, but all the reassuring and minimizing adverbs and adjectives fail in face of the fact that instead of the \$4 charged for the round trip between New York and Philadelphia the new schedule calls for \$4.50.

"However, they have to go to the Interstate Commerce Commission for permission to make these charges. The public is not without its defense, but the railroad managers will continue to wonder why they are so unpopular."

"The total German market, therefore, in the western hemisphere appears to be considerably in excess of the American market in Germany. However, in addition to the \$328,000,000 accredited as sales to Germany, many millions of dollars' worth of American goods are bought or handled by Germany for consumption in Austria-Hungary, Russia, the Balkan States, and Switzerland, in the marketing of which Germany can no longer help us."

In South America Germany's loss of trade, says a writer in the *New York Evening Post*, amounts to upward of \$144,500,000, "represented chiefly by such manufactured articles as general machinery, motors, stationary engines, tools, pumps, automobiles, farming implements and machinery, paints, rubber, wearing apparel, and paper." And we read further that while "England and France, if successful in blockading Germany, will in all probability maintain their present export trade," still "they can hardly expect to do more"; and "Germany seems to have ousted herself for years to come."

South America is our "richest trade prize of the war," says a writer in *Collier's Weekly*, who adds that, "altho this vast region lies at our very feet, and is bound to us by geographical and sentimental ties, by a curious irony it has taken a great and devastating European struggle to give us the adequate commercial opening there that long ago should have been ours." Lack of basic understanding between the two continents is the reason for this, we read generally.

But a new era has begun, if we are to believe the press reports which reveal the Government's activities along trade education lines. This work has been going on for some years, as a preparation for the opening of the Panama Canal. Now it receives an added impetus, as may be gathered from a Washington dispatch in *The Iron Trade Review* (Cleveland). We read:

"It has just been announced that efforts will be made at once to bring this country and Latin America into closer industrial relations, and to this end it has arranged to send a number of experts in commercial lines as a traveling force to expand the trade of this country. Representatives of the steel and hardware trades will be included in the list. Names of these representatives will be made public soon. . . . This force will consist of men familiar with the language, customs, and business methods of Latin America, who have had practical experience in the lines of business carried on with Latin America."

The *Columbus Dispatch* speaks of the South-American accomplishments of the Bureau of Domestic and Foreign Commerce as "a fine service," and points out that—

"the great demand is for foodstuffs, but textiles, cement, flour,

coal, coke, paper, petroleum, steel rails, tools, machinery, jewelry, hops, and wines are also wanted. The reports also contain lists of articles that Latin America is offering for sale in the United States. In the list are wool, meat, hides, tallow, quebracho wood and extract, cacao, beeswax, coffee, bananas, tin, and mahogany."

Because our bankers "are rapidly placing financial facilities at the disposal of our own business men, and those of Latin

WHERE RUSSIA FIGHTS.

A Russian invading army was checked at Allenstein, in East Prussia, but another has won successes around Lemberg, in Austrian Galicia. Counter-invasions have been made by German armies in the direction of Lodz, and by the Austrians toward Lublin. The Russian objectives are Berlin and Vienna. But the Germans expect the forts along the Vistula to halt the Slav invasion, while the Carpathians are looked upon in Austria as a strong defense for the capital.

America," the *Cincinnati Enquirer* predicts during the next sixty days "a greatly increased exportation of manufactured goods," and it adds:

"The South-American countries are now eager to trade with the United States, for their Governments, their financiers, their merchants know that Europe now, and probably for months in the future, will be unable to transact business with them to their profit or satisfaction.

"Take the trade statistics of Argentina for the year 1913, and note the fact that it imported from Great Britain in that year commodities to the value of \$126,000,000, from Germany to the value of nearly \$69,000,000, from the United States approximately \$60,000,000.

"That supply from Germany is impossible now, while war has so disturbed Great Britain, France, Belgium, and Italy, finances there are so bad, manufacturing in all of them laboring under such difficulties, transportation so uncertain, that Argentina turns to the United States to transact far greater business than ever before.

"This also applies to every other Latin-American country, and by the patronage of those countries our export trade should increase hundreds of millions of dollars during the coming twelve months."

A GERMAN MOVE IN HOLLAND

A BARGAIN that was concluded before the war began is of interest now as showing Germany's commercial expansion toward the North Sea which England hopes to check. Rotterdam, Amsterdam, and Antwerp were largely German ports in a commercial sense, but were jealously guarded against actual German control. Hence the importance of Germany's victory in a duel with the Dutch Government about a concession of Dutch territory for the erection of steel-works and building of a harbor. The harbor concession was the fruit of nearly two years' persistent effort pursued with the tireless patience so characteristic of German diplomacy. It was not exactly a public grant, according to *The Standard* (London), and can not be in any way disturbed by the circumstances of the present war. In any case, a private harbor and steel-works are to be built on the northern bank of the New Waterway, the canal which connects the port of Rotterdam with the North Sea. In return for this grant, according to the authority cited, Germany had made to Holland attractive proposals in regard to building war-ships for the defense of the Dutch East Indies. The principal advantage which Germany will gain from this concession lies in her power henceforth to manufacture arms and accumulate fuel within a few miles of the coast of England. This is at least *The Standard's* explanation of its importance. An interesting light is thrown on this subject by W. A. R. Zimmerman, the Burgomaster of Rotterdam, who is quoted in the *London Times* as saying:

"The Government has taken a decision which, in my opinion, will prove to be the most important and in its consequences more far-reaching than any action taken by the central authority for some time.

"It has granted to the Vulkan Company—in other words, to Mr. Thyssen, for the two names are practically synonymous—a license to establish a private harbor on the New Waterway at Vlaardingen. The harbor will be available for ocean-going vessels, and will be equipped for dealing with coal and ore. The ground will also be large enough to allow for repairing-shops and a repairing-wharf.

"From this and from the fact that the New Waterway is one of the most important outlets to the sea on the whole continent of Europe, it will be seen that this development is of great importance. All the more so, in that this action on the part of the Government constitutes a departure from the principles which hitherto have governed the administration of all harbors, docks, and waterways in Holland—namely, that they should be under public control. Administered on those lines, the Dutch harbors have become great, and Rotterdam itself has become the second port on the continent of Europe. For a small country those principles have obvious advantages, for under any other system important docks and harbors could be sold to any one, irrespective of nationality.

"Rather more than two years ago Mr. Thyssen made strong

efforts to obtain an independent position on the Waterway. It was soon made evident that the entire public opinion of Rotterdam was strongly opposed to the scheme. The City Council unanimously requested the Burgomaster and Wethouders [Aldermen] to use every means at their disposal to oppose the establishment of private docks, and this the city authorities have done. Nevertheless, the Government has now granted a license to a German firm, which is a rival, if not in some respects superior to, Krupp."

The words of *The Standard* quoted above are suggestive and noteworthy. It was a long time, we are told, before the

Dutch ministers would give Germany a right to use the Waterway. Hence we read:

"It was at once felt by far-seeing men in Holland that there might be ultimate danger to Dutch neutrality in the lodgment of an undertaking of the kind within two or three miles of Rotterdam.

"The Dutch Government had one simple means of vetoing the whole proposal. Messrs. Thyssen were free to buy any land behind the Waterway that happened to be in the market, but the few feet of ground immediately above the high-water mark are the property of the Dutch Government. Without official consent to cut through this strip of foreshore the scheme could not be carried out. Docks and repairing establishments might be built, but no access could be had to them from the Waterway. Hence the German Minister at The

Hague, working on behalf of Messrs. Thyssen, has concentrated on these few feet of foreshore. He has, at least, asked for the consent of the Dutch Government to cut through them, and Messrs. Thyssen will shortly be in a position to proceed with their far-reaching plans."

English suspicions had been thus expressed in the same newspaper before the present war broke out:

"Messrs. Thyssen's harbor, it must be remembered, is to be a quite private concern; it is not to be under the administration of the Dutch authorities, and it would be perfectly practicable to build up, under the guise of a purely commercial undertaking, something like a German naval base within six or seven hours of the shores of Great Britain. In the event of a European war it would be quite impossible for the Netherlands Government to enforce neutrality, and the temptation to Germany to make use of its opportunity would be irresistible. At any rate, the concession of the privileges sought with such ardor by German diplomacy is regarded by thoughtful observers here as a significant step forward in the Germanization of Holland."

Sydney Brooks in the *London Daily Chronicle* speaks thus of German plans:

"For three decades at least Holland, Belgium, and Denmark have been the objects of the Pan-German propaganda. The Dutch have been plainly told that it is an insufferable monstrosity that the mouth of the Rhine, the German Tiber, should be in the hands of strangers and that a small coast people should set astride of Germany's busiest river. They have been warned that Germany must advance to her natural confines and that at present Germany is in the position of a man who is denied a key to his own front door."

GERMAN RESERVISTS ARRESTED IN ENGLAND.

FOREIGN COMMENT

LOYALTY OF GERMAN SOCIALISTS

THE GERMAN followers of the great Socialist leader Bebel are very different from the French followers of Jaurès, the brilliant Socialist and antimilitarist, recently assassinated because of his outspoken opposition to the military ardor and warlike enthusiasm which he saw animating the bulk of his fellow countrymen on the brink of war. The German Socialists are ready to fight down what they style Russian despotism, and they rally round their Government in its war policy because of their hatred and dread of the Czar. They style the Kaiser "a prince of peace," and speak of him as "showing himself the protector of universal tranquillity." The chief organ of Socialism in Berlin, the *Vorwärts*, contains the following editorial utterance:

"We were always open enemies of the monarchic form of government, and we always will be. We were often obliged to conduct a bitter opposition to the temperamental wearer of the crown. But we have to acknowledge to-day that William II. has shown himself the friend of universal peace."

In harmony with this is the speech made at a mass-meeting of Social Democrats by N. Feuerstein, Socialist member of the Reichstag, from which the *Vossische Zeitung* (Berlin) quotes the following passage:

"We are all convinced that the German Government is peace-loving and desires nothing better than to uphold the peace. But in the case of the present war it is the duty of every Social Democrat called to arms to do his best fighting beside his fellow countrymen, especially when operations are directed against Russia, whose absolute despotism constitutes a menace and danger to civilized Europe."

"War in our country," declares the *Volkstimme*, a Socialist organ of Chemnitz, compels all comrades "to unite against the foe," and this paper proceeds to say:

"All must set aside the aims and purposes of their party, and bear in mind one fact—Germany, and in a larger sense all Europe, is endangered by Russian despotism. At this moment we all feel the duty to fight chiefly and exclusively against Russian despotism. Germany's women and children must not become the prey of Russian bestiality; the German country must not be the spoil of Cossacks; because if the Allies should be victorious, not an English governor or a French republican would rule over Germany, but the Russian Czar. Therefore we must defend at this moment everything that means German culture and German liberty against a merciless and barbaric enemy."

A similar sentiment is expressed by the Socialist Deputy Kolb, in an article in *Volksfreund* (Carlsruhe), when he says:

"If the Russian Government should really be senseless enough to force, against all common sense, reason, and humanity, this European war, every Social Democrat will be expected to do his duty toward his fatherland, culture, and humanity. It will be the last thing that Social Democracy could endure to have Russian Czarism act as political arbiter of Europe."

Deputy Haase, speaking in the Reichstag, voiced the view of the Socialists in a speech regretting the war, but pledging

support to the Government. He is quoted as follows in the *Kölnische Zeitung*:

"On behalf of my party, I wish to make the following declaration:

"The policy of Imperialism has plunged the entire world into war, and made the peoples fling themselves against each other and deluge Europe in a torrent of blood. The defenders of this policy will have to bear full responsibility before the world.

"The Social Democrats of Germany have combated this policy with all their strength, and at this very hour they combat it still, in union with their French brothers, who have always labored to maintain peace. Our efforts have failed. We find ourselves in a state of war and menaced with foreign invasion. It is no longer a question of the cause of the war; it is a question of the means whereby we can defend our frontier. But we have the right to think with sorrow of the millions of our fellow countrymen who have been dragged, in spite of themselves, into this catastrophe.

"It is they who will suffer from the horrors of war. Our eyes accompany our soldiers, but we think of the mothers who are forced to separate from their sons, of the women and children deprived suddenly of their bread-winners, and of all those who will suffer from misery and hunger. To-morrow thousands of sick and wounded will return to us. We consider it our duty to ease their pains and to assist them as much as possible.

"Germany is threatened with annihilation by Russian despotism, and to prevent this danger the Government can count on the support of the Social Democratic party on condition that all efforts are made to secure, at the earliest possible moment, an honorable and permanent international peace."

The British Socialists can scarcely believe that their German comrades are supporting the Kaiser in the present war. Thus *The Labor Leader* (London), "a journal of Socialism, Trade Unionism, and Politics," while expressing the horror and hatred with which English Socialists regard the havoc of internecine strife, remarks:

"Disgraceful attempts have been made by the capitalist press of this country to depict the Socialists of Germany as blinded 'Jingoes,' cheering the Kaiser and the cause of German Imperialism as enthusiastically as the most bigoted reactionaries. Such reports are a vicious misrepresentation of the facts. We have no doubt the German people are being told that British Socialists are cheering King George and British Imperialism. On both sides of the North Sea the ruling classes are anxious to convince the workers that their comrades have played traitor to the sacred trust of international solidarity.

"The truth is the German Socialists have protested against the war probably more vigorously than the Socialists of any country in Europe. On the very eve of the war the party organized demonstrations throughout the country attended by hundreds of thousands of people; in Berlin alone the audiences totaled seventy thousand. A manifesto was also distributed broadcast voicing 'in the name of humanity and civilization a burning protest against the criminal behavior of the war-mongers.' This agitation was only suppressed by the declaration of martial law."

"BUSINESS IS VERRA DULL THE NOO!"

—The Sun (Vancouver, B. C.).

MORAL RESPONSIBILITY IN WARFARE

NOTHING is more striking in the outbreak of the present war than the way in which everybody is considering it from a moral standpoint. The press refer with horror to the bloody battle-fields heaped with the slain; the idea of military glory or territorial expansion has sunk into the background, and all the present events are treated in a tone which indicates a prevailing feeling that such a struggle is a barbarous anachronism in our day. The Hague Tribunal has done one thing for the world in making the Dove of Peace take a living place beside the eagles of Napoleonism in the popular mind. The sense of responsibility for the homicidal ravages of howitzers and machine guns has been a question most of all the subject of debate in the press, and we read much more about the agents or agencies that caused the new struggle in the cockpit of Europe, the famine with which the poor are universally threatened, the bankruptcy of traders and the paralyzing of commerce, than about the outcome of the struggle or the probable triumph of Pan-Germanism or Pan-Slavism. In fact, alongside the war in the field is the fierce war of newspapers waged with the object of pointing out and defaming the wire-pullers or instigators of a ghastly Armageddon. The British press naturally regard William II. as the culprit; while the German press denounce such an idea as grossly libelous. The former notion is somewhat savagely presented in the *London (Canada) Advertiser*, which declares that

"the Kaiser wears a badge of infamy before the whole world." Here is one of its bitterest paragraphs:

"The Emperor of Germany has defiled the earth. He has stood forward against a background of friendship and moderation, a supreme and terrible iconoclast. He will drag Europe and the world through the mire to achieve his mad ambitions. He will dismantle every good thing that the centuries of invention and achievement have placed on substantial foundations. Art, commerce, international amity, the individual triumphs of brotherhood and Christianity, all may fall before this horrible monster. He has polluted his escutcheon, defiled his countrymen; his acts do not measure the all-embracing consequences that may come after him. He has been guided by no good intentions. Capitulation would have been his great virtue. He was looked for as the peacemaker of all time. The world looked with friendly eyes toward him a few days ago. There was no vast issue of empire which assailed his honor. His cause was the cause of the barbarian. And if the world can expect so little from the statesman-emperor, who suddenly threw off his mask to reveal the greatest criminal of the ages, what are the possibilities if the hordes of the Orient should some day sue for supremacy?"

This "responsibility," as implicating the Kaiser, an eminent German of learning, experience, and authority utterly repudiates. We refer to the following utterance of Mr. Herman Ridder, the editor of the able *New-Yorker Staats Zeitung*, who prints his statement both in German and English. The substance of his editorial may thus be given in his own words, as he impartially distributes the blame among all the Great Powers of Europe, omitting Germany:

"To picture the Kaiser as a bloodthirsty war-lord is arrant

nonsense. The telegrams that were exchanged between the Kaiser and the Czar show how far the German Emperor went to preserve the peace of Europe.

"Further to assume that the Emperor declared war in the present instance against the will of Germany is an absurd assumption.

"Germany is a military nation. Its people are soldiers, and the problems of Germany from a military standpoint are known to every German citizen. When Russia mobilized her army it meant war, and every German knew and expected it. Had Germany been under a republican form of government war would have been declared just as quickly, and just as certainly, and just as surely.

"The Emperor is a part of the German national life, but by no means an all-important part. The rôle he plays in the commercial, artistic, and military life of Germany is in direct proportion to his personal magnetism and to his personal ability. In this situation, however, the war spirit was abroad in the land,

and no Emperor or Reichstag could have controlled it for very long. Russian mobilization spelled danger for Germany, and the nation realized it and acted accordingly.

"It is my belief, which is worth as little or as much as that of any other American who tries to keep in touch with the situation abroad, that the blow of Russia and France against Germany has been delayed many years through the moderation and peace-loving nature of the present German Emperor. An 'ambitious-war-lord' would have plunged Europe into war at the time of the Morocco crisis.

"England has been jealous of Germany and her commercial triumphs for over a generation. France has advertised her loss of the provinces of Alsace and Lorraine until the whole world has accepted her sentimental attitude on this question. Russia since her setback by Japan

has been looking westward for an outlet to the sea.

"This is not a war of conquest. It is not a Napoleonic war to satisfy the personal ambitions of an emperor. It is a defensive war for the German race with their national life at stake. Europe was ready for this struggle."

We find a French view in an article by Mr. Paul Leroy-Beaulieu in his *Économiste Français* (Paris), which he entitles "The Greedy Designs of the German Ogre." He gives an account of German designs in colonizing Africa, Asia, and the coasts and islands of the Pacific, and after a long and emphatic account of these designs he concludes bitterly:

"Such is the greed of the German ogre. Is it not quite time that all independent countries of Europe united in order to prevent the establishment of his growing tyranny and to stop the inroads of a country which is none other than a beast of prey? He is trying to subject all such countries to the barbarous treatment which he inflicts upon them. This he has been doing for forty-three years with increasing brutality, as is shown in his treatment of Alsace-Lorraine."

Such expressions show how the French feel in the dark hour when the spiked helmets are nearing Paris. This writer informs us that at the last session of the Academy of Moral and Political Science the president of that body, Mr. Henri Bergson, the most celebrated French philosopher of the present day, said:

"The struggle against Germany which is now going on is no more nor no less than a struggle of civilization against barbarism. . . . The German ogre must be placed in such a condition that it will be impossible for him to devour his neighbors or even distant countries, at least during the century which we have set out upon."

SCIENCE AND INVENTION

EUROPEAN WAR AND AMERICAN MINERALS

WAR is a great disturber of industrial and commercial conditions. It makes the fortunes of some persons and ruins others. Most of us have already felt the pressure of disturbed conditions in the increase of prices, but we are quite ready to believe that the country at large is to benefit in some way by the disturbance. According to Secretary Franklin K. Lane, in an interview sent out from the Interior Department in Washington, one of the most direct benefits will be in making us realize to a greater extent the value of our own mineral resources. Mr. Lane thinks it entirely possible so to utilize these resources and expand our industries that the label "Made in America" will become familiar in our own and foreign markets. Says the Secretary:

"Of an importance second only to that of the food-supply is the supply of mineral products necessary to meet the requirements of twentieth-century civilization. One of the first effects of the war has been to make us realize the interdependence of nations in the matter of food-supply. Most of the countries now at war are dependent upon importation of foodstuffs, and we have cause for self-congratulation in the United States that we are able to feed ourselves. What we possibly have not so fully realized is that we are nearly as independent in the possession of essential mineral resources, and that the interference with manufacturing caused by interruption of the flow of importations of many necessary raw materials may be overcome almost wholly by development of neglected resources in our own country."

Mr. Lane believes that the United States can very largely make itself independent of the rest of the world in its manufactures. The main difficulties to be overcome, he thinks, are in the rearrangement of the distribution system. It has been easier, and perhaps cheaper, to import mineral products and materials than to develop our own resources. Forced to the latter course, American enterprise and energy will almost at once show results. To quote again:

"For the maintenance of agriculture, for instance, we rely more and more largely upon mineral fertilizers. The three essential plant-foods are potash, nitrogen, and phosphorus, the latter used generally in the form of phosphates. We have depended, with the rest of the world, very largely upon the mines of Germany for our supply of potash salts, and war has cut off this supply, but we have large deposits of potash in a California reserve which can be immediately opened and developed if a bill now before Congress to make these supplies available is enacted. Chile holds a practical world monopoly of the most readily available nitrogen in its great nitrate beds. . . . Fortunately . . . we can draw nitrogen from the air and fix it with lime by the use of large and cheap electrical development, as is done at Niagara Falls and in Norway. . . .

"The Southern States have for years largely supplied the world with phosphates, but because of the distribution system a large part of this supply has gone to Europe, and much of the phosphates used in the Western States have been imported across the Pacific. We have some 3,000,000 acres of phosphate lands in the West lying near the smelters from which is produced the sulfuric acid necessary to convert these phosphates into form available for plant-food."

Among other industries, now dependent upon the products of other countries, which can be made independent, Mr. Lane specifies the steel industry. He says:

"Manganese is of large importance to this industry, and the largest supply of ore comes from Russia and other countries with which commerce is now paralyzed. . . . We have great stores of manganese in this country which has been largely untouched because it is somewhat inferior in quality. To bring this home supply into use means merely adoption of methods

for its purification, which are known and can be successfully used. . . . There are other international contributions, too, in the steel industry. We have depended largely upon the island of Ceylon for the graphite used in the manufacture of the crucibles in which crucible steel for edge-tools and small firearms is made. Or to take another metal, European smelters, using in part Chinese and Mexican ores, have in late years furnished much of the world's supply of antimony, which is used in the manufacture of type-metal, and also medicinally. War has paralyzed the production of antimony in England (at Newcastle), and prices have gone up. Antimony, however, is easily extracted from many low-grade ores which we have in great quantities in at least seven States, and there is no reason why we should not make this extraction and be independent of other countries, both as to supply and prices. Similar conditions hold in the case of arsenic.

"A large tonnage of ferromanganese alloys comes from Germany and England. It is only in the last ten years that we have freed ourselves from Sicily's monopolistic control of the sulfur-supply. Flint pebbles are common and the supply large enough in the United States, but for such an apparently unimportant product as these, used in the fine grinding of cement and ores, we have been depending upon the chalk cliffs of England, Denmark, and France."

According to Mr. Lane, the Government is doing all that it can to aid industry in such matters as these. We are told:

"The nation's greatest natural resources are a part of the public domain, and under the charge of the Interior Department. The annual reports on the mineral resources of the United States published by the United States Geological Survey for the last thirty years contain not only statistics of yearly production of all commercial minerals, but also useful facts regarding the occurrence, exploitation, and application in the arts and sciences of the mineral wealth of the country. The Geological Survey has been instructed to furnish upon request the addresses of producers from whom buyers can supply their wants if the mineral is produced at all in this country or information regarding the localities where reported deposits are undeveloped. In some instances large deposits remain undeveloped simply because of the fact that distance from market has given to the foreign sources of raw material with the lower ocean freights an advantage over domestic producers shipping by rail."

Asked what immediate effects upon mineral industries may be expected from the war, Mr. Lane replied that an instance is the copper industry, which has already felt injurious effects in the curtailment of production:

"While considerable copper is consumed in the munitions of war, the constructive arts of peace furnish a far better world market. . . . In the case of zinc, however, the effect of the European war is the opposite. The smelting centers of the Continent are in the zone of fighting. In Belgium, for instance, practically all the zinc smelters lie along the line of attack chosen by the German armies, while in Rhenish Prussia, Austria-Hungary, and Russian Poland the smelters are likewise located where military operations promise to be most active. It is within the limits of probability to expect a loss of a half million tons in the foreign production of zinc, or nearly half the world's output, with beneficial effect upon the recent overproduction in the United States, especially as affording the opportunity to export zinc and galvanized-iron products to South-American countries which market has hitherto been only in part utilized by our exporters.

"Fuel-oil has a large use in naval warfare of to-day, yet the tying up of the big tank-steamers on both the Atlantic and Pacific seaports is already embarrassing the oil-producers of this country who depend so largely upon the export trade in all the forms of petroleum, crude and refined. On the other hand, Russia, our strongest rival in oil production, must suffer more complete and longer-continued interruption of exports, which should tend to enlarge the market for our oil.

"The supply of cheap foreign barytes has prevented the

A TANK FIRE AT ITS HEIGHT.

AFTER THE "SUDS" WERE TURNED ON.

development of many good deposits of that mineral, but with the consumers on the Atlantic seaboard already looking for domestic supplies, some of the Southern mines should be reopened to supplement the outputs of those already in operation.

"The closure of the European market leaves but one buyer for the radium ores of Colorado and Utah, which is decidedly to the disadvantage of the miner. Had the legislation introduced in Congress been promptly enacted the United States Government would probably have been buying these ores at this time.

"While the United States leads in coal-mines, the six European nations now at war happen to be the six next largest coal-mining countries, producing together over half the world's coal. Interference with both the mining and the commerce of these nations must necessarily increase the demand for our coal, at least in the neutral countries of the world. And coal is our one resource about which there need be no present anxiety. The United States is now producing 40 per cent. of the world's supply of coal, and the reserves yet to be drawn upon exceed, so far as known, those of all the rest of the world combined. It is not generally known, however, to what an extent we have been depending upon Europe, principally Germany, for many of the chemical products derivable from coal, and which we have been permitting to go to waste, in the most reckless manner. Coal-tar obtained in the manufacture of coal-gas and of coke (in retort ovens) is capable of producing hundreds of chemical products, but the chemical industries dependent upon coal-tar as a raw material have had little development in the United States. Our imports of coal-tar products in 1913 were valued at \$11,000,000 at initiating points, and when they reached the ultimate consumer probably cost double that amount. If the present war continues any length of time the American consumer will have to do without aniline colors and dyes, certain drugs, and numerous other coal-tar products, or the American manufacturers will undertake to supply these essential commodities which have hitherto carried the label 'Made in Germany.'

"The Panama Canal is opened in time to help us in many ways. Bolivia, for instance, is one of the greatest tin-producing countries in the world, but its heaviest exportations have been to Europe, and the United States has been getting its supply of materials for the manufacture of tin-plate and tin alloys from London and Liverpool. With the suspension of European

industry and the opening of the canal, there is no good reason why we should not now step in, bring Bolivia's tin ore to this country, and manufacture it."

"This change of supply would not necessarily mean higher prices in this country, Mr. Lane thinks. During the transition from one supply to another, and the development of new sources of material, cost of production might possibly be slightly enhanced, but with a new production and distribution system, wholly domestic, once established, there is no reason why foreign fluctuations in prices should affect our industries or the prices of our products to home consumers.

NO MORE TANK FIRES

THE EFFECTIVENESS of foam or "suds" in putting out fires in oil or other liquid fuel was demonstrated some time ago, and was duly reported in these pages. It has now been applied in an automatic extinguishing plant recently installed at the Standard Oil Company's refinery at Bayonne, N. J. The satisfactory results of several tests seem to show that tank fires, long the bugaboo of the oil man, need no longer be feared. The equipment, which is described in *Engineering News* (New York, August 20) consists of stand-pipes placed around and connected to a storage tank. We read:

THE LAYER OF FOAM AFTER A HARD FIRE.

"The first test was run on July 22 in connection with a roofed tank 40 feet in diameter. The fire apparatus consisted of four stand-pipes 30 inches in diameter, the same heights as the tank, arranged outside and against the tank at intervals of 90 degrees. There was a direct outlet into the tank from the stand-pipes, about 12 inches wide by 8 inches deep, at the top of the tank. These stand-pipes contained about one gallon of a solution of sodium carbonate and soapbark per square foot of oil surface. Lead-lined sulfuric-acid containers were suspended from the top of the stand-pipes, and connected to a phosphor-bronze cable containing standard fusible links, controlled by a series of triggers. The cable and fusible links were arranged to permit

frequent inspection. In the test, water was admitted to the tank to within 3 feet of the top; 3,000 gallons of Mexican crude oil and some naphtha were floated upon the water, and a torch applied. When the fuses melted, the acid dropt into the chemical solution in the stand-pipe and the resulting foam started instantly into the tank through the opening. The fire was automatically extinguished in nine seconds by a 14-inch layer of foam.

"On July 24, another test was run, in which the fire was permitted to gain headway. The roof and automatic devices were removed, and the stand-pipes arranged to operate by hand on a 7-foot cable, so that the acid could be released at will. The water in the tank was lowered 6 feet. It was thought by some that the foam in issuing from the discharge opening would be destroyed to a certain extent, and that its swift delivery across the surface of the oil would be impossible. On the water in the tank, 3,000 gallons of Mexican crude oil and 100 gallons of gasoline were floated and ignited. The fire was permitted to rage for five minutes, when one of the stand-pipes was operated. It made little impression. The remaining stand-pipes were released thirty seconds later and the fire was extinguished in one minute."

TOPSY-TURVY EVOLUTION

THAT the development of life may not have proceeded from the simple to the complex, as Darwin and his followers have taught us, but rather from the complex to the simple, is the somewhat sensational thought elaborated by Prof. William Bateson, Director of the John Innes Horticultural Institution, in his presidential address before the British Association at its meeting in Melbourne, Australia, this month. Professor Bateson thinks that we may regard the earliest and simplest forms of life as containing in some mysterious way all the peculiarities of the more complex forms that descend from it. A speck of protoplasm on this theory would thus be a sort of concentrated essence of the world's greatest men, with their bodies and brains complete, and the influence of environment and education reduces to a minimum, perhaps to zero. Quantity is of no account in these considerations, Professor Bateson assures us. Shakespeare once existed as a speck of protoplasm not so big as a small pin's head, and whatever was added to this in the process of growth could equally well have served to build up a halibut or a rat. We quote from an extended report of Professor Bateson's address printed in *The Times* (New York, August 16). He said:

"We must begin seriously to consider whether the course of evolution can at all reasonably be represented as an unmaking of an original complex which contained within itself the whole range of diversity which living things present. I do not suggest that we should come to a judgment as to what is or is not probable in these respects. As I have said already, this is no time for devising theories of evolution, and I pronounce none. But, as we have got to recognize that there has been an evolution, that somehow or other the forms of life have arisen from fewer forms, we may as well see whether we are limited to the old view that evolutionary progress is from the simple to the complex, and whether after all it is conceivable that the process was the other way about. When the facts of genetic discovery become familiarly known to biologists, and cease to be the preoccupation of a few, as they still are, many long discussions must inevitably arise on the question, and I offer these remarks to prepare the ground. I ask you simply to open your minds to this possibility. It involves a certain effort. We have to reverse our habitual modes of thought. At first it may seem rank absurdity to suppose that the primordial form or forms of protoplasm could have contained com-

plexity enough to produce the divers types of life. But is it easier to imagine that these powers could have been conveyed by extrinsic additions? Of what nature could these additions be? Additions of material can not surely be in question.

"We are told that salts of iron in the soil may turn a pink hydrangea blue. The iron can not be passed on to the next generation. How can the iron multiply itself? The power to assimilate the iron is all that can be transmitted. A disease-producing organism like the pebrine of silkworms can in a very few cases be passed on through the germ-cells. Such an organism can multiply and can produce its characteristic effects in the next generation. But it does not become part of the invaded host, and we can not conceive it taking part in the geometrically ordered processes of segregation.

"These illustrations may seem too gross; but what refinement will meet the requirements of the problem, that the thing introduced must be, as the living organism itself is, capable of multiplication and of subordinating itself in a definite system of segregation?

"That which is conferred in variation must rather itself be a change, not of material, but of arrangement, or of motion. The invocation of additions extrinsic to the organism does not seriously help us to imagine how the power to change can be conferred, and if it proves that hope in that direction must be abandoned I think we lose very little. By the rearrangement of a very moderate number of things we soon reach a number of possibilities practically infinite. . . .

"I have confidence that the artistic gifts of mankind will prove to be due not to something added to the make-up of an ordinary man, but to the absence of actors which in the normal person inhibit the development of these gifts. They are almost beyond doubt to be looked upon as releases of powers normally suppressed. The instrument is there, but it is 'stopt down.'

"The scents of flowers or fruits, the finely repeated divisions that give its quality to the wool of the merino, or, in an analogous case, the multiplicity of quills to the tail of the fantail pigeon, are in all probability other examples of such releases. . . .

"Somewhat reluctantly, and rather from a sense of duty, I have devoted most of this address to the evolutionary aspects of genetic research. We can not keep these things out of our heads, tho sometimes we wish we could.

"The outcome, as you will have seen, is negative, destroying much that till lately passed for gospel. Destruction may be useful, but it is a low kind of work. We are just about where Boyle was in the seventeenth century. We can dispose of alchemy, but we can not make more than a quasicchemistry. We are awaiting our Priestley and our Mendeleeff."

HE REVERSED EVOLUTION.

Professor Bateson, president of the British Association, thinks the earliest and simplest forms of life may have contained all the more complex forms that have descended from them.

THE RECORD SALT CROP—The production of salt in the United States in the year just past exceeds the ten-million-dollar mark in value and breaks the record, according to information given out by the U. S. Geological Survey in its *Press Bulletin* (Washington, August). Says this publication:

"The marketed production of salt in the United States, including Hawaii and Porto Rico, in 1913 reached the record-breaking total of 34,390,298 barrels of 280 pounds each or 4,815,902 short tons. The value of the product was \$10,123,139. These figures are the greatest yet recorded by the United States Geological Survey for the salt industry in the United States, and they represent an increase of 3 per cent. in quantity produced and of nearly 8 per cent. in value compared with 1912. Salt occurs in two distinct ways—as rock salt in beds or associated with bedded or sedimentary rocks, and in solution, as in sea-water or in brines or bitters. A very large part of the salt production is derived by converting the natural rock salt into brine, which is then pumped to the surface and evaporated. The two main methods of obtaining salt are the mining of rock salt and the evaporation of salt-bearing solutions. Rock salt is produced chiefly by deep shaft mining."

EFFECTIVE SUBMARINE SIGNALS

AN ELECTRIC OSCILLATOR which, when attached to the inner skin of a ship, sends out a tone that can be heard on board another vessel five to thirty miles away, has been invented by Prof. R. A. Fessenden. P. Harvey Middleton, who describes this device in the pages of *Popular*

Illustrations by courtesy of "Popular Electricity and Modern Mechanics"

IT MIGHT HAVE AVERTED GREAT SEA DISASTERS.

The new submarine signal that tells of approaching ships or icebergs. In the view above it is being used as a telephone.

Electricity and Modern Mechanics (New York, September), asserts that it might have averted all of the terrible marine disasters of the past two years—the sinking of the *Titanic*, the burning of the *Volturno*, the loss of the *Empress of Ireland*, and the collision of the *New York* and *Pretoria*, all of which, he says, were due to the absence of reliable means of warning vessels in fogs of the proximity of danger. Of Professor Fessenden's apparatus he says:

"The sound is produced in the oscillator by the vibration of the diaphragm itself, this motion being produced by electrical impulses induced in a copper cylinder inside the casing, which hangs free in an electromagnet. The motion, 1-1000th of an inch, is given at the rate of 500 per second. The receiving oscillator is practically a duplicate of the sender, excepting that the action is reversed; in this case the diaphragm excites a telephonic apparatus within as it receives vibrations from the water.

"This oscillator is a development of the submarine-bell system of signaling, the serious defect of which, it is said, was that it only enabled vessels to receive the sounds made by bells located on buoys and light-ships, leaving the problem of ship-to-ship communication still to be solved. This oscillator will, however, not only enable a moving ship to communicate with another moving ship, but will also receive the submarine-bell sounds.

"Signals transmitted through the air have proved powerless to prevent collisions and avoid icebergs, owing to the fact that air does not transmit sound uniformly. It varies in density, and columns and bodies of air at different densities reflect and refract sound so that when heard it may not truly indicate the direction from which it comes, and it often skips over spaces where it can not be heard at all. H. J. W. Fay is authority for the statement that between 900 and 1,000 vessels were

wrecked from 1893 to 1902 by aberrations of sound or by being drawn on a false course by the echo, the loss in property amounting to fifty-seven millions of dollars and over 500 lives being lost. The transmission of sound through the medium of the ocean itself is the only safe method, and it is four times quicker than through the air.

"On June 3 the collier *Derercur*, of the Metropolitan Coal Company's fleet, rounded Cape Cod. About 9:30 p.m. she began sounding a Fessenden oscillator installed for test purposes, using alternately an oscillator on the port and another on the starboard. At Boston Light-ship the tug *Neponset* was lying with Professor Fessenden and a number of newspaper men aboard. A receiving oscillator was hung overboard from a davit. Almost immediately the *Derercur's* signal was heard, carried across Massachusetts Bay, the Morse dot and dash sound, being clear and unmistakable. By prearrangement the *Derercur* sounded first her port oscillator, with the letter 'M S,' over and over, for five minutes. Then she switched to her starboard oscillator, sounding 'G O.' After five minutes more she left an interval of five minutes of silence. Then the process was repeated and she kept it up all the way across the bay. Just as her lights appeared to those on the tug the sound became so strong that, tho the ship could not be seen, the sound of her signals could be heard distinctly by the men on the tug's deck coming up out of the water. That they were not conveyed by the air was demonstrated by going down into the tug's forepeak, where the sounds were much louder.

"Earlier in the day, with two tugs equipped with oscillator anchored near each other, messages were sent by means of the human voice transmitted under water. The next day the writer was present in the workshops of the Submarine Signal Company at Boston, when Professor Fessenden played a phonograph record on a machine in a small room at the end of the shop with the door closed. The sound of Melba's voice came clear and distinct from the center of a tank filled with water, to which an oscillator was attached, a hundred feet away from the room in which the record was playing.

"That this oscillator would have prevented the sinking of the *Titanic* was fairly proved in a series of tests conducted this spring.

THE OSCILLATOR.

Its tones can be heard on a vessel five to thirty miles away

on the Grand Banks from the U. S. Revenue Cutter *Moran*, engaged in ice-patrol service, when Professor Fessenden was able, by timing the echo returned from the transmitting apparatus, to compute the depth of soundings, and not only the proximity of icebergs, but the approximate distance of the icebergs from the vessel."

BUTTER FROM A TREE.

A SO-CALLED "butter-tree" is described in a recent report by United States Consul Yerby, from Sierra Leone, Africa. The product, he thinks, may become an important export, and it is already used, in Europe, to make an artificial butter. Says an editorial writer in *The Courier-Journal* (Louisville, Ky.), commenting on Mr. Yerby's report:

"The shea-tree produces a nut covered with a soft pulp, which is in turn covered with a smooth skin easily removable when the nut ripens. The pulp is sweet and wholesome. It may, perhaps, be used for the manufacture of alcohol, says the Consul. The nut is about 60 per cent. 'butter,' which is edible. The tree begins bearing at the age of fifteen years and reaches its full capacity at about twenty-five years. The butter plantation then lasts indefinitely if jungle fires do not get it.

"Chocolate manufacturers in Europe could easily absorb the product of a greatly enlarged cultivation of the shea-tree, in the opinion of Mr. Yerby. Candles and soap, he says, may also be made of it.

"Three products of a single tree so widely different in use and requirements suggest too great versatility upon the part of the tree which might otherwise seem a useful servant of mankind. In Sierra Leone, no doubt, nearly everything that will lubricate a biscuit so that it may be swallowed easily rates as butter. But discriminating palates will not be enticed by a substance with which a man may scrub his face and hands prior to the discussion of the evening meal, light the dining-room during the meal, or butter the sliced bread when the meal is in progress.

"Sundry varieties of synthetic butter have long been money-makers in America, among them oleomargarine. But nothing other than real butter meets the reasonable demand of any one who has been brought up on a dairy farm, or on dairy products. The butter-tree sounds marvelous, but a little too much so to create the belief that the time may come when shea-tree plantations in British West Africa will produce a competitor for the genuine article."

UNCLEAN SODA - FOUNTAINS—Dirty methods at soda-water fountains are reprobated in a note by *American Medicine* (New York, July), which intimates that they should receive more attention from health authorities than they now do. Says this paper:

"Frequent mention is made of the matter in the daily press, and we must say that the complaints are often well founded. The glasses after being used are merely dipt in a sink of dirty water and are presented to the next customer with the greasy lip-marks of the last one still on them. In times of epidemics of infections of the throat there must be many cases contracted this way—indeed, it is a danger at all times, not to mention the disgusting filthiness of the custom. It is so easy to install flowing water in an apparatus which will effectively cleanse the glasses that we are surprised that all fountains are not thus equipped anyhow.

"Perhaps the patrons of these places might drive the offenders out of business by refusing to buy of them and inducing their friends to join in a boycott for decency as well as good health. Then we might also take up the matter of flies, and force the merchants so to cover or screen the drinking utensils that patrons will not be compelled to use those which have had the dirty insects crawling over them."

THE VALUE OF STUMPS

WOOD of the most contorted grain—the most valuable for decorative purposes—is to be found in the lower part of the trunk of hardwood trees, nearest to the roots. This part is frequently wasted in cutting, because it is difficult to remove. A correspondent of *The Hardwood Record* (Chicago, July 25), signing himself "J. V. H.," calls attention to this fact and suggests that lumbermen should put a stop to this waste. He contributes two pertinent illustrations and thus comments upon them:

"This drawing represents a mahogany-tree that stood near Camp Vaca, on the headwaters of the Belize River, about 30 miles

From "The Hardwood Record," Chicago.

WASTEFUL CUTTING OF A MAHOGANY-TREE.

WALNUT-TREE, READY FOR ECONOMICAL CUTTING.

WRONG AND RIGHT WAY TO FELL TREES OF VALUABLE WOOD.

northeast of Lake Peten, Guatemala, Central America. It is a typical representative of the mahogany-tree, as it grows in that country. The picture shows the extremely wasteful method of the natives in felling timber by erecting a platform (or barbecue, as they call it) with poles bound together with tie-vine. On this the chopper stands, and is so elevated that he can cut a great notch around the tree, clear above the great buttresses, or brace roots, sometimes called spines. Nature strengthens the stumps and crotches of trees by knitting and twisting the fiber, and increasing the thickness of the annular layers of the growth of woody substance at points where falls the greatest strain. Thus every tree has been given a stump and crotch figure common to itself. From both of these in walnut we obtain a beautiful and valuable veneer, and from the crotches or fans of the mahogany has been produced a rare style of fancy veneer that has been prized very highly for a long time, and is still in demand. Why not utilize its stump?

"This photograph represents a large walnut-tree, after the earth had been dug away in grubbing, thus exposing the side or spur roots so they can be chopped down on a line with the body of the butt log, thus saving the extreme butt or stump, the most valuable portion of all large walnut-trees and many small ones, if of a figured nature. This tree stood near the Arkansas River at Blackburn, in the Osage Nation, Indian Territory, now Oklahoma. The average gain in felling walnut by grubbing is about equal to the average loss in felling mahogany by cutting high stumps. . . . All walnut stumps can be cut off at a point considerably below the ground line, and not produce an objectionable amount of end grain in the veneer, and by cutting them in various ways are very productive of a fine product. This, I claim, is also true of mahogany, and it should be thoroughly tried out by experiment."

LETTERS AND ART

Copyrighted by the American Press Association.

LOUVAIN, THE HISTORIC BELGIAN CITY WHICH IS NOW A WASTE OF ASHES

DESTRUCTION OF ART AT LOUVAIN

QUITE APART from the question of whether or not the burning of Louvain by the Germans was justified as a military expedient, art lovers in all parts of the world are mourning the artistic and historical treasures irreparably lost in the destruction of that ancient Belgian city. The Germans might say, on the one hand, that it was impossible to separate the art treasures in the stern exigencies of war, and, on the other, of course it is only natural that an English paper like the *London Daily Chronicle* should denounce this destruction as "treason to civilization" and "war on posterity to the remotest generations." For, says *The Chronicle*, "it is tragic for individuals to die, but in a few years we must each die, anyhow, and others will come after who may more than replace us; but these trophies and stepping-stones of the human soul need never have died; and now that they are dead, they are irreplaceable." Turning to the journals of neutral nations, we

find echoes of the same feeling. Thus the *Rotterdam Telegraph* declares that in the devastation of Louvain "a wound that can never be healed" was inflicted "on the whole of civilized humanity." And the *New York Tribune* reminds us that while Napoleon robbed Italy of a wealth of pictures and statues, he was never guilty of the wanton destruction of works of art. The great works which he carried off still exist and are ac-

cessible to the world's art lovers—"partly in the Louvre, and partly in Italy, whither some of them were later returned." *The Tribune* continues, in a rather anti-German vein:

"If the worst is true and the beautiful Hôtel de Ville at Louvain has gone with the rest of the city into smoldering ruins, the whole world is the poorer. It ranked as one of the most exquisite of late Gothic buildings in the Low Countries. The pictures in the town, while not of the first rank, were important examples of Flemish art."

"All Belgium is dotted with similar spots of beauty. Ghent with its Van Dycks, Antwerp with its Rubenses, its Musée Plantin—there is hardly a town or city in the whole district where German revenge can strike without injuring the whole human race, living and to come."

"It is an interesting suggestion which the London papers make—that if the Allies shall be successful, art treasures be taken from Germany and presented to Belgium to replace what has been wantonly destroyed. That is not reprisal. The razing of Nuremberg or the slash-

ing of the Dresden Madonna would be a poor revenge. But the shifting of beauty from a nation whose army is an army of vandals to a nation better able to honor it would be a just punishment and a just recompense."

Another suggestion—one of prevention rather than compensation—is offered by Paul Ottet, president of the Union des Associations Internationales at Brussels, who seeks the aid of

EXQUISITELY CARVED STALLS IN THE CHURCH OF ST. GERTRUDE.

the neutral Powers for the preservation of the museums and other treasure-houses of art, not only in Belgium but in all European cities which may be menaced by the war. In the *New York Telegraph* we read:

"M. Ottet points out that the United States is in a position to be of great assistance in this regard by securing the cooperation of other neutral nations and proffering to the belligerents a petition that all parties to the great conflict now in progress respect the wish of the whole intellectual world that these priceless indicia of the world's development and civilization's growth be everywhere preserved."

The *Chicago Evening Post*, after speaking of the priceless canvases by Rubens, Van Dyck, Franz Hals, and other masters that would be imperilled by the bombardment of Antwerp, goes on to say:

"All through Belgium, all through the country of the Franco-German border line, are towns and cities filled with treasures of art or history.

"Under the guns of both sides of the mighty conflict these pictures and shrines and storied buildings are exposed to destruction.

"We wish that it could be the office of the United States to beseech the great Powers of Europe to throw around the works of art in all the war zone the protection of general orders to their soldiery.

"Under the last Hague proposals, Article XXVIII, historic monuments and such things are supposed to be respected. But both Germany and France have accused each other of disregarding this convention."

Returning to the specific case of Louvain, we find a graphic account of its destruction, by Richard Harding Davis, in the *New York Tribune*. Mr. Davis witnessed the tragedy from the window of a car in which he was held prisoner by the Germans. He writes in part:

"For two hours on Thursday night I was in what for six hundred years had been the city of Louvain. The Germans were burning it, and to hide their work kept us locked in the railroad carriages. But the story was written against the sky, was told to us by German soldiers incoherent with excesses; and we could read it in the faces of women and children being led to concentration camps and of citizens on their way to be shot.

"The Germans sentenced Louvain on Wednesday to become a wilderness, and with the German system and love of thoroughness they left Louvain an empty, blackened shell. The reason for this appeal to the torch and the execution of non-combatants, as given to me on Thursday morning by General von Lutwitz, military governor of Brussels, was this: On Wednesday, while the German military commander of the troops in Louvain was at the Hôtel de Ville talking to the burgomaster, a son of

the burgomaster with an automatic pistol shot the chief of staff and German staff surgeons.

"Lutwitz claims this was the signal for the Civil Guard, in civilian clothes on roofs, to fire upon the German soldiers in the open square below. He said also the Belgians had quick-firing guns, brought from Antwerp. As for a week the Germans had occupied Louvain and closely guarded all approaches, the story that there was any gun-running is absurd.

"Fifty Germans were killed and wounded. For that, said Lutwitz, Louvain must be wiped out. . . .

"No one defends the sniper. But because ignorant Mexicans, when their city was invaded, fired upon our sailors, we did not destroy Vera Cruz. Even had we bombarded Vera Cruz, money could have restored it. Money can never restore Louvain. Great architects and artists, dead these six hundred years, made it beautiful, and their handiwork belonged to the world. With torch and dynamite the Germans have turned these masterpieces into ashes, and all the Kaiser's horses and all his men can not bring them back again.

"When by troop train we reached Louvain, the entire heart of the city was destroyed and fire had reached the Boulevard Tirlemont, which faces the railroad station. The night was windless, and the sparks rose in steady, leisurely pillars, falling back into the furnace from which they sprang. In their work the soldiers were moving from the heart of the city to the outskirts, street by street, from house to house. . . .

"On the high ground rose the broken spires of the Church of St. Pierre and the Hôtel de Ville, and descending like

steps were row beneath row of houses, roofless, with windows like blind eyes. The fire had reached the last row of houses, those on the Boulevard de Jodigne. Some of these were already cold, but others sent up steady, straight columns of flame. In others at the third and fourth stories the window curtains still hung, flowers still filled the window-boxes, while on the first floor the torch had just passed and the flames were leaping."

Louvain, a town of about 42,000 inhabitants, is described by the *Chicago Tribune* as "one of the quaintest and most picturesque memorials of the days of feudalism." The *Chicago* paper goes on to say of it—

"There was hardly a building within the ramparts but breathed the air of some romance of the Middle Ages or marked a stepping-stone in its stirring history. Once before war robbed it of its commercial prestige, only to permit it to rise, phoenixlike, as the center of learning during the sixteenth century. At the opening of the present war it still boasted of the largest university in Belgium, in which thousands of antique volumes and prints were stored. Its museums and its churches housed scores of paintings of the old Flemish masters.

"Louvain has passed through successive periods of culture

LOUVAIN'S FAMOUS HOTEL DE VILLE.

This edifice, recognized as one of the most beautiful examples of the ornamental ogival style, was built by Mathieu de Layens about the middle of the fifteenth century. Reports have it that the Germans spared this building.

and barbarity ever since Julius Cæsar established a permanent camp there during his campaigns against the Belgians and the Germans.

"In the eleventh century it became the residence of the long line of Dukes of Brabant, and was the capital until Brussels wrested this distinction from it during an uprising of weavers against their feudal masters.

"In the fourteenth century it had gained a population of between 100,000 and 150,000, and there were no fewer than 2,400 woolen manufactories. The weavers were a turbulent lot, however, and when they rose against the Duke Wencelaus he conquered them and forced thousands of them to flee to Holland and England. It was then that Brussels became the capital and Louvain lost its prestige as a center of the cloth-making industry.

"Scholars began to pour into the town, however, to glean what learning they could from the old parchments and books which its castles contained. In 1423 Duke John IV. of Brabant founded Louvain University. Students flocked there from

GERMAN IDEALISM IN THE BALANCE

EVERYWHERE in America are found sympathy and admiration for "German culture and civilization." It is feared that whatever the outcome of the trial at arms the delicate flowers of this growth must be crushed. The German Chancellor himself fears for it, and appeals to the American people on the ground that German culture and civilization are fighting for their life "against a half-Asiatic and slightly cultured barbarism." The American hears these pleas with concern and thinks of Goethe and Schiller and of German idealism, and feels that here is a world that must be saved. But one of our most thoughtful papers asks if German idealism has not already given way somewhat to commercialism, materialism, and militarism. In fact, the *Springfield Republican* finds

in this lowering of ideals the explanation of Germany's appeal to arms. To readers who may think such a charge unfriendly to Germany it might be said that this New England daily spoke even more strongly of the decay of American idealism in our war with Spain, so its words may be taken as the faithful wounds of a friend. Moreover, its contention is based upon purely German authority. They are the very teachers Germany has sent us, and it appears that we have only half comprehended their meaning. *The Republican* quotes from an essay written by Prof. Kuno Francke, of Harvard, about seven years ago, and says that "it helps wonderfully to explain how the war came to pass." The German professor has lately been doing his part to defend his nation and his Emperor from blame for the war. Seven years ago the Professor asserted — what *The Republican* ventures to think he would be wary of affirming

now — that "the idealism of Schiller is out of date in Germany." We read on:

"In the last years, the great poet was occupied with a 'Hymn to Germany,' which he never completed:

"Apparently Schiller wanted to proclaim the greatness of Germany in the midst of national disasters; he wanted to tell his people, threatened in its very existence by the Napoleonic invasion, that there was still a hope left for it; he wanted to contrast the brute force of military prowess with the eternal achievements of literature and art. Bereft of political power, he says, the German has found his worth in another sphere, a sphere of his own; and even if the empire should crumble to pieces, German greatness would remain unimpaired. To him, the German, the highest destiny has been set. He has been chosen by the world spirit, in the midst of temporary struggles, to devote his work to the eternal structure of human culture, to give permanence to what the fleeting moment brings."

"How strangely out of date, says Dr. Francke, do those words seem: 'Now the question is, "Will the new era of popular prosperity and national self-assertion result in a reawakening of spiritual strivings also?"' That was in 1907; to-day national self-assertion seems to lead rather to another kind of strife. A strong central government based on military power, a benevolent bureaucracy, a robust imperialism, this is the dominant German ideal of to-day; the ideals of Schiller's time are threadbare and antiquated:

"The brotherhood of nations has no particular charm for the German of the twentieth century. Enlightenment? The time has long passed when this word thrilled the élite of the nation beyond any other. We have come to see that, priceless a possession as intellectual enlightenment is, it is after all not

THE CHURCH OF ST. PIERRE, LOUVAIN.

all over the world. In the sixteenth century it had 4,000 students and forty-three colleges. . . .

"The library occupied a large room with fine wood panels, carved in intricate designs. It held 150,000 volumes and thousands of manuscripts, valuable beyond price. In the center of the room stood a colossal group representing a scene from the Flood, sculptured by Geerts in 1839.

"One block to the north of the university is the Grande Place, on which faced the Hôtel de Ville, one of the finest examples of the late Gothic style of architecture in Europe. It surpassed the town halls of Bruges, Brussels, and Ghent in elegance of detail and harmony of design. It was erected in 1448 by Mathieu de Layens, and it was from the upper windows of this building that thirteen magistrates of noble birth were hurled to their death on the spears of the populace in the streets below during the weavers' uprising.

"Across the Grande Place stood the church of St. Pierre, a magnificent type of the Gothic style built on a cruciform plan and flanked by chapels holding reliquaries of the saints, life-sized wooden figures, and priceless carvings and paintings. There might have been seen the works of Van Papenhoven, Roger van der Weyden, Dierick Bouts, and De Layens.

"Four other churches in the town, all centuries old, held treasures equally as valuable from the historical standpoint. They were the churches of St. Jacques, St. Quentin, St. Michael, and St. Gertrude."

According to a rather bitter statement by Frank Jewett Mather, the well-known American art critic, Louvain "contained more beautiful works of art than the Prussian nation has produced in its entire history."

without its dangers, and easily leads the masses to materialism and moral indifference.

"Nor is freedom any longer a word to conjure with; even the Socialist demands not freedom, but justice. Nationality appeals more to the modern German than human brotherhood or enlightenment or freedom, but having been achieved it has ceased to be an ideal. The song 'What is the German Fatherland?' no longer makes the German heart beat faster. Industrial progress and supremacy engage the keenest and best trained minds of the country, but can hardly be called an ideal without adding social justice, and this Dr. Franke leaves as the summing up of the modern German ideal.

"The old vague longing for enlightenment which inspired Schiller has gone: 'The increased struggle of life, the quicker pulsation of blood, the greater tension of will and intellect, all of which are characteristic features of modern society, are bringing about, in Germany as much as anywhere else to-day, a new type of man and of woman.'"

There have been other changes in Germany hardly less significant. According to the Springfield paper:

"Bismarck, man of blood and iron, was a profoundly religious man, and often said that if he were not a believer in his religion, he would be a democrat. But even in Bismarck's day religion was losing its hold: 'In America and England questions of the higher life are still very largely bound up with the Church; it is hardly conceivable that spiritual problems should arise in either of these countries without the Church trying to meet them. In Germany, the Church has ceased to be a moral leader; it has sunk back to the position of a defender of creeds.' Does not this perhaps explain the moral shock which the brutal invasion of Belgium gave to America, and the difficulty of more realistic Germany in comprehending such an outcry over an injustice which statecraft had pronounced useful? It may explain, too, why Professor Münsterberg, a strong exponent of imperial ideals, finds the Americans so sentimental and idealistic as compared with the Germans of to-day. And in return no writer has done so much as Dr. Münsterberg in the past ten years to make Americans aware that a new Germany, a Germany with a hard cutting edge, had replaced the Germany which since Emerson America had been admiring.

"To the same effect other Germans have testified. In 1902 Dr. Wolf von Schierbrand wrote in an American magazine:

"The whole spirit has greatly changed in German schools and higher educational institutions. This is but natural in a nation whose conditions of life have been so greatly modified of late. And this change is even more noticeable among the students and pupils than among their teachers. The spirit of bold militarism is rampant among these boys and young men. For the specific form it has taken *Strebertum* has been coined in Germany, which in its generally accepted meaning stands for a hard striving after material success, no matter what the means employed to that end. There is, indeed, no disguising the fact that German youth of to-day is no longer distinguished for that idealism, that love of science and knowledge for their own sake, which formed one of the prime characteristics until not many years ago. The present generation of young Germans has discarded old aims and ideals, and indulges no longer in ideals of any kind. They are severely matter-of-fact. This change is most pronounced among the university students."

Each of these writers, *The Republican* reminds us, has "come out loyally in this crisis in defense of Germany and Austria, and with this loyalty nobody can fail to sympathize, but—

"Their words written before the crisis, words so frank that possibly they would not be written now, go far to explain how the crisis came about. Germany's advocates appeal to 'German culture' almost as tho it put Germany necessarily in the right—the Imperial Chancellor in his appeal to foreign opinion had really little else to urge. But it would be a more convincing appeal if German spokesmen had not for years been disowning Schiller:

Das ist nicht des Deutschen Grösse
Obzu legen mit dem Schwert.

"With the growth of material wealth and the decay of spiritual ideals, with the decline of democracy and the evolution of a militant imperialism, modern Germany as interpreted by these Germans has become a dangerous aggressive force. That the average German is peaceably disposed does not affect the case, if organization and ideals make for war. Schiller might deny that German greatness lay in conquest by the sword, but Schiller, as we have seen on unimpeachable authority, is out of date."

AN ENGLISHMAN SPEAKS FOR GERMANY

IF THE GERMAN would secure sympathy for his "fight for existence and for civilization," his advocate is perhaps to be found in one of the nations now ranged with his enemies. Mr. Henry W. Nevins, the English publicist and author, writes for the *London Nation* (August 15), a statement of "how it looks to Germany." The nation itself, he declares, "did not desire war, and certainly they did not expect it." Mr. Nevins was traveling in Germany when the trouble began, and he reports "the whole population that can afford holidays was out holiday-making." "They hurried home. They knew the awful loss that must befall nearly every family in such a war as this, when it is estimated that 9,000,000 men between twenty and fifty will be called up for service of one kind or another." But for two generations they have been brought up to expect this terrible hour. "They have heard the great songs of the 'War of Liberation' from the cradle. All can sing the national songs of 'Die Wacht am Rhein' and 'Deutschland, Deutschland, über Alles,' as musicians would have them sung." Furthermore:

"They have imprinted upon them from childhood the text of Scharnhorst's army reform, 'All the inhabitants of a country are its born defenders.' By nature an orderly and patient people, very submissive to authority, they have accepted the army discipline as a national necessity, and it has become part of themselves. They are not bellicose, but the military spirit has certainly been encouraged by their admired Kaiser's phrases about 'the mailed fist' and 'the shining armor,' or by Bismarck's phrases about 'Blood and iron,' and 'Words are not soldiers; speeches are not battalions.' It has been further encouraged by historians of the Treitschke school, and by the romantic thinkers, like the Kaiser himself, who brood over the glories of Charlemagne and the adventures of medieval knighthood. Nietzsche, with his German superman and his contempt for the gentler qualities of self-denial, has had his effect.

"So it is a rough school under which the German is brought up, and there is no denying its oppressive and brutalizing side. Strong and conspicuous individuality is likely to be destroyed under it, and genius seldom emerges. But to understand the German nature we must recognize the long pressure of the fear which is now being realized. Germans fear for their lives, for their rapidly increasing prosperity, for their learning, their schools, their way of life—everything that they call their culture or civilization. In the Socialist leader's speech, there was a friendly reference to 'our brothers in France.' The mention of Russian despotism was received with tumultuous applause. That distinction is significant. In all this terrible crisis, almost the only ray of light is the disappearance of the German people's old enmity to the French. What hatred exists is directed entirely against Russia. There is no national feeling against France. That is a signal for future hope.

"When I was coming down from the Transvaal to the Natal frontier a few days before the Boer War, General Joubert said to me at parting, 'The heart of my soul is bloody with sorrow.' I write as an Englishman who thinks that if we had stood by and watched Belgium violated and France bled to the white without one effort in their defense we should never have been able to look the world in the face again. But when I think of Germany and all she has been to us, I say with Joubert, 'The heart of my soul is bloody with sorrow.' Goethe, reproached for not having written war-songs against the French, once replied:

"In my poetry I have never shammed (*nie affectirt*). How could I have written songs of hate without hatred? I did not hate the French, tho I thanked God when we got rid of them. How could I, to whom civilization and barbarism are the only distinctions of importance, hate a nation which is one of the most civilized on earth?"

"The words came to my mind the other day as the train slowly dragged us through Germany after our escape from Berlin. From the carriage I could see the pleasant German villages and the old German towns, where I had so often been happy with country people and students in years when I thought the German mind held the secret of the universe. I was wrong; but I do not regret the time I spent among Germans in the search. There they were still—the well-built houses with high roofs, the well-cultured fields, the woods and low hills, murmuring of fairy-land."

THE NEW POPE, BENEDICT XV.

By its election of Cardinal Giacomo della Chiesa, Archbishop of Bologna, to succeed the late Pope Pius X., remarks the *New York Evening Post*, the Sacred College of Cardinals "has sustained its record of making an unexpected choice." The new Pontiff has worn the red hat for only three months, having been made a cardinal on May 30 of this year, and it is only seven years since he became an archbishop. Hence his election, we are told, came as a great surprise. As an indication of how little was known of him in this country, the *New York Times* points out that "in the 'Catholic Encyclopedia,' which was completed early this year, not a line about him is printed." Dispatches state that he was born on November 21, 1854, in Pegli, in the Diocese of Genoa, and was ordained to the priesthood in 1878. Unlike his predecessor, he is of noble blood, being the son of the Marchese della Chiesa. In his ecclesiastical career he has been closely associated with the late Cardinal Rampolla, whose secretary he was for several years. Mgr. Joseph F. Mooney, Vicar-General of the New York Archdiocese, expressed to a representative of the *New York Times* the opinion that, as a logical result of this association with Cardinal Rampolla, the new Pope would be inclined to adopt a policy closer to that of Leo XIII. than to that of Pius X.—in other words, that he would "be more active and participate to a greater extent in the affairs of the world than did his immediate predecessor." "In fact," Mgr. Mooney went on to say, "this probably had something to do with his election, for the Cardinals must naturally have sought for a man who was best equipped to cope with the perturbed conditions in Europe at the present time." The *New York Sun* points out that the new Pope, who has chosen to be known as Benedict XV., is "in the prime of life, bred to a wide scope of affairs, close to Cardinal Merry del Val, and a friend of cordial relations between the Vatican and the Quirinal." "Like his predecessor," says *The Times*, "Pope Benedict is a formidable enemy of Modernism."

TWO HARVESTS. SOLDIERS ENTRENCHING IN A FIELD WHERE REAPERS ARE STILL AT WORK.

"THE COLLAPSE OF CIVILIZATION"

THE IRONY of eight avowedly Christian nations plunging into such a war as now devastates Europe was emphasized in our issue of August 29, under the query, "Has Christianity Broken Down?" Now the Rev. Dr. Frederick Lynch, writing in the *New York Christian Work and Evangelist* (Undenominational), describes the conflict, from the scene of which he has just returned, as the temporary collapse of Christian civilization. As he sees it, "Christianity has been thrown to the dogs, and the nations have gone mad." As an immediate result of this insanity "we have the sight, in the twentieth century of Christ's Church, of eight nations doing their best to annihilate one another, while at the same time the good people in every one of these nations, previous to the sudden spread of the war fever, bore no ill will to the good people of the other nations—indeed, had much good will." In a flash, with the apparent inconsequence of things happening in a dream, came the change. Says Dr. Lynch:

"In a moment, almost without premonition, millions of men on the Continent have become frenzied, and with wild eyes, with bestial thirst for blood, and with savage yells, are rushing to rip their brothers' bowels out. Women are rushing from besieged and burning cities with little babies in their arms, and little, cold, hungry, tired boys and girls, hardly old enough to walk, trying to keep up. Poverty stares millions in the face—poverty not only during this war, but during long years to come. Thousands of women are to be widowed, millions of little children are to be left fatherless. Natural affections are already blotted out, and their place being taken by strange, cruel lusts and passions. The virtue of women will be a free commodity for all soldiers. Drunkenness has already spread throughout these lands in a mad orgy. All industry will be ruined. Thou-

sands of farms and villages will be laid waste. Thousands of schools and churches will be blown up. Hatreds will be engendered which will keep Europe irritated fifty years after the peace of exhaustion shall come. The commerce of the world will be all upset. The general morality of Europe will be lowered to a point where the churches will have to begin all over again and work a hundred years to restore it. Already thousands of atheists have been made. Almost every other man we have met in Europe this last week has shook his head with sadness and said: 'What's the good of Christianity if it can not stop this sort of thing.' It is as if the Devil and all his angels have taken complete possession of Europe."

Dr. Lynch does not evade this challenge to Christianity. We read:

"What does it all mean? It means many things. First of all, it means that there is something the matter with our Christianity, or else that we are not presenting it truly. For it seems to have no power whatever over men or nations when any real provocative of men's passions comes. Most of these millions of men who are now drunk with lust of killing, and hoarsely shouting for their brother's blood, have been calling themselves Christians, and have most of them been taught in Christian schools and churches. And in a day it is all forgotten, and if one who remembers dares suggest, as a few did suggest in the various parliaments and in the press, that we remember our religion, he is hooted down. Is it that the human heart is too desperately wicked for even Christianity to control it when the deepest passions of all, revenge and lust of blood, are aroused? Is it that it can find only a few in each community—which is all it has yet done—whom it can fully regenerate? Or is it that we have been concerned too much with dealing with those sins which are more easily uprooted and controlled, and have neglected to uproot those awful, fiendish, demoniacal passions that burst forth at such a time as this? Or have we

in our endeavor to inculcate righteousness in our personal dealing with our brother of our own land neglected altogether to eradicate the beast out of men which such a crisis as this reveals as only slumbering. For the thousands of men we saw howling in all the cities of Europe were not men any longer. They had become beasts. The least could even be seen in their eyes. They howled for only three things: drink, women, and blood of their brothers. Perhaps there has got to be a wholly new presentation of Christianity before these things can be stopt. Perhaps we have got really to teach what Christ himself taught, namely, that love of all Christians for each other, all men of good will for one another, must transcend race, nationality, and every other bond. We have never dared preach this, altho it was continually on Christ's lips. He even went further, and said it must transcend family ties. It would be as

country above love of one's country being right, and which talks more about love of country than it does about love of God and all his children. This awful tragedy, beyond anything since Napoleon's day, is the result of this sort of patriotism. The time has come to lift this quality up to something high, noble, and universal. We are glad the report of the Federal Council delegates at Constance to the churches of America emphasizes this need of Christianizing patriotism."

The lesson of it all is that nations must live up to the same rules of conduct that their people observe as individuals:

"One thing even the blind can see lies at the root of all this calamity of the nations, and that is our neglect to preach the one truth on which any lasting order of justice or peace can be reared, namely, that nations must be amenable to the same Christian ethics that govern the relationships of men. There can be no double standard of ethics in the kingdom of God. Right must be right and wrong be wrong throughout the whole universe of men. If it is wrong for men to steal, it is just as criminal for big nations to seize little ones. If it is wrong for men to murder, it is wrong for nations to kill and destroy weaker nations, or men in any nation. If it is un-Christian for men to settle their disputes with their fists, it is wrong for nations to adjust their quarrels by iron fists on sea or land. If it is Christian for a man to negotiate all questions with his brother in the sweet Christian spirit of forbearance, charity, even forgiveness, what else can be Christian for nations? We have not believed this, we have not preached it in our pulpits, or taught it in our schools. We are going to learn it now in this year of agony. Every pulpit should reiterate it every week."

FOR A SPIRITUAL CENSUS

A SERIOUS DEFECT in the numerical church census taken by the United States Government, according to a minister who writes in the *New York Presbyterian Examiner*, is the fact that it ignores the questions of largest interest to Christian people. Believing that "it is far more important to know whether the Church is growing better than to learn whether it is growing bigger," he suggests a comprehensive "spiritual census." Experiments along this line, he says, have already been tried by three churches in three different cities, which circularized the members of their congregations with printed slips carrying "a number of leading and important questions" to be answered anonymously. Of these experiments and their results we read:

"The leading question upon a slip given out to heads of households was, 'Do you have family prayers?' And this was followed by another question, 'Did your parents maintain a family altar?' Despite the fact that one is everywhere met by the assertion that 'Family prayer is a thing of the past,' in the largest of the three churches located in a city of modest size, there were 12 per cent. more replying 'yes' to the first question than to the second. In the second church two-thirds of the older members replied that they had been brought up in households where family prayer was the rule, while of the generation still under parental control almost one-half reported that they had family prayers at home. In the third church the question was not properly printed, so that the comparison could not be carried out. But enough was gathered to make it certain that the family altar is not 'lost' and that its neglect is not a social necessity anywhere.

"Another fact brought out by these written questions was that 98 per cent. of all those responding had had a Christian mother, 90 per cent. a Christian father, and over 63 per cent. had been brought up in homes where family worship was the rule. The Church is perpetuated by the family. . . .

"In the three churches those who had 'read the whole Bible through' numbered 33 per cent., 50 per cent., and 55 per cent. Many of those who had not completed such reading were still quite youthful members. In the matter of New Testament reading, in one church 60 per cent., in a second 66, and in the third 75 per cent. had read the entire New Testament through.

"As to other helps toward religious nurture, in one church 30 per cent., in another 65, and in the third 75 per cent. of the families took religious papers or magazines."

THE REAPERS.

—Ripley in the *New York Globe*.

impossible for one Christian to kill another, did we really believe in Christ and accept his Gospel, as it would be for a man to kill his mother. Another thing which we think every American of the fifty who got this first sight of war has come to feel is that our religion has broken down in its psychology, that our Gospel has been addrest to a man who does not exist, that our sermons have been preached to an imaginary man. We have been preaching to men as highly respectable, on the whole good, some of them saintly, while as a matter of fact this has been only seeming. They have seemed this because great temptations have not roused them from their sleep. No one who came across Europe within the last month can ever hold this easy faith again. Men are beasts; cruel, lustful, revengeful, ravening, just as the Gospel represents them. There are exceptions, but in most of us the beast lies just below the surface, and nothing but a regeneration which shall sweep through men's souls as a wind from heaven can make them clean."

Another theory "dissipated forever" by this cataclysm, according to Dr. Lynch, is the idea that "the way to get justice or peace is to prepare for war." And "the kind of patriotism the nations of Europe have been cherishing is discredited also." For—

"This whole miserable business has arisen out of a perverted patriotism, a race consciousness raised to the power of madness. It was a Servian 'patriot,' a devotee of 'Greater Serbia,' who threw the bomb that stirred Austria to revenge. All through Europe there is this patriotism which makes a God of one's country and declares there is no other god, which is forever imputing intrigues and schemes to other countries, which goes into fervors about one's own country that exasperate other countries, which would clamor for little rights for one's own country and bring on a war, regardless of the effect it would have upon six or eight innocent countries; which puts love of

CURRENT POETRY

THE European war, during the first days of its course, brought from the poets of the United States many a passionate plea for peace and reproach for the battling nations. Strangely enough, the English poet whose attempt to justify the war is, as a work of art, most worthy of attention is that laureate of peace, Mr. Alfred Noyes.

The three sonnets quoted below were printed in the *London Daily Mail*. For an equally partizan poem on the German side our readers can turn to George Sylvester Viereck's "Wilhelm II., Prince of Peace," which we quoted in our issue of August 29.

The United Front

BY ALFRED NOYES

The Kaiser, in his reply to Belgium, has definitely placed it on record for all future ages that the destiny of Germany depends absolutely upon his right to violate guaranties, tear up treaties, and dishonor his own word. He himself has now definitely stated it in language which does not admit of any other interpretation; and the duty of nations that respect law, honor, and righteousness is now quite clear.

I

Thus only should it have come, if come it must:
Not with a riot of flags or a mob-born cry,
But with a noble faith, a conscience high
And pure and proud as heaven, wherein we trust,
We who have fought for peace, have dared the thrust
Of calumny for peace, and watched her die,
Her scutcheons rent from sky to outraged sky
By felon hands, and trampled into the dust.

We fought for peace, and we have seen the law
Canceled, not once, nor twice, by felon hands,
But shattered, again, again, and yet again
We fought for peace. Now, in God's name we draw
The sword, not with a riot of flags and bands;
But silence, and a mustering of men.

II

They challenge Truth. An Empire makes reply,
One faith, one flag, one honor, and one might.
From sea to sea, from height to war-worn height,
The old word rings out—to conquer, or to die.
And we shall conquer. Tho' their eagles fly
Through heaven, around this ancient Isle unite
Powers that were never vanquished in the fight,
The unconquerable Powers that can not lie.

But they who challenge Truth, Law, Justice, all
The bases on which God and man stand sure
Throughout all ages, fools!—they thought us
torn
So far with discord that the blow might fall
Unanswered; and, while all these Powers endure
This is our answer: Unity and Scorn.

III

We trust not in the multitude of a host,
Nations that greatly builded, greatly stand,
In these dark hours, the Splendor of a Hand
Has moved behind the darkness, till that coast
Where hate and faction seemed to triumph most
Reveals itself—a buckler and a brand,
Our rough-hewn work, shining o'er sea and
land,
But shaped to nobler ends than man could boast.

It is God's answer. Tho' for many a year,
This land forgot the faith that made her great,
Now, as her fleets cast off the North Sea foam,
Casting aside all faction and all fear,
Thrice-armed in all the majesty of her fate,
Britain remembers, and her sword strikes
home.

The author of "A Wine of Wizardry" uses the sonnet form to express his feelings about the war, too, but he is not at all in agreement with Alfred Noyes. Mr. Sterling's sonnets are as partizan, in their different way, as those of the English poet. The pacifist attitude toward war is difficult to put into verse, but Mr. Sterling has done it with distinguished success. The poem appeared in the magazine and story section of the *New York World*.

To Europe

BY GEORGE STERLING

I

Beat back thy forfeit plowshares into swords,
It is not yet the far, seraphic Dream
Of peace made beautiful and love supreme.
For now the strong, unwearable chords
Of battle shake to thunder, and the hordes
Advance, where now the circling vultures scream
The standards gather and the trumpets gleam,
Down the long hillside stare the mounted lords.

Now far beyond the tumult and the hate
The white-clad nurses and the surgeons wait
The backward currents of tormented life,
When on the waiting silences shall come
The screams of men, and, ere those lips are dumb,
The searching probe, the ligature and knife.

II

Was it for such, the brutehood and the pain,
Civilization gave her holy fire
Unto thy wardship, and the snowy spire
Of her august and most exalted fane?
Are these the harvests of her ancient rain
Men glean at evening in the scarlet mire,
Or where the mountain smokes, a dreadful pyre,
Or where the war-ship drags a bloody stain?

Are these thy votive lilies and their dew,
That now the outraged stars look down to see?
Behold them, where the cold prophetic damps
Congeal on youthful brows so soon to lose
Their dream of sacrifice to thee—to thee,
Harlot to Murder in a thousand camps!

III

Was it for this that loving men and true
Have labored in the darkness and the light
To rear the solemn temple of the Right
On Reason's deep foundations, bared now
Long after the Cæsarian eagles flew
And Rome's last thunder died upon the Night?
Outraged, the cannon menace from the height;
Armored, the new-born eagles take the blue.

Walt not thy lords the avenging certain knell—
One with the captains and abhorrent fames
The echoes of whose conquests died in Hell?—
They that have loosened the ensanguined flood,
And whose malign and execrable names
The Angel of the Record writes in blood.

The defense of Liège, which inspired Mr. Stephen Phillips to the stirring lines recently reprinted in these columns, has been

celebrated also by Mr. William Watson. His poem, in the *London Daily Chronicle*, has little novelty of phrase to commend it, but it has strength and grace. The two syllables that end every stanza give the poem a laconic emphasis almost military in its effect.

Liège

BY WILLIAM WATSON

Betwixt the foe and France was she,
France the immortal, France the Free,
The foe like one vast living sea
Drew nigh.

He dreamed that none his tide would stay,
But when he bade her to make way
She, through her cannon answered, "Nay,
Not I."

No tremor and no fear she showed;
She held the pass, she barred the road
While Death's undleeping feet bestrode
The ground.

So long as deeds of noblest worth
Are sung 'mid joy and tears and mirth,
Her glory shall to the ends of earth
Resound.

Watched by a world that yearned to aid,
Lonely she stood but undismayed,
Resplendent was the part she played,
And pure.

Praised be her heroes, proud her sons;
She threw her souls into the guns.
Her name shall with the loveliest ones
Endure.

Prof. George Herbert Clarke, of the University of Tennessee, shows in his verse none of the aloofness from humanity which sometimes mars the work of poets who write in academic seclusion. His book "At the Shrine, and Other Poems" (Stewart & Kidd Company) contains many poems of thoughtful beauty.

Sometimes, as in the ecstatic song that follows, Professor Clarke leaves sonnets and other fixed forms for a musical and passionate verse that is free without being that abomination known as "free verse."

Daybreak

BY GEORGE HERBERT CLARKE

Sun! Sun! Sun! Sun!
Chorus of earth-birds, chorus of sky-birds, myriad
matins begun,
Cross-tangled adventurous music, anthems of awe,
Of appeal, adoration: litanies now of law,
And now raptur'd singings of trust in the truth of
the light,
The Lighter's proud power, and the rich-altared
East, all bedight
With the glimmer, the glow, and the glory, till it
mounts into flame,
And the mass-music mightily swells to the
sovereign Name—
Sun!
As his garment, incredibly golden, the edge of the
world has won,
And life is astir, and love is alive, and the sighing
and sleeping are done!
Sun! Sun! Sun!

PERSONAL GLIMPSES

TWENTY-SIX HOURS OF MARCHING MEN

WHAT is the German Army like? What is this Army, the greatest in many respects that the world has known, when it is gathered together in its millions? We are told that the men are surpassingly well drilled, that they march and fight like machines, and many other particulars, but it is difficult to put these facts together, repeated a million times in minute detail, and arrive at anything like a picture of the whole. In these columns has been told the story of the men who surged down into the river before Liège, advancing more thickly than the dead and wounded could fall, swarming across and up the other side in the face of a leaden hail; but even this falls short of the picture given us by Richard Harding Davis, in the New York Tribune, in his description of the German forces passing through Brussels. For twenty-six hours this stream of armed men rolled like fog through the echoing streets. It was not at all like a parade or a review, for these are human things, and, as Mr. Davis says:

The entrance of the German Army into Brussels has lost the human quality. It was lost as soon as the three soldiers who led the Army bicycled into the Boulevard du Regent, and asked the way to the Gare du Nord. When they passed the human note passed with them.

What came after them, and twenty-four hours later is still coming, is not men marching, but a force of nature like a tidal wave, an avalanche, or a river flooding its banks. At this minute it is rolling through Brussels as the swollen waters of the Conemaugh Valley swept through Johnstown.

At the sight of the first few regiments of the enemy we were thrilled with interest. After, for three hours, they had passed in one unbroken steel-gray column, we were bored. But when hour after hour passed and there was no halt, no breathing time, no open spaces in the ranks, the thing became uncanny, unhuman. You returned to watch it, fascinated. It held the mystery and menace of fog rolling toward you across the sea.

The gray of the uniforms worn by both officers and men helped this air of mystery. Only the sharpest eye could detect, among the thousands that passed, the slightest difference. All moved under a cloak of invisibility. Only after the most numerous and severe tests at all distances, with all materials and combinations of colors that give forth no color, could this gray have been discovered. That it was selected to clothe and disguise the German when he fights is typical of the German staff in striving for efficiency to leave nothing to chance, to neglect no detail.

After you have seen this service uniform under conditions entirely opposite, you are convinced that for the German soldier it is his strongest weapon. Even the most expert marksman can not hit a target he

You Can't Compromise with "Acid-Mouth"

"Acid-mouth" is the chief scourge of the teeth. Dentists say that 9 out of 10 people have it and that its ravages cause 95% of all tooth-decay.

There's no trifling with such an enemy. It must be checked or in time it will destroy even the soundest teeth.

A sure protection is the regular daily use of

PEBECO TOOTH PASTE

the dentifrice that scientifically counteracts "acid-mouth."

Pebeco does this in addition to its other duties—those of cleaning the teeth, keeping them white, removing bad tastes and odors and refreshing the whole mouth.

Pebeco originated in the hygienic laboratories of P. Beiersdorf & Co., Hamburg, Germany. As it comes in extra-large tubes and only one-third of a brushful is needed at a time, its use is economical.

It's easy to prove the virtues of Pebeco if you will

FRENCH CO., 303 Arch Street, Philadelphia, Pa.

can not see. It is a gray-green, not the blue-gray of our Confederates. It is the gray of the hour just before daybreak, the gray of unpolished steel, of mist among green trees.

I saw it first in the Grand Place in front of the Hotel de Ville. It was impossible to tell if in that noble square there was a regiment or a brigade. You saw only a fog that melted into the stones, blended with the ancient house fronts, that shifted and drifted, but left you nothing at which you could point.

Later, as the Army passed below my window, under the trees of the Botanical Park, it merged and was lost against the green leaves. It is no exaggeration to say that at a hundred yards you can see the horses on which the Uhlans ride, but can not see the men who ride them.

If I appear to overemphasize this disguising uniform it is because, of all the details of the German outfit, it appealed to me as one of the most remarkable. The other day, when I was with the rear guard of the French Dragoons and Curassiers and they threw out pickets, we could distinguish them against the yellow wheat or green corn at half a mile, while these men passing in the street, when they have reached the next crossing, become merged into the gray of the paving-stones and the earth swallows them. In comparison, the yellow khaki of our own American Army is about as invisible as the flag of Spain.

Yesterday Major-General von Jarotzky, the German Military Governor of Brussels, assured Burgomaster Max that the German Army would not occupy the city, but would pass through it. It is still passing. I have followed, in campaigns, six armies, but, excepting not even our own, the Japanese, or the British, I have not seen one so thoroughly equipped. I am not speaking of the fighting qualities of any army, only of the equipment and organization. The German Army moved into this city as smoothly and as compactly as an Empire State Express. There were no halts, no open places, no stragglers.

This Army has been on active service three weeks, and so far there is not apparently a chin-strap or a horseshoe missing. It came in with the smoke pouring from cook-stoves on wheels, and in an hour had set up post-office wagons, from which mounted messengers galloped along the line of column, distributing letters, and at which soldiers posted picture post-cards.

The infantry came in in files of five, two hundred men to each company; the Lancers in columns of four, with not a pennant missing. The quick-firing guns and field-pieces were one hour at a time in passing, each gun with its caisson and ammunition-wagon taking twenty seconds in which to pass.

The men of the infantry sang "Fatherland, My Fatherland." Between each line of song they took three steps. At times two thousand men were singing together in absolute rhythm and beat. When the melody gave way, the silence was broken only by the stamp of iron-shod boots, and then again the song rose. When the singing ceased the bands played marches. They were followed by the rumble of siege-guns, the creaking of wheels, and of chains clanking against the cobblestones, and the sharp, bell-like voices of the bugles.

For seven hours the Army passed in such

Good Light For the Home For Business

Good light is soft, agreeable and easy on the eyes. It is neither brilliant nor dim.

Brilliant, dazzling or harsh light is the worst kind of poor light. It is a crime against eyes, nerves and health, and should be softened by globes, shades or bowls into an agreeable, comfortable illumination that is easy to read by, work by and live in.

Alba Bowl on Macbeth-Evans Fixture—an attractive and efficient lighting unit for stores, offices and other business buildings.

Macbeth-Evans Lighting Equipment (with Alba or Decora Glassware)

makes seeing easy and comfortable, brings out the beauty of the surroundings, gets more and better illumination from the current, softens the light, directs it where needed and makes good light cost less than poor light.

Send for one of these Lighting Pamphlets

- 1—**HOMES:** Good light in the home is beautiful, makes seeing easy and comfortable, the evening hours cheerful, and brings out the beauty of the surroundings. It prevents eye-strain.
- 2—**DEPT. STORES:** Customers stay longer and buy more where seeing is easy and comfortable, speak well of the store and visit it often.
- 3—**RESTAURANTS:** Good light attracts patrons and makes them more comfortable. It is soft, agreeable, restful, promoting relaxation.
- 4—**STORES:** Well-lighted stores and windows attract customers, and display merchandise well. Customers stay longer and buy more.
- 5—**OFFICES:** Good light means more work with fewer mistakes, less fatigue, without eye-strain. Seeing is easy and comfortable.
- 6—**CLUBS:** The illumination should be ample, restful, agreeable in color, beautiful, in harmony with the surroundings and entirely without strain.

- 7—**HOTELS:** Good light is beautiful, brings out the beauty of the surroundings, and makes seeing easy. People enjoy themselves more.
- 8—**BANKS:** Good light is handsome and in harmony with the surroundings. It makes seeing easy, often pays for itself by increasing efficiency and preventing errors.
- 9—**THEATRES:** Good light is subtle, soft, restful, and cheerful. It is beautiful, in harmony with the surroundings, and creates a receptive attitude in the mind of the audience.
- 10—**HOSPITALS:** Light should be ample, cheerful, and restful for comfort and quick recovery of patients. Good light is needed in operating rooms for precision and accuracy.
- 11—**CHURCHES:** Light should be subtle, soft agreeable. Harsh or brilliant spots which distract eye and attention, should be avoided.

solid column that not once might a taxicab or trolley-car pass through the city. Like a river of steel it flowed, gray and ghostlike. Then, as dusk came and as thousands of horses' hoofs and thousands of iron boots continued to tramp forward, they struck tiny sparks from the stones, but the horses and the men who beat out the sparks were invisible.

At midnight pack-wagons and siege-guns were still passing. At 7 this morning I was awakened by the tramp of men and hands playing jauntily. Whether they marched all night or not I do not know; but now for twenty-six hours the gray Army has rumbled by with the mystery of fog and the pertinacity of a steam-roller.

STRIKING OUT THE GREATEST HITTER

WITH Time upon the mound one can not line them out to the fence forever. Time puts over some easy ones and is guilty of not a few wild pitches now and then, but in the end he always rallies and the strikes come—one, two, three. Even one who is a hitter by profession, and the shrewdest and heaviest of the lot, is not safe against that baffling, slow in-curve. Thus it is that Napoleon Lajoie, of Cleveland, has slipt for the first time in eighteen years below a .250 average, and is counted out of the regulars and among the reserves. And with his going, points out Grantland Rice, in the *New York Mail*, the diamond loses a more remarkable hitter than is generally realized:

It is not generally known, but Lajoie, off the field now, means that the greatest hitter in all baseball is on the bench.

Larry the larruper hasn't batted .300 as many seasons as Wagner. He has slipt below the .300 mark twice in seventeen years. But the Nap star has compiled the greatest average ever known over an eighteen-year stretch—a greater average than Wagner, Anson, or any of the old guard were able to hang up.

Anson's batting average for his complete length of service was .337. Wagner's up to 1914 was .344. Lajoie's for eighteen years was .351. Including 1914, Wagner's grand average is .341 and Lajoie's .348. Cobb is well beyond them both, but Tyrus Raymond had only served half the time established by the renowned Frenchman and the equally renowned German. Cobb has a grand nine-year average of .371, but what the next nine years will show is another matter.

It will be interesting to see where Lajoie winds up as a player—whether he will serve out his time in Cleveland as a pinch hitter and then retire, or whether he decides that a shift to another city will give him still another year or two to star with the old war club. He is still two years younger than Wagner, and Wagner isn't through yet. It might be that, shifted to the Yanks, Lajoie would get going again and find the change of scenery beneficial to his batting eye.

But if he comes to New York it will be of his own accord. He will have his

choice of remaining under the Cleveland flag or picking his next home. Charley Somers, owner of the Naps, has told us on several occasions that Lajoie would end his career in Cleveland if he desired to stick. His home is there and he has saved up enough money to take life easily. He has been paid a fine salary for twelve years—a salary that averaged around \$8,000 a year.

HOW THE WAR NEWS CAME TO ST. MARGARET'S

LET people once be lulled into a belief in the impossibility of a thing, and their faith becomes implicit and unshakable, under ordinary circumstances. But the breaking forth of war upon the continent of Europe has taught all mankind a new lesson upon this text. A sacred impossibility was violated in an instant, and in that instant the impossibility became a concrete and terrible fact. It would be highly instructive were it possible to record the composite processes in the minds of those to whom the news of war came in this way, as a surprise. Something of the sort has been done by one man, Alfred Pittman, a writer to the *Kansas City Star*, who, in the staid little village of St. Margaret's-by-the-Sea, saw rumor come and saw it grow from a dim wraith of suspicion to the lowering thunder-heads that now hang over the whole of Britain. He gives us an admirable picture of the detached air of the village in ordinary times, and how it was drawn, with the whole of England, helplessly into the whirlpool of war. The scene is set for us as follows:

The village of St. Margaret's sprawls over the edge of the great chalk cliffs; sits on top, skirts the shingle beach at the bottom and clings to the side, amid hanging gardens. From down-town to up-town is two hundred and more steps by a zig-zag stairway. You can stop half-way up and get very good tea and cakes, or whisky and soda if you are dead beat.

The shipping of four empires passes silently before St. Margaret's, like a picture-show. It is a never-ending pageant, branching out to the ends of the earth. On clear days the chalk cliffs of France are as white streaks on the horizon, and, when there is no fog, the light-towers of Dover, Calais, Grinnez, and the Goodwin Sands ship may be seen winking at one another from dusk to dawn—tho, of course, nobody in St. Margaret's stays up after dark to see them.

The village has been a model of composure for centuries. The headstones in the yard of its twelfth-century Norman church—those whose carvings can still be read—are evidence enough of that. No one thinks of dying under eighty. Even in this irreverent day the place is still unprofaned by a railway. An hour's walk from Dover and England's chief highway to the Continent, it rejoices in the headland that lies between, shutting out the smoky view.

Let England fret over its business and

Every year you spend nearly two solid weeks in shaving

If it takes you 15 minutes to shave and you shave every day, you spend, annually, 12 working days in shaving. That's a long time—and a weary, bothersome job. Figure what this time is worth to you.

Wouldn't you like to save half that time and money—and *all* the torture caused by a burning, smarting face?

Use Mennen's Shaving Cream. You can shave in less than half the time because there is no "rubbing in" with the fingers, no re-stropping, no re-lathering, no "doctoring" your face with lotions afterwards.

The full, generous lather of Mennen's Shaving Cream quickly softens the beard, so that even a razor which is a trifle dull cuts easily and smoothly. No free caustic or other irritant to

bite, burn and disfigure your face.

Mennen's Shaving Cream is put up in sanitary, airtight tubes with handy hexagon screw tops. Just one trial will prove to you what this *different* shaving cream can do to take the torture out of your daily shave. Try it.

At all dealers—25c. Send 10c for a demonstrator tube containing enough for 50 shaves. Gerhard Mennen Co., Newark, N. J., makers of the celebrated Mennen's Borated and Violet Talcum Toilet Powders and Mennen's Cream Dentifrice.

CHIPPENDALE

sit up late for theaters; let the sea pageant keep on at its door—St. Margaret's will go to sleep under its red roofs at half-past nine and be up betimes to tend its flowers. The fragrance of heliotrope, honeysuckle, and St. John's wort hovers about it on a calm day, and in the long dusk the west wind carries the smell of sweet clover and fresh-cut hay. Gulls cry, a dog barks, a distant steamer's whistle drones, the surf roars over the shingle—these are the noises to which St. Margaret's sleeps and wakes.

That is to say, it was so until last week. Last week an agitation such as the oldest inhabitants could not remember—and goodness knows how old they are—began to spread over the town. A new lot of sights and sounds sprang up, with curious effect on both village folk and summer visitors.

The heavy rhythm of tramp—tramp—tramp on the gravel road brought people to their windows. A squad of soldiers in khaki, carrying rifles, passed by. They marched down the crazy steps to the beach and fell to work with picks and shovels about the little cubical concrete house that marks the end of the French cable, and before which at low tide the cable lies exposed. The building of bullet-proof breastworks was started. The little officer "ragged" with the hotelkeepers, billeting his men on them—at a loss to the hotels. Tents were pitched in the gardens and marching and bugling became night and morning routine.

A huge defense gun on the headland was uncovered. Lookouts stood before it with telescopes to their eyes.

A man from the hotel motored to Dover and was stopt by sentinels. They asked if he had any camera or sketching materials, and, when they had searched the car, let him pass.

"I'm glad they didn't ask my name," he said. "Schreiberg! That would have got me in. But I'm English as can be." And his speech proved it.

"I say," he went on, "you should have seen Dover Harbor. Full of black war-ships—thirty-five of them. Sentinels at the pier gates and a military band playing on the esplanade."

St. Margaret's is used to war-ships. They are always passing—on play business. But the rumors in the air now give a grave significance to their movements. Fifteen torpedo-boats, low-lying and stocky, pass by in file for the North Sea. Five dreadnoughts, the flag-ship flying the balled white ensign, meaning admiral aboard, cruise to the south. St. Margaret's saw the ill-starred Russian Fleet sail proudly by toward its fate in the Japan Sea. That is a sobering thought for the village now, looking out on British ships.

At night search-lights from both sides of the Channel crisscross in the clouds and on the water and pick up every vessel within range, making a white phantom ship of it against the dark sea. Aeroplanes whir by in twos and threes, and submarines, their tops just visible, appear and disappear. All these are daily and nightly spectacles.

And now the scene shifts to the prim little summer hotel, typical of "The Green Man," "The Cliff House," and every other inn and gathering-place in the village. News filters in slowly; one day no

papers come down from town; a rumor is started, contradicted, reaffirmed, it grows, spreads, and lays siege to reason. Nothing is certain, and yet, in the midst of uncertainty, the one great fact of European war attains its certainty in the startled thought of those who wait for its confirmation. All this Mr. Pittman has cleverly expressed in the following dialog, which, if not reported verbatim, must be a close paraphrase of the actual words of those concerned. The dialog forms a grim little playlet, cast in four brief scenes, as follows:

THURSDAY EVENING

POSTMAN (in the office)—"Germany's declared war."

ELDERLY BRITON (with pointed beard)—"Look here! Is that certain?"

POSTMAN (nodding)—"At six-thirty this afternoon, sir."

PRETTY ENGLISH GIRL (tears shining in her eyes)—"Oh!"

ELDERLY BRITON (joining group on terrace)—"Well, it's come."

GROUP—"Yes? Yes?"

ELDERLY MAN—"Germany's declared war."

GROUP—(Dead silence.)

TALKATIVE WOMAN—"This is frightful. Do you think we are in danger here? My son told me—"

YOUNG ENGLISH WIFE—"What do you think, Cyril? Should I write Maria to stock the house with provisions?"

CYRIL—"I would, I believe. Things will be high and devilish hard to get."

POET—"Bread went up ha'penny to-day. They'll be starving in the East End. Two German bankers committed suicide. When the bankers can't stand it, what about the others? Peruvian preference, Brazilian railway, Amalgamated Copper, Union Pacific, Aerated bread—all down. Those who weren't consulted pay. And no one profits. That's war!"

AMERICAN—"I wonder if I can get my passage changed to this Saturday. I'd better be clearing out if I'm to be home by September."

CYRIL—"They closed up Portsmouth Harbor to-day—gave notice they'd fire on any ship that tried to come in or go out."

AMERICAN—"By George, I'll wire and see, anyway." (Goes out, followed by Elderly Briton.)

PRETTY ENGLISH GIRL (brightly, to Elderly Briton)—"I've just 'phoned Aldershot and they say the German report is false."

ELDERLY BRITON (rejoining group on terrace)—"Good news now—they say in Aldershot that war has not been declared. The young lady just telephoned."

TALKATIVE WOMAN—"I was sure it couldn't be so!"

ELDERLY MAN (fervently, half to himself)—"I'm glad, God! I'm glad."

CYRIL (to his wife)—"I wonder if some soldier chap down at Aldershot hasn't been spoofing that girl; trying to buck her up."

FRIDAY EVENING

(Word has been received that Germany did not declare war, but a "state of war," meaning martial law.)

ELDERLY BRITON—"It must have been a wonderful sight on the stock exchange

My Cry is— Votes for Men

"I am one of the men who prefer Van Camp's to any old-style Baked Beans. I like them ten times better than the Beans that mother baked.

"I like their wholeness, their nuttiness, their mealiness. I like the tang of the sauce.

"I believe millions of men are just like me. My lunch-room downtown—which serves Van Camp's—is fairly mobbed at noontimes.

"So I stand for votes for men—votes on the Beans to be served on their home tables. If men had the say, no Beans would be baked in the old ways."

But men do have the say. Just try it. Say how you like Van Camp's. Within 15 minutes your grocer will get a telephone order for them.

VAN CAMP'S
PORK & BEANS BAKED WITH TOMATO SAUCE

Also Baked Without the Sauce

10, 15 and 20 Cents Per Can

Madam, you cannot compete with our chefs on Baked Beans. Nobody ever has. You can't get such raw beans as they get. And there is no other sauce like the sauce they bake into them.

You have not a steam oven, and Beans can't be baked as Van Camp's are without it. That is, baked until mellow without crisping or bursting.

These are new-style Baked Beans. Every process is scientific. Materials are specially grown for them. The ablest chefs prepare them.

Try them. They cost but three cents per serving. They are ready on a moment's notice. They come to your table with the fresh oven flavor. Find out, for your own sake, what it means to have such meals as these ready on the pantry shelf.

Buy a can of Van Camp's Beans to try. If you do not find them the best you ever ate, your grocer will refund your money.

A Five-Cent Banquet

The costliest banquet ever spread, with all the gastro-nomic concoctions that culinary genius can devise, could not contain as much real body-building, digestible nutriment as two

Shredded Wheat Biscuits

the food that contains all the elements in the whole wheat grain steam-cooked, shredded and baked. It is what you digest, not what you eat, that builds muscle, bone and brain. The filmy, porous shreds of whole wheat are digested when the stomach rejects all other foods. Two Shredded Wheat Biscuits, with milk or cream and sliced peaches, make a complete, perfect meal at a cost of five or six cents.

Always heat the Biscuit in oven to restore crispness; then cover it with sliced peaches or other fresh fruit and serve with milk or cream. Try toasted Triscuit, the Shredded Wheat Wafer, for luncheon with butter, cheese or marmalades.

"It's All in the Shreds"

Many Pretty Bands & Wrappers
For Multitudes of Rank Filler

yesterday. I have a letter from my office. Every man of them dying to sell and not one of them offering a share. They knew it would be like a break in a Holland dike if they did. They're heroes, those chaps. They kept out a deluge."

AMERICAN—"That's bully!"

ELDERLY BRITON—"My letter says it looks pretty dark. Germany's sure to start things within a day."

STUDENT—"Well, if it does! Why does England have to mix in?"

ELDERLY BRITON—"For our own security, my son."

STUDENT—"That was it the last time we sent troops to the Continent. For our security we fought to check the Russians. Now we fight to turn them loose."

ELDERLY BRITON—"Great Britain must stand with its friends. If the Germans get into the Channel our empire is at an end. With the Germans overrunning Belgium and northern France, we are gone."

STUDENT—"I've heard that before, and the same kind of talk about the Russians in Asia not long ago. I don't believe we have more to fear from 65 million Germans than from 200 million united Slavs, with their rudimentary civilization and their enormous military force. Let them tear at each other's throats. We shall be relatively stronger and more secure if we stay out."

ELDERLY BRITON—"That's a very good theory."

STUDENT—"It's a stock debate. Let's save it for a dull night."

(The sound of cannonading from the direction of the French coast intervenes.)

TWO OR THREE PERSONS—"What's that!"

A WAITER (smiling)—"Coast guns, sir. They test them every now and then."

SUNDAY EVENING

(Germany has declared war on Russia and France.)

ELDERLY BRITON (seating himself beside the young English wife)—"I'm a bit upset to-night. I suppose I'm ruined. (Pause.) My office hears the Bank of England will suspend gold payments Tuesday morning, and Monday's a bank holiday. Pretty tough on a man at sixty-two."

YOUNG ENGLISH WIFE—"Yes; we must keep a grip on ourselves."

CYRIL (crossing to his wife)—"This is rough on us. Bank-notes were just plain paper in town this afternoon. Nobody would take anything but gold. We've got to get back Monday, and if the banks don't open Tuesday, we've got to stay around until they do open."

AMERICAN GIRL (to Poet)—"Won't you please explain to me what's the real cause of it all? I can't seem to understand."

POET—"No wonder. It is hard to comprehend. But it's something like this: A certain man took it especially to heart that some of his neighbors differed from him in race and religion. That kind of thing doesn't make much difference ordinarily, but as it was it made all the difference in the world. You see, the man happened to be the son of the Emperor of Austria-Hungary, and because of his bitterness, some 500 million people have to go to war." . . . (The explanation goes on.)

ELDERLY BRITON (bringing in Sunday afternoon extras)—" . . . Germany seizes two British merchantmen . . . Battle on the French frontier. . . . Germans violate the neutrality of Luxemburg. Lord, Great Britain's bound to get into it now." CYRIL—"She is in it."

MONDAY MORNING

POET—(Exit, followed by porter and bags.)

ELDERLY BRITON—(Exit, ditto.)

AMERICAN GIRL AND HER FATHER—(Exeunt, preceded by porter with truck and trunks.)

CYRIL AND HIS WIFE—(Exeunt, ditto.)

Others follow, including three waiters, the student, and the talkative woman, who wonders whether the American was lucky enough to catch his ship.

HOTEL MANAGER (soliloquizing)—"And bank holiday was to have been a fat day for me."

TOURIST STORIES OF EUROPE'S METAMORPHOSIS

FROM this side of the Atlantic we had a certain picture of the sudden crystallization of the war spirit in Europe, and the subsequent rapid course of events that led with lightninglike rapidity to open warfare; but only those Americans who were caught abroad in the vortex of war itself saw the real change that came over the whole Continent in those few eventful opening days of August. These unwilling spectators of the world spectacle did not have the sense of universal catastrophe of which we were conscious here, but the drama which they did witness was in many ways more startling. Wherever they happened to be in Europe, when the blow fell, they beheld whole communities change, overnight, from peaceful towns and cities into seething centers of mobilization and armament. They returned to their hotels at nightfall through innocent-appearing crowds of curious citizens, and awakened in the morning to hear outside their windows the martial strains of military music, accompanied by the steady tramp of soldiers marching to take their places in one of the greatest wars of history. Often in a single day was this metamorphosis visible. In France and in England, as in Germany, they were witness to an almost instantaneous change from the ways of peace to the devices of war. Great cities that for half a century had slumbered peacefully in apparent immunity from disturbance altered suddenly to armed camps. The travelers, taken wholly unawares, saw civilization, which they had believed to be an edifice of adamant, displayed as nothing better than a painted curtain, which, flung aside, revealed in full panoply the hideous form of stark barbarity. And all this, as we learn from the accounts which have been brought home to us, or have been sent by those who could not yet manage to

Why Not Live the Thoroughly Successful Life?

I know that I can easily, quickly and positively prove to you that you are only half as alive as you must be to realize the joys and benefits of living in full; and that you are only half as well as you should be, half as vigorous as you can be, half as ambitious as you may be, and only half as well developed as you ought to be.

The fact is that no matter who you are, whether you are young or old, weak or strong, rich or poor, I can prove to you readily by demonstration that you are leading an inferior life, and I want the opportunity to show you the way in which you may completely and easily, without inconvenience or loss of time, come in possession of new life, vigor, energy, development and a higher realization of life, success and happiness.

Become Superior to Other Men. The Swoboda System can make a better human being of you, physically, mentally and in every way. It creates a greater activity of the forces of life which in you are partially dormant, thus compelling them to become more alive and positive, enabling you to grow and evolutionize to a higher state of perfection. The Swoboda System can do more for you than you can imagine. It can so vitalize every organ, tissue and cell of your body as to make the mere act of living a joy. It can give you an intense, thrilling and pulsating nature. It can increase your very life. I not only promise it, I guarantee it.

Why Take Less Than Your Full Share of Life and Pleasure? Are you living a full and successful life? Why not always be at your best?—thoroughly well, virile, energetic. Why not invest in yourself and make the most of your every opportunity? It is easy when you know how. The Swoboda System points the way. It requires no drugs, no appliances, no dieting, no study, no loss of time, no special bathing; there is nothing to worry you. It gives ideal mental and physical conditions without inconvenience or trouble.

The Swoboda System of Conscious Evolution is no experiment. I am giving it successfully to pupils all over the world. I have among my pupils hundreds of doctors, judges, senators, members of cabinet, ambassadors, governors, thousands of business and professional men, farmers, mechanics and laborers, and almost an equal number of women—*more than two hundred thousand people have profited through this system.*

Your Earning Power, your success depend entirely upon your energy, health, vitality, memory and will power. Without these, all knowledge becomes of small value, for it cannot be put into active use. The Swoboda System can make you tireless, improve your memory, intensify your will power, and make you physically just as you ought to be. I promise it.

Pupils are men and women, ranging in age from 14 to 92.

Originator of
Conscious Evolution

WHAT OTHERS HAVE TO SAY

"Can't describe the satisfaction I feel."
"Worth more than a thousand dollars to me in increased mental and physical capacity."
"I have been enabled by your system to do work of mental character previously impossible for me."
"I was very skeptical, now am pleased with results; have gained 17 pounds."
"The very first lessons began to work magic. In my gratitude I am telling my croaking and complaining friends, 'Try Swoboda.'
"Words cannot explain the new life it imparts both to body and brain."

"It reduced my weight 30 pounds, increased my chest expansion 5 inches, reduced my waist 6 inches."
"I cannot recommend your system too highly, and without flattery believe that its propagation has been of great benefit to the health of the country."
"My reserve force makes me feel that nothing is impossible, my capacity both physically and mentally is increasing daily."
"I have heard your system highly recommended for years, but I did not realize the effectiveness of it until I tried it. I am glad indeed that I am now taking it."
"Your system developed me most wonderfully."
"I think your system is wonderful. I thought I was

in the best of physical health before I wrote for your course, but I can now note the greatest improvement even in this short time. I cannot recommend your system too highly. Do not hesitate to refer to me."
"You know more about the human body than any man with whom I have ever come in contact personally or otherwise."
"Your diagnosis and explanation of my brain trouble was a revelation to me. I have had the best physicians of my State, but your grasp of the human body exceeds anything I have ever heard or known. I have read your letters to many people, also to my physicians, who marvel at them."

MY NEW COPYRIGHTED BOOK IS FREE. It explains the SWOBODA SYSTEM OF CONSCIOUS EVOLUTION and the human body as it has never been explained before. It will startle, educate, and enlighten you.

My book is not a dry treatise on anatomy and physiology. It tells in a highly interesting and simple manner just what you have always wanted to know about yourself.

You will cherish this book for having given you the first real understanding of your body and mind. It shows how you may be able to obtain a superior life; it explains how you may make use of natural laws for your own advantage.

My book will give you a better understanding of yourself than you could obtain from a college course. The information which it imparts cannot be obtained elsewhere at any price. It shows the unlimited possibilities for you through conscious evolution of your cells; it explains my discoveries and what they are doing for men and women. Thousands have advanced themselves in every way through a better realization and conscious use of the principles which I have discovered and which I disclose in my book. It also explains the DANGERS OF EXERCISE and of EXCESSIVE, DEEP BREATHING.

Unless you already know all about the SWOBODA SYSTEM OF CONSCIOUS EVOLUTION for men and women, you should lose no time in securing my free book. It will give you information which you will value, because it will open new avenues through which you may become successful in satisfying your most intense desires.

I offer my System on a basis which makes it impossible for you to lose a single penny. My guarantee is startling, specific, positive and fraud-proof.

Write for my FREE BOOK and full particulars to-day before it slips your mind. Make up your mind to at least learn the facts concerning the SWOBODA SYSTEM OF CONSCIOUS EVOLUTION for men and women.

ALOIS P. SWOBODA, 1227 Aeolian Hall, New York City, N. Y.

The Swoboda System is as effective for Women as for Men.

—with an EDISON MAZDA in every socket

The new 42 story
L. C. Smith
Building, Seattle.
Architects,
Gaggin & Gaggin,
Syracuse, N. Y.

Like scores of other sky-scrapers, big stores and public buildings, this magnificent, cloud-piercing structure, of which the great Northwest is justly so proud, is lighted from top to bottom with EDISON MAZDA Lamps.

These lamps are chosen to the exclusion of all others for their sturdy endurance, the satisfying quality of their brilliant white light, and best of all because they produce good light at the lowest possible cost—from 3 to 6 times as cheaply as old-style carbon lamps.

The shrewd men who manage these giant buildings take full advantage of every wise economy. That is why they discard carbon lamps and use EDISON MAZDAS in every socket.

Apply this same shrewdness to your own home. Use EDISON MAZDAS, not only in important rooms, but in every room from cellar to garret. Only thus can you get the full benefit of EDISON MAZDA economy, backed by the world-wide research of MAZDA Service.

Your nearest dealer or your lighting company will gladly show you sizes and styles of EDISON MAZDAS for every room in your home.

EQUIPMENT FOR EVERY ELECTRICAL NEED

few, they saw in concrete terms, in scenes and events poignant in themselves, but a thousand times more so because of the personal meaning they held for the panic-stricken onlookers. Of all cities of the Continent, few are so peaceful in appearance, so hospitable to the casual visitor, as Munich. This old town is famed above all others for its *Gemüthlichkeit*, the one universal German expression for peaceful, quiet enjoyment. Yet it is a very different picture of the Bavarian capital that is given by one contributor to the *New York Evening Post*, who happened to arrive there just as the change came. We read:

On Friday, the last day of July, Munich was feverish with excitement over the prospects of war. Altho official bulletins were epidemic, the final orders for the march to the front had not come to the troops which throughout Bavaria had rapidly been mobilizing during the few previous days of this stormy midsummer week. We had only arrived the night before from Berlin and Dresden, where the mobs in the streets and processions of students singing "Die Wacht am Rhein," and other war ballads, were of such magnitude that old residents said nothing like them had been seen since the beginning of the Franco-Prussian conflict of 1870. Consequently it was not surprising to find the Haupt Bahnhof, or central station, swarming with excited Bavarians all trying to move in opposing directions.

It took us a full hour to get our baggage and ourselves out of the terminus into a taxicab, and the drive to the hotel was blocked by masses of people at every turn. Under such conditions Germany seemed a good place to retreat from, and our first efforts on reaching the hotel were devoted to securing accommodations to Paris for the following night on that crack train, the Orient Express, which makes the run in twelve hours.

To see Munich in a day seemed like sacrilege, but if we had fallen to its charms instead of steeling ourselves against them, we might be there yet. So we cautiously selected the best of the many double-starred attractions recommended by Mr. Baodeker, and had just been driven out of the famous picture-gallery by the four o'clock closing bell, when we found excited throngs eagerly reading large pink posters, conspicuously plastered on walls and buildings calling for immediate and complete mobilization of all reserves and indicating that the great European war, dreaded by all, had come. Bavarian officers, with aids, were everywhere pushing through the streets in motors reading proclamations to the crowds at various points and, on hurrying back to our hotel, we found Cook's agent besieged by tourists hysterically trying to get tickets out of Munich by night trains, on which all accommodations had been sold. We could have disposed of our places on the Orient Express at a large profit, but, of course, kept them tightly buttoned up and made ready to leave.

It took us another full hour to get into the station, check our baggage, and find our places on the train, and our clothes were nearly dragged from our backs by the seething mass of people that were surging in every direction. Fortunately, the Orient

Express pulled in from Vienna late, and as it disgorged its hundreds of passengers, they were literally swallowed up by the throng that stormed the cars in their eagerness to get on board. Our satisfaction in finally reaching our compartment was short-lived, for the attendant told us the train would not proceed beyond Strassburg, six hours distant, since none of the cars would be allowed to leave German territory under existing conditions.

This looked like war, indeed, and our real troubles began when we were ordered out of the train at Strassburg in the small hours of the morning, with the announcement that the train would go no farther. No one at the station could tell us if or when we should be provided with another train to the French frontier, and none of our fellow passengers knew what to do next. So we all paced the platforms awaiting daylight and developments.

Soldiers were everywhere, and the buffet where we tried to get some small refreshment was so overrun with them that it was war to the knife in obtaining a poor cup of coffee and an unbuttered roll. It was not until about nine o'clock in the morning that a train of third-class cars backed into the station, and we were finally told it would take us across Alsace to the French frontier at Avricourt—some two hours distant. There was nothing to do but clamber in and forget the Orient Express. Our third-class local was packed with troops fully armed and belted with cartridge, and at every small station were detachments of soldiers. Every railway bridge—big and little—had its guards, who were actually throwing up intrenchments. Long trains of cavalry and artillery could be seen moving along the high roads toward the west, and the farmers everywhere seemed to be working frantically to harvest their grain—some of which had not yet fully matured—before their farms became battlefields. The German soldiers—many of whom were mere boys—were equipped in khaki uniforms, khaki-covered helmets, new cartridge belts, and heavy army boots. Whether they knew of the cause for which they were going to fight seemed doubtful, but they certainly were prepared for war.

Of the same change in Paris there have been many descriptions given. It began with the pink mobilization bulletins, took color with the singing of the "Marseillaise," and developed more swiftly than thought could realize into a wild outburst of military ardor, and the confusion of departing regiments. Something of this is shown by the writer of the above, who arrived in Paris after still more difficulty in crossing the French border, and nineteen sleepless hours in a train filled to the corridors with French soldiery:

We looked forward to a bath and breakfast at the Ritz, but were immediately confronted with scenes of the greatest confusion and excitement at the terminus. Baggage of every description was piled to the roofs of all the fourteen platforms of the Gare de l'Est, and soldiers were rushing in every direction. We at once saw the hopelessness of trying to get our trunks out of the mêlée, and, with a stroke of real genius—as it afterward proved—imme-

The New Howard *Ionic*

The latest achievement of the HOWARD Watchmakers and one of the most beautiful Time-pieces ever designed.

The HOWARD Ionic—12-size, 17-jewel, extra-thin, open-face, the movement adjusted to three positions, temperature and isochronism, cased in a single-joint gold-filled case of special design, exceedingly flat and compact—price \$40.

Owing to the extreme care given to the finish and adjustment of every HOWARD movement, only a small number of these new watches will be available this year.

The more enterprising jewelers will make a point of having a few to show, and we would strongly advise anyone who is interested to see the Ionic and make reservation at an early date.

A Howard Watch is always worth what you pay for it. The price of each Watch is fixed at the factory and a printed ticket attached—from the 17-jewel (double roller) in a Crescent Extra or Boss Extra gold-filled case at \$40, to the 23-jewel at \$150—and the EDWARD HOWARD model at \$350.

*Not every jeweler can sell you a HOWARD WATCH.
The jeweler who can is a good man to know.*

A Si-wel-clo never embarrasses

People are glad to visit homes where their finer sensibilities are considered, and where they are not embarrassed by noise escaping from the bath or toilet room when the closet is flushed.

Silent SIWELCLO Closet

is constructed on a principle that reduces to almost nothing the noise of splashing, running water and when properly installed it positively cannot be heard outside the bathroom.

It is sanitary inside and outside and is modeled to harmonize with every accepted style of bathroom.

If you are planning to build or remodel, ask your architect or plumber about The Trenton Potteries Company products.

diately decided to abandon them where they were, in order to investigate conditions in Paris generally. For we feared that the declaration of war, following so soon on the murder of the prominent French Socialist legislator, which had taken place but a few days before, might mean bad times in the city.

Once outside the station, we found it surrounded by a cordon of troops, who permitted no civilians to enter; for the station and the railway had all been taken over by the Government in moving troops and supplies to the frontier, and all other traffic was suspended. Only two or three cabs were in sight—bringing officers to the terminus—and it seemed as if we must walk. But, amid the excitement, we jumped into a taxi, out of which a captain of infantry was dismounting, and, altho the driver continued to expostulate, we succeeded in getting him to take us through the deserted streets to the hotel.

Shutters were everywhere up—no busses were running, having been commandeered by the Government for transporting troops—few people were in sight, and this was Paris on a bright Sunday midsummer morning!

At the hotel everything was in silent confusion among the few attendants who remained. The very courteous manager reported that three hundred of his servants had left the day before—his guests were going as fast as they could—he was being forced to pay gold for his bread and his ice, and that, under such conditions, he couldn't keep the hotel open. He advised us immediately to get out of Paris, if we could, but added that, if we already had no tickets for London, it would be quite impossible for us to buy any, as the railroad station was surrounded, and only those having tickets would be allowed to enter. As to motors, he said, they were almost impossible to obtain, and further added that he understood the authorities would stop all cars from leaving Paris by noon that day. And it was 11:15 then! We had no money—no tickets anywhere—and now we were practically told to get away as soon as we could. But how? Our breakfast and bath were forgotten, and we stared helplessly out into the vacant Place de la Concorde, asking ourselves, What next? And this was the Paris we had looked forward to with pleasant anticipations!

But we were running with luck, for, just as our case seemed hopeless, and our wits scattered to the four winds, a real American stepped up to us and asked if we were trying to get out of Paris. We said we had only just arrived, and were more than anything else looking for a bath and breakfast. "Cut it all out and get to England as soon as you can," was the gist of his response, and he emphasized his advice by saying that on Saturday, the day before, he had paid the guard at the Gare du Nord 500 francs simply to permit his wife, child, and nurse to go through the gate and get on the Boulogne train without tickets.

"I have a motor outside the city walls waiting to take me to Boulogne," he added, "and a taxicab chained here to the front door to take me outside the walls, but we must get through the gates before twelve or we may be prevented from leaving Paris at all. If you want to come, I shall be glad to take you, but we must start at once if we are to catch the last boat to England at seven to-night."

Draperies That Will Not Fade

GIANT HEATER CO., 64 Temple St., Springfield, Mass.

His courtesy and his invitation were like the proverbial straws to the drowning, and we grasped them greedily. We threw our bags into his taxicab, left our baggage receipt for the trunks abandoned at the Gare de l'Est with the hotel porter, and at 11:30 started out of Paris, one hour after our arrival. There was no trouble at the city gate, and the motor was awaiting us at a garage just beyond. It took five minutes to buy a loaf of bread, some butter, and two bottles of mineral water at a near-by café, and we were ready for the 145-mile run against time to Boulogne.

Just as we were about to start, a parting telephone greeting came to us from the manager of the Ritz, who said that the latest information was that we would probably be stopt on the way and our car commandeered by the authorities for war purposes. It was too late to hesitate now, so we climbed in and started off through the quiet suburbs toward Boulogne, every moment of the way expecting to be held up. We slid safely through Pontoise, however, and other villages between it and Abbeville, where we stopt only long enough to buy a few extra liters of gasoline. There was no time for lunch, altho it was the lunch hour here, and altho savory odors floated out from the courtyard of the little inn by which we halted. Asking the chauffeur if he were not hungry, he looked at me disdainfully, waved his hand down the road ahead, and merely said dramatically the two words: "A Boulogne!" We admired his state of mind as we rapidly pulled out of Abbeville and headed north by the well-worn "Route de Calais." As we drew near each village we prepared ourselves for the inevitable detention, but it never came, and we successively slid through Montreuil, Samer, and St. Léonard until it seemed as if fortune was indeed with us.

At six o'clock we saw the sea from the uplands back of Boulogne, and at 6:30 we reached the end of our exciting ride.

Another writer in the same paper, a young woman member of the staff, had so great a faith in the solidity of the civilization that surrounded her in the English capital that she scorned the reports then coming in from the Continent, and continued blithely on her intended tour through France. If she had heeded the warning, she says, she "would not have seen Paris in its mad war fever, would not have missed the boat I was booked for, would not have got steerage room on the *Celtic* just five minutes before the tender left with its cargo of Americans and its smattering of immigrants." There was talk of "*la guerre*," and the railroad trains were filled with soldiers all the way to Paris.

Paris was hot, crowded, hectic, hurried, confused. The army was mobilizing. We had come from England and from old Rouen, where the glass doors of our rooms opened into an old garden, and the sweet night air had come in from where the dark yew trees and the Cathedral spire were silhouetted against the late twilight. It was a very rude awakening. At that time there were two of us. I could talk only the merest trifle of French. My friend could

"Will You Fill Your Pipe From a Stranger's Pouch?"

He was standing on the sheltered side of a small town railway depot drawing away at an empty pipe and shuffling his feet while he waited for a train already hours late. It was so far into the P. M. hours that buying tobacco was out of the question.

He wanted to smoke. He wanted to smoke as bad as you have wanted to smoke when you found yourself isolated somewhere with all the materials for smoking except the fire.

And then came the question, "Will you fill your pipe from a stranger's pouch?"

Neither the words "I love you" nor the words "Here's that money I owe you" ever sounded as sweet as those that proffered tobacco to that empty pipe.

"That smoke," he told us, "was the best tasting, the most entirely satisfactory, I had ever breathed through an amber bit. Maybe

standing under a dripping eave on a rainy night, waiting for a slow train, gives to tobacco an added charm. I don't know. But I do know that I never found the equal of that smoke until months later when I had some Edgeworth from a fellow in the Yale Club."

Maybe there is something of good omen in that question, "Will you fill your pipe from a

stranger's pouch?"

Let's try and see.

We are strangers, you and we, let us offer you some Edgeworth. Let us send you—not a pipeful, but a pouchful—free to try, to like or to dislike, to smoke but a little, or to smoke to the last bit and buy more, as you like it.

Will you let us give you some Edgeworth?

We have the confidence to believe that you will like Edgeworth Ready-Rubbed the way so many other smokers like it—Best. Your name on a postcard and your tobacco dealer's name will bring a sample postpaid.

Send the postcard now; it's an easy thing to do.

Edgeworth comes in two forms, Plug Slice and Ready-Rubbed, and is on sale practically everywhere. Every package wherever and whenever sold is unqualifiedly guaranteed.

The retail price of Edgeworth Ready-Rubbed is 10c for pocket size tin, 50c for large tin and \$1.00 in handsome humidor packages. Edgeworth Plug Slice is 15c, 25c, 50c and \$1.00. Mailed prepaid where no dealer can supply, but about all the good dealers have it.

Write to Larus & Brother Co., 5 South 21st Street, Richmond, Va. This firm was established in 1877, and besides Edgeworth makes several other brands of smoking tobacco, including the well known Qboid—granulated plug—a great favorite with smokers for many years.

To Retail Tobacco Merchants—If your jobber cannot supply Edgeworth, Larus & Bro. Co. will gladly send you a one or two dozen carton, of any size of the Plug Slice or Ready-Rubbed, by prepaid parcel post, at same price you would pay jobber.

NORMANDY BIRD CAGES FOR LIVE BIRDS—\$5 to \$12

not say anything but, "Mais, oui, madame," "Mais, non, monsieur."

With great difficulty we got a cab and after coming out ahead in an argument with the porter, who wanted four francs for carrying our bags to the cab, we started for our hotel.

In the hotel an East Indian porter, several French porters, a worried Russian proprietor, and a weeping maid greeted us.

"How comes it that Americans still enter this city?" asked the Russian. His black hair was cropped close to his head, his face was very pale, and his eyes looked as if he had been crying. "It would be better not to come."

We dropt our bags and went directly to the American Express office, for all the money we had between us was a coin or two, amounting in all to about 15 centimes. We had never doubted that our checks could be cashed at once, when we reached Paris.

"Go at once to the Express office, for it closes early on Saturdays," the Russian proprietor had said. This was Saturday, August 1. The East Indian, who trod like a cat and had smirking, smooth ways with him, escorted us to the Rue Scribe. Probably the majority of Americans in Paris were assembled there, on the Rue Scribe, besieging the Express office, the steamship companies, or the New York Herald office, or talking together in excited, morbid knots. We tried to hear nothing that was said. Our object was to get some money changed and to find out the chances for an immediate escape.

The efforts of the pair proved, for the time being, fruitless. Through a heedlessly chaotic Paris they tramped back to their hotel, only to find it practically deserted, and to be told by the harassed proprietor that, tho they might remain there for the night, the hotel would surely be shut up on the morrow, as he must leave the country. Penniless or not, they must move on. There follows a graphic description of the night of turmoil that followed:

That was the wildest night of my life. Some of the time I tried to sleep, but wild, feverish dreams made sleep unbearable, and finally we sat by the windows and looked down into the Rue de Mathurin and up and down the street to the corners, where carriages and machines tore past, all night, crowded with soldiers. Americans and all other foreigners were leaving in great numbers, whole families together, hurrying along, sometimes talking in shrill voices, sometimes keeping a hurried silence, which was worse. They were all on foot, for no one but soldiers could ride in machines, and almost all the horses were taken for the Army.

No one could take baggage with him which he could not carry himself, and the people's arms and hands were full. Often two men carried a trunk between them. All night long the life of the Paris streets went on, and fragments of it floated up to us in sight and sound. The cafés were full of men. Women of the street plied their trade diligently. One of these women, a large, dark, strange creature, I can never forget. Her large hat and flowered, ample, silk waist gleamed up at me every time she sauntered under a street-light. So uncon-

JUST PUBLISHED
A Momentous History of Events Leading Up to the Present European War From the French Viewpoint
FRANCE
From Behind the Veil
By **COUNT PAUL VASSILI**

IN THIS VOLUME, written in frank and pungent style, is embodied the author's unrivaled experiences of the inner social and political life of France during the last fifty years. He opens his reminiscences with the meteoric reign of Napoleon the Third and his lovely Andalusian wife, the Empress Eugénie, and closes them "the day before yesterday" as it were.

"There is here much first-hand and entertaining gossip about the celebrities and notoriety of French society during the author's time."—*The Sun, New York.*

"Contains much that is momentous in history, simply and frankly told."—*The Evening Post, Chicago, Ill.*

"No man of the era which closed with the downfall of Napoleon III. had better opportunity for close investigation than did this diplomat, whose missions, mostly of a semi-official nature, were many, taking him to all the courts of Europe."—*The Globe-Democrat, St. Louis, Mo.*

Large Octavo, Cloth, \$3.75 net; by mail \$3.91
FUNK & WAGNALLS COMPANY
354-60 Fourth Avenue New York, N. Y.

cernedly she strolled along, at midnight, and still, when the dawn came, always with furtive eyes, always flirting the tiny, glittering, white fan she carried in her pudgy, beringed fingers.

At one o'clock a great coach-load of Americans drove up to our door. The red-coated driver took down all the luggage and rang the bell. Then he beat upon the door, and roared at the top of his voice. They had engaged rooms, but the Russian would not take them in. He put his head out at the door, and said many things to them. They answered him also many things, and the red-coated driver piled the luggage on the coach-top again and drove them away.

And so that first night wore on. The soldiers dashed by in motor-cars, and the foreigners flocked out to the stations. The café doors swung in and out, and the little white fan glittered slowly up and down the street, shining wanly under the street-lights. Now and then we would hear the tramp of many feet, and snatches of the "Marseillaise" sung by many voices. All Paris was awake.

Up by our windows we had almost forgotten our share of the troubles, but sometimes we remarked that we had no money, that probably the trains would all be given up to soldiers for the next few days, that we were somewhat alone, and really very, very much afraid. I knew that it was the experience of a lifetime for which any one of the American men I knew would barter his very soul. But I was not an American man, only an American girl, and I dared not stop staring at the Paris street, for fear of sleep and feverish dreams from which waking could bring no relief.

Had these two women reached Paris some weeks earlier and found themselves without baggage, alone, and unfriended, with no place, apparently, where they might rest their heads, there is no knowing how they might have fared. But so great and sudden was the metamorphosis of the city that something of it swept through even the strangers within its gates, and what in other circumstances might have seemed impossibilities became only gratefully accepted opportunities. Somehow or other these two found another place to stay, and, without even car-fare between them, managed to make their way across the unfamiliar city on the various errands which necessity forced them to undertake. They "saw" Paris, tho not at all in the way they had expected to do so:

In searching for the police headquarters that afternoon, we incidentally saw some of the city, the Madeleine, the Rue Royale, the Champs Élysées, the Arc de Triomphe, the Place de la Concorde, the outside of the Louvre and Notre Dame, and other things. The artificial beauty of it all seemed just a mockery that day, and the only sudden joy I had was in seeing the red goldfish in the great pool of the Tuileries Gardens, swimming together in one great patch of color, alive and true and natural.

When we found the police headquarters, after much weary walking, we were told that it was the wrong place, and that every one must go to the police chief of his own district. We walked the many weary miles, it must have been at least six, back again, and, because there was nothing more that

Do You Work at Your Desk in the Old-Fashioned Way?

Here is a man at work in his office. He has his papers, forms, records, etc., in filing cabinets against the wall, or out in the next room. He starts to work but in a minute has to jump up and go to a file for some information; or he has to call the file clerk or his stenographer, and ask for what he wants. He takes up either his own time, or his clerk's or, as usually happens, both. All day long this occurs with untold loss of time.

Is that your way too? You can eliminate all this needless effort and waste of time—by using

The "Desk with Brains"

It is made of sections which stack together as solid as an ordinary desk. From the numerous sections offered, you can suit your requirements perfectly.

Think of the convenience of having your important records right at your finger tips, filed in the pedestals of your desk, ready for constant reference.

Let us help you plan a desk exactly suited to your needs. Please write today for a desk chart with interesting information on filing.

500 Progressive Businesses Adopt This Dial This Year

—this dial, which is the outward form and semblance of the *Automatic-Phone, a better Inter-communicating System.*

Here is the old style manual switchboard which is replaced, putting the girl at some other work which cannot be done better by a machine. The expense of operators' salaries is eliminated entirely—but that is only a small part of the saving.

Here is the Automatic Switchboard, which takes the place of the girl. It makes all connections instantly, automatically, with absolute, inevitable certainty. It does not require light, air or valuable floor space. It is never tired or cross or out-of-order. It is on the job 24 hours a day.

Here is the instrument that connects each man and department with every other man and department. A twist of your finger (or your secretary's finger) on the dial gets your connection. It is *secret*—your conversation cannot possibly be overheard.

Here is the saving in time—18 seconds on every call—over the most perfect manually operated system. At 30 calls a day this amounts to a working week each year for each employe using the telephone.

See: Rosback, Solway Process, Baldwin Locomotive, Standard Oil of Ohio, Illinois Central R. R. and scores of others use and highly recommend the Automatic-Phone. Our booklet, "At Your Finger's End," tells why. It's free. Request a copy today. Mail the coupon.

were afraid of the Paris streets at night, we went to bed.

I was at the steamship office at eight the next morning with an American crowd, which, as Dulcinea would say, "is always so good-natured," waiting for the doors to open.

"What time do you open up?" called a fat American to the clerk within. The former was in a fever of excitement, mopping his bald head.

"Neuf heures," answered the clerk, coolly.

"What, never!" shouted the fat man, his eyes popping from his head.

That day was devoted to passports. When I found that no checks were being cashed that morning, I staked all my hopes of leaving Paris on the few dollars which my friend had extracted from the American Express, and we set out for the American Embassy to get a passport out of Paris, which, after I got it, was never even seen.

We walked for hours in search of the Embassy, and en route picked up another woman and a Spanish man, both bound for the same elusive destination. The American crowd was, as usual, forming lines. This time, it was for numbers which would entitle the holders to a place in another line, where passports were being doled out.

"But I can not wait," said I; "I'm leaving France to-day to catch the *Philadelphia*."

"Then go right up," said the man, and I went right up and signed something in French and bore it away. No money was being given out at the Embassy: only passports.

It being two o'clock, we decided to eat and not try to get to the big meeting of Americans at the Grand Hôtel. We sank into chairs by small tables in front of a tiny café, we two, the other woman, and the Spanish man. The latter could talk French, and he learned from the shop-keeper that we could buy bread from a shop up the street and butter from a shop down the street, and he would give us beer. So we separated. The Spaniard came back waving a two-foot loaf of bread and a handful of coins.

"I told them it was bread for a woman who had not touched food these twenty-four hours," said he, exultantly, "and they changed my fifty-franc note. We must have cheese now to celebrate."

Thus it was we broke our fast. And then the luck changed. The walk back to the Rue Scribe was many weary miles, but when I got there the Mercantile Marine cashed one of my two checks for me.

Now all that was left to do was to get the passport signed by the police and to buy a railroad ticket to the port from which a boat was most likely to leave. And all the time we were closing our ears to the rumors and alarms and facts which swirled around us, that no trains ran; that no boats sailed; that starvation awaited us within the week. As one woman said to me, cornering me suddenly on the street:

"It is this way: we Americans will just have to get together and hire rooms and get any food we can. We won't be able to get beds, but we can use a blanket each, or our steamer-rugs."

She passed on. I straightened my hat and did the same. Akin to her was the woman who pointed her finger at me

A Handsome Parlor Davenport By Day— A Roomy, Comfortable Bed at Night!

Whether your home is large or small, a **Kroehler Bed Davenport** will be a great convenience. It has the exact appearance of a handsome parlor davenport. At night it serves as a regular or extra bed.

A gentle pull on the strap at back of seat unfolds a full size, sanitary, all steel bed frame and springs. It closes easily. Separate, removable felted cotton mattress. You don't sleep on the upholstery. Room for bedding when closed. Indestructible—Luxuriously Comfortable either as a bed or davenport.

Saves Space, Saves Furniture Expense.

Makes 1 Room Seem Like 2.

Hundreds of styles. Our huge capacity enables us to give the best quality at low prices. There are 4 Types of

KROEHLER Bed Davenports

**Unfold, Duofold,
Daveno and Kodav.**

Any one of them will please you. The Kroehler trade mark on the metal frame of every bed is a **GUARANTEE OF QUALITY.** Insist on seeing it before you buy.

KROEHLER MFG. CO.

Naperville, Ill. Binghamton, N. Y. Kankakee, Ill. Cleveland, O.

threateningly when I cried. I was waiting in one of the crowds for one of the doors to open. And each story I heard of the war and the plight of Americans in Paris was worse than the last. So I leaned my American Panama against the unopened door and shed a few American tears. Immediately I became the center of the crowd.

"And what are you crying for, young woman? What are you crying for?" demanded a woman, waving her finger in my face. I could not tell her why, and I suppose she will never know.

That night we saw aeroplanes—German, they said—hovering over Paris, and we realized again that Paris was not simply a place for Americans to flee from, and that there were other things in the world than passports, railroad tickets, and American checks.

Paris at sunset, if one can take time to see it, leaves no room for thought of anything but Paris. That night, when all the faces of the crowd were turned up wonderingly, I forgot that it was war aeroplanes they saw, and I had a sudden vision of what Paris might be in peaceful twilights.

But it was not a peaceful twilight. The cars still rolled by full of cheering, waving soldiers. It seemed a glorious adventure for them, they were so young, so gay in their blue and red, and they were borne away so swiftly and with such glory out of the streets of Paris into the great *guerre*, which was so lightly on their tongues. More often than not it was a laughing farewell they gave their wives. And the women, sobbing hopelessly, would watch the horses or the machines out of sight, stand uncertainly for a moment, and then, picking up the tiny child who did not at all understand, join some shouting mob of women and little boys and old men who were filling the streets from curb to curb and singing over and over again the "Marseillaise."

It was the faces of those in the mob which told the story of Paris in war-time; not the faces under the red caps. Thoughtlessly I asked the maid in my hotel whether she had any relatives in the war. She looked at me for a minute, quite speechless. Then she touched her breast with a little quick French movement:

"*C'est fini*," she whispered, and went out of the room, lest I should see her cry. I learned afterward that her husband, her three brothers, and her husband's brothers had all gone. And after that, under all the shouting of the mobs, under all the fragments of the national hymn which every one was singing, under all the laughter of the little children who did not understand, I heard that woman's whispered words, "*C'est fini*."

The writer finally made her way homeward safely enough, tho with considerable difficulty and discomfort. And she concludes thus:

It was eight o'clock on Saturday morning by the clock on the Jersey Central station when we came up the harbor. We had seen the Statue of Liberty, and we could see a black spot up ahead which grew into a crowd of many people, waiting for us at the White Star Line pier. And, just as if nothing in the world had happened, we opened up our bags for the customs man to see.

Don't Let Accident Steal Your Earnings

You believe in protecting yourself against loss by fire or by windstorm. No doubt you carry life insurance. You consider these kinds of insurance as good business. You don't carry *accident insurance*. "But," you say, "I am not liable to accident. I don't travel on trains. I don't run an automobile nor own one. I'll do the same things tomorrow that I'm doing today. I spend little time away from my home outside of business hours. I don't *need* accident insurance. Here is a wonderful fact. Most people are hurt in the street and at home. Only one "drummer" in 8,765 is killed in a year. The commercial traveler is a better accident insurance risk than a minister.

One man in seven is hurt in a year. So any man's chance of escaping injury is six to one—not a wide margin. You say, perhaps—"but my salary would go on while I would be laid up." How long? If it does, you must shoulder the increased expense of a surgeon's services. You must take that sum from your family, in necessities. The accident leaves a hole that is never filled. It robs you of your *savings*, while household costs go on. No one can avoid accident. You *can* avoid its *cost*.

The **Equity-Value Accident Policy** is for any man, in any walk of life. It gives the protection you need at a cost of \$3.50* per thousand if you are in the preferred class. If you should be suddenly disabled by accident, your weekly indemnity would be at the rate of \$5.00 for every \$1000 of insurance. For protection against illness or accident under an **Equity-Value Dis-**

ability Policy, with the same weekly indemnity and principal sum, the cost is \$10 per thousand. Here is real provision against chance stealing your earnings, a *salary* while you're laid up if you should be overtaken by sudden accident or illness.

It will certainly pay you to know just what the **Equity-Value Accident Policy** will give you in protection. It will certainly pay you to examine it and see for yourself its many advantages. Know its full import. Know just how you can protect yourself against time-loss, against money-loss, against chance and the doctor's bill—for a lower premium than other policies paying the same principal sum and equal *indemnity* for accidents, anywhere in the world. Sign and mail the coupon. It will bring a sample **Equity-Value Accident Policy**. Your signature involves no obligation, of course.

Maryland Casualty Company

Baltimore, Maryland

*This rate applies to all states excepting North Carolina, Florida, Alabama, Mississippi, Tennessee, Arkansas, Texas, Oklahoma and Missouri, in which the rate for the Equity-Value Accident Policy is \$4.00 per thousand or \$11.00 per thousand for the Equity-Value Disability Policy.

Maryland Casualty Company
4 North St., Baltimore, Md.

Reshingle this Fall with "CREO-DIPT" Stained Shingles

You can save the cost and mess of staining on the job. You can put on a roof and cover the side walls with most pleasing color effect. You save the expense of painting.

THEY LAST A LIFETIME

14 Grades, 16, 18, 24-inch. 25 Different Colors

"CREO-DIPT" Shingles come in bundles ready-to-lay. We select Red Cedar shingles, dip them in creosote and stain them any color desired. No poor shingles—no wedge-shaped shingles. They lay faster and look better.

Write for FREE "CREO-DIPT" Booklet Today. It shows different types of "CREO-DIPT" houses selected from all parts of the country.

Give name of your Lumber Dealer and ask for Sample Color Pad. Name of Architect appreciated.

STANDARD STAINED SHINGLE CO.
1024 Oliver St. No. Tonawanda, N. Y.

"CREO-DIPT" Shingles on Roof and Side Walls, Horrell County Club, Horrell, N. Y. An example of good protective covering with color stain that harmonizes well with surroundings. These shingles will last a lifetime.

If your typist spent two hours every day with her arms folded—

—Well, what's the difference whether she sits with her arms folded or sits at your desk making pencil-marks in a note-book?

Every minute of the time is wasted, either way—

Every minute of the time she might just as well be writing on her typewriter.

Cost? Man alive, the Dictaphone System isn't a cost at all. It's an economy. The saving in "overhead" shows up the very first day.

THE DICTAPHONE

INVESTMENTS AND FINANCE

OPPORTUNITIES IN STOCKS

MOODY'S MAGAZINE declares that while the prompt closing of the New York Stock Exchange when the outbreak of war had brought an avalanche of selling orders from all over the world "prevented what might have been a panic," the situation "does not apparently hold anything of immediate danger to legitimate investors." The position of speculators, however, is "somewhat different." These run a great risk of losing their money, provided they have not "the necessary resource to see the situation through."

As to standard securities, many of which have fallen as much as ten points in price since the war began, the writer believes that "the very greatest confidence can be assumed by the legitimate purchaser," that is, by those who purchased them outright. Moreover, investors who have the funds can now make selections for new purchases at "remarkably low prices"; the bargain counter is "clearly open all along the line." Standard railroad stocks can be bought with "full faith in their future"; so also can the best stocks in the industrial and public utility fields, where well-secured issues can be had at prices "ranging from five to ten points below those which existed a month ago."

These views as to opportunities are shared by *The Wall Street Journal*. When the Stock Exchange reopens, that paper believes, stocks which still sell as low as they did when the exchange was closed will present "many remarkable bargains." Tables are presented of industrial and railroad stocks, in which are given the closing prices for the last day on which the exchange was open, the highest prices that have prevailed in 1914, the rates of dividend paid, the amount of the yields on the closing prices, and figures for the latest returns of earnings. Following are selections from these lists:

INDUSTRIALS					
	Thurs. Close	High 1914	Div. Paid	Yield	Earn.
Am. Can. pf	80	95 3/4	7%	8.8	11.3
Am. Smelters	52 1/2	71 3/4	4	7.7	7.5
Am. T. & Tel	114	124 1/2	8	7.0	9.5

Southern Ry pf	67 1/2	85 1/2	5	7.5	9.2
Union Pac	113 1/2	164 1/2	8	7.1	10.5

Among the interesting comments on these lists, made by *The Wall Street Journal*, are the following:

"Fifty industrials closed July 30 at 63.4, July 29 at 68.2, and the average high for

1914 was 79.4. In many individual stocks the declines ran much greater than twenty points from 1914 high. Canadian Pacific at Thursday's close was off 63, American Tobacco 41, Lehigh Valley 34 1/4, Reading 32 1/4, International Harvester 31 1/2, New Haven 27, Missouri, Kansas & Texas preferred 32 1/2, Baltimore & Ohio 26 1/2, Chesapeake & Ohio 26 1/2, and Missouri Pacific 28.

"Yield on the investment at Thursday's (July 30) closing prices of thirty-four industrial dividend-paying stocks averaged as high as 7.7 per cent., the average dividend paid being 5.7 per cent. Twenty-nine railroad stocks paying dividends showed an average yield of 6.5 per cent., average dividend paid being 6.6 per cent. In the case of some of the industrials the yield ran particularly high, Amalgamated Copper, Anaconda, Tennessee Copper, and United States Rubber showing a yield of over 10 per cent. Of the railroads, Chesapeake & Ohio offered the biggest yield, 9.8 per cent.; Seaboard Air Line preferred was next, with 8.5 per cent. Kansas City Southern preferred, Lehigh Valley and Baltimore & Ohio yields were all over 8 per cent.

"That stocks are selling low, judged from the viewpoint of their earnings the past year, is indicated by the fact that the earnings of the fifty railroads for the year June 30, 1914, were equal on the average to 9.05 per cent. on the closing market price of the outstanding stock. Average earnings on par value of stock were 6.3 per cent. In the case of the fifty industrials, earnings for the calendar year 1913 were equal on the average to 14.43 per cent. on market value and 8.64 per cent. on par value of stock. Some of the industrial companies that show a large per cent. earned on Thursday's closing price follow: American Can, 23.6 per cent.; Central Leather, 18.2 per cent.; Tennessee Copper, 10.4 per cent.; United States Rubber, 21.5 per cent.; Westinghouse, 16.3 per cent.; International Harvester, 17.7 per cent.; Pacific Mail, 20 per cent.

"Of the railroads showing the biggest percentage earned on market value are the following: Seaboard Air Line preferred, 15 per cent.; Kansas City Southern preferred, 16 per cent.; Southern Railway, 12.2 per cent.; and Chesapeake & Ohio, 11.3 per cent. United States Steel earnings as per the last annual report are equal to 21.2 per cent. on Thursday's closing price of common stock, but based on earnings for the first six months of 1914 only 1 per cent. is shown on the market price."

GOVERNMENT-OWNED RAILROADS

There are only two countries in the world possessing any considerable amount of railway mileage that have left the operation of their lines entirely to private corporations, says a writer in the *New York Times Annalist*. These are Great Britain, with 23,400 miles of road, and the United States with 250,000. In both countries the state has not yet entered the field, altho the question of government ownership has been raised in both. Except for "the overwhelming preponderance of mileage in this country," statistics would show that the total of government-owned lines would exceed the total owned by private companies. Following is a table printed by *The Railway Age Gazette*, showing the mileage owned pri-

"The final saving possible with the universal use of Armco Iron for all purposes requiring rolled or drawn metal, would compare favorably with the amount America could save by cutting out all her unnecessary fire losses."—From the story of Armco Iron, "Defeating Rust"

ARMCO Iron Resists Rust

OVER one hundred million dollars' worth of sheet metal is made each year in this country. Most of it disappears shortly on account of rust. This is due to the fact that most sheet metal of the present day contains impurities such as carbon, manganese, silicon, copper, sulphur; therefore it cannot help rusting when exposed to air, moisture or corrosive gases.

Our chemists are saving millions of dollars for the public as a result of the discovery of two things: first, government experts proved that the rapid corrosion of steel was caused by the presence of impurities, especially manganese; second, we found the way to make pure iron. Either of these discoveries ranks as one of the greatest achievements in metallurgy.

Let us illustrate this saving of millions, literally. In a decade, most of the impure sheet metal made in 1914 and used in exposed situations will have been destroyed by rust. The sheet steel made in 1904 has mostly rusted away. There you have a complete, annual loss of nearly one hundred million dollars.

Pure, Rust-Resisting Iron Will Save Millions

As soon as the public realizes and accepts the great truth that pure iron is a resistant to rust, there will of course be little sheet metal used except pure iron. When that time comes, this terrific waste of millions of dollars will be wiped out.

These are big figures, big claims—but they are true. Perhaps little figures will mean more to you. Let us say it will cost you \$100 to roof a building with metal shingles or sheet metal. Ten years is about as long as you can count on modern impure metal roofing lasting. That is a cost of \$10 a year. Pure iron roofing should last many times ten years. Even the old-fashioned charcoal iron roofs lasted forty to seventy years, and that iron was not as pure and not as rust-resisting as the pure iron which we are making. So instead of \$10 a year, the cost of your roof will be nearer \$2 a year.

Apply the same method of figuring savings to other sheet metal products; to metal window frames, metal lath, ventilators, gutters, pipes, especially to stoves, boilers, ranges and furnaces, which are peculiarly subject to rust, owing to condensation of moisture and to corrosive gases; to refrigerators; to road culverts, metal cars, boats, flumes, smoke stacks, tanks, woven wire fences and the thousand and one other things made from rolled or drawn metal.

ARMCO Iron is Pure

Armco Iron is not only pure, rust-resisting—it is an exceedingly fine quality of metal for other reasons. Every process of manufacture is handled with extreme care and is under the supervision of very highly trained metallurgists. For instance, each sheet, after rolling, undergoes a slow annealing process which takes a week, although ordinary sheet metal is often annealed in a day. Slow annealing restores all of the original strength and evenness of texture and removes molecular strains caused by rolling. For this reason, Armco Iron is very ductile.

Armco Iron, when galvanized, shows practically no dissolution when the zinc is applied; therefore the zinc is not impregnated with iron particles and lasts much longer than the coating on an impure base.

Terne Plate Roofing.—Armco Old Style Terne Plate, with its Armco Iron base, is made by the Morewood hand dipped, old style, pure palm oil process. No acids are used. The coating is pure lead and tin—two almost indestructible metals.

There are seven operations. No higher grade metal roofing is made in the whole world. Each sheet is stamped Armco.

How to Get Armco Iron

Armco—American Ingot Iron is sold through distributors of sheet metal. It is specified by architects and engineers and

The trademark ARMCO carries the assurance that iron bearing that mark is manufactured by The American Rolling Mill Co. with the skill, intelligence and fidelity associated with its products, and, hence, can be depended upon to possess in the highest degree the merit claimed for it. It has behind it the guarantee of that company concerning the purity of the iron and the accuracy and thoroughness with which each step in its manufacture has been conducted.

is used for making sheet metal products by many manufacturers. You can buy finished products of Armco Iron from hardware dealers, tinnern and sheet metal workers. If you have any difficulty getting Armco Iron, write us for names of dealers and manufacturers who use Armco. For example, the Page Woven Wire Fence Company uses Armco Iron.

Write for Free Book "Defeating Rust"

This book, "Defeating Rust," contains more real information about sheet metal than ever before has been put between two covers. It tells the complete story of pure iron—Armco Iron. It gives processes by which Armco Iron is produced. It shows how Armco Iron compares with other sheet metals in analysis, in tests, in actual use. This book gives the experiences of manufacturers in regard to welding, stamping, forming, enameling and polishing Armco Iron. It tells why stoves and refrigerators made of Armco Iron last longer.

Our Service Department will advise you regarding the use of Armco Iron. Our staff of metallurgists, chemists and practical field men is at your service.

vately and owned by Governments in all European countries:

Country	Private Railways Miles	State Railways Miles	Total Miles
Germany	2,750	10,200	12,950
Austria-Hungary	3,400	23,000	26,400
Great Britain	23,000		23,000
France	25,600	3,540	29,140
Russia (in Europe)	14,200	24,400	38,600
Italy	1,870	8,030	9,900
Belgium	2,680	2,000	4,680
Luxemburg	201	122	323
Netherlands	880	1,100	1,980
Switzerland	1,200	1,700	2,900
Spain	9,540		9,540
Portugal	1,155	725	1,880
Denmark	1,124	1,216	2,340
Norway	280	1,630	1,910
Sweden	0,000	2,760	2,760
Serbia	220	356	576
Romania	80	2,100	2,180
Greece	1,000		1,000
Bulgaria		1,200	1,200
Turkey (in Europe)	1,045		1,045
Malta, Jersey, Isle of Man	68		68
Total miles	108,052	113,620	221,672

From these figures it appears that Germany, Austria-Hungary, and Russia are thoroughly committed to government ownership, while in France little more than 20 per cent. of the mileage is owned by the state. The European countries in which there is no government ownership of railways are Great Britain, Spain, Greece, and Turkey. It is to be noted that the total mileage for all Europe, shown in the above table, is 37,000 miles less than the mileage for the United States alone. Other interesting facts contained in the *Annalist* article are these:

"Either on the basis of population or area the United States has much more than its proportionate share of the world's railway mileage. The following table shows the distribution of railways in 1912, with the division between state- and privately owned lines:

Country	Private Railways Miles	State Railways Miles	Total Miles
Europe	98,052	113,620	211,672
America	321,408	22,237	343,645
Asia	22,004	43,440	65,444
Africa	10,056	15,435	25,491
Australasia	2,708	19,870	22,578
Total miles	456,416	214,581	670,997

"There has been a steady, but slow, increase in the proportion of the world's railways owned by Governments. Of the total mileage for the world in 1912, which was 670,997, private companies owned 456,416 miles, or 68 per cent., and Governments owned 214,581 miles, or 32 per cent. In 1911 the total mileage was 654,435, 16,562 less, and of the total, companies owned 456,881, or 69.8 per cent., and Governments owned 197,554, or 31.2 per cent. In 1910 the total mileage was 638,611, or 32,386 less than the total in 1912, and of this private companies owned 450,659, or 70.57 per cent., while Governments owned 187,952, or 29.43 per cent.

HOW A MAN CAN MAKE HIMSELF INDEPENDENT AT SIXTY

E. C. Thompson, in a contribution to *The Rollins Magazine*, points out how, by proper self-denial in expenditures, any man, with a moderate income, can find himself at sixty possessed of sufficient means to live without work if necessary. Unless a man does save, he may, under present social conditions, "find himself face to face with a very serious condition." Life-insurance is good as a protection to those who are dependent on him, but if, through age or infirmity, he loses the ability to earn money, and has no income from savings, a man finds himself "dependent perhaps on the very ones whom he had hoped to protect by his insurance."

Mr. Thompson believes that about nine men in ten save nothing, their excuse being that "it takes about all I make to pay my

The Coward Shoe

"SEE A PAT OFF"

Help for sinking arches, strength for weak ankles, relief for aching foot muscles, arrive immediately with the wearing of the Coward Arch Support Shoe with Coward Extension Heel. A comfortable, corrective shoe for all "Flat-foot" conditions.

expenses," the blame being commonly put on "the high cost of living." So far from its being a necessity for a man to spend all he earns in order to live, Mr. Thompson believes that "in these days of high wages and high prices, large profits and large living expenses, there is overflowing opportunity for the thrifty man such as the world has never before witnessed." Few men to-day, earning even what are considered small wages, should fail at sixty, in his judgment, to have at least \$20,000; a sum which, invested at 5 per cent., would yield an annual income of \$1,000. To take another case, a man of thirty, earning \$3,000 a year, ought so to regulate his expenses that by the time he is sixty he will have not less than \$60,000. Other interesting points in the article are these:

"There is no man, married or single, who can not revise his expenses and save money. Any man with sense enough to go in when it rains knows whether his income warrants his present standard of living. If it does not, he should have the moral courage to cut down his expenses. It may be that he will have to give up some things that have come to seem like necessities. It may be that he will have to move out of the house, and even out of the neighborhood where he has been living. He may have to give up pleasant associations. But be the sacrifices what they may, he will find that once made they are by no means as great as his imagination had pictured them.

"They will save him from years of infinitely greater sacrifice and humiliation. The man who makes this move in time will gain all that he gives up, and more, for he will have the satisfaction of feeling solid ground under his feet, and of knowing that he is all that he pretends to be, and not a sham and a humbug. The question as to how much should be saved would require a different answer for each individual case. A table is presented here that will assist any one who will apply it to his own case. Saving one dollar each year and keeping the whole amount saved at compound interest at 5 per cent. will produce:

\$13.21 in ten years	\$50.11 in twenty-five years
\$22.46 in fifteen years	\$89.76 in thirty years
\$34.72 in twenty years	\$134.54 in thirty-five years
	\$126.84 in forty years

"Using this table, it will be found that a person who will begin when twenty years of age and save only \$150 a year will have \$5,208 at forty years of age, \$10,460 at fifty, and \$19,026 at sixty.

"If a man of thirty who is earning \$2,500 a year will save \$1,000 each year, he will have \$13,210 at forty, \$34,720 at fifty, \$69,760 at sixty. This last amount, invested at 5 per cent., will yield an annual income of \$3,488.

"Put in another way, assuming a man's income to be constant, if he will save three dollars out of every ten and invest it at 5 per cent., in a little less than thirty years his savings will return to him at 5 per cent., an amount each year equal to his annual earnings, thus permitting him to retire and maintain a standard of living even better than that to which he has been accustomed."

THE ELECTRIC SUPPLY OF GREAT CITIES

In *The Electrical World* was recently printed an article on electric supply stations in great cities, from which it appears that New York now has the greatest "connected load," while Chicago has the "lowest average price" and "the greatest average per capita consumption." The smallest per capita consumption is credited to Paris. The striking feature in

Can Your Wife Trust You?

WHEN you're away from home have you left her to the torture of fear every time a door creaks or a blind slams? Have you left her absolutely unprotected—at the mercy of the first burglar—thug—degenerate that may knock at your door, or force your windows?

Just think what might happen—what may be happening now, while you are miles away? Now, while you are powerless to do anything but rave over your neglect and pray that it may not already have exposed her to danger, to death—or worse!

You swore to protect her. Be worthy of her trust. Get her a ten-shot Savage Automatic, the safest protection that science has devised or love can provide—the greatest protection for helpless women ever brought into the world. And don't give her any other. If she needs protection at all she needs this 10-shot defender; not 8 shots or 6 shots.

This is the only automatic that guards against the old excuse—"didn't know it was loaded." A glance or touch tells positively.

Send today for free booklet "If You Hear A Burglar"—written by a famous detective.

A Brand New Savage Rifle

This .22 Tubular Repeater has all the original Savage features—hammerless, trombone action, solid breech, solid top, side ejection, etc. Price \$12. Send for circular.

This is Teeth Insurance

Sozodont comes in three forms.—Paste, Powder and Liquid. The kind used is generally a matter of individual taste.

We have found by experience—and we have made Sozodont since 1846—that the use of Liquid at night and either Paste or Powder in the morning, is the best form of teeth insurance.

This is very easily explained:

Sozodont Paste or Powder will put as beautiful a polish on the teeth as any paste or powder. One or the other should be used each morning. But no matter what paste or powder you use, it does not get between the teeth, and cleanses them as Sozodont Liquid will.

So just before retiring, we recommend that you use Sozodont Liquid. The Liquid gets in between the teeth and around the gums, stimulating and hardening them, where the Paste or Powder—even the tooth brush—cannot reach.

Sozodont Liquid is an alkaline and neutralizes the acidity of the mouth.

Simple enough, is it not? It doesn't cost any more either, because the Combination lasts just twice as long. Try Sozodont Combination. Ask your Druggist's or Dentist's opinion.

Send for this interesting and valuable pamphlet, "A Dentist's Talk on the Value of a Clean Mouth and Clean Teeth."

Hall & Ruckel, Inc., New York
Makers of Sozodont since 1846

Interest On Idle Funds

Money awaiting investment may be deposited with this company in an account subject to check, on which interest will be allowed; or it may be placed on a time Certificate of Deposit commanding a better rate.

Your investment funds will thus be earning a definite income even though not permanently employed.

Pamphlet outlining our various facilities will be mailed upon request.

Capital and Surplus, \$30,000,000

recent electrical progress is the great observable trend toward the consolidation of stations and the installation of large units. Some of the more interesting facts in the article have been summarized in *The Wall Street Journal* as follows:

"London, where a movement has been started for centralization of power-supply, leads all other cities in the number of stations, being served by no fewer than 70 stations, with an average capacity of but 5,400 kilowatts each. London, with a population of 7,250,000, has an area of 693 square miles, and its annual consumption per capita is 130 kilowatt-hours and the average price for current for all purposes is 4.5 cents. The connected load of all London is 523,865 kilowatts.

"New York, which twenty years ago had twenty systems, now has but four, serving an area of 131 square miles and a population of 4,754,000. The connected load of all New York stations is 782,682 kilowatts, the greatest of any city in the world and the average capacity of the main stations is 94,000 kilowatts, with an estimated average annual consumption per capita of 360 kilowatt-hours at an average price of 5.2 cents per kilowatt-hour for the New York Edison.

"Chicago, which has one of the greatest electrical outputs of any city, has an average station capacity of 90,000 kilowatts with a connected load of 545,235 kilowatts, and the largest annual per capita consumption of any city in the world, with 425 kilowatt-hours. The average price in Chicago also is the lowest in the world's great cities, being about 2.18 cents a kilowatt-hour. Chicago has 191 square miles area and a population of 2,190,000.

"Paris has practically reduced its generating companies to one with an average station capacity of 54,000 kilowatts, supplying an area of 31 square miles and a population of 2,800,000. The total connected load of the generating stations is 226,890 kilowatts, which is sold at an average price of 10.2 cents a kilowatt-hour, the highest in any of the world's great cities. The average annual consumption of electric current in Paris is but 27 kilowatt-hours per capita, the smallest in the great cities.

"Berlin, with 2,200,000 population and an area of 24 square miles, has an average station capacity of 40,000 kilowatts and a connected load of 255,721 kilowatts. The average annual consumption per capita is 111 kilowatt-hours at an average price of 3.4 cents a kilowatt-hour. Hamburg, another German city with an area of 30 square miles and a population of 1,000,000, is served by four generating stations of an average capacity of 11,000 kilowatts, and the average per capita consumption is but 43 kilowatt-hours a year. It has a connected load of 100,000 kilowatts, and the average price for current for all purposes is 6.16 cents a kilowatt-hour.

"It will be seen that the great cities of the United States compare most favorably with other cities in the price of current and far outstrip them in connected load and also in per capita consumption. In all the cities the tendency is toward consolidation, and in Paris but one company will generate current and it will have but two stations. In Berlin and Hamburg the supply is in the hands of one company in each city."

A Bad Fix.—"How are you fix financially, old man?"

"I'm at the saturation point."

"What do you mean?"

"At the point where I've soaked all I can."—*Boston Transcript*.

LISTERINE

Use it every day

LISTERINE applied to the scalp every day, either full strength or diluted, is almost a specific for dandruff.

This is but one of the many uses for Listerine in the range of personal hygiene. Use it as a mouth-wash, for relieving cuts and burns and skin affections, soothing the itch of insect bites, etc. Listerine has many imitators, but none of these possess its safe, non-poisonous, antiseptic properties.

THE SPICE OF LIFE

Are There Others?—MADGE—"You shouldn't say he's a confirmed bachelor unless you know."

MARJORIE—"But I do know; I confirmed him."—*New York Times*.

A Long Shot.—In a certain text-book on arithmetic designed for use in schools appears the following ingenious problem: "A cannon ball travels 540 feet in one second. How far will it be from the muzzle of the gun after the lapse of thirty-five minutes?"—*Sacred Heart Review*.

The Helpmeet.—MR. NEWLYWED—"Did you sew the button on my coat, darling?"

MRS. NEWLYWED—"No, love; I couldn't find the button, and so I just sewed up the buttonhole."—*Judge*.

Call of the Wild.—INQUISITIVE BLIND MAN—"How do you manage to call your dog in the dark when he can't see your fingers moving?"

INGENIOUS MUTE—"I drum on a dog biscuit with a bone."—*Puck*.

Imported Stock.—"You told me you hadn't any mosquitoes," said the summer boarder, reproachfully.

"I hadn't," replied Farmer Cornmeal. "Them you see floatin' around come from Si Perkins's place. They ain't mine."—*Washington Star*.

Cruel!—YOUNG WOMAN (to her neighbor at dinner)—"Guess who I met to-day, doctor."

DOCTOR—"I'm afraid I'm not a good guesser."

"You're too modest. Aren't you at the top of your profession?"—*Life*.

A Double Fumble.—"Who was that tough-looking chap I saw you with to-day, Hicks?"

"Be careful, Parker! That was my twin brother."

"By Jove, old chap, forgive me! I ought to have known."—*Boston Transcript*.

A Case of Gravity.—The latest Boston story is about a small child who fell out of a window. A kind-hearted lady came hurrying up with the anxious question, "Dear, dear! How did you fall?"

The child looked up at the questioner and replied, in a voice choked with sobs, "Vertically, ma'am."—*Tit-Bits*.

The Kest Explained.—The little agricultural village had been billed with "Lecture on Kests" for over a fortnight. The evening arrived at length, bringing the lecturer ready to discourse on the poet. The advertised chairman, taken ill at the last moment, was replaced by a local farmer. This worthy introduced the lecturer and terminated his remarks by saying:

"And now, my friends, we shall soon all know what I personally have often wondered—what are Kests?"—*Pittsburg Chronicle-Telegraph*.

I should like to smoke five of your Private Havana cigars. Enclosed find 10c toward shipping expenses. I prefer (....) Light (....) Dark cigars.

Name.....

Address.....

(Please pin coupon to your business letterhead or business card, stating your position.)

Smoke Five Free

I make this offer especially to men accustomed to smoking 10c and two-for-25c cigars.

For these are the men who most appreciate the exquisite flavor of my private Havana.

The leaf is from a mountainous district in Cuba. It is selected for me by a resident expert. Then made up especially for me under my monogram brand. In 40 years of smoking I have never found so mild and sweet a smoke.

I want you to know, as thousands already do, what a delightful smoke this is. If you don't say that these cigars at \$5 per hundred are the peer of any 10c cigar you ever smoked, the trial will have cost you nothing.

My Offer: Send me 10c toward shipping expenses and I will send you trial cigars. Then you can get future supplies at my low price—\$5 per hundred, \$2.60 for fifty, all charges prepaid. I offer other cigars, too, for those who like heavier, stronger smokes. You will find them described in my booklet. But send for the trial J. Rogers Warner Panatelas now. The coupon above is for your convenience. (43)

CURRENT EVENTS

European War

August 25.—A German Zeppelin air-ship flies over Antwerp, dropping bombs, which wreck many houses and kill 12 non-combatants.

August 26.—The Germans burn Louvain, Belgium.

August 27.—British marines land in Ostend. The British cruiser *Highflyer* sinks the German armed merchant cruiser *Kaiser Wilhelm der Grosse* off the coast of Africa.

The capture of Namur, Belgium, and its forts is reported by the Germans.

The German cruiser *Maadburg* is sunk in the Gulf of Finland.

Japan declares a blockade of Kiaochow.

Austria recalls her Ambassador from Tokyo.

August 28.—It is announced in London that a squadron of the British North Sea Fleet has sunk three German cruisers and two torpedo-boat destroyers off Helgoland.

The Russian advance in East Prussia reaches Allenstein.

August 29.—The German forces defeat the Allies near St. Quentin in northern France and drive their left wing further back toward Paris.

August 30.—A German aeroplane drops bombs over Paris.

The Germans continue to drive back the Allies' left flank.

Apa, in German Samoa, surrenders to a British force sent from New Zealand.

August 31.—Paris prepares for a siege. The Allies' left wing is again driven back.

September 1.—The German Government reports a victory over the Russian Army in East Prussia and the capture of 70,000 prisoners. The Germans in France occupy Amiens.

The Czar orders the name of St. Petersburg changed to Petrograd.

September 2.—The German Army pushes on to within 30 miles of Paris, still driving back the Allies' left wing.

The French Government announces the temporary removal of the capital to Bordeaux.

The Russian Army advancing on Lemberg, the capital of Austrian Galicia, is reported to have defeated a strong Austrian force.

French and German aviators flying over Paris exchange shots.

General Foreign

August 27.—Seventeen militant suffragists are arrested in London after attempting to force an entrance into the British Home Office to interview Secretary McKenna.

August 30.—The Mexican bandit chief, Zapata, agrees to support Provisional President Carranza.

September 3.—Cardinal Giacomo della Chiesa, Archbishop of Bologna, Italy, is elected Pope, in succession to the late Pius X., and takes the name of Benedict XV.

Domestic

WASHINGTON

August 29.—The House of Representatives passes the bill creating a Federal bureau of war risk marine insurance.

September 2.—The Senate passes the Clayton Antitrust Bill.

GENERAL

August 26.—The *Pleides*, the first ship to make the trip from San Francisco via the Panama Canal, arrives in New York.

The Progressive State Committee of New York indorses F. M. Davenport for Governor.

An explosion destroys the office of the Anaconda Mining Company, and Hutto is again placed under the guard of Montana militia.

WARNING!

BEWARE OF SUBSCRIPTION SWINDLERS!

Swindlers are at work throughout the country soliciting subscriptions for popular periodicals. We urge that no money be paid to strangers even tho they exhibit printed matter apparently authorizing them to represent us, and especially when they offer cut rates or a bonus. THE LITERARY DIGEST mailing list showing dates of expiration of subscriptions is never given out to any one for collection of renewals. Better send subscriptions direct, or postpone giving your order until you can make inquiry. If you have reason to suspect that the members of your community are being swindled, notify your chief of police or sheriff, and the publishers, and arrange another interview with the agent at which you can take such action jointly as may seem proper.

THE LEXICOGRAPHER'S EASY CHAIR

In this column, to decide questions concerning the current use of words, the Funk & Wagnall New Standard Dictionary is consulted as arbiter.

Readers will please bear in mind that no notice will be taken of anonymous communications.

"C. H. O." Chicago, Ill.—"I notice that 'in the circumstances' is used according to the NEW STANDARD DICTIONARY only if the idea of locality is in mind, and 'under the circumstances' if it is intended to express the idea of conditions attending a certain action. Please explain what reason there is for this distinction."

The paragraph concerning *circumstance* treats only of the correct prepositions to use. The NEW STANDARD DICTIONARY does not state that "in the circumstances" is used only if the idea of locality is in mind; the word it uses is *situation*, which in the sense applied means "a combination of various circumstances," not location. Steps taken to achieve an end and which are due to conditions are said to be taken "under the circumstances." The first treats of condition; the second treats of action only.

"E. S. S." Lincoln, Neb.—"What is the distinction between *cartoon* and *caricature*? I claim that a *caricature* is of one person, while a *cartoon* may be of a group or an event, etc."

A cartoon may be a caricature, but a caricature is not a cartoon. The NEW STANDARD DICTIONARY defines *caricature* as "a picture or description in which natural characteristics are exaggerated or distorted so as to produce an absurd

effect; burlesque; hence, any exaggerated or distorted reproduction or resemblance; as, his manner is a caricature of his father's." *Cartoon* is defined as "a large picture or caricature in sketchy style as in a newspaper or periodical, especially one intended to affect public opinion as to some matter or person."

"H. B. J." New York.—The statement you make is incorrect. The correct transliteration of the Hindustani is "pagri" and not "pagari." But this form is almost unknown to English and Anglo-Indian literature. The form favored by Yale and Harvard is "pugree" and that favored by Sir William Napier and Sir James Murray is "puggree," and, while the NEW STANDARD DICTIONARY records the form *pagri* (the true transliteration as recorded by Forbes and Balfour) in vocabulary place it defines the term under *pugree*, the form which its readers for quotations found most frequently in use in English literature, one which has been commonly accepted by the English-speaking people. It is the province of the lexicographer to record usage as he finds it, not to seek to create it, and as *puggree* and *pugree* have been in use for more than three hundred years in English literature, it is quite evident these forms have come to stay.

"D. P. C." New York.—"What is the proper pronunciation of the word *quay*, a landing-place for convenience in loading and unloading vessels?"

The correct pronunciation of *quay* to-day is *kay*. Formerly it was pronounced *kway* and sometimes *kay*, but that pronunciation is not now considered correct.

The CORONA TYPEWRITER

Can be equipped with various type faces

NOT only is the Corona Typewriter a standard machine in every particular—but it can be

equipped with various type faces to meet the needs of different professions—Doctors and Druggists especially find it invaluable.

Other notable features of the Corona are visible writing, full width universal key board, back spacer, stencil cutting device, front stroke type bar, folding carriage and aluminum frame.

No other standard typewriter is at once so light, inexpensive and portable. The Corona weighs but 6 lbs., and when folded occupies but a corner in a suitcase.

Booklet No. 81 will be sent anyone who writes

The AMAZING ARGENTINE

A New Land of Enterprise

By JOHN FOSTER FRASER

This new book, designed for wide, popular reading, is the result of a special visit made by the author to Argentina. The world is awakening to the agricultural and commercial potentialities of the Republic, and a growing interest is manifest on all hands regarding the place Argentina is going to occupy among the nations of the world. Here are but a few of the chapter headings:—Some Aspects of Buenos Aires. Railway Development in the Republic—Argentina's Part in Feeding the World—Live Stock in the Republic. The Future of Agriculture—A Trip Into the Andes—Tucuman and the Sugar Industry—The Industrial Side of the Republic—Prospects and Problems. Illustrated with 40 Full-Page Illustrations. Octavo, cloth, \$1.50 net; average carriage charges 12 cents.

A New Oldsmobile for \$1285

Now You Can Afford This Famous Car

This year there is a new Oldsmobile, and in all but one particular it stands where all Oldsmobiles of past years have stood—in that small group of leaders, five or six at the most, which has always boasted quality instead of quantity of output. That one differing detail is price.

We first announced the price at \$1350, but the flood of orders we have received has allowed us to increase our production plans and reduce our price still lower. You now can buy the new Oldsmobile "Light Four" for \$1285.

True Oldsmobile Quality

People will naturally think that to reach this low price, we have sacrificed Oldsmobile quality—until they examine the car.

This new "Light Four" is a genuine Oldsmobile—in design, in carefulness of construction and finish, in completeness of detail and equipment. Everywhere it carries out the idea of what an Oldsmobile should be—an aristocrat in appearance and performance.

For the last two years, there has been an increasing and insistent call for a smaller, lighter "Oldsmobile," built with the characteristic completeness and refinement that has marked the big Oldsmobile "Six." We have planned carefully to meet this demand—not hastily, for we knew the market would be ready as soon as we were—but step by step, seeking the type of car that would fill this demand, not for one season, but for many seasons to come.

How well we have succeeded you shall judge. The new Oldsmobile is now ready—in the salesrooms of our hundreds of dealers—for your inspection.

A True Replica of the Oldsmobile "Six"

One of our dealers said, when he first saw the new "Four" at the factory: "Just like looking at 'the greatest six-cylinder car in America' through a reducing glass." That describes it.

Our large car has always been celebrated for its beautiful lines and harmonious proportions. The same grace and beauty are apparent in the smaller Oldsmobile, reduced in wheelbase length to 112 inches.

Its low center of gravity makes it seem to "hug the ground," yet it has ample road clearance.

No Light Car So Complete

See how carefully we have worked out Oldsmobile completeness. You won't be able to think of purchasing the ordinary "popular priced" car after you have looked into this new car closely.

Wide 22-inch doors, comfortable for even the largest person. Wide seats, and ample room for your legs. For the driver, 20½ inches from cushion edge to clutch pedal, means comfort and freedom. Deep luxurious upholstery, and long, easy springs, balanced perfectly, absorb road shocks and vibrations.

Delco Electric Lights and Starter

Of course you would rather have the Delco starting and lighting system than any unknown make. It has been adopted as standard equipment on cars costing twice as much as this, yet we include it on the light Oldsmobile at no extra cost.

All woodwork is of handsomely

grained Circassian walnut. The dash unit, of the same beautiful wood, brings all instruments, set flush, immediately under your hand—starter, lights, speedometer, eight day clock, etc.

Many other features, that in the Oldsmobile Six have won the admiration of the critical, are duplicated in this lighter car. Cast aluminum front and running boards. Extra large gasoline tank, fastened to main frame in rear. Concealed tool box, fully equipped with standard tool kit, tire pump and jack—all of exceptional quality. Extra strong artillery wheels of selected hickory; twelve spokes, front and rear, natural finish.

Plenty curtains are a part of our regular equipment, as well as cape top, with boot. Tire iron at rear.

No Unnecessary Weight

The question of weight is important, but strength must come first. After making every provision for the widest margin of extra strength and safety in every part, every ounce of excess weight has been removed. Shipping weight is 2,485 pounds.

A Few Words About the Motor

The latest engineering developments, both in America and in Europe, point unmistak-

ably to the superior efficiency of the compact, small bore four-cylinder motor, with overhead valves, for a car of this weight.

We are increasing the output of the "greatest six-cylinder car in America" to meet the 1912 demand. Seven-passenger, touring body type, \$2955. Catalog "A," describing the Oldsmobile Six, sent on request.

ably to the superior efficiency of the compact, small bore four-cylinder motor, with overhead valves, for a car of this weight.

The unit power plant of the new Oldsmobile is of this modern type. All valves are enclosed, and all working parts covered. Its four cylinders, measuring 3½ x 5, are cast en bloc, with specially designed Oldsmobile silencer; and exhaustive road tests show great flexibility with a wide range of speed. The motor is mounted on the main frame, with three point suspension.

This is unmistakably the car for the man who seeks distinction without extra cost—who demands in the car of his selection all that "Oldsmobile" has meant since motor cars were first built. Hundreds of dealers are now ready to show it. Our new catalog "B" describes and illustrates the new car in detail. Write for it today.

TOPICS OF THE DAY

WHAT WE PAY TO SEE EUROPE AT WAR

A DOLLAR A HEAD on every man, woman, and child in the United States is what the Emergency Internal Revenue Tax Bill means with its demand for \$100,000,000, to make up the loss in our customs receipts as one result of Europe's war. That is the way it looks to some editors, but others observe that if only luxuries are taxed, a much smaller number of people will foot the bill. The aim of the Ways and Means Committee, say Washington dispatches, is "to limit the tax to as few articles as possible," and we read that their bill provides for "a tax of 3 per cent. on railroad freight, from which it is estimated \$65,000,000 will be realized annually; an additional tax of 50 cents a barrel on beer, which will bring in about \$33,000,000; and a tax of 20 cents a gallon on domestic wines, the probable yield of which will be \$0,000,000." This may soften the blow to some, but not to the *Pittsburg Dispatch* (Ind.), which says that "the paradox that the one great nation which has kept out of this war must pay additional taxes for its exemption is certainly singular." This idea working in minds less calm produces not a little sharp talk from editors who prefer to attribute the present "necessity" to the Democratic tariff and to the extravagance of a Democratic Congress. The chief item in the latter charge is the "pork barrel" of the River and Harbor Bill, which, according to report, is about to be passed by the Senate and will entail an appropriation of about \$53,000,000, tho it is reported from Washington that this figure is to be cut down by about \$25,000,000. Then the deficit in the customs revenue, it is averred by critics of the Administration, was already long under way before the outbreak of the war. Against such strictures may be instanced a large quota of pro-Administration opinions, conceding the need of a war tax and venturing the confidence that the American people will bear it "patiently, patriotically." Suspicion of the River and Harbor Bill is found also among editors of this group, but they frown upon the attempt to turn the discussion into a partizan "tariff debate." For all that, there are observers who, looking forward to the fall elections, see in the President's address to Congress in joint session a "campaign document" that is "highly persuasive." The President's message reads in part as follows:

"During the month of August there was, as compared with the corresponding month of last year, a falling off of \$10,629,538 in the revenues collected from customs. A continuation of this decrease in the same proportion throughout the current fiscal

year would probably mean a loss of customs revenues of from \$60,000,000 to \$100,000,000.

"I need not tell you to what this falling off is due. It is due, in chief part, not to the reductions recently made in the customs duties, but to the great decrease in importations; and that is due to the extraordinary extent of the industrial area affected by the present war in Europe. Conditions have arisen which no man foresaw; they affect the whole world of commerce and economic production; and they must be faced and dealt with. . . .

"The Treasury itself could get along for a considerable period, no doubt, without immediate resort to new sources of taxation. But at what cost to the business of the community? Approximately \$75,000,000, a large part of the present Treasury balance, is now on deposit with national banks distributed throughout the country. It is deposited, of course, on call. I need not point out to you what the probable consequences of inconvenience and distress and confusion would be if the diminishing income of the Treasury should make it necessary rapidly to withdraw these deposits. And yet, without additional revenue that plainly might become necessary, and the time when it became necessary could not be controlled or determined by the convenience of the business of the country. It would have to be determined by the operations and necessities of the Treasury itself. Such risks are not necessary and ought not to be run. We can not too scrupulously or carefully safeguard a financial situation which is at best, while war continues in Europe, difficult and abnormal. Hesitation and delay are the worst forms of bad policy under such conditions.

"And we ought not to borrow. We ought to resort to taxation, however we may regret the necessity of putting additional temporary burdens on our people. To sell bonds would be to make a most untimely and unjustifiable demand on the money market; untimely, because this is manifestly not the time to withdraw working capital from other uses to pay the Government's bills; unjustifiable, because unnecessary. The country is able to pay any just and reasonable taxes without distress. And to every other form of borrowing, whether for long periods or for short, there is the same objection. . . .

In the view of the *New York Journal of Commerce* (Fin.), the President offers "some valid reasons" for making up the revenue deficit and "keeping the public Treasury in a strong position" through an emergency tax, but it adds:

"More stress might well be laid upon the need of economizing government expenditures so far as this can be done without injury to the public service or any important interest of the nation. It is not desirable to maintain a specially liberal surplus for the purpose of using it as an aid to private enterprise where that is able to take care of itself, and it is to be hoped that the

TERMS: \$3 a year, in advance; four months, \$1; single copy, 10 cents; postage to Canada 85 cents a year, other foreign postage \$1.50 a year. **RECEIPT** of payment is shown in about two weeks by date on address label, subscription including the month named. **CAUTION:** If date is not properly extended after each payment, notify publishers promptly. Instructions for **RENEWAL, DISCONTINUANCE** or **CHANGE OF ADDRESS** should be sent two weeks before the date they are to go into effect. Both old and new addresses must always be given. **DISCONTINUANCE:** We find that many of our subscribers prefer not to have their subscriptions interrupted and their

files broken in case they fail to remit before expiration. Nevertheless, it is not assumed that continuous service is desired, but subscribers are expected to notify us with reasonable promptness to stop if the paper is no longer required. **PRESENTATION COPIES:** Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

Entered at the New York Post-office as Second-class Matter.

banks will soon be in a position to perform their functions without a distribution among them of Treasury funds as a means of relief. Those funds should always be so placed as to take their normal course with other deposits.

"While so much concern is shown for increasing revenue, without a very close calculation of government needs, there is

THE PORK-BARREL TWIST.

King in the Chicago Tribune.

a singular lack of any effort to restrict expenditures with due regard for such needs. The bloated River and Harbor Appropriation Bill is now before the Senate loaded with about the usual quantity of 'pork' for local distribution where it will 'do most good' as a political aid to the reelection of members of Congress in both Houses."

"The extravagance of the present Congress," a reproach frequently encountered in opposition journals, is defined by the Republican St. Louis Globe Democrat as follows:

"In spite of the declaration of the Baltimore platform for rigid economy under a tariff for revenue only, extravagance has run riot. In the first full fiscal year of the Wilson Administration, ordinary government expenses amounted to \$701,000,000. In the last full fiscal year of the Taft Administration, ordinary expenses of Government were only \$654,000,000. Appropriations now being made, and which have been already made, keep well up to the high-water marks of past years. The situation being what it is, the President urges, wisely, we think, that it would be better to lay a temporary tax than to issue bonds. The real Treasury situation was far from being revealed in what he told Congress. The address showed the earmarks of evasiveness, and a want of conviction. But, the condition being what it is, it should be relieved by appropriate and prompt legislation."

We read further in this journal that "Mr. Wilson's implied claim that no part of the loss is due to the new Tariff Law . . . is insincere," and it calls attention to the fact that receipts from duties "were declining long before the beginning of the war, during the time when imports were increasing under the greatly enlarged free list and lower duties in practically all schedules." If the Payne-Aldrich Law had remained in operation, we are told, "importations might fall off as they have, owing to the war, and still the loss to the Treasury would have been much less than it is now." A similar view is held by the Pittsburgh Gazette-Times (Rep.), which says also that the Democratic party "is placed in the position of adopting a war tax to cover up its defective system of peace revenues," and this journal adds:

"On the horns of a dilemma it is suspected of having chosen to obtain its ineptitude with the smoke wafted from a foreign ship, hoping in this fashion to avert an accounting in the Con-

gressional campaign for the sorry failure of its financial operations. But the Republican minority will not overlook the opportunity for disclosure of the facts."

"Businesses have to economize in a time like this," says the Progressive Washington Times, "why not Government?" Yet its judgment of the whole matter of the present tax differs sharply from the foregoing opinions. We read:

"The plea for more money was fully justified by the emergency. The demand that it be raised by taxation, not by a loan or loans, was sound. Under the conditions which a Democratic tariff policy imposes, there will be little dissent as to the method, that is, internal-revenue duties.

"The Times does not agree with the whole revenue policy of this Administration. But at this time it refuses to believe that anything will be gained by turning this revenue discussion into a tariff debate. There would have been a deficit under the old tariff schedules if the war had lasted very long. Perhaps it will prove that, by swapping revenue tariff for income taxation, we have stumbled right; the income tax very possibly will produce a more stable revenue than would the customs duties.

"But all this is beside the question. The country is going to be compelled to pay more taxes or else to get government conducted more cheaply. The biggest, plainest, easiest single piece of big economy lies in killing the river and harbor grab.

"Then kill it!"

The belief just expressed that we must submit to a war tax, but that at the same time we must cut down our national running expenses, is supported also by the Atlanta Constitution (Dem.), which adds:

"The main requirement of any emergency provision is that it shall be as free of hardship and as uniform as may be possible. The fact that Oscar Underwood is to have charge of the framing of the bill supplying such revenue is reassuring in this direction. At any rate, it is not likely there will long be need for the levying of the special impost, since with the cessation of war in Europe the custom-houses will again play their rôle in government upkeep.

"Two benefits of a compensatory nature stand out from the situation. The first is that the new Democratic Tariff Law, making the Government less dependent upon the tariff for its expenses, creates a smaller deficit than would have to be met

THE INNOCENT BYSTANDER.

—Harding in the Brooklyn Eagle

under high protection. The income tax is already doing much of the work that would otherwise be saddled on any emergency measure."

This journal tells us, moreover, that "it wouldn't hurt any one in the country, except a few place-hunting Congressmen, to cut in half the Waterways and Public Buildings bills for a couple of

years," and the same aversion to "pork" is disclosed by the *Boston Post* (Ind. Dem.), which believes President Wilson's plan for revenue-raising by "indirect taxation" to be "both timely and wise." Yet it adds:

"Congress should see to it that the tax is wisely imposed; that it be kept absolutely clear of the necessities of the people which, in all conscience—and some lack of it—are high enough already. The tax should be placed upon things that the average man and woman can perfectly well go without, but which, by those able to afford them, will be used in sufficient quantities to produce the needed revenue."

The *New York Times* (Dem.) thinks the committee "will be wisely guided if it takes the war-revenue-tax law of June 13, 1898, as a model."

"The chief feature of that law was the placing of a tax by means of stamps upon negotiable instruments, documentary evidences of value, and a large number of proprietary articles. In the first full year of their operation, the year ended June 30, 1899, the adhesive stamp tax yielded \$43,837,819; the next year it yielded \$40,964,365; in 1901, \$39,241,036. In 1902 most of these taxes were repealed and others reduced. The added taxes upon fermented liquors and tobacco produced also a large increase in the internal-revenue receipts.

"Taxes of this nature are easily borne, they provoke few complaints, and they are derived from proper sources of taxation. The taxes proposed by the law of June 13, 1898, took effect at once in respect to fermented liquors, and the others took effect from July 1, only eighteen days after the passage of the act. Promptness is essential, and it can be secured by a resort to similar taxes now. There would be no delay save that involved in the printing of the stamps."

This suggestion is strongly voiced also by the *New York Evening Post* (Ind.), which says:

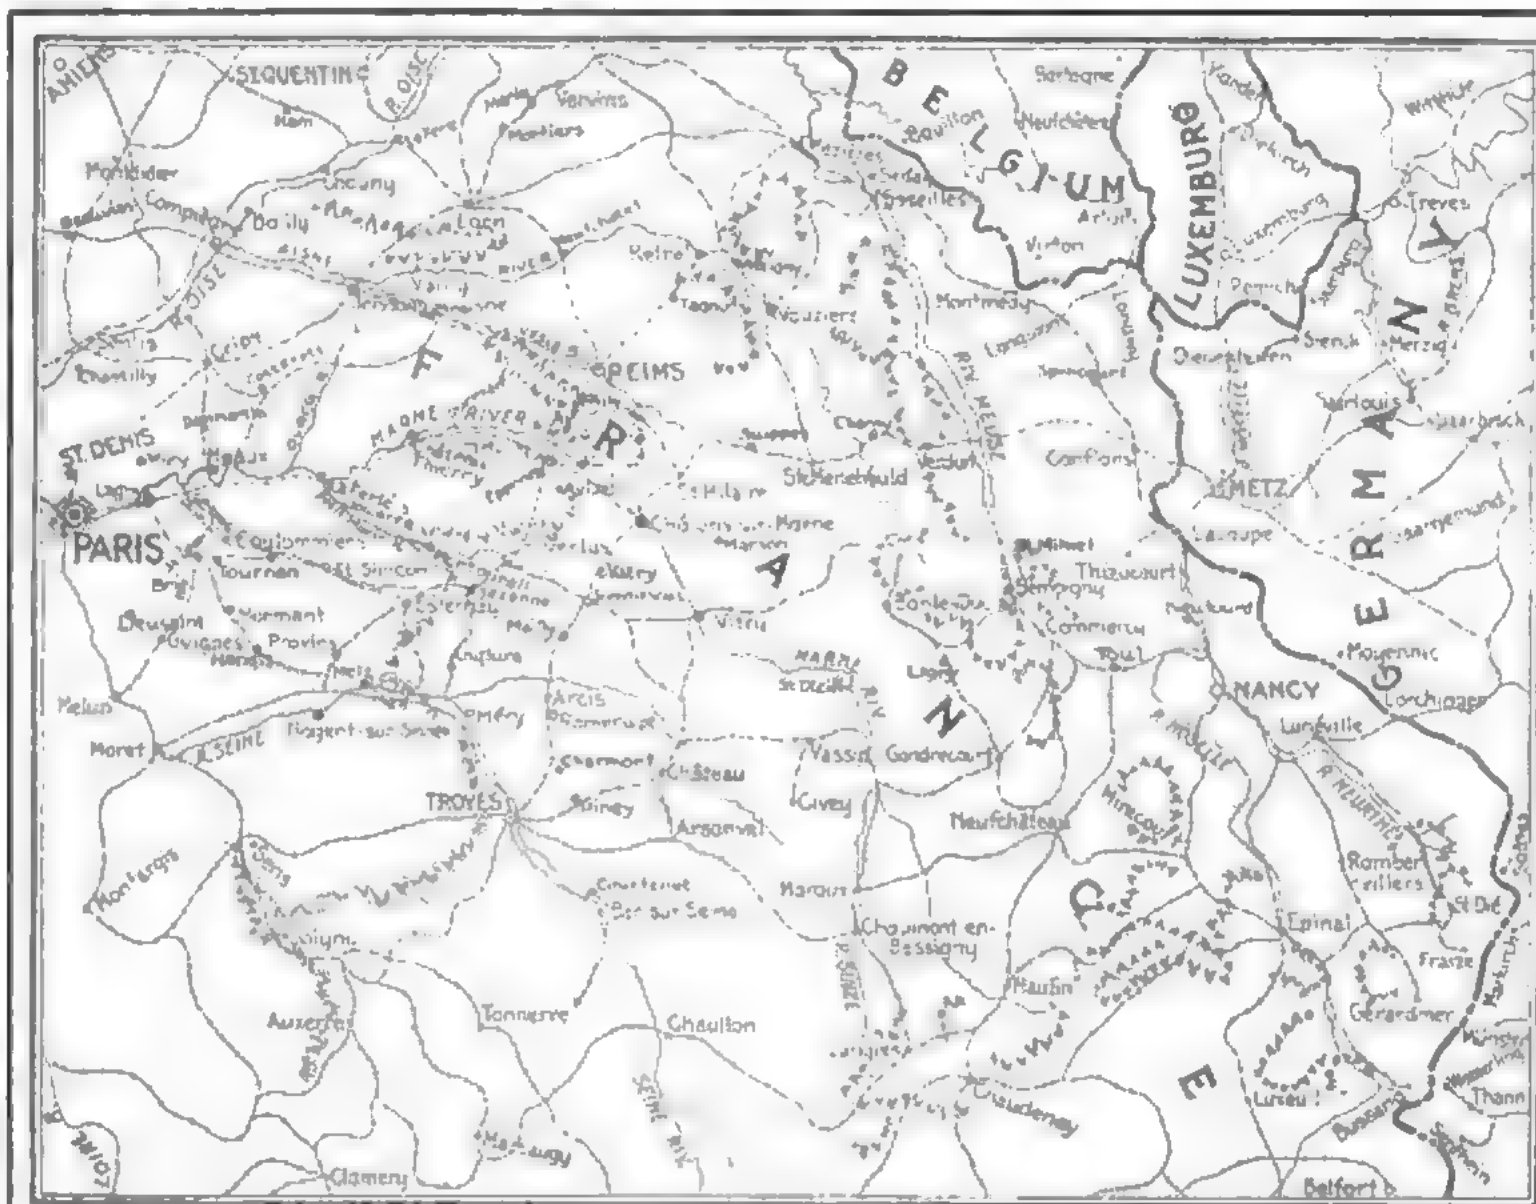

"As for the nature of the action that should be taken, there will be substantially unanimous concurrence in the President's view, that this must not take the shape either of borrowing money or of withdrawing Government deposits at a time when either of these operations would be sure to have the effect of aggravating, instead of alleviating, the strain upon the business interests of the country; and accordingly that it becomes the duty of Congress to levy emergency taxes to make good the falling off in Government revenue caused by the war in Europe."

"The situation is not so distressing as it seems," *The Rocky Mountain News* (Ind.) assures us in these words:

"If the United States can manage to get along for a time without the manufactured goods of Germany, England, France, and Belgium the people of this country will be forced by sheer necessity to supply the demand. The loss in revenue to the Government through falling customs duties will be far more than compensated by the gain to the country through increase in manufacturing equipment, employment of more people, and renewed and increased domestic prosperity."

THE ALLIES' NEW BOND

A SIGNIFICANT "scrap of paper" was the protocol recently signed in London by Sir Edward Grey and the Russian and French Ambassadors in London binding each of their respective nations to make no peace moves without the consent of its allies. At least so it is regarded by the press of this country and England and in official circles in Washington and London. It means, we are told, that the Triple Entente

SCENE OF THE FIGHTING BETWEEN THE GERMANS AND THE ALLIES EAST OF PARIS.

has become the Triple Alliance, and that the Allies have committed themselves to a "war to the finish." And it is on this last phase that the editors in this country prefer to dwell, as they see all hopes for an early peace go glimmering. The London agreement of September 5 is brief. Shorn of the words proclaiming its official character, it reads:

"The British, French, and Russian Governments mutually engage not to conclude peace separately during the present war.

"The three Governments agree that, when the terms of peace come to be discussed, no one of the Allies will demand conditions of peace without the previous agreement of each of the other Allies."

This means, so a British Foreign Office authority told the London correspondent of the *New York Times*,

"That the Allies are absolutely determined to stand together in this war for freedom, fighting together for the right and to vanquish an enemy who threatens the whole world. Until thrown together by the outbreak of hostilities the Entente had been a rather loosely constructed organization, with no definite undertaking, as far as England was concerned, to join with the others in military operations against any enemy. The French and Russians were pledged to assist each other, but England was not. Now the more or less informal Entente of the three countries becomes an absolute alliance, with each pledged to cooperation in war as well as politics."

Neutral countries, says the *London Daily Chronicle*, now "know definitely where things are. . . . They can assume, a

that whatever allowance must be left for the unforeseen, London, Paris, and Petrograd have reached already a general agreement as to the lines upon which Europe should be reconstructed." And *The Chronicle* adds, significantly: "It goes without saying that the five weeks which have intervened between the first outbreak of war and the signing of the treaty have not been spent by the diplomatists in merely drafting the two short clauses of which its text consists." The *London Times* wishes it under-

possible so as to save the rest of the country from the ravages of war. There is no question but what she could have made peace with honor, but this was not to England's interest.

"The military machine of Germany, which has never made an aggressive war, has never endangered international peace; but the selfish interests of England, who wants to be the undisputed ruler of the shipping and commerce, is the most dangerous proposition that the world has had to face. It is all the more dangerous on account of the natural cant and hypocrisy of the English diplomacy, which is cunning enough to shift the responsibility for its ill deeds on other people."

In the eyes of most editors in this country, however, this new agreement is neither glorious nor perfidious, and means merely "the inevitable prolongation of the war to the bitter end." In the light of this document, they see no hope in the rumors of an early peace through the mediation of President Wilson. It means the slaughter of so many more thousands of German working men, French shopkeepers, and Russian peasants. The *Philadelphia Press*, indeed, thinks that "conditions are conceivable under which the French people would insist that peace be made regardless of the compact which has just been announced," but it admits that the probability is remote. In certain contingencies the protocol would pave the way to an early settlement, suggests the *Baltimore News*, "for the neither France nor Russia may make peace alone, it binds England not to prolong hostilities indefinitely against their wishes." But even if it does mean prolongation of the war, observes the *Washington Times*, "it means less likelihood of a second war of new alliances succeeding the present conflict." If the Allies are eventually successful, explains the *Newark News*, "a real concert of Powers will be established." For,

"No one of the Allies can demand a partitioning of Europe to suit its own interests. . . ."

"This step practically clinches the equal civil rights promised to the Jews. It will tend to persuade the Poles that Russia's promises, even the forced by the emergencies, were made in good faith, and, if Russian arms are successful, they will doubtless seize the opportunity to become united under a Russian viceroy."

"At the very time when the outlook for the Allies was blackest, some of the most influential British papers took occasion to declare that if the tide of battle turned, Britain would guarantee to repartition Europe along racial lines and in accordance with the wishes of the people. Since the people who now suffer most because of artificial boundaries are mainly Slavs, Russia may be expected to support Britain in this undertaking. If Russia should push her zeal for the Slavs too far, however, Britain may turn to France for support in checking her. A reasonable approach to sanity in the final settlement, then, may be looked for, if the Allies succeed."

The *New York Press* and *Tribune* think it well for the world that the war be fought out to the end, namely, the defeat of Germany. For if "militaristic" Germany succeeds, *The Tribune* "can not conceive how anything more than an armed truce is possible." "To obtain peace by a blind compromise," it declares,

"is to ignore the most significant of facts. It is damming Niagara with kind words. In the first place, it can not be done. . . . In the second place, if it conceivably could be done, the peace resulting would be a false peace of no lasting value and certain to involve the world in fresh hostilities before a generation had passed."

But calmer observers outside of New York prefer to take the new agreement as simply an interesting indication that the war will last three years, perhaps, rather than six months. And sober, impartial comment on the great and long-drawn-out contest they now see inevitable is characteristic of such representative dailies as the *Boston Transcript*, *Providence Journal*, *Lowell Courier-Citizen*, *New Haven Journal-Courier*, *Rochester Herald*, *Philadelphia Press*, *Washington Herald*, *Cleveland Leader and Plain Dealer*, *Detroit Free Press*, *St. Louis Globe Democrat*, and *Savannah News*. What we are to see, remarks the *Indianapolis News*, "is not a mere test of military

HE SAVED THE DAY FOR ENGLAND.

Sir Horace Smith-Dorrien. In his account of the British retreat and running fight with the German forces under Von Kluck, on August 26, Field-Marshal Sir John French says: "I can not close the brief account of this glorious stand of the British troops without putting on record my deep appreciation of the valuable services rendered by Sir Horace Smith-Dorrien. I say without hesitation that the saving of the left wing of the Army under my command on the morning of August 26 could never have been accomplished unless a commander of rare and unusual coolness, intrepidity, and determination had been present to personally conduct the operations."

stood that there is nothing new in this officially expressed determination of the Allies to persevere together.

"We have all entered into this war for the sake of the peace that we mean to make after it, so that, in the words used in the memorable declaration by Dr. Eliot, ex-President of Harvard University, 'it may mean the end of militarism.'"

"But while we know this well enough, Germany did not know it. She believed that when France has suffered a certain amount of her brutality she will forget everything but that suffering and will make peace on what the Germans are pleased to call easy terms, and even, perhaps, be grateful to Germany because these terms are no worse."

So the London protocol appears to those supporting the Allies, but to Germans, if the New York Chamber of German-American Commerce may be permitted to speak for them, it shows the "desperate position" of the Triple Entente, and "keeps up the traditions of perfidious England." Quoting further from this statement:

"France, during the last four weeks, has had the Germans in her territory, and however humane and well disciplined an army may be, it must do a great deal of damage to a country it has to conquer. It would have been reasonable for her, under the circumstances, to make peace as quickly as

GENERAL VON KLUK.

GENERAL PAU.

GENERAL ROUSKY.

ARCHDUKE FREDERICK.

General von Kluk commands the German right wing, which pushed the Allies' left back from Belgium to Paris, but was later itself compelled to retire. General Pau won successes for the French in Alsace-Lorraine in the early days of the war, and was summoned north to help beat back the oncoming German right. General Rouzsky commands the Russian Army in Galicia, which is reported to have defeated the Archduke Frederick's Austrian forces and inflicted a loss of 120,000 men. Vienna denies the Russian reports of victory.

FOUR GENERALS WHO MAY FIGURE IN HISTORY.

strength as it is to-day, but a test of endurance and of resources yet to be developed."

This fact is especially apparent in the dispatches from England. We hear of Premier Asquith's successive calls for troops which will bring the total British Army up to about 1,400,000 men. We hear, too, of Mr. Lloyd George's reminders that England has "won with a silver bullet before," and his opinion that the nation should husband its resources, as "the last few hundred millions may win this war." And the *New York World* is profoundly impressed by the fact that "all the resources of men and money of the greatest Empire ever known have been enlisted for the war and are to be thrown into the balance."

Nor are the other combatants a whit behind Britain. Germany has called out the Landsturm, France is arming her last reserves, Russia has declared her determination to see the war through, "no matter how long it takes or how much it costs." And Japan has declared her resolve to fight as long as do her Western allies. Germany and Austria, we learn, agreed before the fighting began not to make peace separately. Both sides, notes the *San Francisco Chronicle*, "are preparing for protracted warfare. Paris is being stocked with food supplies for a long resistance, and Berlin is reported to be killing animals in the zoo for the purposes of economizing on meat consumption."

In an editorial setting forth the patriotic unanimity of the different warring peoples the *Boston Herald* asks its readers in particular to abandon the belief that the German Kaiser's "hotheadedness forced the issue, contrary to the real wishes of his peace-loving subjects." It asserts, in words which must be read in the light of the recent patriotic statements of German savants, and the almost universal testimony of returning travelers, that behind the Kaiser "the German people are more perfectly united than we have ever been behind any of our war Presidents." For instance, it notes, "Ralph Pulitzer, president of the *New York World*, which is an unsparing critic of the Kaiser and autocracy, writes from Germany that its people as one man are fighting, as they believe, in self-defense." And "no one conversant with the situation has given us a shred of evidence in the other direction."

Both sides, sadly comments the *New York Sun*, believe they are fighting with God in "the highest interests of civilization":

"There can be no doubt that the combatants alike are now determined to put their last man in the field, believing that defeat

would be fatal to national ideals and aspirations. There can also be no doubt that the people of all the combatant nations are at present resolute to support the national policy and make the last sacrifice for its success. It is to be noted that political partizanship has everywhere subsided. Would that the present prospect were for a short war and a quick peace!"

EUROPE APPEALING TO AMERICA

WE ARE ASKED to "imagine Napoleon in the full tide of any of his successful campaigns stopping to explain to some neutral Power why he had destroyed some architectural treasures in the wrath of war!" But the world has moved, continues the newspaper-writer who puts the question, and the nations at war in Europe are actively trying to secure the good-will of neutral America. To say nothing of appeals from newspapers and individuals, there is the Belgian delegation visiting Washington to "present to the President their story of the destruction of Louvain and what they hold to be convincing proof of atrocities committed by the German troops." There is Emperor William's letter to President Wilson charging his foes with using "dum-dum" bullets, and justifying the conduct of his armies in Belgium. There is the reply to this protest from President Poincaré of France. There is the appeal of the Burgomaster of Ghent for American protection. There is the announcement, which the *Philadelphia Public Ledger* notes, "that the German War Office will make a thorough investigation of the acts of wanton cruelty alleged to have been committed by German troops in Belgium, and will then invite three neutral nations to pass in review the findings." These things, the *Pittsburg Gazette-Times* is persuaded, can only prove "that, after all, the great force to be reckoned with by the warring nations is the world's public opinion." Neither England nor France, writes Willis J. Abbot in the *New York American*,

"has the remotest idea that the United States will give them material aid, yet it is obvious enough that their efforts to cultivate a sentiment hostile to Germany in this country are only exceeded in vigor by the German endeavors to make that sentiment friendly. . . ."

"Between the warring peoples the United States as a nation can not now judge. But that, coincidentally with the struggles of their armies in the fields, the European governments should be striving so assiduously each to escape the odium of having caused the war, and to prove itself guiltless of the greater and unnecessary barbarities of war, proves that the world has moved far, and

war, even if successful, is becoming more and more a crime rather than a glory in a nation's history."

While our editors appreciate the compliment paid to us as a nation by these appeals from European belligerents, most of them contend that there is nothing we can do about it. We may show sympathy for the sufferers, but that, says the *Indianapolis Star*, "is about as far as we are likely to go":

"The belligerents in Europe . . . are in a life-and-death struggle, and advice from outsiders is not likely to produce any-

Copyrighted by the New York Herald Company.

LOOK OUT, UNCLE SAM—Y-TOU'LL BURN YOUR FINGERS.

—Rogers in the New York Herald.

thing except friction. We are not looking for a chance to risk our present friendly relations with any belligerent for the sake of futile protests."

That stories of atrocities on the part of Germans, Belgians, and Russians have been greatly exaggerated is the belief of the *New York Times*, *Tribune*, *Nashville Tennessean*, and *San Francisco Chronicle*. The testimony of the five well-known American newspaper correspondents who signed a statement that they saw no signs of German cruelty in Belgium is deemed particularly impressive. Furthermore, several American newspapers have been printing extracts from letters sent home by German officers and soldiers, telling, first, of the severe treatment meted out by military authorities to soldiers found guilty of misconduct toward non-combatants, and, secondly, of atrocities committed against them by the Belgian population."

The most noteworthy accusation against the Allies comes from no less a personage than Emperor William of Germany. He deems it his duty to inform President Wilson, "as the most notable representative of the principles of humanity," of the "barbarous" methods of his opponents. He alleges in particular the use of "dum-dum" bullets, and the cruelties practised by the Belgians in their "guerrilla warfare." He concludes with the declaration that his "heart bleeds" at the inevitable suffering from the punitive measures made necessary by such conduct.

In reply to this, however, we have President Poincaré's explicit denial of the Emperor's charges, and a return charge that the Germans were using the torturing bullets. English journalists hope Americans will not be convinced by these attempts to influence public opinion, in which "Belgian atrocities are explained away, and the most monstrous allegations made against the allied troops and unhappy Belgians themselves." "At all embassies and legations here," says a London dispatch to the *New York Times*, "as well as with the Government, there is no question about German outrages."

THE PRESIDENT "ON THE JOB"

OPONENTS of the President are certainly making no objections to his decision to renounce the stump this fall in the Congressional campaign, and his friends unite in lauding the high patriotism of it, so the approval appears to be pretty nearly unanimous. At a time when the European din is drowning out all other sounds and politics is driven into the back pages of the daily papers, a decision not to speak is thought wise as well as virtuous by opposition critics; but more friendly observers remark that the less said by our Chief Executive the better for our international relations just now, and his intention to stay in Washington and "on the job," as he phrases it, is declared by the *New York Herald* (Ind.) to be "none the less welcome and none the less commendable because it is what the American people had a right to expect." Some Democratic Congressmen are, of course, disappointed that the President is not to appear in their districts. But Democrats, as a rule, if their newspapers represent them fairly, do not expect their cause to suffer. For one thing, as the *Philadelphia Record* (Dem.) reminds us, tho the President will not leave Washington, he may take opportunity to state the Democratic party's case in writing, and, declares *The Record*, he "is the best political letter-writer we ever had." Moreover, says the *Baltimore Evening Sun*, speaking for a number of its fellow supporters of the Administration, "his refusal to take the stump this fall and the letter in which he gives the reasons for that refusal will be worth more to himself and the Democratic party politically than all the speeches he could deliver in the Congressional campaign." And, what is more, as Democratic dailies like the *New York World* and *Brooklyn Eagle* see it, their party, because of its record and because of the change in the political atmosphere due to the war in Europe, faces the fall elections with perfect confidence. This confidence is shared by the President, as may be seen from his review of the work of the Congress in his letter telling Chairman Doremus, of the Democratic Congressional Committee, why he does not feel justified in taking an active part in the campaign. He trusts that he may often have the privilege of calling attention to the "fine and unselfish service" of Congress, and hopes that he can again be given such "colleagues." But, he continues:

"In view of the unlooked-for international situation, our duty has taken on an unexpected aspect. Every patriotic man ought now to 'stay on his job' until the crisis is passed, and ought to stay where his job can best be done. . . ."

"The President can not, especially in times like these, turn away from his official work even for a little while. Too much depends upon his keeping all the threads of what is occurring in his hands.

"I have, therefore, reached the conclusion that I can not in any ordinary sense take an active part in the approaching campaign; that I must remain here to attend to the serious work sure to fill the months immediately before us—months that will carry with them obligations, no doubt, of the most tremendous sort. I know that you will feel similarly about your own obligations; that members of Congress, too, without distinction as to party affiliations, will feel that they must remain to do the work of necessary and pressing service and bring it to a successful conclusion. . . ."

"The time has come for great things. These are days big with destiny for the United States, as for the other nations of the world. A little wisdom, a little courage, a little self-forgetful devotion may under God turn that destiny this way or that.

"Great hearts, great natures, will respond. Even little men will rejoice to be stimulated and guided and set a heroic example. Parties will fare well enough without nursing if the men who make them up and the men who lead them forget themselves to serve a cause, and set a great people forward on the path of liberty and peace."

The "good sense and patriotism" of this "will meet with universal approval," in the *New York Sun's* (Ind.) opinion.

Copyrighted by "International News Service."

A GERMAN SIEGE-GUN AND WHAT IT CAN DO.

At the right is seen one of the Lige forts after receiving the attention of Germany's siege artillery. The 11-inch portable howitzer, at the left, is one of the types being used by the Germans with terrible effect in their attacks upon fortified positions in Belgium and France.

"Even from the viewpoint of party expediency," adds the *Syracuse Herald* (Ind.), "it is a sagacious stand." In an appreciative vein the *New York World* says that while "we have had Presidents who regarded the duties of the Chief Magistracy as an easy routine," and "others who used their position to exploit themselves by extensive travel, public shows, and incessant speech-making,

"Woodrow Wilson has been on the job for peace, on the job for fair taxation, on the job for honest business, on the job for self-respecting industry, on the job for sound currency, and on the job for just banking. We believe that a great people who are also on the job will take care of him and of every member of Congress, no matter what his party label may be, who has supported him."

And the Democratic majority in Congress, *The World* adds, has a record which speaks for itself in the campaign now opening, for it is no small task—

"To have reformed the tariff, to have lightened the burden of taxation on the consumption of the masses, to have reformed the currency and banking, to have restored the nation's regard for the sanctity of treaties in the Panama Canal tolls legislation, to have cleared up the debatable ground around the antitrust laws, to have opened the way for the restoration of the American merchant marine."

Also, thinks the *New York Evening Post* (Ind.), "the fact that we are at peace with all the world is sure to weigh mightily with thousands of voters."

"They will be inclined, other things being equal, to make their vote for members of Congress a vote of approval for the Administration which, in the face of all possible discouragement, by skill and patience and firmness averted a war that seemed all but absolutely upon us; and averted it not only without loss of national prestige, but with a great gain for the position of the country in its relations with the South-American republics."

The same thought is in the mind of the *Brooklyn Eagle* (Dem.), as it points out the change that came over the face of our politics within a little over a month:

"Six weeks ago, when partizanship ruled, Republican hopes ran high of a victory in November which should return the control of the House to that party, and which should overwhelm the Wilson policies with a vote of national disapproval. Such a reversal in the House is likely in the mid-term of Presidents, and the Republicans counted, properly enough, not merely upon that recurring mid-term flood, but upon the opposition of many to

Wilson's Mexican policy and to the repeal of the Panama tolls exemption law.

"The invasion of Belgium checked that confidence, however. For a few days people fixt their minds on the cables, to see how far the conflagration was to run. Then, when they realized that we were in the presence of a world war, and that the United States was not to be engulfed in it, through the leadership of a man wise enough and strong enough to maintain our neutrality, a great national wave of thankfulness went up. The people realized that they had a leader whom they could trust, and they resolved to support him firmly until this danger was past. With the growth of that feeling the Republican hopes of a mid-term reversal of the House control vanished, and the Democratic party came into a position where it 'will fare well enough without nursing.'"

Congressmen seeking reelection, observes the *Newark News* (Ind.), may well take a hint from the President's words, for "the people will not forget to reward those of their Representatives who stay with Wilson 'on the job' at Washington, nor will they fail to remember those who have deserted their posts to advance their own interests."

While many Republican papers follow up their praise of the President's stand with criticisms of the Democratic Congressional majority and its acts, a few frankly attack the Doremus letter as a campaign document. The *Brooklyn Standard Union* (Rep.) is displeased with what it considers the Presidential disregard of the proprieties:

"He furnishes to the Democratic Congressional Campaign Committee, on the request of its chairman, a 1,000-word 'key-note' for the campaign, which is put out for partizan use by the Committee at the very time when the President of the United States is supposed by Americans to be occupying his mind with very different things."

"Evidently he realizes the awkwardness of his position in thus suddenly starting up the national political campaign at this particular time. He lamely apologizes for it, and even in writing his campaign document he adopts the tone of pretending he is not doing it."

Now that Mr. Wilson has fired the first gun in the political campaign, he may expect, so *The Standard Union* continues, to draw the fire of the opposition, whose members "do not think his Administration has been such a wonderful and semisacred thing as he makes out, nor do they have the slightest respect for those Democratic Congressmen he puffs up so fulsomely while they are for the most part neglecting the duties they draw pay for in order to come home and look after their own interests."

COLORADO ASKED TO PACIFY ITSELF

THE "DISGRACEFUL AND INTOLERABLE" conditions in Colorado, where United States troops have been doing police duty for more than four months as the result of the strike deadlock between the mine-owners and the United Mine Workers of America, must come to an end, say some commentators as they consider President Wilson's draft of "a tentative basis for the adjustment of the strike" offered in identical letters to the contending parties. The plan of settlement involves a truce of three years' duration, we read, and there are things about it that neither side will like. Yet, says the *Brooklyn Eagle*, as "the United States has been compelled to intervene by a situation which was close to civil war, and the intervention can not be made permanent," it behooves Colorado to concede "to the United States at least a moral right to suggest a *modus vivendi* for the preservation of peace after its withdrawal, and to insist upon its acceptance, unless some equally promising plan is forthcoming from the parties."

So far no such plan is in sight, *The Eagle* goes on to say, and "until one is evolved, the man or organization that refuses to accept the Wilson plan will assume a grave responsibility." In making the request for a settlement, which is based on the investigations of the Federal Commissioners of Conciliation, President Wilson urges that the disputants realize that "this is a time . . . when everything should be done that it is possible for men to do, to see that all untoward and threatening circumstances of every sort are taken out of the life of the people of the United States," while the proposals themselves are epitomized by *The Eagle* when it says that the agreement—

"Provides that the State laws shall be thoroughly enforced; that miners who have not been found guilty of a violation of law shall be permitted to return to their work; that intimidation shall be prohibited; that wage scales and mine regulations shall be printed and posted; that a grievance committee be appointed by the men of each mine from men who have worked there six months, and with married men in the majority, and that grievances which this committee is unable to adjust with employers shall be taken to a committee of three, to be appointed by the President, one man from each side and one impartial; that the decisions of this board shall be final, and that, during the truce, there shall be no mine guards, nor any picketing or colonizing

by the men and no suspension of work pending the hearing of a dispute."

"It is none too soon to say," observes the *New York Evening Post*, "to the mining companies and the United Mine Workers alike, that the public opinion of the United States will imperatively demand that this method of terminating an intolerable state of things be accepted promptly and in good faith." And in the *New York World* we read that "in the miserable Colorado business the President addresses the Rockefeller mine-owners and strikers in his demand for peace, but it is plain he intends to move upon the State." Then this journal reminds us that a strike "of peculiar ferocity" has been in progress since last November, and that since May Federal troops have been in command of the State. We read:

"Since then State and Federal commissions have attempted without success to adjust matters. Labor leaders devoted to violence, agents of absentee employers infatuated with the idea that money must conquer, and local officials in a paralysis of timidity and demagoguery have prevented a settlement."

"As the United States Army is not maintained for the purpose of keeping cutthroat capital and cutthroat labor apart in States recognized as sovereign, it is high time that, so far as its present errand is concerned, it should be withdrawn. If Colorado is unwilling or unable to enforce law among its inhabitants, the next visitation of the national forces should be in obedience to an order for the suppression of insurrection. If a Western State must be reconstructed from the ground up, here are precedents at the South that need not be ignored."

But the *New York Journal of Commerce*, viewing the President's proposal from a different angle, points out that "there is no reason why the 'emergency,' which is tacitly implied as the occasion for this appeal, should be used to coerce the acceptance of anything which is not in itself fair to both the parties concerned." And altho "the result aimed at is highly desirable," this journal adds, it is bound to avow that:

"The chance of the acceptance of this scheme by either party in the present case seems rather dubious. To the mine-owners it would be equivalent to a recognition of the very organization which has caused all their trouble by violating the very principles upon which these terms are based. It will be at least interesting to see what effect the President's direct appeal will have."

FOREIGN COMMENT

THE RUSSIAN "STEAM-ROLLER,"

Which has conquered a large part of Austrian Poland, but is finding German Poland a harder proposition.

RESURRECTION OF POLAND

THE CZAR'S PROCLAMATION to the Poles, offering them a restoration of their union and liberty in case the Allies prevail in the present war, is looked upon by the British press and by eminent historians and statesmen as "a masterpiece of imaginative statecraft," to use the phrase of the *London Daily Chronicle*. In the absence of German or Austrian comment, we can present only the views of the Allies in this article, but will give the other side when it appears. In our issue of September 5, several skeptical reflections on the Czar's sincerity were quoted from the American press. The Russian autocrat promises solemnly that Russia, if victorious, will reunite into one Kingdom of Poland the Poles of Austria, Prussia, and Russia. They are to enjoy complete autonomy under the Czar's scepter. It is a promise of resurrection to a nation which was abolished finally by the Congress of Vienna in 1875. For many years the Poles in Paris have chanted on bended knee:

"So long as we can live
and sigh,
Our well-loved Poland
cannot die."

Now, however, writes the Paris correspondent of the *London Daily Chronicle*:

"Among the Polish colony there is unspeakable joy. Family groups gathered to celebrate the good news, while many of the pious Polish wo-

men went to their mission church to offer up prayers of thanksgiving."

The French press thrills with delight to see that the ally of France has seized the unique opportunity of catching up with the progress of the world and at the same time claiming indemnity from the invader of France. For Prussia would be compelled to give up to the restored Kingdom of Poland 26,000 square miles of territory and Austria about 35,000 square miles. The new State would have a population of some 20,000,000. The great French historian, Gabriel Hanotaux, looks upon what he

styles in the *Figaro* "the resurrection of Poland" as in some sense sanctifying the object of the war, and he remarks:

"After this frightful war, this war which was necessary in order to exorcize the devilish spirit which urges Germany to the most frantic of struggles, what shall the new Europe be? The proclamation of the Grand Duke Nicholas reveals the principle upon which the consequences of victory are to be based. Under the scepter of the Czar Poland shall be born again, free in her religion, in her language, in her autonomy, and Europe, the whole liberal world, the countries of civilization and high ideals, will know what they have been fighting for. This war, had it no other object than that which we have indicated, would be well justified. Let our adversaries say what they have been fighting for. They are fighting to maintain the

From the *London "Graphic."*

THE POLAND OF 1740 AND THE POLAND OF TO-DAY.

yoke of servitude imposed by braggarts, blockheads, and sabre-bearers. It is a war of officers, as said a German soldier who was picked up on the field of battle at Liège. We will make a new Europe, free and united. We are numerous enough and strong enough to espouse all causes that are just. France is used to such sacrifices as are imposed by such a course of action. She needs only to feel that her heart is beating in union with

"THE STORMING OF LIÈGE."
Patriotic post-card circulating in Germany.

that of the Allies. England does not wish to incur the charge of dishonor. Belgium does not wish to submit to a German yoke; Russia is restoring the kingdom of Poland. Come, then, without fear and without reproach and engage in the great impending battle. The cause is understood before the tribunal of God."

Speaking of Poland's future as to be determined by the result of the war, the semi-official *Temps* (Paris) observes:

"It is a war for the good of the peoples, a war to redress the errors of a century of history. Russia reconciles the two great branches of the Slav family, while France, in reclaiming Alsace and Lorraine, pursues *la revanche*, not for its own prestige, but for the right of peoples to dispose freely of themselves."

Impassioned are the terms in which Mr. Clemenceau in his *L'Homme Libre* (Paris) hails this coming rebirth of Poland.

"One of the greatest crimes of history is thus to be ended. The Allies in a war waged in pursuit of justice and liberty naturally seek support in an appeal to the noble sentiments of independence, which form one of the strongest forces in the human breast. Nicholas II. should now certainly reflect upon the position of the people of Finland.

"As for the Poles, there are quite 300,000 of them in the armies of the German Kaiser, and they would ask nothing better than to direct their weapons against those who lead them bound in the chains of an iron discipline. Poland rises miraculously like Lazarus from the grave. Neither William II. nor Francis Joseph could have attempted this deed without making war upon each other.

"It needed courage to break with the harsh traditions of Russia, but it was inevitable that a war of liberation should lead to still further extensions of right and liberty between the peoples."

The spirit of Jaurès, the antimilitarist and Socialist, breathes through the following words of the *Humanité*, a paper he founded and edited to the day of his death:

"The world must go back to the wars of the French Revolution to find anything like the wind of liberty which is blowing upon and bringing back to life the dead bones of the European policies of to-day. In every land the war is regarded as being directed against imperialistic brutality and the misuse of power. Those, on the other hand, who supply the sinews and support the struggle and endure the sacrifice it entails will demand that it should result in the extension of liberty and the more rapid promotion of social progress."

When the Grand Duke Nicholas, Commander-in-Chief of the Russian Army, published his proclamation in Poland he offered the Poles their choice, to stay as they were or join Russia

against Germany and Austria. Of their answer, *The Daily News* (London) says:

"The leader of the Poles in the Duma has announced the solidarity of the Poles of the Kingdom with the Russian people. The Polish nobles of the Government of Minsk, outside the Kingdom, have met together to express their loyalty to Russia. In London the Poles are considering a plan for forming a Polish legion to fight on our side. The same thing is happening in France. There is at present no indication, so far as we know, of the attitude of the Poles of Galicia. One thing is certain, they will place their own interests before everything else. It is important for the Poles to be on the side of the victors in this war. This consideration is likely to induce the Poles of Austria to throw in their lot with their brethren in Russia. Prussian oppression of the Poles has been too brutal to leave any doubt as to the attitude of the people of the Duchy, a territory more seething with discontent than Alsace."

The *London Spectator* asks, "Will the Poles trust Russia's words?" and continues:

"We hope that Russia may be able to dissipate all Polish hesitation. Let her guarantee the Prussian and Austrian Poles absolute protection, and at the same time let her exact from the Poles promises that they will never use autonomy to oppress Jews or Ruthenians or any other minority. If this be accomplished, the war will more than ever be stamped as a war for the safeguarding of the smaller peoples who dare to preserve the distinctive marks of their race or their nationality."

The evident satisfaction with which French writers and statesmen receive the news of Russia's action in the case of Poland is not shared by some English organs which scarcely

MARS RUNNING AMOK.

When once he's loosed, who can hold him?

— © Kladderadatsch (Berlin).

trust to the genuineness of Russia's sincerity. The Poles themselves, however, take the matter seriously, as their spokesman in the Duma declared. But the coldest comment we have found is the cautious utterance of the *London Tablet*, which thinks that "the difficulties in the way of the acceptance of the Czar's offer are as great as they are numerous, but it contains a chance for the divided Poles to become, in some sort, what England, France, and Russia are fighting to maintain for Belgium."

ENGLISH SHARE IN THE GUILT

THE GERMAN KAISER has for some weeks been made the target of contumely by English, French, Canadian, and a few New York newspapers. It is his overhearing ambition, we are told, which has driven the civilized nations of the Continent into deadly strife. It is Krupp forges and foundries that have been encouraged to shape the thunderbolt of this war lord, his enemies tell us, and at Essen alone are to be found the destructive weapons with which he has long intended to strike his foes, and especially England, whose naval supremacy and vantage-ground of commercial power he covets.

Now this is all wrong, declares the editor of the *London Labor Leader*. There are mercantile firms in England who have long been helping to furnish the Kaiser and the Emperor of the Dual Monarchy with explosives, with ships of war, and other warlike supplies. The paper whose opinion we are stating is edited with singular ability, and a spirit of honest conviction lends intensity to its sometimes blazing columns. We quote as follows from an article headed "A Hellish Conspiracy," in which Germany and Austria are said to be armed by British firms:

"Few people realize that British armaments firms, both inside and outside the ring, have actually armed the German and Austrian forces against Great Britain. This assertion will appear incredible. Even those who appreciate the lack of principle which characterizes modern business transactions will hesitate to believe that the claims of 'patriotism' can be betrayed so infamously. Well, we will state the facts in detail."

It then names several firms dealing in explosives, arms, and ammunition, and proceeds:

"Names of officers of the British, German, and French armies are to be found side by side in the shareholders' list."

"Let us hope fate may not be so unkind as to cause any of these officers to be blown to bits by their own gunpowder."

"Great Britain is now at war with Austria, and before many days have passed the Austrian and British fleets will, no doubt, be engaged in battle in the Mediterranean."

"Many of the destroyers in the Austrian fleet have been constructed and equipped by British armaments firms."

More than that, we are told, many of the torpedoes with which the Austrian fleet will attempt to sink British "dreadnoughts" have been manufactured at the torpedo-factory at Fiume, which is controlled by British capital. Such are the main features of what this paper styles a "hellish conspiracy" against peace and the abolition of armies and navies desired by the Labor Party. The labor leader, John Burns, resigned his seat in the Cabinet because he was opposed to the "war lords" of England, we are told. But in spite of the efforts of the English Labor Party:

"Alas—the schemers were also at work. The war lords, the financiers, and those who supply the instruments of destruction were not asleep."

"Why supply money and men and ships without an opportunity of trying them? The blood of the men, the tears of the women and children, and the future taxation and poverty of the poor were as nothing. An excuse must be made, and, slight as it was, it presented itself and it was sufficient."

"A man and a woman were done to death by a maniac. Men and women have been done to death in thousands in all of the countries in Europe, by those whose god is Mammon, as a matter of course and without protest. But this man and woman—they were more than God's creatures. Were they not gilded darlings of society? Nay, were they not Royalty? A cause of quarrel had arisen and rivers of blood must flow."

"Few people thought that the initial cause was enough to kindle a fire which might traverse the whole of Europe, but the chance of the war-mongers had come, and the conflagration must be hurried forward before the good sense of the people of all the nations concerned could arouse in them a feeling of horror which would arrest the blood lust and keep their rulers in check."

Those who blame Germany and its ruler for the condition of things are putting the saddle on the wrong horse, proclaims this British writer:

"Efforts are being made to arouse the hatred of British workers against the workers of Germany. The war has not been forced upon the people of France, Belgium, and Britain by the people of Germany, but in spite of them, and any word now spoken by us against the German people will make our task, and their task, more difficult in the years to come."

Germany is really not to blame, and her adversaries must bear the blood-guiltiness on their head, this writer tells us:

"It is monstrously unfair to thrust upon the war lords of Germany all the responsibility for the present conflict. It may be true that they have held a pistol at the head of Europe, but is

GERMAN SATIRE ON FRENCH ARTILLERY.

"If Mme. Caillaux had used a French cannon instead of a Browning revolver, Calmette would still be alive."

— © Kladderadatsch (Berlin).

there not some justification for a man whipping out his pistol when he is surrounded by armed enemies plotting his downfall? That has been the position of Germany. During the last ten years Great Britain, France, and Russia have deliberately schemed to isolate and degrade Germany."

Such are the utterances of an extreme party organ, but the most learned and eminent men in Germany share this opinion. Thus we find in the *Vossische Zeitung* (Berlin) the following declaration published by Prof. Ernst Haeckel, the leading materialistic philosopher of Jena, and Professor Eucken, the most eminent of German spiritualistic philosophers, in which they express their indignation at the present behavior of England in the following terms:

"What is happening to-day will be inscribed in the annals of history as an indelible shame to England. England fights to please a half-Asiatic Power against Germanism. She fights not only on the side of barbarism, but also of moral injustice, for it is not to be forgotten that Russia began the war because it was not willing that there should be a thorough expiation of a wretched murder."

"It is the fault of England that the present war is extended to a world war, and that all culture is thereby endangered. And why all this? Because she was envious of Germany's greatness, because she wished at all costs to hinder a further extension of this greatness. She was only waiting for a favorable opportunity to break out to the detriment of Germany, and she therefore seized most promptly on the necessary German advance through Belgium as a pretext in order to cloak her brutal national selfishness with a mantle of respectability."

WHY JAPAN ATTACKS GERMANY

AMERICAN CRITICISM of Japan for attacking the Kaiser when he was already pretty fully occupied with other Powers was almost ludicrously exaggerated in the Japanese imagination. We find in the Japanese press, in fact, that the attitude of the American public caused no small apprehension. It was even rumored there, we are told, that the whole Atlantic squadron of the United States was ordered to pass through the Panama Canal and proceed to the Far East. While no one knew what the meaning of this alleged move was, the public was so worked up by the rumor that the Government and the leading statesmen of Japan had to employ their utmost influence to calm the people. Count Okuma repeatedly assured the people that Japan and the United States understand each other perfectly well in the present juncture. At the same time our President and Secretary of State have also publicly stated that the United States has no reason to interfere with Japan's course of action, and it has been reported from Tokyo that the utterances of our Chief Executive have laid to rest the ghost of American interference.

Before the opening of hostilities between Germany and Great Britain, the press of Japan all expressed the wish that the European war would not drag Japan into the turmoil. They were cautious in commenting upon the relations between Japan and England, but intimated that if England should enter the conflict, Japan could not shirk the responsibility which the Treaty of Alliance with England placed upon her shoulders. According to the Tokyo *Asahi*, regarded as an authority on international problems, the Okuma Cabinet obviously had a clear understanding with Downing Street before Japan sent an ultimatum to Germany. The *Asahi* informs us:

"A few days before England declared war on Germany, that is, on August 3, the British Ambassador returned to Tokyo from his summer villa to hold a conference with Baron Kato, Minister of Foreign Affairs. It is understood that at this meeting the British Ambassador wished to ascertain whether the Mikado's Government could be relied upon as the protector of British interests in the Far East, should the British Government be compelled to declare war on Germany. This was the first time England approached Japan since the opening of the European war. In putting this question to the Japanese Government, the British Ambassador had of course in mind clauses 1 and 3 in the preamble to the Anglo-Japanese Treaty of Alliance, which are, respectively, worded as follows:

"The consolidation of the general peace in the regions of eastern Asia and of India."

"The maintenance of the territorial rights of the high contracting parties in the regions of eastern Asia and of India and the defense of their special interests in the said regions."

"At this conference Baron Kato replied to the British Ambassador that the question before him was of too serious a nature for him to give immediate answer. Consequently, on the day following, Baron Kato conferred with Premier Okuma and all the members of the Cabinet. On the evening of the same day Baron Kato had another conference with the British Ambassador and assured him that Japan was ready to take up arms at any moment Great Britain called upon her for aid.

"Up to this time Japan did not expect to be called upon to join England very soon, but on the evening of August 7 the British Ambassador suddenly requested an interview with Baron Kato. It is understood that at this conference the British Ambassador told the Foreign Minister that a certain new factor was injected into the situation obliging England to ask for immediate assistance of Japan. On the same evening Premier Okuma called a meeting of Cabinet members and Elder Statesmen, and on August 16 Japan sent an 'advice' or ultimatum to Germany."

All the leading journals emphasize Japan's obligation to the Anglo-Japanese Alliance, and recall the moral support which England extended to Japan during the war against Russia.

And yet some of the newspapers are frank enough to admit that has seized upon the present opportunity to "get even Germany." German interference in 1895 with the peace

terms between Japan and China was, they declare, only the first in the long string of events calculated to alienate Japanese sympathy from Germany. The *Jiji*, for instance, publishes a history of Japanese-German relations during the past twenty years. To summarize the *Jiji*'s story:

"The German 'advice,' admonishing Japan for taking the Liaotung Peninsula from China, was of a peremptory nature—far more so than those of Russia and France. On April 23, 1895, the German Minister presented himself at the Foreign Office and in a most overbearing manner handed to the Foreign Minister the advice bluntly telling the Japanese to quit the peninsula for the sake of the peace of the Far East. In the original note it was even stated that Japan, a weak nation, could not afford to reject the advice and take the risk of entering into an armed conflict with such powerful nations as Germany and Russia. Upon the protest of the Foreign Department this part was struck out.

"In the wake of Japan's forced evacuation of Liaotung, Germany and Russia entered into a secret understanding in virtue of which Germany occupied Kiaochow and Russia Liaotung, the self-same territory from which Japan was ousted only a short while before.

"Since that time the Kaiser has been encouraging the Czar to concentrate attention upon the Far East, so that Germany could be comparatively free from Russian aggression in Europe. The result was the mustering in Manchuria of Russian troops in increasing numbers.

"When the Boxer disturbance broke out in China, Japan proposed to the Powers that she be permitted to rush troops to China to rescue the beleaguered foreigners in Peking. Again the Kaiser interfered and said that unless he was convinced that Japan would not interfere with the interests of other Powers, he could not consent to Japan's proposal.

"During the Russo-Japanese War Germany's attitude toward Russia was a virtual violation of neutrality, and Japan had to protest against Germany offering secret assistance to Russia.

"What almost horrified the Japanese military authorities was that a German officer who was, by special courtesy of the Japanese Government, permitted to accompany the Army to the front, was found secretly sending war reports to the German Government without first submitting them to the censor."

All these experiences seem to have led the Japanese to the conclusion that Germany is a dangerous element in the Far East, and they have caught the first opportunity to destroy the German base in China. Immediately after England entered into the arena in Europe, a number of British merchant vessels in the Far East were either chased or captured by German cruisers, while a vessel of the Russian Volunteer Fleet was captured by a German war-ship within Japanese jurisdiction. All these incidents were interpreted by Japan and England as a menace to the "general peace" of the Far East and to the "special interests" of England and Japan in the said region, thus affording Japan the occasion for sending an ultimatum to Germany. And, of course, the Japanese have not yet forgotten the Kaiser's historic picture of the "Yellow Peril" in which an Oriental people, presumably the Japanese, was painted as tramping across the Asian continent and invading the Christendom of Europe. Speaking of England's share of the spoils in Germany's risk of her colonial possessions, the *London Outlook* remarks:

"We do not for a moment suggest that Great Britain should annex the entire German Colonial Empire. But we do say the German colonies are legitimate objectives of British attack at this crisis, and the inability of the Germans to defend them would mean a severe loss of prestige and respect. This stroke at Britain's enemy is well worth considering by India, South Africa, Australia, and New Zealand. England had no desire to interfere with Germany's work of tropical administration. She might have kept her colonies for ever, and, indeed, England had already concluded an agreement with Germany which aimed at settling all possible grounds of conflict in Central Africa and substituting friendly cooperation for wasteful and dangerous rivalry. Germany has herself to thank if one of the results of this wantonly provoked war with the British Empire is the downfall of that imperial fabric which she has reared with such pride and care."—Translations made for THE LITERARY DIGEST.

SCIENCE AND INVENTION

A PUBLIC REFRIGERATOR

THE new city market-house in Cleveland, Ohio, includes a public cold-storage plant, where perishable goods are stored at reasonable rates. This plant is at the disposal not only of commercial concerns, but of private families, which are making increasing use of it. A man in Cleveland may not only lay in his coal for the winter, buying it in summer when the price is low, but he may now do precisely the same thing with his meat, poultry, eggs, vegetables, and other perishable supplies, using the facilities of the city's refrigerating plant. The large commercial cold-storage concerns have always refused to do small business of this kind. Arnold E. Cornell, writing in *The Technical World Magazine* (Chicago, September), on "Summer Prices in Mid-Winter," describes the new market-building, and then goes on:

"In the basement of this structure, 235 feet long and 136 feet wide, is the great opportunity, as yet but little used—the municipal cold-storage plant. It is here the housewife may store eggs, butter, or apples, when the prices are lowest, for use in the long winter when prices are almost prohibitive. Here, also, are cold-storage lockers five by six feet, for which the retail merchants in the market-house pay four dollars a month. Tho it is not apparent, these lockers are one of the greatest sanitary features of the establishment. The market is open only four days a week. On the closed days, perishable stocks are stored in these lockers instead of being hauled about the city in unsanitary wagons, through dusty streets, to ice-boxes of doubtful cleanliness.

"The lockers, however, take up only a small part of the storage capacity of the plant. Seven cold rooms with a total capacity of nearly fifty thousand cubic feet are devoted exclusively to storing foods for the public. Wholesale dealers who make a business of speculating in cold-storage products were quick to take advantage of the excellent service, and the first year stored 3,000 barrels of apples, 2,000 cases of eggs, 175,000 pounds of cheese, besides a large quantity of bakers' supplies.

"Tucked away in odd corners were a few cases of eggs, a few crocks of butter, and three boxes of apples—all the property of families. That was in the winter of 1913-1914. This year, however, the glad word has been spread and consignments of family supplies are coming in most gratifyingly.

"When the warehouse, with its single refrigerating-machine,

rated at thirty tons of ice a day cooling capacity and seven public rooms, was opened, few people realized it was there for their use. Cold storage to the public mind was a vast undertaking only for the experienced and wealthy speculators. Joseph M. McCurdy, superintendent of the plant, had been superintendent of the largest commercial plant in northern Ohio for

ten years. He had experimented with small family facilities for years, but in a private venture the profits had been too small. In this public plant he began a campaign to educate the people, and it was quite by accident he obtained the first family consignment.

"We of the city administration wanted the people to take advantage of the opportunity we were able to offer, but they did not flock to us as we had hoped," says Mr. McCurdy. "As superintendent of the warehouse, the responsibility for its success was directly upon me, and I went among my friends urging them to let me take care of their produce for them. I did everything I could think of to interest the people, but met with indifference.

"Early in April, 1913, a woman called me over the telephone. She explained she had known me for years and begged as a favor that I permit her to store a case of eggs in the municipal warehouse. I could not convince her that the warehouse was designed for just such people as she. The city has no provision for trucking, but I wanted those eggs so much that I made an excuse to

get into her neighborhood that day and brought them here. That was our first family lot. As a result of that call the women of the neighborhood combined and stored 150 dozen eggs with us.

"The butter-storing season is the month of June. We had made a beginning with eggs, and it was not so hard to get people to put butter away. The big difficulty was educating prospective consumers to buy butter in tubs and repack it in crocks or to buy one-pound bricks. These were then crated and received as crates containing a specified number of packages which could be removed one or more at a time. We have to have such produce crated to save room and to save loss.

"Apples were next in season. A woman who had no way of keeping a barrel of apples in her home was our first customer in this line. We never would have got those apples if the woman had not placed a sentimental value on them. They were raised at her old home and she did not want them to spoil. She repacked them in three boxes and sent them in. Toward spring she found she would need only two of the three boxes."

CLEVELAND'S GREAT PUBLIC REFRIGERATOR.

"In the saving to the people, in the comfort and cleanliness it assures, it is, as Tom Johnson would say, 'a gold-mine to the commonwealth.'"

came to me again. I went to one of the grocers in the market and sold the extra box, a bushel of apples, for enough to pay all expense of shipping, packing, and storing, together with the amount she paid for the whole barrel.

"We have not begun to develop the possibilities of private storage. Bakers store fruits used in making pies, but so far we have not been able to devise a proper package for family use.

"Poultry can be bought cheap in the spring and summer, dressed and stored in a cold warehouse for use in the winter. The best hotels and clubs making a specialty of broilers in January and February use only cold-storage birds. They are less expensive and much improved by freezing. This is true of all meats.

"Each article must be kept at a certain temperature, and no two kinds of food can be stored in the same room. We have

EXPLAINING IT TO THE HOUSEWIFE

The cost of living can be reduced by buying in the low-price season and storing in the city refrigerator until the high-price season.

only seven rooms, but as the plant is enlarged we shall be able to extend our facilities. In the meantime we are experimenting, learning, and educating. Eventually we hope to be closer to the public than the corner grocer and of infinitely more benefit."

"Thus has the city of Cleveland invested almost one million dollars of the taxpayers' money. Does it pay? A crate of eggs (thirty dozen) is stored from April 1 to January 1 for forty cents, one hundred pounds of butter from June 1 to February 1 for fifteen cents, one hundred pounds of cheese for a month for ten cents, and a barrel of apples (three bushels) from October 1 to April 1 for forty cents. Does it pay, when others charge from 5 to 10 per cent. more and refuse to handle family consignments?

"During the first year the Municipal Cold Storage warehouse showed a deficit of \$1,663.74. It was not ready for use all of that time, and more than \$2,200 was charged to operating expenses tho actually belonging to construction account."

"Perhaps from a commercial viewpoint, with taxes to pay and stockholders to satisfy, it would be a failure. But in the saving to the people, in the comfort and cleanliness it assures, it is, as Tom Johnson would say, 'a gold-mine to the commonwealth.'"

AVALANCHES WHILE YOU WAIT—The production of real avalanches by the pressure of a button is described in *Cosmos* (Paris, July 23). This business, or sport, was carried on in certain parts of the Swiss Alps, either in connection with the moving-picture industry or simply for the enjoyment of the tourist, until the avalanche of war interrupted it. We read:

"Explosive cartridges are buried deeply in the accumulations of snow that crown the high ridges and are fitted with

electric fuses connected by cable with a magnetic exploder situated in the valley. When everything is ready, the production of a feeble electric current is sufficient to explode simultaneously all the charges of powder, and formidable masses of snow are precipitated down the mountainsides, with all the terrible roarings of a natural avalanche."—Translation made for THE LITERARY DIGEST.

A NEW WAY TO STUDY PLANETS

EVERY ONE knows how many different worlds one may view by holding glass of different colors before the eyes. It is quite conceivable that if we had no sense but that of sight we might learn much about the objects around us by comparing their appearances under these circumstances. This is precisely our relation to the distant celestial bodies which we can not hear, touch, or smell. Vision is our only means of contact with them, and the filter of colored glass, properly varied, has been found a fertile means of investigation. We have already described in these columns the discoveries of Professor Wood, made by photographs taken with invisible rays below and above the ordinary spectrum. Now a Russian astronomer has gone further in the same direction by using different colors in the visible gamut for his experimental filters. His results, as described in *Cosmos* (Paris, July 2), are most interesting. We read in this magazine:

"Selective filters are plates of glass covered with layers of gelatin saturated with chemical substances so chosen that the filters thus prepared can be traversed only by luminous radiations of a rigorously definite length.

"Several scientists have made curious and original use of these filters in astronomical research, and especially a Russian astronomer, G. A. Tikhoff, has arrived, in this domain, at most curious results, especially in planetography.

"Tikhoff uses the great telescope . . . of the Pulkowa observatory to photograph, with exposures of 5 to 40 seconds, the planets Mars and Saturn. On the plates, the disk of the former measures about $\frac{1}{17}$ inch, and that of the latter, with its rings, about $\frac{1}{10}$ inch. But instead of photographing the planets with ordinary plates, Mr. Tikhoff employs special emulsions, and interposes in the path of the luminous rays various selective filters. He then compares the appearance of the images obtained through these different filters, and draws some interesting inferences.

"For Mars, for instance, this comparison shows that the color of the 'canals' is entirely similar to that of the seas; the red filters show, in a truly striking way, the contrast between the 'continents' and the 'seas.' Besides, comparison between the photographs taken in red and in violet light shows that the Martian atmosphere must diffuse the solar light in a way similar to that of the terrestrial atmosphere, that is to say, this diffusion must increase as the wave-length of the diffused rays diminishes. It is worth noting that the more important 'canals' (180 miles long) are visible on the best 'red' negatives, on which they have the appearance of continuous, regular lines.

"Study of the photographs of Saturn obtained through the selective filters of divers colors gives the following results:

"1. The difference of intensity, between the center and edges of the planet's disk, diminishes to zero, and the equatorial belt gradually weakens, when we pass from the red to the violet rays.

"2. The intensity of the ring undergoes changes in the reverse order; in the red it is of less than medium intensity, while it exceeds that intensity in the violet.

"3. These results are in perfect accord with spectrographic studies of the planet and its ring; they are attributable to the influence of Saturn's atmosphere.

"4. Near the edges of the planet's disk there is observed only the light diffused by its atmosphere; on the other hand, the ring near its points of intersection with the disk presents the same variation of intensity as the edges. It may be concluded that the matter constituting the ring is similar, so far as its diffusive power is concerned, to that of the atmosphere of Saturn, and that the corpuscles that form the ring have an average diameter less than the wave-length of light.

"Such a startling conclusion, of course, demands verification by other methods."—Translation made for THE LITERARY DIGEST.

WAR AND DRUG FAMINE

THERE will be a difference of opinion regarding the effect of a possible scarcity of drugs, due to the war in Europe. Physicians may have to adapt their prescriptions to the available supply; patients will have to be satisfied with what they can get. Druggists will find additional scope for their skill in recommending "something just as good." But those who eschew the use of drugs altogether, and many physicians who are leaning toward the use of other therapeutic measures, will doubtless keep calm and regard the "famine" with equanimity, even with a certain sardonic amusement. However, we take it, it is very likely to come, we are told editorially in *The Journal of the American Medical Association* (Chicago, August 15). Says this paper:

"While American life has not been at once affected in any wide-spread dramatic way by the European catastrophe, all sorts and conditions of men are likely to find it touching them at unexpected points. Physicians, for instance, may find that they are hampered in the writing of prescriptions by scarcity of some drug. This country doubtless would suffer little inconvenience beyond the increase in price if compelled to rely on the resources of this continent so far as most inorganic chemicals and biologic preparations are concerned. As for vegetable drugs, however, aside from cascara, hydrastris, and podophyllum, few of therapeutic importance are produced in the United States. This country depends largely on European manufacturers for finished preparations and on European middlemen for crude drugs. Crude drugs from the Far East, such as buchu, cinchona, senna, asafetida, rhubarb, opium, and aloe, come to us largely through the London and Amsterdam markets. A comparatively small amount of cinchona comes from South America, and, if access to the London and Amsterdam markets is shut off, the South-American drug might be obtained direct. While the prices for

sostigmin, pilocarpin, atropin, and homatropin. Other important drugs of German manufacture are strychnin, quinin, caffein, cocain, theobromin, formaldehyd, and salvarsan. The involvement of France, the chief source of supply of tartaric acid, and of Austria-Hungary, which with France and the Balkan

THE ROSE'S ENEMY.

THE GREEN FLY, GREATLY MAGNIFIED.

He loves roses too well, and is being "swatted" by electricity.

States supplies us with the essential oils, will affect the drug-supply much less than the isolation of Germany."

In another editorial *The Journal* calls attention to the fact that there may be an entry on the other side of the account if the war leads to a scrutiny with a view to revision of the United States patent laws, which it asserts now favor the importer at the expense of the American public. We read:

"The patent laws of Great Britain and some other countries provide that the holder of a patent must, under penalty of forfeiture, begin manufacture of the patented product within the country in a reasonable period of time from the issuance of the patent. An American branch of at least one German house had begun the manufacture of a synthetic product before the war. Others may find it worth while to manufacture on American soil if the war continues; but if our patent laws had contained a provision similar to that of the British law, we would not now be threatened with temporary shortage or stoppage of therapeutic supplies. Our laws, in addition, permit the patenting, not merely of the process, but also of the product. Therefore the American market is altogether dependent for any given patented product on a single foreign manufacturer. Revision of our patent laws may become a necessity if the European war is not over soon. Another result may be an investigation of the possibility of producing in this country a larger proportion of the drugs used here. The Department of Agriculture has long maintained that, so far as soil and climate are concerned, the conditions are favorable for the growing in this country of many of the drug-plants now imported from abroad."

AN ELECTRIC FLY-KILLER—The latest application of electricity, according to *Popular Electricity and Modern Mechanics* (New York, September), is that of killing the green fly by means of an electric spark. We read in this magazine:

"This fly is a species found on rose-trees and is exceedingly disastrous to the flowers. Heretofore, considerable difficulty has been experienced in ridding rose-trees of these pests, but the electrical method recently devised is proving both practical and efficient. Briefly, the fly-killing apparatus consists of a small spark-coil, spark-gap, high-frequency transformer, switches, and other accessories. A flexible conductor conveys the current from the high-frequency transformer to a brass-ball electrode fitted with an insulating handle so that it may be held without danger of shock. To use the apparatus, the electrode is brought near the flies on the rose-bushes. A spark then jumps from the electrode to the tree and kills the flies, the current passing through the tree to the ground without damage to the leaves or flowers."

THE ELECTRIC FLY-SWATTER.

Its current spares the roses, but kills their enemy.

these substances have advanced, the supply should not be altogether cut off by this war unless it should spread to the East and thus limit production. . . . Of imported synthetic drugs and alkaloids, by far the largest proportion comes from Germany. Ophthalmologists are likely to feel the result of the interruption of trade with Germany in the withdrawal of supplies of phy-

THE INVENTION OF GUNPOWDER

THAT gunpowder was well known for a century or so before it was used in guns appears probable from investigations in connection with the recent celebration at Oxford of the 700th anniversary of the birth of Roger Bacon. Bacon's claims to the invention of gunpowder are often met by

THE MAGNETIC RAKE.

English writers in opposition to those of Berthold Schwartz, who is generally said to have invented it about 1344—a century after Bacon's time. It seems certain from the latter's writings that he was familiar with the composition, not as its inventor, but because of its use in various countries of the world. Apparently, however, it was regarded merely as a firework, a means of producing sudden and brilliant flame, and its users were far from suspecting that in a confined space the expansive power of its gases could be put to use in hurling projectiles.

Says an editorial writer in the *Revue des Questions Scientifiques* (Louvain, Belgium, July 20), with little thought of what the approaching days would bring to his city:

"The text that we have studied allows no further doubt that Bacon knew of gunpowder. On page 213, under the title 'Of the Powder of the Lombards,' he restates what he has already said in his 'Opus Majus' of the explosive properties of this powder, but he also informs us that it is known in various parts of the world, and that it is composed of saltpeter, sulfur, and willow-charcoal. . . .

"Comparison of the terms used by Bacon to describe the effects of explosive powder [in three different places] shows that he was writing of the same powder. Now his letter on the 'Secret Works of Nature' would appear to have been written to William of Auvergne, Archbishop of Paris, who died in 1248 or 1249. It seems, then, that the explosive properties of black powder were known in France and England before the middle of the thirteenth century. . . .

"It should be noted, however, that nothing shows that Bacon knew also of the projective power of the powder when ignited in a closed vessel, or that he ever dreamed of making this use of it. Nowhere in his writings, in fact, did he allude to it, and the first cannons must have made their appearance much later. Bacon and his contemporaries doubtless saw nothing in this explosive mixture, but a new incendiary composition calculated to frighten animals and human beings." *Translation made for THE LITERARY DIGEST.*

A MAGNETIC RAKE. A rake whose teeth are magnets, designed to remove from a driveway nails and sharp bits of iron and steel liable to injure the tender portion of a horse's hoof has been devised by an employee of the Chicago post-office. Says *The Technical World Magazine* (Chicago, September):

"The need of such an instrument was realized for work on sharp inclines in entrances to the general post-office. In order to check the heavy vehicles on the downward course, the concrete paving was spread with ashes from the post-office furnaces, in which were burned old boxes and barrels. The nails and bits of wire left in the ashes caused injury to a number of valuable horses. The magnetic rake is now used to abstract all dangerous particles from the ashes before a team is permitted to drive over it. It is worked on the vacuum-sweeper plan.

About two dozen steel teeth with blunt points are arranged, in two rows, to a boxlike top. A long coil of insulated wire leads from a socket to the plate holding the teeth, and the latter become heavily charged with electricity. The rake is worked back and forth through the ashes on the roadway and the teeth pick up every substance of metallic character. About two pounds of old nails, bits of wire, and pieces of iron bands are taken out of the ashes at each raking, and the whole mass is so cleaned out that all the former danger is removed."

ARTIFICIAL DIAMONDS WITHOUT PRESSURE

MAKING REAL DIAMONDS artificially has not heretofore been a profitable experiment. The French chemist, Moissan, who first crystallized carbon artificially by the use of enormous pressure, was able to get only tiny stones, of no value as gems. A French engineer, Guyot de Boismenu, has now succeeded, by a new process, involving the use of electricity, in making diamonds about an eighth of an inch in diameter, with the prospect of still further increasing the size by prolonging the action of the electric current which is the effective agent in their production. Boismenu's diamonds, in fact, grow at the rate of one-hundredth of an inch per hour, so that if he could only keep up the process long enough, he would be able to give us gems as large as a pigeon's egg. Up to the present time, however, he has managed only diamonds of the size already noted. Says a contributor to *La Nature* (Paris), which has temporarily suspended publication:

"Being director of a large manufactory of calcium carbide, he remarked that the fused carbide could be decomposed by electrolysis, and he began to experiment along this line. . . . His first success, according to the author himself, was on April 13, 1908. The furnace having been fed with fragments of carbide, which melted slowly, the electrodes were gradually withdrawn. At the end of four hours the crucible contained over six pounds of melted carbide; an intense current was maintained for the next two hours, and then the circuit was broken and the crucible was allowed to cool all night. The solidified mass showed, in its center, finely crystallized carbide, and near the negative electrode a black, friable mass, like spongy carbon. Thrown into water, this gave off carbon dust with some crystals of pure carbon [diamond].

"In subsequent trials Mr. Boismenu observed that the size of the artificial diamonds increased nearly proportionally with the duration of the electrical action, the rate being about one-one-hundredth inch per hour. Not being able to keep up his current longer than twelve hours, he has not obtained, up to this time, crystals more than one-eighth inch in size. . . .

"Moissan had already made in the electric furnace small diamonds of one-twenty-fifth of an inch, but he believed that the

Illustration by courtesy of The Technical World Magazine, Chicago.

RUSTY NAILS AND METAL BITS GATHERED BY THE RAKE.

crystallization of carbon required formidable pressure; and it was on this idea that he based his somewhat complicated process. The carbon being first dissolved in molten iron, he plunged the crucible into cold water in order that, the exterior layers of iron being solidified in the first place, the internal mass still in fusion should be subjected to great pressure during the course of its solidification. Mr. Boismenu, on the contrary, does not consider pressure necessary."—*Translation made for THE LITERARY DIGEST.*

THE "TWILIGHT SLEEP" DISPUTE

A MISUNDERSTANDING seems to have arisen between Dr. Krönig, of Freiburg, and the writers who described his work in an American magazine. On July 18 we quoted a letter from Dr. Krönig in which he said that unauthorized material was used, erroneous statements made, and the article published despite his protest. Now one of the authors of the article, Miss Constance D. Leupp, writes to *The Lancet-Clinic* (Cincinnati, August 8):

"When Drs. Krönig and Gauss were in this country last winter, I met and talked with them both, and they knew what Miss Tracy and I were planning. The Freiburg end of the work was carried on by Miss Tracy subsequently, and I am writing her now to ask her to get an explanation from the doctor. I know that he has been very adverse to publicity and that he was unwilling to give Miss Tracy any help whatsoever in the writing of the article and collection of the material. We knew enough of medical etiquette not to expect such help. On the other hand, we should not have undertaken to write the article had our relations with the clinic been other than friendly. The completed manuscript was read over by one of the assistants there, and by an unfortunate misunderstanding, which we all greatly regretted, but which was due to the difficulty of dealings between people three thousand miles apart, the uncensored manuscript went to press in New York, so that it was impossible, when the corrected one came, to make all of the revisions. The important ones were made, however. You can perhaps appreciate that neither Miss Tracy nor I, as writers with reputations for integrity to maintain, can afford to allow the impression to get abroad that we deliberately published material from Dr. Krönig's clinic which he was unwilling to have us use, and that such material is unreliable. Nor shall we allow your paper or *THE LITERARY DIGEST* or any other publication to convey such an impression without our vigorous protest. We did not expect the doctors or the medical journals to agree with us as to the wisdom or expediency of discussing painless child-birth in the pages of a popular magazine; we know the peculiarities of the medical profession too well for that. But we think it is not too much to ask of them that they treat us fairly. This the majority of medical journals who have complimented us with their attention have conspicuously not done; yet we feel that we can show quite as clear title to integrity, intelligence, and disinterestedness in our desire to get the 'twilight sleep' recognized and established under the right auspices in this country as the physicians and medical editors who have disapproved our methods."

FISH THAT SURVIVE FREEZING—The ordinary cold storage of fish is put out of date by Mr. R. Pietet, the brilliant Swiss scientist, noted for his experiments with cold. He has just succeeded in freezing live fish and reviving them several weeks or months later, an achievement which recalls Edmond About's fanciful tale of "The Man with the Broken Ear." He recently placed twenty-eight fish in a box containing water rich in oxygen, and in which several pieces of ice were floating. He then very slowly reduced the temperature of the contents. At the end of about two months the resultant cake of ice was gradually thawed and the fish were all found to be alive. According to the report of the experiment given in *L'Illustration* (Paris), it is essential that the water be very gradually frozen and that it shall have contained pieces of ice for from fifteen to eighteen hours before the whole mass is frozen. The process of thawing must also be very slow. It is stated that Alaskan

salmon and Siberian sturgeon may thus be brought alive to Paris. Methods of making the process commercially successful are now being sought.

A DRY RAIN-TREE

THE FAMOUS PERUVIAN "RAIN-TREE," fabled to drip moisture from its branches, is really as innocent of any such processing as an oak or a maple, we are assured by a contributor to *The Hardwood Record* (Chicago, August 25). This tree, otherwise known as the saman, is a conspicuous feature of the tropical American landscape. Botanists call it *Pithecolobium saman*. One of its chief characteristics is the size of its crown, which often covers fully half an acre.

Another distinguishing feature is that it has its leaves on small twigs at the ends of the branches, so that all are exposed to the rays of the sun. We read further:

"There is no other tree in tropical America about which there is so much curious information as the saman, and every one who visits the region of its growth alludes to it as one of the most wonderful trees. There is a story about this tree which is familiar to many. It is said that during the day the tree takes up a great deal of water from the earth by means of the roots, and that during the night the water is given off profusely through the leaves in the form of rain. Some of the numerous stories which have been written and published in newspapers about this tree state that travelers in tropical America never pitch their tents under it on account of the profuse dripping of water transpired by the leaves during the night.

"A number of credulous people who have read such exaggerated statements about its water-transpiring qualities have conceived the idea that the rain-tree would be the proper kind to plant in the arid Southwest, where droughts are so common. It is true that the rain-tree grows in semiarid condition in Colombia and Peru, but this does not argue that it would grow in New Mexico and Arizona, and that it would supply moisture enough to grow crops in the vicinity of such plantations.

"The truth of the matter is that the saman does not transpire any more water than other trees with similar leaf surfaces. It is difficult to say how this legend ever originated. The forest officer of Trinidad, British West Indies, ventured the conjecture that it may have arisen from the fact that the crown is open and the sun always shines through it to the ground, so that grass and some farm crops will grow underneath a saman almost as freely as in the open. This is a fact which does not obtain in the case of other tropical trees.

"Aside from this legend, the tree is an intensely interesting one from an ornamental point of view. The photograph accompanying these notes shows a fine example of many large saman trees which form landmarks in tropical America. The one here illustrated is at Port of Spain, Trinidad."

LETTERS AND ART

BOYCOTTING WAGNER

THE TEMPORARY BOYCOTT of Wagner and other German composers at the famous Queen's Hall promenade concerts, London, was one manifestation of war-time feeling that evoked a prompt protest in the English press. It seems that a week after war was declared a piece by Strauss was replaced on the program of the first promenade concert

that even for a moment this tendency to pander to the passions of the hour should have thus invaded the world of art.

The incident has evoked the following interesting comment from the pen of William Archer in the columns of the *London News and Leader*:

"Passing through the Embankment Gardens the other evening, I heard the band discoursing to a large crowd the march from 'Tannhäuser.' 'Good!' I said to my companion; 'we're not boycotting Wagner!' What was my amazement, then, to read that Wagner, received with applause on the Embankment, was to be boycotted at Queen's Hall! I went to the Promenade Concert on Monday evening, half hoping—shall I confess?—to hear some protest on the part of the public. There was nothing of the sort; the audience accepted the 'Franco-Russian' program on its merits, with no trace of political feeling; but as 'A. K.' pointed out, there was nothing like the crowded house usual on Wagner nights. Glancing down the announcements in advance, one is glad to note that there is no thought of such an imbecility as a general boycott of German music. Handel, Mozart, Schubert, Schumann, Mendelssohn hold their places; and Friday is, as usual, a Beethoven night. I trust the public will mark its resentment of the exclusion of Wagner by giving Beethoven a bumper house. That will be the most dignified protest."

Emphasizing the distinction between waging war against Germany and waging war against German art, Mr. Archer goes on to say:

"For my part, I am heart and soul with this war against the incubus of militarism under which Europe has been tossing and gasping for the past half century. But is a war against militarism a war against German culture? Heaven forbid! And even if it were, what has music—that mysterious transcript of the rhythmic universe and intimation of our kinship to the stars—what has music to do with earthly boundaries and petty tribal rancors? It is true that some music has, by association, a chauvinistic tinge. I do not know how far Wagner in his later years may have been caught up in the vortex of German Imperialism. But all his best work, if I am not greatly mistaken, was done before 1870; and it is not to be imagined that the revolutionary of '48 would have any real sympathy with the military tyranny of to-day. It would be untimely to play the 'Kaisermarsch'; but who wants to hear the 'Kaisermarsch' when he can hear the 'Lohengrin' prelude or the 'Tristan' overture? Why should we cut off our nose to spite our face?"

Mr. Archer regards the incident as "typical," and expresses the hope that "we may turn it to profit." To quote him further:

"'Love as thou would one day hate' is a particularly mean specimen of proverbial wisdom; but its converse, 'Hate as thou would one day love' is truly wise and peculiarly apt at the present juncture. One day—unless this war be indeed the end of civilization—we shall be the friends of a purified, ennobled Germany. Let us do nothing that shall needlessly postpone that day, nothing that shall tend to mar it by memories of senseless, futile alienation. Shall we forget, because of the misdeeds of a caste of soldier-politicians, all that Germany has given us of great and beautiful, in science and scholarship, in poetry and music? Nay, rather, let us keep in closest touch with it, that, when the day of reconciliation comes, we may be able to say, 'From the true soul of Germany we were never estranged.'"

"Here we may well call to mind another proverbial tag: 'Fas est et ab hoste doceri.' If it is right to be taught by an enemy, much more evidently is it wise to accept from him all we can of spiritual sustenance, refreshment, solace. One could imagine Germany, if it were possible, cutting off our supplies of Goethe and Heine, of Beethoven and Wagner; but that we ourselves should reject and cast them out would be the height of self-defeating stupidity."

"Literature can not, indeed, claim the aloofness of music from political influences, but the best literature of Germany is

ART-WORK PROBABLY DESTROYED IN LOUVAIN

This wood-carving was in the portico of the Church of St. Pierre.

of the season by something of Tchaikowsky's; the customary Wagner concert was replaced the next day by a French and Russian program; and it was announced that the names of no living German or Austrian composers would appear on the future programs. In explanation of this course the management stated that "the patriotic feelings of the enormous audience" had to be considered, and that any German music might provoke demonstrations embarrassing to the police. But it seems that the management did its audience an injustice. "It is a worthy tribute to the broad-minded and tolerant view of the British public toward all things artistic," writes the London correspondent of *Musical America* (New York), "that disapproval has been expressed on every side for this attempt to boycott German music." We learn, moreover, that the directors have issued another statement saying that in the future, "with the broad-minded cooperation of their audience," they will adhere to the original scheme of the concerts as set forth in their prospectus. *Musical America's* correspondent regrets

CARVED STONE-WORK IN THE CHURCH OF ST. PIERRE, LOUVAIN

Four other famous works of art in this church are specifically mentioned in a dispatch from Ostend as among the treasures destroyed when Louvain was burned. These are Roger Van der Weyden's "The Descent from the Cross," Dirckx Bout's "The Last Supper" and "The Martyrdom of St. Erasmus," and a beautifully carved screen of fifteenth-century workmanship.

entirely free from the spirit with which we are at war. How far Nietzsche may justly be claimed as a product of 1870 I must leave to the Nietzscheans to determine. His arrogance, I own, has always repelled me. In Sudermann there is a great deal of the Prussian drill-sergeant, and Sudermann is therefore a third-rate writer. Hauptmann, a first-rate writer, is devoid of that spirit. "Der Biberpelz" satirizes it: "Hannele" moves in a region of pure poetry and pity. And when we turn to the great classics we find no trace of swaggering Bismarckianism. Schiller, the poet of the human ideal, would certainly have detested it; Goethe is rather to be reproached with lack of patriotism than with chauvinism. As for Heine, he abhorred the Prussian eagle and riddled it with shafts of scorn."

Another writer, discussing the Queen's Hall incident in a London paper, remarks that "it would be interesting to know whether it is also high treason in Germany now to be caught reading Shakespeare and Milton." His irony, however, loses some of its point if the following dispatch, which comes to the New York *Evening Post* from Copenhagen, is true:

"German authors have formed a national association to prevent literary works from hostile countries being translated into German. The authors of plays belonging to hostile countries are not to be mentioned in the German press. This movement, it is said, is due to the attitude of Belgian and British authors."

From the London correspondence of *Musical America* we learn further that while public opinion in England rejects the boycott of German music, it accepts the expedient of employing only British musicians. This discrimination, the director of the Royal Albert Hall explains, is resorted to "as a means of alleviating any possible distress among British musicians rather than from any sordid or chauvinistic motive."

GERMAN CULTURE DEFENDED

OBSERVERS IN BOTH CAMPS agree that behind the present terrific upheaval in Europe there is a conflict of irreconcilable ideals, but they differ diametrically when it comes to defining and allotting these ideals. Thus, from many German sources we have been assured that the basic issue of the war is whether Teuton culture or Slavic barbarism is to survive and dominate Europe. On the other hand, Mr. Henri Bergson, perhaps the most famous of living philosophers, while also characterizing the war as a struggle of civilization against barbarism, sees barbarism represented by the Prussian military machine and civilization by the forces of the Allies. In last week's issue we quoted an article in which the Springfield *Republican* undertook to show, by the testimony of Germans themselves, that the German idealism of an earlier generation had been superseded of late by German materialism and commercialism. Now in *The Fatherland* (New York) we find the same charge of deterioration leveled against both England and France by Prof. Herbert Sanborn, of Vanderbilt University. As this champion of German culture sees the situation, "all Europe except Germany has been steadily sinking to a plane of crass materialism." In support of this rather sweeping contention he says in part:

"From the point of view of universal ideals, if not from the point of view of ordinary racial prudence, the Teutons of the North, England, and even France and Italy, ought to be found at the side of Germany in this contest, and the chief explanation of their defection and antipathy is the fact that these nations themselves have lost their former ideals to such an extent that

they no longer find themselves as whole peoples in sympathy with the German culture. England, as Münsterberg pointed out in the 'Americans,' has steadily degenerated since the days of Shakespeare, until it has been called appropriately merely a 'nation of shopkeepers,' and France, and Italy, taken as a whole, are not much better off; it is not the France of Molière, nor the Italy of Dante, even in spirit.

"The German nation, on the contrary, has steadily adhered to its ancient veneration for the eternal values of life, and has never, in the midst of material progress, lost sight of the fact that riches and commercial prosperity are not for luxury, but for the development of the higher life to be based upon it. This thought permeates all classes of the nation and makes them instinctively despise Russians and other races with low aims of life.

"It should be the sacred duty of all thinking men to do everything possible to prevent the crippling or the downfall of the German Empire. . . . For the destruction and subjection of this people, to which the present war might be merely a preliminary step, would mean, if not immediately so great a reverse as we find in the Dark Ages subsequent to the downfall of the Roman Empire, nevertheless a return to something nearly as bad in the espousal of a point of view of civilization that makes material values ends in themselves; for no modern nation except Germany, one may venture safely to assert, possesses as a whole any higher ideal.

"Concerning the Slav there can, of course, be not the slightest doubt.

"At the time of Peter the Great the race was a horde of barbarians, just emerging from a condition of semisavagery, susceptible, as Peter in his own person only too plainly showed, of nothing but the most superficial veneer of European civilization, and the race, in spite of so-called universities that it has established, and in spite of a few sporadic cases of genius, not of the first rank, such as Tolstoy, has most certainly remained upon the plane of Peter himself. They have furnished America chiefly its anarchists and nihilists. To such a race the leadership and control of civilization can hardly be entrusted.

"England lives on a higher plane, of course, and so does France; but it is nevertheless true that England (as Carlyle, Ruskin, Matthew Arnold, and other cultured Englishmen of our day have frequently lamented) now lives, as a people, on the sordid plane of thinking which regards the accumulation of material wealth and the various forms of luxury to be obtained thereby as the sole aim and end of civilization. . . .

"Ask the average Englishman of breeding and intelligence—the men who at present control the development and application of English material resources—what the purpose of education is, and he will promptly tell you that it is for some material advantage, 'getting on in the world,' and the like. If you suggest that there may be something further than this, he does not understand what you mean; for he and his kind have not yet come to the stage of self-consciousness that grasps higher aims than this.

"He believes in universities and vocational training, to be sure, but only because he believes that these are instrumental to the realization of greater material prosperity, and he is correspondingly alarmed when he seems to discover that the training process does not produce 'efficient' men. He wants specialist-men rather than men-specialists. Germany, on the other hand, has attained as a nation to that stage of self-consciousness where the eternal values are clearly conceived, where material wealth is consciously and unremittingly transmuted into spiritual values.

"It may be true that Germany desires commercial expansion (and certainly this is the cause of the arrayal of English arms against her), but this is a necessary economic right, not a crime. She desires it, however, not in the interest of luxurious living, as does England, but for the sake of the development of an ever higher stage of civilization and culture; and there is no modern nation whose people as a whole are so thoroughly permeated with this spirit.

"For this reason, if for no other, every friend of true culture of whatever nation, every person who has grasped the strictly German thought that history is a development, and a development in self-consciousness, should find himself in warmest sympathy with this noble people in this hour of fate. Patriotism is a fine thing, and it is sometimes necessary for individuals to follow its impulse in opposition to something that is higher and grander than this—the devotion to that country in which the highest ideals of the race seem most secure; but so long as these two impulses do not stand in opposition, nobility obliges sympathy with higher rather than with lower aims."

A NEW DRAMATIST FROM ICELAND

ONCE MORE, it seems, Scandinavia has given to the world a dramatist who unites realistic portrayal of character and circumstance with poetic vision and diction. And this time it is Iceland which has produced a genius who is already acclaimed as worthy to rank with Ibsen, Björnson, and Strindberg. It is even said by enthusiasts that Johann Sigurjonsonn, who is not yet thirty-four years of age, may to-morrow surpass that famous triumvirate.

Mr. Sigurjonsonn's most successful drama, "Bjoerg-Ejvind," has not only been received with enthusiasm in the principal theaters of the Scandinavian countries, but has been played at the Court Theater of Munich, and before the outbreak of war was about to be staged in Vienna, in Hamburg, in Bremen, in Cologne, and in Essen.

In *La Revue* (Paris) for June 1 and 15, Mr. Léon Pineau, the Dean of the Faculty of Letters of Clermont-Ferrand, writes with enthusiasm of the poet-dramatist's work. Much of Mr. Pineau's article is taken up with an analysis of Mr. Sigurjonsonn's three principal dramas, including copious extracts from all. The subject of the first, "Dr. Rung," is very simple. The hero is making an effort to find a specific for tuberculosis.

"He seeks a poison which can destroy the microbe of the terrible malady. He has experimented on rabbits. The results have not satisfied him. However, in the course of his experiments he has come to see the possibility of producing a special serum which will act as a vaccine. He explains it to his friend, Otto Locken.

"Otto—'But you don't think of trying it on yourself.'"

"Harold Rung—'It's the only way of solving the problem. . . . I've made numerous experiments on animals. Unfortunately, none will support a sufficient dose of the poison. In fact, it is requisite not merely that the action shall be durable, but that it shall have also a certain degree of intensity. Man, on the contrary, supports a much higher degree of the poison than any other animal. . . . I shall inoculate myself with tuberculosis in the arm at the same time that I take the poison in progressive doses, which will continue until I have attained my object.'"

The character of Otto, who is a young poet full of the joy of living and ecstatic appreciation of the beauties and glories of the material world, is the obvious foil for that of Harold, the modern scientist searching above all for truth and filled with an ardor for the delivery of humanity from its ills. The love interest is introduced by Otto's sister, Vilda, who, after pleading in vain with her lover to abandon his purpose, refuses to leave him.

Finding his remedy ineffectual against the self-inflicted malady, Harold eventually commits suicide by the novel method of eating some grapes into which he had injected a subtle poison by means of a hypodermic needle. It may seem rather out of keeping with his character that he should present Vilda with some of the same fruit, without telling her of its deadly contents. Mr. Pineau finds, however, in this drama intellectual exactness united to sobriety of language and precision of psychological analysis allied with the most lively and natural poetic sentiment. And these qualities, he goes on to say, are even more evident in the second play, "Gaarden Hraun," or "The Hraun Farm."

"The word 'Hraun' is applied in Iceland to a field strewn with stones of volcanic origin. The characters of the play live in that distant part of the island where the author's infancy was passed, and he sketches in loving detail the patriarchal life. Is not this farm the very spot where he himself grew up?—this farm with the five white pines, the walls of earth and stone, the turf-covered roof, the dairy, the forge, the stables, etc."

The theme is that age-old struggle between the love of the land and the love of the child when the two come in conflict. The peasant *Sveinungi* and his wife, *Jorunn*, have an only daughter, *Ljott*, whom they purpose marrying to the steady but unromantic son of a neighbor, an estimable young man who will properly

keep up the place and improve the property. But *Ljott* has given her heart to a wanderer whom she has seen but once, a young geologist tramping through the country. The first scene shows the family happy and united in the peaceful setting of the prosperous farmhouse. But the next shows us the household gathered outside in the yard, after an earthquake which has destroyed the sheepfold and part of the mansion. This partial destruction of the old mansion is a dramatic expedient for bringing to the surface an expression of that intense love of the place which is part of the peasant landlord's very being. He is almost ready to curse God and die at the very thought that another shock may bring the whole to ruin. And his artless expression of his feeling rises to a strain of exalted poetry. He says to *Jorunn*:

"You know that night when you thought I was lost in the snow-storm. A light was burning in the topmost window. When I saw it I felt happier than if I'd met a friend. And when the dogs began to bark behind the door it was just as if the house itself was talking and uttering cries of joy. It gave me more pleasure than to hear any human voice. And when I opened the door and came into the hall the darkness put its arms about me. I never had a sweeter embrace—not even from my girl when she was a baby. . . . (He points at the house with his finger.) There she is, she who has waited for me every evening as far back as I can remember. I have seen her windows flaming in the sunshine; I have seen them wet with rain; I have seen them white with frost. . . . I have climbed on her roof as I did on my father's shoulders. When I was up there, it was just as if she'd lifted me up so I could see better."

In short, he'll have no son-in-law who'll desert the place and carry *Ljott* away. The girl must choose between father and lover. Sorrowfully but firmly she chooses the latter. But this apparently hopeless deadlock between two iron wills is resolved by *Jorunn*, the obedient wife and loving mother. In a touching and charming scene she finally triumphs by reminding him that *Ljott* will probably have children, and that a grandson may take upon himself the pious care the would-be son-in-law refuses. Says the tactful *Jorunn*: "A daughter's son is often more like his grandfather than his father. You know that as well as I!" The argument suffices, and the curtain falls on a happy ending.

But it is in "Bjoerg-Ejvind" that the dramatist gives the most characteristic picture of his native land as well as the most powerful portrayal of human passions. The hero, whose name gives the title, is an outlaw. Hunger has made him a thief; he has been condemned, but has escaped from prison, taking refuge in the mountains.

"Tired of solitude, he has descended the opposite slope into a region where he is unknown and taken service under the name of *Kari* with *Halla*, a rich young widow. . . . *Halla*'s brother-in-law, the sheriff, wishes to marry her for her property, but she scorns him. *Halla* learns *Kari*'s secret, but tells him she loves him. . . . She flies with him to the mountain. She has two children. The first comes at a time of such great material and moral distress that she leaves it to perish in the snow. The second is a lovely little girl, whom she adores. But the sheriff, whose hate is unceasing, finally tracks them to their hiding-place. Then *Halla*, rather than deliver her child to the vengeance of this man, runs, as if demented, to the cascade and throws the sleeping child into it, while *Bjoerg* plunges his knife into his enemy's heart. They must fly farther. And now these former lovers, wandering through the torment of days and nights of ceaselessly falling snow, maddened by hunger, torture each other with mutual reproaches, until finally, beside themselves with suffering and fear, they are lost in the impenetrable gloom of the white night.

"In this frame the poet has placed a number of pictures, which, with those from the 'Hraun Farm,' constitute a very original gallery of Icelandic life and manners. The opening scene is in the great hall of *Halla*'s farm; along the walls are ranged the beds with their bright coverlets of knitted wool. The dormer windows, with their openings covered with squares of bladder, light dimly the wainscot, black with soot and decay, the carved chests, and painted trunks."

Space forbids extended quotation of the striking dialog, but we quote some of Mr. Pineau's final remarks:

"'Bjoerg-Ejvind' has been received with enthusiasm wherever it has been played. The picturesqueness and variety of the *milieu*, the vigorous movement of the principal scenes, . . . above all, the love, the all-powerful love of this marvelous *Halla*, who abandons everything for the man—the thief, the servant, the outlaw whom she loves; this love, which avenging famine finally destroys in delirium and madness, explains and justifies everything.

"But some persons can not pardon her double crime, the slaying of her children. In reality, this woman, generally so reasonable, is an impulsive. . . . As the author expresses it: 'I mean to show a person who at certain moments acts purely from instinct. . . . Beneath the snows of Iceland is the burning volcano. . . . In fact, *Halla* expiates by her atrocious death the fault she committed in braving the social law to follow her heart.'

"In this theater there is no obscure symbolism, no fog of fantasy, no scandalous thesis, not even a new theory of art—nothing but poetry. Not the poetry of words, charming and fallacious, not of rhythm nor of dazzling imagery making us forget our miseries . . . but the sublime creative poetry which makes beings of flesh and blood like ourselves . . . human creatures to whom Sigurjonsonn has given of his own soul."—*Translation made for THE LITERARY DIGEST.*

WAR AND LITERATURE

THE IDEA, advanced in some quarters, that one effect of the present war will be to impart a pronounced impetus to literary creation in Europe is characterized by a writer in the *New York Globe* as fallacious. While admitting the plausibility of the idea in theory, this writer argues that "the historical precedents are almost entirely against it." He goes on to say:

"Take Germany, for instance. Here, as in all other countries, nationalism has been violently, artificially stimulated. Cosmopolitan tendencies have naturally been eclipsed for the time. Just as the Englishman feels himself more overwhelmingly English than he did even during the Boer War—for, remember, there was a strong, numerous pro-Boer party in England at that time—just so does the German to-day feel himself more thoroughly Teutonic than he has for forty years.

"The Frenchman does not enter into this discussion except casually. To an amazing extent are the art and literature of France indifferent to outside influence. Sir Walter Scott, of course, left the mark of his example on the novel of all countries. Other exceptions may be picked here and there. But the fact remains that the self-sufficiency, the imperviousness, of the French as a nation to the art and literature of their neighbors, are little short of chauvinistic.

"The German, on the other hand, is peculiarly susceptible. From time to time he has vigorously tried to shake off French influence. In his music he has succeeded. But never in his literature. You can find traces of it in Schnitzler to-day. Despite the Ueberbrett'l movement and the efforts of Bierbaum, Von Wolzogen, Dehmel, Hauptmann, Thoma, and Wedekind, Germany can never keep its eyes off Paris for very long. But surely, one thinks, now that the race-feeling has been so abnormally stimulated, there will be a strong, intensive cultivation of essentially German books, plays, poems. Surely a prolific period of literary vigor will ensue?

"On the contrary, all precedents point to the probability of a period of deadly anemia.

"After the Franco-Prussian War the triumphant nation, having been brought into being upon such strong meat as bayonets and cannon-balls, confined its literary diet to 'pap for babes.' After the Napoleonic wars France plunged into a period of activity that was prolific but futile, a period that did not end until the thirties.

"In the United States most of the big authors antedate the Civil War. Emerson lived until 1882, and Whitman until ten years later. But their creative powers were definitely formed before 1860 ('Leaves of Grass' was published in 1855). And the general taste in the following two decades was undeniable toward the namby-pamby."

RELIGION AND SOCIAL SERVICE

A NEUTRAL SHIP THAT CARRIES AID IMPARTIALLY TO ALL THE COMBATANTS.

THE RED CROSS SHIP

THE SAILING of the steamer *Red Cross* for Europe, with its cargo of thirty doctors and one hundred and twenty-five nurses, bears witness, as the *New York Sun* remarks, "that our solicitude is for those who suffer and our neutrality not the product of indifference." It is the beginning of America's practical response to dispatches telling how the demands made upon the European Red Cross have already run far beyond its resources both in funds and nurses. The *Red Cross* is the transformed *Hamburg*, which was given to the American Red Cross organization for this use by the Hamburg-American line. She sails under the American flag, with American officers and crew. Her commander is Capt. Armistead Rust, U. S. N., retired. While she carries, in addition to the surgeons and nurses, an immense quantity of hospital supplies and equipment for use in the field, she is not fitted out with wards and operating-rooms. In other words, she is not a hospital ship, and it is explained that the only circumstances in which she would receive wounded on board would be in case she encountered a naval battle. The medical staff is under the command of Major Robert U. Patterson, United States Army Medical Service, and the nurses are under Miss Helen Scott Hay, of Chicago. In a statement to the press Miss Mabel T. Boardman, head of the executive committee of the American organization, gives the following additional information:

"There are five extra nurses, in order to provide substitutes for any possible illness among them. This number of surgeons and nurses constitutes ten units, each including three surgeons and twelve nurses. A double unit will be landed at Falmouth, England, for use by the English medical authorities, and the double unit assigned to Russia will also land at Falmouth and proceed to their destination by way of Copenhagen. A third double unit will be landed at Havre for the French; and double units for service with the German and Austrian armies will be landed at Rotterdam, in Holland.

"Besides the surgeons and nurses, we shall land immense quantities of supplies and equipment for each of the warring countries. Belgium, which has cabled that she does not require surgeons and nurses, will also receive supplies. It is impossible for me to enumerate all the stores we are sending, but everything that can be required in caring for wounded men will be in the holds of the *Red Cross*."

"If this war lasts as long as some authorities say that it will, we shall have to send many more expeditions to Europe and elsewhere. Besides the force going on the *Red Cross*, we are sending a single unit of three surgeons and twelve nurses to Servia on the *Ioannina*, of the Greek line, next week. They will go by way of Piræus and Salonika."

According to the *Kansas City Star* there are 5,000 trained

nurses in this country who are members of the American Red Cross Society, each of them pledged to service in any part of the world when called. In the *Kansas City* paper we read further:

"In times of peace the nurses of the Red Cross pursue their own course. They are in hospitals, in private service, teaching in training-schools. When they enlist they pledge themselves to the service of the Red Cross. They get no pay from the society until called out, then the pay is \$50 a month for service in this country, \$60 a month if sent outside the country.

"The pay is small enough for the risks they run and the hard work they do. In battle they will be in danger of bullets and bursting shells, and their days and nights will be filled with uncertainty, fatigue, and nervous strain. There will be little of romance in the work, with its long lines of sufferers, with limbs shot away, crushed heads, torn bodies, lips that babble in delirium."

"When the American Red Cross volunteers get to Europe they will be assigned for duty with the medical staffs of different armies, where the European head of the society decides their services are most needed. They will go to the front at once, and within two or three weeks will be in the thick of the fighting.

"In Germany and in France the Red Cross is officially recognized and is placed under the direct military control. In England, while it cooperates in every detail with the Army Medical Corps, the Red Cross preserves its own organization intact. In Germany, the volunteer organization is presided over by an imperial commission or inspector-general, and the Red Cross operates according to his instructions. Nurses and doctors volunteering are assigned by him to various commands, but it is a rule of the German service that no volunteer who is not of German nationality can be assigned to duty with the army in the field. At base hospitals, however, the services of foreigners are welcomed, but authorization to engage in the work must emanate from the War Office. The same rules regulate the service in France."

The American branch of the Red Cross advertises that it needs \$1,000,000 to meet adequately the great opportunity for service created by this war, and in its call for contributions it says: "Give what you can—be it five cents or \$5,000." Commenting on this appeal, the *Dallas News* remarks that it is for a cause in which the Church could well cooperate. We read:

"Thousands have died who, if they had received prompt and proper attention, could have been saved. What is lacking is primarily money. Given the necessary money, and the Red Cross will soon provide even the army of nurses demanded by this monstrous war. If it is to get the money, and if thousands are not to lose their lives needlessly, the people of all countries must contribute promptly and generously. The people of the United States ought to contribute with a double measure of generosity, and call it a thanksgiving offering for their exemp-

tion from the frightful calamity that has been brought on the people of Europe. It seems to us that the churches could do nothing better than to take up collections for the Red Cross. Furthermore, we should think ministers could not easily find a more inviting and appropriate theme for discourse than this of our obligation as a people to contribute to the funds of the Red Cross."

The New York Times thinks that the sailing of the Red Cross will awaken Americans to the needs of the situation and accelerate their giving. Says the New York Globe:

"We should not stop with sending one Red Cross ship to Europe. There is crying need for medical supplies, for doctors and nurses. The war is the greatest the world has ever known, and the suffering caused by it is in proportion. As the greatest neutral nation on the globe and the wealthiest, we must live up to our obligations. The chief of these is that when we are called upon in the name of humanity we must promptly respond. Never has this call been more urgent."

"The American Red Cross Society needs more money to send further relief to the stricken countries of Europe. Thirty surgeons and one hundred and twenty-five nurses! Fine! But let us rather make it three hundred surgeons and twelve hundred nurses. The opportunity is here. Let us rise to the occasion."

There is no danger of exaggerating the dire need of Red Cross work in the countries now devastated by war, declares *The Union*, of Manchester, New Hampshire, which goes on to speak of the American society's record for efficiency. Not only does its mission of mercy know no discrimination in time of war, remarks the *Indianapolis News*, but in times of peace it is also active in alleviating suffering in the wake of other disasters. Thus we are reminded that it raised a million dollars for the victims of the Messina earthquake, and distributed two million more among the Ohio flood sufferers. "But never before," adds *The News*, "has it been called upon to meet so overwhelming a disaster as now confronts it."

Whereas, it is the especial wish and longing of the people of the United States, in prayer and counsel and all friendliness, to serve the cause of peace:

Therefore, I, Woodrow Wilson, President of the United States of America, do designate Sunday, the fourth day of October next, a day of prayer and supplication, and do request all God-fearing persons to repair on that day to their places of worship, there to unite their petitions to Almighty God, that overruling the counsel of men, setting straight the things they can not govern or alter, taking pity on the nations now in the throes of conflict, in His mercy and goodness showing a way where men can see none, He vouchsafe His children healing peace again and restore once more that concord among men and nations without which there can be neither happiness nor true friendship nor any wholesome fruit of toil or thought in the world; praying also to this end that He forgive us our sins, our ignorance of His holy will, our wilfulness and many errors, and lead us in the paths of obedience to places of vision and to thoughts and counsels that purge and make wise.

THE PRESIDENT'S CALL FOR PRAYER AGAINST WAR.

PROHIBITION'S NEW ALLY

BIG BUSINESS is "the new foe of the liquor traffic able to deal a staggering blow," says a writer in *The Christian Advocate* (Methodist, New York), who maintains also that "the day of the sober workman, long dawning, is here." Manufacturers can not be expected to indemnify employees injured in their plants, we read, if the accident is due to the semi-sober condition of the worker. Consequently when, as is the case

in New York State, a Workman's Compensation Law provides that employers shall insure their employees against death and injury, the employer rightly insists that none of his men shall drink intoxicating beverages. "Accidents are no longer regarded as providential," says the writer, but are known to proceed largely from the drinking habits of workmen. Of what use is it, he asks, "to have expensive machinery guarded with the most serviceable and approved devices" if even a "moderate drinker" is to handle it? To insure "safety first," we must guarantee "sober first," and he goes on to say that merely

on the ground of efficiency, employers are encouraging the workers in various ways to leave drink alone. What is more interesting, perhaps, to believers in prohibition is the fact that—

"The man who thinks more of his job than he does of his drink has the floor. Society is taking so complex a form, competition is so keen, the standards of efficiency required so high that there is a growing discrimination in favor of the man whose hand is steady, brain clear, and judgment unimpaired by drafts of drink. Even the moderate drinker is out of it; the handwriting is on the wall."

"Let us make the daring prophecy that the time is not far distant when a prohibition zone will surround our mills and factories, even as schools and churches are now protected, within which no liquor may be sold. The webs so skilfully spun at doors and gates of industrial plants will have to come down,

and we shall no longer hear the cordial refrain, 'Will you walk into my parlor?' It is going to be hard on the spiders—but big business is now talking . . . not preachers or reformers. Large financial interests are at stake. Competition is so close that the very existence of factories in the race for trade and maintenance is threatened unless the field be a clear one with no mill discounted by lower standards of efficiency than another."

It is perfectly plain, the writer tells us, why saloons locate close to factories. Indeed, "so desirable is the patronage that if the gates are shifted, the saloons move accordingly," and we read:

"How much of our annual drink bill of \$2,000,000,000 is incurred by employees in mills is problematical; but it is not problematical how far this consumption befores the brains of men entrusted with the machinery, tools, and appliances in our industries. That has been determined. . . . The evidence has been gathering fast, and the call is louder and clearer for sober men in the mills. 'Safety first' is no longer the slogan, but 'Sober first'; then safety will be assured. Men who run dangerous machinery to-day must have steady nerves. They risk their own lives, their fellow workmen's lives, their employers' property, and now in case of accident their employers' money in compensation. It is the drink or the job. Saloons must not be so near that men can steal out unnoticed to the bar. . . ."

"Monday following the weekly holiday, with its usual indulgence in liquor, is the dreaded day of disasters in the mills. The curve of accidents for every day has been charted and the 'peak' shows that at ten o'clock in the forenoon and three in the afternoon, just long enough for alcohol to produce its effects after the morning and noon drinks, are the dangerous hours for men and machines. And on top of it all, unbiased experts have made rigid investigations as to the cause of accidents in scientifically managed plants, and unfailingly have traced the blame to operators visiting near-by saloons during lunch hour, or slipping out across the alley during an idle moment or two. Tell-tale snap shots reveal employees stealing out to the saloon. There is only one sure safeguard: a law permitting no saloon to be located so near a factory that workmen can reach it unnoticed by gatemen or watchmen. This calls for a 500- or 1,000-foot limit, and this is the distance that is being advocated by experienced employers who have made a study of the question."

Another proposition in the effort to establish sobriety as a principle of industrial plants, the writer says, is "the substitution of milk for the saloon lunch," and he adds:

"I have before me a letter detailing the names of seven large factories employing thousands of men which provide bottled milk for their employees, one company taking 300 bottles daily. The milk is packed in ice and sold at cost. Saloons which provide a hot soup as an inducement for workmen to drink their beer can be met on the same ground by substantial meals served in the neighborhood without intoxicating liquors. To look afield for a moment: in the Berliner Allgemeine Gesellschaft, Germany, one of the largest corporations in the world, the use of tea, milk, cocoa, and soft drinks is in every way encouraged, and they are displayed for sale at convenient places throughout the works."

As to wholly personal benefit resulting to the workman from the prohibition attitude of big business, the writer mentions the following instances:

"The Philadelphia Quartz Company, located at Chester, Pa., announced last February that it would increase by 10 per cent. the wages of all its employees who would sign the temperance pledge. There was no compulsion about it, but all the 300 men and boys signed up. The manager of the plant says that it is only common sense to state that a strictly sober man is worth more to his company, and that the firm expects to be more than repaid by the improvement in the service it will get from sober workmen."

"Another firm, one of several which might be cited, the United States Steel Mills, covering the entire Mahoning Valley, in March last issued a sweeping order to the effect that all promotions hereafter of whatever character will be made only from the ranks of those who do not indulge in the use of intoxicating drinks. In the same month of March the Great Northern Railroad notified the town of Garretson, South Dakota, that unless it voted out the saloons and kept them out the road would move its division headquarters to an adjoining dry town."

And to such examples, says the writer, may be added the practise of the firms who will hire no drinkers, those that "warn their men that signing a petition for a saloon is an act inimical to the welfare of the factory employing them," and those that "put in their pay-envelops slips bearing pictures of a keg of beer and of a sack of flour with the query, 'Which do you buy?'" In short, argues the writer, "this is the day of the sober workman," and he concludes:

"Time was when the brilliant alcoholic could hold his place in almost any job or profession. That time is past. Industry has come to realize that dependability is better than brilliancy, and that brilliancy itself is more common with men of clear heads than with those whose brains are muddled with alcohol. Manufacturers with near-by saloons closed or pushed back from their doors have just that much advantage over their rivals."

THE MINISTER OVERWHELMED

THERE IS BOUND TO BE inefficiency in the conduct of churches, especially the larger ones, as long as a minister has to fulfil the threefold mission of "preacher, pastor, and manager," says Joseph Ernest McAfee in *The Continent* (Presbyterian, Chicago), and the editor of this journal indorses him as an authority on the subject because of his connection with the Home Board. One who has never undertaken to run a city church with perhaps twenty to thirty different attached organizations, Mr. McAfee tells us, can not realize how great a burden it is. The minister, to make his church successful, must excel in each of the three branches of his work, and while this is a possible achievement in the case of a church of moderate size and a man of exceptional capacity, nevertheless, "in an increasing number of churches this combined office is proving far too heavy a load for one man to carry." The more serious phase of the problem, however, the writer points out, is that "the duties are so varied that the special talent and training demanded for one of the three hamper the same individual in the others." All this is no discovery to "any thoughtful minister," adds the writer, who hopes that in the future the churches will "more and more specialize these three offices and not seek the talents and training for them in one and the same man." For, we are advised, "no individual can prepare a sermon, run upon numerous and heart-wrenching pastoral errands, straighten out the administrative tangles of a great church organization, all in the same day and succeed equally well in each." Yet the present method of helping a minister out of his difficulties by providing him with an assistant or assistants "shows serious limitations," thus outlined:

"Ministers are trained by the same method to do the same kind of work and have been inspired with the same enthusiasm—all measurably the same. The assistant is often as eager to preach as is the principal, and, deprived of the opportunity, grows restive and dissatisfied. There is usually no functional division of duties in the two other departments; to the assistant fall those pastoral and managerial duties which the principal is unable to perform."

A better way, we read, will be found through "scientific and sanctified management," which two adjectives "are to be construed as interchangeable." Of the three offices of preacher, pastor, and manager, which under present conditions the minister is compelled "to jack at," the writer thinks the least capability is shown in that of manager, and he adds:

"Each church ought to embody in its working force as varied elements as there are psychological types in its membership and as there are spiritual needs in the community. Scientific church management will see that it does. Personal magnetism will not of itself express the true science. In short, is not the office of church management too little attended to and, where given attention, is it not handled for the most part in a very unscientific and therefore very unsanctified manner?"

REVIEWS OF NEW BOOKS

COUNT VASSILI'S MEMOIRS OF FRANCE DURING THE PAST FIFTY YEARS*

SHORTLY before the appearance of the English edition of this brilliant volume, Count Vassili himself joined the great procession of dead celebrities. A Russian diplomat who was practically a Frenchman by adoption, the Count was peculiarly qualified as an annalist of political and social life in contemporary France. He had had an experience of fifty years of active diplomatic life, in the course of which he came in intimate contact with most of the celebrities of Europe. Hardly a famous name is missing from his witty, scintillant pages, which begin with Napoleon III. and his glittering satellites of the Second Empire and conclude with the régime of President Poincaré.

The portrait of Louis Napoleon has been drawn often enough, and not always in pleasing guise. Victor Hugo has left a sketch that certainly does not flatter the Emperor. The attributes of awe and majesty conceded to "the illegitimate son of Queen Hortense," as he is termed in these pages, were not apparent to the author of "Napoléon le Petit," whose judgment of his sovereign was once rendered in the memorable comment, "He deserves to be led before posterity by the left ear." Vassili's estimate is the most favorable we have seen from a trustworthy source. Without minimizing the responsibility of the Emperor for the cataclysm of 1870, the author gives the sovereign full credit for many achievements during his more or less brilliant eighteen years' reign. It is by comparison with the *épouvée* which followed the French Revolution that the second imperial régime lacks historical color or national dignity. One's imagination may well be dazed by the spectacle of a man who, as it were, raised himself by his boot-straps to an imperial throne. "The Emperor's," says Vassili, "was essentially a kind nature. During the eighteen years of his reign he did an enormous amount of good, and certainly France owes to him a good deal of her present prosperity." Of Eugénie, still living at eighty-four in her English home and only recently a visitor to Paris, the author writes in glowing words:

"The features were quite lovely in their regularity, but a certain heaviness in the chin robbed them of what otherwise would have been absolute perfection. . . . The eyes and the hair were glorious, the figure splendid, and there was an inimitable grace in her every movement. With the exception of the Empress Marie Feodorovna of Russia, I have never seen any one bow like Eugénie, with that sweeping movement of her whole body and head that seemed to be address to each person present in particular and to all in general. . . . Her glances had something of Spanish softness blended with French coquetry. In a word, she was a most attractive woman—one of the most attractive that ever lived—but she certainly was not an ideal sovereign."

There are descriptions of the aristocratic

society of the Faubourgs and of the social splendor of Eugénie's court, with sketches of the principal figures. The chapters which are devoted to the Franco-Prussian War and the Commune throw fresh light on these terrible events. They reveal some of the inner motives and secret diplomacy which brought about the dénouement of the Napoleonic drama. Separate chapters are given to M. Thiers, the Comte de Chambord, last of the Bourbon pretenders, the Orleans princes, the Duc d'Aumale, Marshal Mac-Mahon, Gambetta, Boulanger, and Dreyfus, and there are highly interesting and diverting descriptions of the salons of the Republic, of contemporary Parisian literature and journalism. Perhaps the most striking chapter in the book is one devoted to Madame Juliette Adam, Gambetta's Egeria, the modern survival of the woman who has been a power in French politics and of whom Madame de Staël is the prototype. There is also a striking sketch of Chambord, the most notable part of it being an account of the author's accidental meeting with him in Versailles, where the Count was staying incognito:

"I had occasion to see him during the short stay which he made at Versailles under an incognito which was only discovered by a very few. We took a walk together in the park, and along the alleys of that garden of Trianon where the young and frivolous Queen, so brutally murdered by the bloody Revolution which she had neither foreseen nor understood, had walked together with the lovely Lamballe and her train of gay courtiers. Everything looked sad and deserted and abandoned; it all spoke of a dead past and of a departed glory. Suddenly the Comte de Chambord stooped in his walk, and turning to me said those memorable words, which I have never forgotten:

"What a pity that this place was not entirely destroyed in 1793!"

"I looked at him with surprise.

"You are astonished to hear me say such a thing," he continued, "but let me explain to you my thoughts, and you will understand me better. Royalty, like so many other things, is a prejudice, at least for the masses who have neither traditions nor principles. It represents, or at least ought to represent, to them something that is strong, powerful, entirely above them, beyond them; something sacred, that no power save that of God may touch or may destroy. Once this feeling concerning it is gone, half its prestige is gone too. The mob only respects what it can neither harm nor kill. If it once sees that royalty, like everything else, can be touched with a sacrilegious hand, that it is at the mercy of the first boy or man in the street, then the mob not only loses every fear, but also its veneration. It rejoices to see that it has got over the feeling of awe which formerly inspired it with regard to that superior thing which ruled it; it delights in pulling it down, and in treasuring the remembrance of the day on which it smashed it to the ground. Now, nothing reminds one more of deeds done, whether good or bad, than the spots where such deeds were committed.

"The French people, when looking at Versailles, and walking freely through the rooms where kings formerly reigned,

can always think, speak, and remember, with something of that low pride which a boxer feels when he has knocked his adversary to the ground, of the time when they destroyed the power which had ruled them, and feasted in the halls of their former masters. That remembrance is most unwholesome, and can only foster rebellious feelings in the breasts of those who treasure it. Had Versailles been destroyed the Revolution of course would not have been forgotten, but the nation would not always have had before its eyes the sight of the monument of the fallen grandeur of its kings. Facts are forgotten or lose their importance far quicker than one thinks; but places, and spots, keep their eloquence, and unfortunately keep it forever."

"He stooped, and looked back toward the walls of the massive old pile, whose many windows were blazing in the setting sun. And once more he sighed: 'Yes, I do regret that this place has not been burned down and destroyed; it would not have witnessed then the triumph of the victorious Prussian eagle, and after that, what real French king would care to live in it, even if a king ever reigns again in France!'

"He sighed yet again, and we slowly retraced our steps toward the town. As we passed the castle gates, he stooped again: 'sic transit gloria mundi,' he quoted; 'my glory, like that of my ancestors, has passed away; perhaps it is for the best after all, since I was not destined to see my race continued!'"

CENTRAL-AFRICAN TRIBES

Weeks, J. H. *Among the Primitive Bakongo. A Record of Thirty Years' Close Intercourse with the Bakongo and Other Tribes of Equatorial Africa, with a Description of their Habits, Customs, and Religious Beliefs. With 40 illustrations and a map. 8vo, pp. 318. Philadelphia: J. B. Lippincott Company. \$3.50.*

The registration of anthropological facts among primitive peoples is an important and praiseworthy task. This is especially the case when the area dealt with is coming rapidly under the civilizing influence of the white man, under which native customs change, old ideals are lost, and primitive ideas pass forever. Mr. Weeks is no tyro; in fact, his last work was on a similar line, dealing however with the Upper Kongo region, far less affected by Western civilization than the lower stretches of the river.

It is because the Lower Kongo peoples are changing so fast that the present volume is welcome. A newcomer there would find conditions greatly changed. The orderly tabulation of facts begun to be assembled thirty years ago on the various questions that arise out of anthropological science, including the problems of government, public and social life, superstition and religion, industry, warfare, and hunting, was well worth while. And of the twenty-six chapters all but the first two are full of information of this sort. Those on fetishism and religious beliefs have especial value. While there is nothing absolutely new, perhaps, in the entire volume, nothing that is not familiar to anthropologists, new areas are charted for certain well-known features of primitive life—such as mother-right, circumcision, puberty rites, and the like, as well as more

*Vassili, Count Paul. *France from Behind the Veil: Fifty Years of Social and Political Life. Illustrated. Large 8vo, pp. viii-396. New York and London: Funk & Wagnalls Company. \$3.75 net.*

Don't ever let your children tease in vain for "light," wholesome food. They can't eat too much KELLOGG'S TOASTED CORN FLAKES, or eat it too often. Neither can you. This "good old Summertime" favorite now comes to you as crisp as the minute it was toasted. All the freshness and the famous flavor are sealed in by the new WAXTITE wrapper—but only on packages bearing this signature:

W.K. Kellogg

CURRENT POETRY

SIMPLICITY is the goal at which many modern poets wisely aim. The greatest art, it has been said, is to conceal art, and the greatest poems of Wordsworth and Landor are those in which the poets have succeeded in uttering beautiful thoughts naturally and directly. But in an age of sophistication and artificiality, writers gain simplicity only by an effort, and sometimes this effort is evident in a poem and makes its simplicity seem an affectation as alien to true art as the most elaborate rhetorical flourish.

This is by way of introduction to a poem which needs no apology. In a recent issue of *The Commercial*, a newspaper published in Pine Bluff, Arkansas, appeared some verses which, in spite of the awkwardness of the first few lines, have an irresistible charm. There is a quality of simplicity and naturalness about this little poem which other poets who have won wider fame would give much to impart to their work. The briefer alternate quatrains, coming as a sort of chorus to the reflections of the woman who sits turning the pages of the old family Bible, have an air of impersonal finality which is dramatically effective. Miss Hocker (the name "Willie" is not uncommon among the women of the South and West) has given the world a poem that is more than quaint; it is beautiful with the beauty which belongs to all things that are natural, wholesome, and fresh.

An Old Family Bible

By WILLIE K. HOCKER

Ancstral Bible leaves I turn,
On ancient yellow page discern
Some trace of birth, but can't acquire
The name of my great, great grandire.

(No small the band
Each generation,
That can withstand
Obliteration.)

The ink is pale, the page is marred,
Good Book, you safely now may guard
His little span of incarnation,
All record gone of appellation.

(His fate the same
As millions more,
Time swept his name
On chartless shore.)

But no! the reading lens I bring
And focus brilliant, lighted ring,
Read name, and date, of death and birth,
Of one who long has passed from earth.

(When ages pile
Oh! may I shun
A little while
Oblivion.)

The written line can be erased,
The carved stone is oft defaced,
But goodly lives, their courses run,
From worthy sire through better son.

'Till Good shall blend
With man to bless,
And Evil end
In righteousness.)

There is simplicity, too, in the following poem, which we quote from *The American Magazine*. The final couplets of the stanzas are especially telling. Of course, the whole poem suggests one of Swinburne's familiar refrains, but the development of the idea is original and imaginative.

What Three Can Do

By MARY CAROLYN DAVIES

Three men, together riding,
Can win new worlds at their will;
Resolute, ne'er dividing,
Lead, and be victors, still.
Three can laugh and doom a king,
Three can make the planets sing.

Three, when the whim shall take them,
Can gleefully fight, and win;
Touch Heaven's doors, and shake them,
Loose them, and look within.
Three can laugh Hell from the code,
As they jest along the road.

Three, with a joyful daring,
Can steal new fire from the dawn,
Ere, in their happy faring,
They've loitered, and galloped on
Three can level gods to men;
Three can build new gods again.

Here, from *The Book News Monthly*, is a bit of appreciative criticism skillfully done into verse. The second stanza is somewhat weak, but the first stanza and the last two lines of the third are admirable.

Robert Louis Stevenson

By ETHEL TALBOT SCHEFFAUER

He sings for youth, the passionate and sad
Youth that despairs and triumphs and is blind
And ever through the singing, clean and glad,
The keen cool moorland runs and the north wind.

A starkness and a fierceness and a pride
That still defies the night, and with caught
breath
Cries hope—the louder, not to be denied,
The sullen trumpets of the court of death.

Peal through the page with strong, insist-
ing surge
And ever in the blackness tenanted:
Somewhere far off, a song rings like a dirge,
And a veiled King stands by the poet's head.

Dr. Johnson's muse is not always solemn.
Here, for instance, is a graceful little song
that fairly radiates a lover's mirth. We
take it from his "Collected Poems" (The
Bobbs-Merrill Co.).

Love in the Calendar

By ROBERT UNDERWOOD JOHNSON

When chinks in April's windy dome
Let through a day of June,
And foot and thought incline to roam,
And every sound's a tune;
When Nature fills a fuller cup,
And hides with green the gray,—
Then, lover, pluck your courage up
To try your fate in May.

The proud she was as sunset clad
In autumn's fruity shades,
Love too is proud, and brings (gay lad)
Humility to maids.

Scorn not from Nature's mood to learn,
Take counsel of the day:
Since haughty skies to tender turn,
Go try your fate in May.

The cold she scorned as pearly light
Adown December even,
And stern as night when March winds smite
The beech's lingering leaves;
Yet Love hath seasons like the year,
And grave will turn to gay,—
Then, lover, harken not to fear,
But try your fate in May.

And you whose art it is to hide
The constant love you feel;
Beware, lest overmuch of pride
Your happiness shall steal.
No longer pout, for May is here,
And hearts will have their way;
Love's in the calendar, my dear,
So yield to fate—and May!

There is charm in this sonnet; it is a graceful and effective bit of writing, but the octave lacks the strength and dignity which mark the sextet. It appeared in the *London Nation*.

Altho the Season of Thy Life Decline

BY EDITH ANNE STEWART

Altho the season of thy life decline,
And this thy body show her wintry night,
These springtime suns will grant perpetual light,
Nor ever coldly on the lily shine,
Nor ever coldly on this flesh of thine:
Earth's children take no unreturning flight,
Yearly the primrose hails thy yearning sight,
Yearly each hedge restores the eglantine.

And tho thy brain and body tire and fall,
And tho Death make a harvest of thy dew,
And hang his sickle near thy door by night—
Before thee then new mercies will unveil,
New hands, full of old kindness, stay thy tears,
New eyes console thee with the old love-light.

There are three contemporary English poets who have learned thoroughly the value of simplicity. They are A. E. Housman, W. H. Davies, and Walter de la Mare. The last-named poet contributes to a recent issue of *The Westminster Gazette* a love-song so direct and so artfully artless that it might have been written in Elizabeth's reign instead of that of George V.

I Went to Pluck a Flow'r

BY WALTER DE LA MARE

I went to pluck a flow'r,
To send it to my love,
But no bloom could I find
Perfect enough and fair
To set among her hair,
Or where the laces bind
Her bosom, or above
Her heart to lie an hour.

And so my choice prefers
An unpretentious bloom,
A simple meadow weed,
A humble, blue-eyed thing:
Like the weak praise I sing,
It is to intercede
For one whose sighs presume
To beauties such as here.

And when my offering
She sees, and reads my rhyme,
She'll gently put it by,
She'll ponder for a while;
Then smile a little smile,
And sigh a little sigh,
And wonder that old Time
Has such a leaden wing.

"Cook could you
spare me a little, please?"

Artful minx! Bound whatever happens, to have
her fill of this tempting and satisfying dinner-course—

Campbell's Tomato Soup

And right here is the moral for every solicitous
mother—anxious first of all for the physical welfare of
her children.

Their normal appetite, nine times in ten at least, is
a safe guide to the food which does them good.

The genuine wholesomeness of this
perfect soup is what makes it so irresistible to the unspoiled appetite of young
and old.

Do you and yours get the full advantage of this fact as often as you might?
How about dinner today?

REVIEWS OF NEW BOOKS

(Continued from page 515)

exact information on that most difficult of subjects, fetishism. Mr. Weeks covers well the course of life among these tribes from the cradle to the grave, and among all classes from kings to the lowest slave. The illustrations are perhaps less effective than in his other volumes, but still have high value. The format is excellent—as is usual with the firm issuing this volume.

THREE "WHO'S WHO" BOOKS

Marquis, Albert Nelson (Editor). *Who's Who in America*. Vol. VIII. (1914-1915). Chicago: A. N. Marquis & Company. \$5 net.

During the fifteen years that "Who's Who in America" has been before the public, it has almost from its start been a necessity to writers and business men in this country, as well as abroad. The eighth edition (1914-1915) in its almost 3,000 pages contains 21,459 biographical notices, over 2,000 more than Vol. VII., altho nearly 1,000 prominent people have died in the biennial period since the previous issue. Of the birthplaces recorded, New York heads the list with 3,322 names. Indian Territory, Oklahoma, and South Dakota claim only one each. Of the 2,259 persons of foreign birth, Canada is credited with 452; England, 424; Germany, 385; Ireland, 178; Scotland, 129; France, 99; Sweden, 69; and Russia, 58; while six were born on the high seas. These figures are interesting as showing the great preponderance of the native-born. The biographical information given, while concise, is remarkably full and up-to-date, and the statistical information thorough.

Mohr, Wm. F. (Editor). *Who's Who in New York, 1914*. Pp. 800. New York: Who's Who in New York City and State, Inc.

This is the sixth biennial edition of "Who's Who in New York." It is restricted to biographical notes of prominent men and women in New York City and State. It is attractively bound and printed in readable type. The alphabetical arrangement makes it comparatively easy of reference, but the make-up could be improved by placing key-words at the heads of facing pages and by placing advertisements at the beginning and end of the book instead of scattering them through the reading-matter.

Shunjiro Kurita. *Who's Who in Japan*. Pp. (Japanese) 1293; (Foreign) 134. Portraits. Tokyo: Who's Who in Japan Office. Price, yen 3.50 (\$1.75).

This is the second issue of "Who's Who in Japan." Mr. Kurita gives valuable information regarding prominent men and women in Japan, both in politics and business. In his preface he says "it was not very important to insert the names of Koreans, but, if found necessary, they will be included in future editions." Other foreigners in Japan are treated quite fully.

The book shows a great need of competent editing and proof-reading. The editor claims that it is "a complete cyclopaedia and the only reference book of present-day Japan." Some of the examples of "English as she is writ" in Japan are peculiar. One advertisement declares that the "Harumoto soap factory is the earliest and most experienced soap factory in Japan." Viscount Chinda is described as Ambassador to Washington, but his address is given as "Japanese Embassy, Berlin." Funaki Rontaro went to England in 1893 to attend the

NABISCO

Sugar Wafers

THESE incomparable sweets are the most universally popular of all dessert confections. Whether served at dinner, afternoon tea or any social gathering, Nabisco Sugar Wafers are equally delightful and appropriate. In ten-cent tins; also in twenty-five-cent tins.

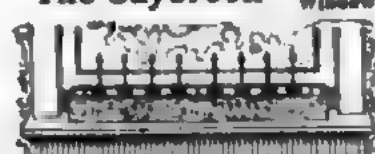

ADORA

Another dessert delight. Wafers of pleasing size and form with a bountiful confectionery filling. Another help to the hostess. In ten-cent tins.

coronation ceremony of Queen Victoria. Tadanori Ishiguro is "widely known for his wonderful development of common sense"; Katsuno Sake Inoue was "dismissed from his post, and appointed Ambassador to St. James Court"; Kosuke Tomeoka was "given chage and is engaging in investigation works of social reforming question by the Home Office"; Nichi Torikata was "also awarded prizes in money and medals"; while Homei Yoshida (altho not a vivisectionist) "once had the honor of engraving a cat in the presence of the Empress." The book, with its many photographic portraits, will be of great aid to newspaper men and others who have occasion to write of men in Japan.

OTHER BOOKS WORTH WHILE

Howells, W. D. *The Seen and Unseen at Stratford-on-Avon.* Pp. 112. New York and London: Harper & Brothers. \$1 net.

This delightful tale is told in a spirit of mischief and delicious humor—a fantasy in which the author meets both Shakespeare and Bacon during the celebration of festivities in Stratford in memory of the "Bard." The entrance of the spirits is made to seem most natural, and their conversations are very enlightening in regard to many mooted points. Reference to the "birthplace, where I wasn't born" is a frequent joke of the poet's, and in the good-natured railery between Shakespeare and Bacon in regard to the authorship of the plays, Mr. Howells makes his attitude very clear and voices some very telling arguments and explanations in regard to criticized points. The little volume is a bewitching literary gem, whose only fault is its brevity.

Wilson, James Grant (Editor). *The Presidents of the United States, 1789-1914.* Four volumes. Illustrated. Pp. 1,219. New York: Charles Scribner's Sons. \$7.50.

In these four volumes we have, in the story of the lives and activities of the Presidents, a sort of concise history of our country from the Stamp Act to the beginning of President Wilson's negotiations for the elimination of Huerta. Most biographies make dry reading, but these, from the pens of John Fiske, Carl Schurz, John Hay, and others, give us such intimate knowledge of the motives that actuated the leaders that they have an authority of such works possess. The series is illustrated by portraits of the various Presidents and the ladies of the White House during each administration, with many views. The appendices contain in tabular form the cabinets of each President and the popular and electoral vote for each.

Bancroft, Frederic (Editor). *Speeches, Correspondence, and Political Papers of Carl Schurz.* 4 volumes. Pp. 3,119. New York: G. P. Putnam's sons.

These handsome volumes were issued by the Schurz Memorial Committee as a tribute to the memory of one of the most useful men in our recent history, and one of the greatest of foreign-born citizens. In them are contained the many speeches and letters—a veritable life-history—of "the American Burke," beginning almost with the day the young German set foot on our shores, together with many interesting letters in reply. Throughout a long and busy life, General Schurz maintained the spirit that animated his student days, which urged him into the revolutionary movement in the Palatinate in 1849, and

10% More for Your Money Quaker Oats is put up also in a 25-cent size, nearly three times as large as the 10-cent size. By saving in packing it offers you 10 per cent more for your money. See how long it lasts.

**Vim-Food
Made Inviting**

A Giant Food with a Fairy Flavor

Quaker Oats is vim-food made delightful. Nature stores in every dish a battery of energy. We make it welcome—make it desirable—so children eat it liberally and often.

That's why Quaker Oats—all the world over—holds the dominant place among foods. The peoples of a hundred nations send here now to get it. They want this food—the supreme source of vitality—with this luscious Quaker flavor

Quaker Oats

The big, white flakes are made of only the richest, plumpiest grains. No puny grains are in it. Our process brings out a matchless taste and aroma, making a winsome dish.

Children and grown-ups—who all need vim—revel in Quaker Oats. See that they get it. Say "Quaker" when you order. It costs no extra price.

Quaker Cooker

We have made to our order—from pure Aluminum—a perfect Double Boiler. It is extra large and heavy. We supply it to users of Quaker Oats, for cooking these flakes in the ideal way. It insures the fullness of food value and flavor. See our offer in each package.

(Written by a President)

My final test of a man

I ran the business myself once—and did it well. That's why I am president. Others now run it for me and my job is to pick the men. The one virtue I insist upon in a responsible executive is that he shall spend my money as though it were his own. I don't dare to trust a man who is not economical. The purchasing agent got his job by detecting a big waste in our printing matter and working out a plan to standardize form letterheads, inter-office forms, price lists, etc., on a uniform, strong, quality paper.

It is always ready at the mill in twelve colors and white and in three finishes, so the printer makes quick deliveries. The name of this paper is Hammermill Bond and the maker thinks enough of it to put his water-mark in each sheet

A President.

Waddington, Mary King. *My First Years as a Frenchwoman*. Illustrated. Pp. 270. New York: Charles Scribner's Sons. \$2.50.

Mary King Waddington is not new to the business of authorship. Knowing her style and claims to distinction among literary folk, readers will welcome this account of the years following her marriage to M. William Waddington, who at that time was a deputy in the National Assembly in Versailles, and soon after became Minister of Public Instruction, and later Foreign Minister, delegate to the Berlin Congress, and Prime Minister of France. Besides all this, the fact that she was the daughter of President King, of Columbia, and granddaughter of Rufus King, our second Minister to England, endears her to American readers and gives us a sense of proprietorship in her reminiscences. The narrative covers the years 1876-1879 and recounts simply and graphically her duties as a diplomat's wife. It gives an intimate picture of the lives of prominent Frenchmen and foreigners who shared her social activities. The interested reader will get an insight into the formalities of foreign functions, the obligations imposed on those who served the Republic of France, and will find that, under the formalities, there beat many a heart warm and sympathetic. Vivid pen portraits come from the hands of this woman. We are made familiar with kings and queens, presidents, poets, artists, and musicians.

Self's *World's Press for 1914*. Edited by Hubert W. Post. Large 8vo, pp. xiii-516. London: Selfs Ltd. 5s. net. Postage 2½ extra.

This useful work, now in its thirty-third year of annual issue, is to be welcomed on the editorial desk. As a guide to the British press, it is invaluable, and has made its way throughout the Empire; but the foreign newspaper list is not so perfect as the English, while the Russian, Indian, and Balkan press are inadequately represented. The same may be said to some extent of the Turkish press. But these deficiencies will be felt perhaps only by those who handle foreign news from original sources. No doubt the managers of so indispensable a compilation will in time remedy its defects.

Poincaré, Raymond. *How France is Governed*. 8vo, pp. 376. New York: McBride, Nast & Co. \$2.25 net.

M. Poincaré is well qualified, both as statesman and writer, to present a living and accurate account of the French Government. While his work is not historic in character, it may be called a parliamentary guide and a living picture of the Republic which has its public offices in what once were the palaces of kings. Side by side with this interesting volume the student should have before his mind France as it was in the age of Louis XIV., when feudal subserviency reigned and the noblesse was paramount. In such days a man like Jaurès would have been summarily decapitated or banished eternally

to the lowest dungeons of the Bastille. M. Poincaré gives an account of the republican constitution, the distribution of votes, and the legislation by deputies and senators. The election of the President is explained, and we have a chapter on the administration of justice and the police, the Army and Navy, national education, and compulsory military service. The information thus accumulated is valuable.

Fabre, J. Henri. *The Life of the Fly*. Pp. 470. New York: Dodd, Mead & Co. \$1.50. (Translation.)

Henri Fabre is already well known in the American literary world from his "Life of the Spider." The "Life of the Fly" is no less interesting and instructive, tho it takes a little patience for one to get thoroughly into the subject. The author writes of flies as tho they constituted a race of architects, lawyers, philosophers, and logicians, and we become amazed at the discriminating powers ascribed to them. Besides intensely interesting facts in fly development and utility, there are introduced some autobiographical chapters which are fascinating and eloquent, describing the author's methods of study and research. His tribute to geometry is unique: "True it does not foster imagination, a delicate flower, blossoming none knows how, and unable to thrive on every soil, but it arranges what is confused, thins out the dense, calms the tumultuous, filters the muddy, and gives lucidity, a superior product, to all the tropes of rhetoric." Practical advice is given as to the proper way in which to protect food, especially meat, against the ravages of the fly. His chapter on the mushroom is illuminating. The value of his own discoveries is thus characterized by Fabre, now a nonagenarian. "In my declining days, I, a humble wood-cutter in the forest of science, make haste to put my bundle of sticks in order. What will remain of my researches on the subject of instinct? Not much apparently; at most one or two windows opened on a world that has not yet been explored with all the attention it deserves." Much of the book is thrilling and dramatic, just as was "The Life of the Spider."

Bruce, H. Addington. *The Education of Karl Witte*. Translated by Leo Wiener. New York: Thomas Y. Crowell Company. \$1.50.

No question is of more vital interest than methods of educating children. Both parents and educators will find many valuable suggestions in this account of Pastor Witte's theories and practices of a hundred years ago. These made a marvel of his son Karl, who, at the age of nine, had mastered nine languages, at ten had entered the University, at fourteen was a Ph.D., and at sixteen a university teacher. To emulate the example of this famous pastor, parents would have to educate themselves, control their friends and assistants, and devote every minute to the correct solution of the daily problems of a growing child. Few, if they desired, could fulfil the conditions necessary to such ideal perfection. No thoughtful teacher could fail to receive help and inspiration, however, from the exhaustive account of Pastor Witte's theories as he worked them out. His text is this: "Even a mediocre child may be approximated to a higher being if one understands

Willys Utility Truck

Price includes chassis and driver's seat

3/4 TON - \$1350

Bodies extra.
Prices f. o. b. factory

This shows the very limited and restricted territory covered by the average team of horses during the average working day

The Willys Utility Truck covers four times the territory of the average team and can do it twice every 24 hours if necessary.

Which produces the most profit ?

Commercially speaking the horse is passé.

The main reason for this is graphically explained above.

With its very high cost of delivering; its slow means of getting there; its quick depreciation; its inability to cope with summer heat and the bitterness of winter; its limited working hours and the uncertainty of its life, the horse is rapidly disappearing.

For that which retards business and prevents progress is bound to be discarded.

The Willys Utility Truck in competition with horses has time and time again accomplished 300% to 400% more work.

This very decided advantage means that a much greater volume of business can easily be handled at a greatly reduced cost.

If you operate horses why not let us explain the many advantages and greater economy of the Willys Utility Truck? Study again the illustrated comparison above. Which seems the most logical and profitable to you?

It will pay you just to have a good talk with our dealer in your town.

At least send for our literature. This gives many more plain facts and convincing figures and proves the extravagance of horses and the economy of Willys Utility Trucks.

Send this coupon now.

how to do it and is willing to try it." All his teaching is against allowing a child's mind to "lie fallow," until he is eight or nine.

Kunz, George Frederick, A.M., Ph.D., D.Sc. *The Curious Lore of Precious Stones.* Pp. 406. Philadelphia: J. B. Lippincott Company.

The object of Dr. Kunz's book is to "indicate and illustrate the various ways in which precious stones have been used at different times and among different peoples, and more especially to explain some of the curious ideas and fancies that have gathered around them." The need of such a book has been vaguely felt by many. There is something interesting for every one in so comprehensive a study of the physical origin of different gems, as well as the significance of their power, either talismanic or religious. The book is beautifully illustrated and full of information in regard to the history of stones, the superstitions connected with them when worn as talismans or amulets, and also their popularity as adornments. The subject of crystal-gazing is delightfully treated. So are legends connected with "birth-stones," and the therapeutic use of precious stones as traced back to ancient times. Each stone is given individual attention. Famous jewels are exhaustively described. Nothing is omitted that can interest or instruct the reader in any phase of the subject in general or particular.

Cabot, Richard C., M.D. *What Men Live By.* Pp. 336. Boston and New York: Houghton Mifflin Company. \$1.50.

Altho a physician, the author of this mentally stimulating volume looks outside of medicine for the things that should restore health, happiness, and ambition to any one who is discouraged, and should make life broader, deeper, and more "worth while." He chooses four cures: "Work, Play, Love, and Worship." In entertaining chapters he proves how these should form helpful companions to all ambitious men and women. "Real life, then, is after all the best teacher and the best doctor." His style is intimate and searching. He makes it very plain how to distinguish "Work, Play, and Love," from "Drudgery, Frivolity, and Lust," claiming that the former trio is open to rich and poor, to young and old; they are of all times and all races in which character is an ideal. The practical application made by the author of his principles to our daily life and its problems makes the book doubly interesting and singularly helpful in giving a sane and healthful comprehension of apparent difficulties. The real key-note of his plea is: Give each one an aim in life, something in the line of work which will make him feel that he is of use and adding to the world's success, and you have made that man contented and happy, and the rule of "Give and take" should be the prevalent adjuster at all times, and in all cases.

Laughlin, Clara E. *The Work-a-Day Girl.* Pp. 320. New York, Chicago, and Toronto: Fleming H. Revell Company. \$1.50 net.

This is a book on present conditions among the working girls and developed along lines of the present agitation in regard to the "white-slave" traffic, and the perils of the unsuspecting girl in search for work. It is not so much a disquisition and

Before You Get Coal

Install a Majestic Coal Chute in the space of the regular basement coal window. Protect the side of your house from being marred or scarred by the careless coal man. Save the lawn or walk from being littered up with coal dust and stray lumps. When open, hopper comes out and catches all the coal. It all goes into the coal bin. When closed, sets flush with the foundation. Has wire glass door protected by a steel shield, so gives light to the cellar. The body is heavy steel. Frame and door cast iron and hopper is boiler plate. Absolutely burglar proof. Locks automatically.

Majestic Coal Chute

*Easily and Quickly Installed
in Any Home*

Any house, no matter how old, should have one. No trouble at all to put one in the space the window now occupies. The opening can easily be made to fit the Majestic. It will improve the looks of your house and enhance its value. Is a big talking point if you want to sell.

Get One Before Your Winter Coal Comes

Hold off your coal delivery until you get a Majestic Coal Chute. 100,000 now in use. Architects and Builders specify the Majestic in the new modern homes and buildings.

Book Free to Home Owners Write today for book. It is free for the asking. It describes the Majestic Coal Chute in detail, explains its advantages and shows how it can be installed in any home. Write now—get full particulars and low price before the coal comes.

THE MAJESTIC CO., 420 Erie St., Huntington, Ind.

indicated solution of the problem as a brutally frank statement of certain facts and a recounting of certain incidents witnessed by the author in the night courts, the factory, public offices, and places of amusement frequented by the young bread-winner. The episodes cited and conditions described are sufficiently startling and revolting, but, in spite of the plea for help in changing conditions, the book does not give convincing plans for amelioration of dangers, except in making a plea that each woman shall take hold and help, assuming personal responsibility in order to make impossible some common occurrences. We wish we could agree with the writer that woman's participation in politics would solve the problem successfully. The author is earnest and explicit, and she puts her finger on the most potent and fundamental cause of wrong-doing when she calls attention to the natural and deep-seated love in all young people for "good times" and recreation.

Hawley. Walter A. Oriental Rugs. With 11 color-plates and 8 half-tone engravings, and 4 maps. New York: John Lane Company. \$7.50.

Here is a book that to the connoisseur will be a delight, to the student an invaluable acquisition, and to the one who has regarded the values of oriental rugs as fictitious and the admirers of them either faddists or poseurs, an enlightening revelation. Mr. Hawley, who is thorough in his treatment of the subject, says:

"The more we study the several fields of art in the Orient, the better we realize the wonderful creative genius of its people, and . . . when we realize that in different lines of artistic effort the genius of Asia has rivaled and surpassed that of Europe and America, we can believe that choice specimens of woven fabrics are to be regarded as works of highest art."

It is principally in the coloring that rugs claim interest and admiration. The colors derived from vegetable or animal dyes grow more mellow and beautiful with passing years. It is the commercial element, the attempt to cheapen the products by use of aniline dyes, that has detracted from the value and beauty of the more modern rugs now on the market. We may begin the study of oriental rugs with the assurance that the further it is pursued the greater will be our appreciation and delight. First, we are told in most interesting narrative of the physical environment which influenced the rug-producing lands, the effect of the climate, the highly imaginative and poetic temperament of the people in contact with elemental forces, and the materials used by different makers. The rug-producing countries may be regarded as a "geographic unit," as all are contiguous—China, India, Afghanistan, Baluchistan, Persia, Turkestan, Caucasasia, and Asia Minor. In order to understand the nature of the nomadic tribes as well as the artisans of the more populous cities, we have to understand the history of the country and its conquests, as well as its political home struggles, as it all has an important influence on art. A comprehensive study is given of the materials used and their comparative values, then of the methods of producing and applying the different vegetable dyes, and finally a detailed description of the looms used in weaving, with maps of localities of production.

Here Started the Great Bowser Idea

Since then Millions Have Been Saved in Gasolene, Oil and Power—and Human Life Protected

Above is shown the record of sales of the first Self-Measuring Oil Pump which was invented by S. F. Bowser—*Sold on the Idea alone—long before the pump itself was made.*

An Eight Cylinder Cadillac

The matchless mode of motoring reserved to only a few privileged persons in the Old World (at an almost prohibitive price) developed by the Cadillac Company for American Motorists!

Serious minded motor car manufacturers have sought the ideal power principle for fifteen years.

The Cadillac Company has never relaxed for a month, a week, or a day, its patient pursuit of that underlying principle which would prove to be ultimate and final.

In the course of that long journey toward perfection, the Cadillac Company has given serious consideration to every reputable type of motor—endeavoring to scrutinize with scientific impartiality the virtues and the limitations of each and every one alike.

Building and experimenting in turn, with every type from the single cylinder to the six, and from the poppet to the rotary and to the sliding valve, we have been carried forward irresistibly, by the impetus of our own research, to the highest form of frequent-impulse motor—the V Type Eight Cylinder.

It is admitted, we believe, that this Company produced in the four cylinder field, a succession of cars which earned the title "Standard of the World."

Beyond that, loomed for us only one hope and possibility—the promise of a motor in which there would be no lapse, no pause, no hesitation between impulses, but an overlapping of strokes so complete as to produce a flow of power almost literally liquid in its continuity.

We sought the medium by which the Cadillac would be endowed, not with *approximate* freedom from gear shifting, or *approximate* hill-climbing ability on high, or *approximate* swift acceleration, but with the *highest possible form* of these three characteristics.

The Cadillac already possessed those qualifications in an extraordinary measure, but we wanted them developed to a point *beyond which it was not possible to go.*

This requirement pointed straight to an Eight Cylinder Cadillac with four power impulses during every revolution of the flywheel.

How fully these luxuries of travel have been achieved, nothing but your first memorable ride in the new Cadillac can reveal.

As the Cadillac softly speeds along under the almost magic influence of this new power-principle, you become oblivious to the wonderful mechanism which gives you motion. The sensation is as unique as though you had never motored before—the sense of floating through space comes to you as it never came to you before.

It is useless to try to depict in words, thrills which you have never felt—or to portray a degree of ease which you have never experienced.

Good roads yield up a velvet quality of travel undreamed of.

Bad roads lose much of their terror, and hills seem almost to flatten out before you—so easily, so quietly, and with so little effort does the car surmount them.

In operation, you enjoy the extreme of flexibility—from less than three miles an hour in crowded city streets and congested traffic to more than sixty miles an hour on the open highway, without change of gears.

Comfort is subserved in the highest degree by the absence of vibration and the pronounced flexibility—and, again, by the yielding springs; the ease with which the car is handled and controlled; the smoothness of the worm bevel driving gears, the soft clutch action and the exceptional sense of rest and relaxation.

The supreme motoring experience of your life awaits you when you take your first ride in this truly remarkable car.

PERSONAL GLIMPSES

KITCHENER OF KHARTOUM

It was our own O. Henry who told the story of the little department-store girl, of the smirking "Piggy" waiting below stairs, and of the eyes that seemed to glow from the lithograph of the Sirdar, Lord Kitchener of Khartoum, on the wall of the little girl's third-floor-back. Those steady, cold, fierce eyes are responsible for many more remarkable things than the rescue of a department-store girl in Gotham. They have made the Englishman, who, the *Hartford Times* remarks, is not an imaginative person and is strongly averse to hysteria of any sort, work himself up into a state of mind wherein he regards the present head of his army as a sort of supernatural being. It is interesting to reread George W. Steevens's chapter on Lord Kitchener, in his "With Kitchener in Khartoum" (New York: Dodd, Mead & Co., 1899), to note with what superlatives his eulogy is phrased. Steevens, of the *London Daily Mail*, was one of the most brilliant of modern English journalists, and his estimate of a man should not ordinarily fall too high or low of the mark. We may believe, then, that we are come near to looking at the real Kitchener in this pen portrait from Steevens's book:

Major-General Sir Horatio Herbert Kitchener is forty-eight years old by the book; but that is irrelevant. He stands several inches over six feet, straight as a lance, and looks out imperiously above most men's heads; his motions are deliberate and strong; slender, but firmly knit, he seems built for tireless, steel-wire endurance, rather than for power and agility; that is also irrelevant.

Steady, passionless eyes, shaded by decisive brows; brick-red, rather full cheeks; a long mustache, beneath which you divine an immovable mouth; his face is harsh, and neither appeals for affection nor stirs dislike. All this is irrelevant, too; neither age, nor figure, nor face, nor any accident of person, has any bearing on the essential Sirdar.

You could imagine the character just the same as if all the externals were different. He has no age but the prime of life, no body but one to carry his mind, no face but one to keep his brain behind. The brain and the will are the essence and the whole of the man—a brain and a will so perfect in their workings that, in the face of extremest difficulty they have never seemed to know what struggle is.

You can not imagine the Sirdar otherwise than as seeing the right thing to do and doing it. His precision is so inhumanly unerring, he is more like a machine than a man. You feel that he ought to be patented and shown with pride at the Paris International Exhibition. British Empire: Exhibit No. 1, *hors concours*, the Sudan Machine.

The man has disappeared. The man Herbert Kitchener owns the affection of

private friends in England and of old comrades of fifteen years' standing; for the rest of the world there is no man Herbert Kitchener, but only the Sirdar, neither asking affection nor giving it. His officers and men are wheels in the machine; he feeds them enough to make them efficient, and works them as mercilessly as he works himself. He will have no married officers in his army—marriage interferes with work. Any officer who breaks down from the climate goes on sick leave once; next time he goes, and the Egyptian Army bears him on its strength no more. Asked once why he did not let his officers come down to Cairo during the season he replied, "If it were to go home, where they would get fit and I could get more work out of them, I would. But why should I let them down to Cairo?" It is unamiable, but it is war, and it has a severe magnificence. And if you suppose, therefore, that the Sirdar is unpopular, he is not. No general is unpopular who always beats the enemy. When the columns move out of camp in the evening to march all night through the dark, they know not whither, and fight at dawn with an enemy they have never seen, every man goes forth with a tranquil mind. He may personally come back and he may not; but about the general result there is not a doubt. You bet your boots the Sirdar knows; he wouldn't fight if he weren't going to win. Other generals have been better loved; none was ever better trusted.

So far as Egypt is concerned, he is the man of destiny—the man who has been preparing himself sixteen years for one great purpose. For Anglo-Egypt he is the Mahdi, the expected; the man who has sifted experience and corrected error; who has worked at small things and waited for great; marble to sit still and fire to smite; steadfast, cold, and inflexible; the man who has cut out human heart and made himself a machine to retake Khartoum.

Lord Kitchener is sixteen years older now, and it may be supposed that his ambition, which Steevens has hinted was the backbone of his "never-fail" efficiency of the old days, will not be as keen an inspiration as before. Still he has already fulfilled one prophecy of 1898, for Steevens writes: "There are some who nurse a desperate hope that he may some day be appointed manager of the War Office. He would be a splendid manager." And that is just what he is at present. The *Hartford Times* comments briefly upon the man's career, and upon the part that he is likely to play in the present war:

In his two best-known campaigns Kitchener has shown a tremendous capacity for arrangement; a genius for the utilization of men and munitions. Seemingly inspired at times in his plans of campaign and ruthless in the accomplishment of his purposes, Kitchener, altho never tested in a really great war, undoubtedly holds place in many military minds as the ablest soldier of Europe. He is sixty-four now and old as field commanders go, but if physical decay or loss of mental alacrity has made itself felt in him it has given no outward sign. As

America's Greatest "Light Six" \$1485

The Man Who Cares For His Own Car

will now find a car on the market which was primarily designed to meet his requirements

Nothing has been sacrificed from an engineering standpoint. Practically all working parts are completely enclosed. Yet accessibility is one of the chief features of its construction. This car is

THE
HAYNES
America's Greatest "Light Six"

The grease cups and oilers may be easily reached; the carburetor is conveniently located; the valves are readily adjustable; the motor and generator are very accessible; storage battery conveniently placed—in fact, every part and every unit has been carefully considered from the standpoint of the owner, making this car particularly well suited to the man who prefers to care for his own machine.

In addition to these desirable features this car represents a sterling value in a high grade, light weight, economical "six" with ample power.

We also build Model 31, "Big Six," with 65 brake horsepower and 130-inch wheelbase—\$2250. Model 32, Haynes "Four," with 48 brake horsepower and 118-inch wheelbase—\$1660.

POCKET STANDARD DICTIONARY

the latest addition to the Funk & Wagnalls Standard Dictionary Series. "A marvel of condensed information." 600 Vocabulary terms; 12 pages colored maps; many valuable supplementary features. Cloth, 25 cents; flexible leather, 35 cents, net; indexed, 5 cents extra.

FUNK & WAGNALLS COMPANY, New York and London

"THE INFLUENCE OF THE

MIND ON THE BODY. A most interesting

little volume on a widely discussed topic, by the famous Dr. Paul Du Bois of the University of Berne. 30 cts. net; by mail 34 cts. Funk & Wagnalls Company, 354-60 Fourth Avenue, New York City.

The Home Life of the Ancient GREEKS

Translated from the German of Prof. H. BLUMNER
By ALICE ZIMMERN (Girton College, Cambridge)

With Over Two Hundred Illustrations

The purpose of this volume is to present, in a clearly written and attractive style, a description of all sides of life in ancient Greece. While to the student, by illuminating the many allusions to customs and manners, it will make clear the preparation for, and study of, the Greek texts, its interest will be equally felt by the general reader. *The Nation*, New York, says: "It is a book which may be used either for consecutive reading, or, owing to its full index, for reference."

Large 12mo, cloth. Profusely illustrated and thoroughly indexed.
Price \$2.00 Net; average carriage charges, 12c.

FUNK & WAGNALLS COMPANY, Publishers, 354 Fourth Avenue, New York City

the administrator of the English Army he has a difficult task. The line forces of the empire are not generally credited with the professional skill of their continental neighbors, the Territorials are an unknown quantity, and while the Boers made plain the lesson that men on horses move faster than men on foot, and that modern cannon shoot with greater rapidity, range, and accuracy than venerated armament of an earlier date, there is some ground for fear that the War Office may not have maintained the efficiency it knew just after 1900.

But in the balance of international conflict a master mind may outweigh many physical defects. Of what value was the mitrailleuse, which Bazaine did not know how to use, against the infantry which Moltke did know how to use!

In view of these comments upon the personality of England's leader on the field of battle, it is interesting to run over Lord Kitchener's last word to the men of the English expeditionary forces. Each British soldier now on the Continent carries in his knapsack a pamphlet signed by Field Marshal Earl Kitchener advising him how to conduct himself. The text of the pamphlet is as follows:

You are ordered abroad as a soldier of the King to help our French comrades against the invasion of a common enemy.

You have to perform a task which will need your courage, your energy, and your patience.

Remember that the honor of the British Army depends on your individual conduct.

It will be your duty not only to set an example of discipline and perfect steadiness under fire, but also to maintain the most friendly relations with those whom you are helping in this struggle.

The operations in which you will be engaged will, for the most part, take place in a friendly country, and you can do your own country no better service than in showing yourself in France and Belgium in the true character of a British soldier by being invariably courteous, considerate, and kind.

Never do anything likely to injure or destroy property, and always look upon rioting as a disgraceful act.

You are sure to meet with a welcome, and to be trusted. Your conduct must justify that welcome and that trust.

Your duty can not be done unless your health is sound, so keep constantly on your guard against any excesses.

In this new experience you may find temptation both in wine and women. You must entirely resist both temptations, and while treating all women with perfect courtesy you should avoid any intimacy.

Do your duty bravely. Fear God and honor the King.

CURBSTONE COLLOQUIES

THE New Yorker is no different from other men in his fondness for making public his views on important topics, or in his willingness to argue out any matter of general interest with the nearest opponent. Give him an hour or so in which to form some idea concerning what it is that the newsboys are shouting, and he is ready for all comers. When not debating, himself, he enjoys picking up ideas from others who are, and in this way has been formed, quite naturally, the Times Square Debating Society, as the *New York Times*, in all modesty, calls it. We learn that—

Its daily sessions, and especially its nightly sessions, have become a feature of the life of the town. Night-workers going home near dawn often find it still unadorned, and at sunup forehanded debaters are already gathering. On Sundays such of the holiday crowd as does not go to the beach or has returned from it boards the Subway and hastens to the square, packing it to the curb. The bulletins are the excuse, but after the bulletin service stops the debating society is still in session. There is never a moment of the day when it is not there. It is the outlet for the city's feelings, a fine chance for expression.

Any one can become an orator, and hundreds do. The crowd is like no other crowd ever seen in New York. It is split up into little rings. In the center of each ring stand two debaters, brought into collision by accident, generally of varying speech. Here a German declares himself, and instantly a Frenchman challenges him to verbal duel; in a moment their audience forms itself into a circle about them. There a Servian and an Austrian are clashing, with their laughing and applauding auditors around them. The style varies enough to suit any taste. If you like repartee and satire, you can get it from these two duelists at the Subway kiosk; if you prefer solid argument and knowledge of the matter in hand, step over toward the newsstand and join the audience around these other two.

If you seek a fiercer excitement, you will go away disappointed; the argument does not degenerate into fistieuffs. It is remarkable, considering how deep the passions are that find expression here, how well the debaters hold themselves in hand. Each speaks for his endangered fatherland, and the matter lies close to his heart. Flashing eyes and voices that deepen and become rough with feeling you will see and hear, but the sarcasm and retort often run close to the border line, they do not cross it. There is real wit, too, and sometimes rough eloquence. "You'd better give it up, you're outnumbered," called a Frenchman to a German beset with three adversaries. "I can take care of three at once, and so can Germany," is the retort that brings applause from a none too friendly audience. In the center of another group is a woman making a moving appeal for sympathy for Germany. No statement goes unchallenged, but the challenge is usually couched in terms that are not provocative. The man who knows his subject is instantly the center of a respectful crowd seeking information.

The police were suspicious and vigilant

Distinctiveness without paying anything extra for reputation

The Moline-Knight cars now in the hands of private owners have made good. Every claim made by us has been substantiated.

Moline-Knight represents progress

The Moline-Knight is a car that is instantly recognized on the boulevard. It is symbolic of reliability, comfort and luxuriousness, and is as near perfection as human brains, energy and automatic machinery are possible to make it. All steels, wood, upholstering leather and other materials used in the Moline-Knight cannot be better because the world's markets and craftsmanship have not yet produced anything superior.

This is the motor that made the phenomenal 337 hour non-

stop run in the laboratory of the Automobile Club of America, New York, averaging 38 horsepower under load and at the end of the test reaching 53.6 horsepower at 1682 revolutions per minute.

Get our literature

Because of our limited production—not over 1200 cars during 1915—and the increasing and insistent demand for Knight motored cars at a fair price—the Moline-Knight 50 H. P., Four-Cylinder at \$2500 will be oversold early. So write at once for descriptive booklets and get acquainted with this splendid car.

THE JOSEPH DIXON CRUCIBLE CO.
JERSEY CITY, N. J.

Established in 1897

the first few nights, but they soon found that there was little to be afraid of, and the Manhattan Debating Society became an institution. New Yorkers may take pride in this institution, this new way of venting war feeling, which so quickly succeeded the dangerous and provocative parades and war-songs. And we extend our respectful congratulations to our fellow citizens from the eight warring nations on the object-lesson they are giving in Americanism.

A SKY-SCRAPER SCHOOL

THOSE who have been inclined to disapprove of the rapid advance of the technical and trade schools have now, in the new "school for office-boys," started in the New York Woolworth Building, an opportunity to see how strong is the demand for business and industrial training for school-children. The school for office-boys is the result of a need universally felt. If the young people who come to the offices to find work have not learned in the city schools enough to enable them to perform their tasks thoroughly and intelligently, so that they may attain to increased responsibility, then another school must be found for them. Cases have been known where the boy or girl assistant could not file letters alphabetically because the new method of teaching does not start with alphabetical study. The New York Times points out that the Woolworth school may be followed by many similar schools in office-buildings. As to the present plans:

The Merchants' Association is working with the Board of Education in the matter. Officials of the association and of the board have had extended conferences, and it is believed on both sides that the formation of this school—which, it is stated, will be the first office-building school in the world—will mark a new step in vocational education.

Teachers will be provided by the Board of Education, their number depending on how many employees become pupils. It is expected that the school will begin with 100, but it is thought that ultimately as many as 500 boys and girls, young men and young women may be enrolled.

To make the school a success it will not only be necessary for the employers to co-operate, but the employees themselves must enter into the plan with enthusiasm. It is believed that there will be little difficulty on this score, once the school gets under full headway and once the employees find that what they learn in class is going to make them worth a bigger weekly wage and will aid them to promotion.

It is a cause for complaint now among many down-town business men that it is difficult to get satisfactory employees among the juniors. Office-boys are declared frequently to lack rudimentary knowledge and the idea of thoroughness. The same complaint is made as to office-girls. Other juniors, such as assistant clerks and typists, are stated to lack the education which will enable them to be promoted to better posts.

The idea of the school came, indeed, from an experience of this sort in the office of the

Merchants' Association itself. There was in the office a young woman employed as a typist. She was bright and trustworthy. It was desired to promote her and make her a stenographer. Then it was found she lacked the knowledge which would enable her adequately to do stenographic work of the kind required. Thereupon the girl was given six months' leave of absence to take the courses she needed. This incident led to the discussion of the feasibility of the establishment of schools in office-buildings, and thus to the present intended experiment.

A WILD VOYAGE

A YOUNG Englishman, working his way around the world and traveling strictly "on his own," once found himself stranded in San Francisco, apparently for good and all. The only alternative that presented itself during the short time that his slender resources held out was to ship on a typical "coffin-ship," or tramp steamer of the very worst and most uncertain sort, and work his way to Japan. His name was A. Loton Ridger, and he tells the story in "A Wanderer's Trail" (New York: Henry Holt & Company). Incidentally he is a Fellow of the Royal Geographical Society. At that time, however, he had only two dollars in his pocket, and with the whole region in a terrible state of financial panic due to the recent earthquake, with no chance to get work on land, and surrounded by thousands of men even more desperately situated than himself, he did not delay in making up his mind. There was always the chance that the old ship might stay above the water, and this uncertainty compared to the certainty of starvation on shore seemed the lesser evil. He made his way to the docks and finally managed to find the *Santolo*. He says of her:

In appearance she was about as dilapidated an old tramp as one could have wished to see, her rusted sides and ancient paintwork fully testifying to her age of twenty-five years. Her design was old-fashioned, most of her accommodation being aft in the poop, which was connected to the bridge deck by a running bridge over the aft-well deck. Her registered tonnage was 2,700 tons. I am not giving any unnecessary detail regarding the *Santolo*, for to follow all the old ship's adventures it is necessary to have a little idea of what she was like. The man-in-the-street knows very little about the deep-sea tramp that supplies him with his daily requirements, his slight knowledge of the mercantile marine being limited to a superficial acquaintance with palatial mail steamers.

The *Santolo* flew the German flag, being captained and officered by Teutons; her crew was Chinese. I said officered by Teutons; that, at the time of my joining her, was hardly correct. Her deck officers then consisted of the captain, a young man of twenty-six, the none the worse for that, and the chief officer, an even younger man. The engine staff was equally deficient in officers. The "chief" was only possessor of a second's "ticket," besides being hopelessly addicted to drink, and a poor engineer to boot. The second engineer, the only other officer the engine-room then possessed, was, however, quite a different type

The Extra Guarantee

Price is what one gives—Value is what one gets back. The return on an investment in a Continental Motor (representing one-quarter of the total manufacturing cost of a motor vehicle) is fixed and sure. It is a handsome interest—even interest compounded—in the form of year after year of most satisfactory service.

Continental Motors

The Continental Motor Manufacturing Company is the world's greatest buyer of high grade motor material; is backed by a decade of success; possesses the finest equipment for accurate and cost-saving work; has the men who know how.

Solely by the combination of *all* these can be made possible such extra values as distinguishes every Continental Motor.

And only as the months and seasons

go by, is the full worth of the extra materials, tests, and scrupulous inspections of a Continental made apparent. On the day of resale—then is the last extra value of a Continental revealed. For a car is as young, or as old, as its motor.

Over one hundred firms are now building into their product the "extra value" of Continental Motors. Tens of thousands of users are benefiting thereby. Choose what type you will, but insist on the Continental-powered truck or pleasure car.

Elgin Wonder Tales

An Elgin Watch that refused to be eaten

"ABOUT the year 1896 I got my Elgin Watch. It has many times bumped on the rocks about the mine. It has been at the bottom of El Salotra Creek, in Mexico. I had it in Alaska in the cold and wet, and for a week at a time I was soaking wet. I went into the Thunder Mountain, Idaho, excitement in 1902-3. This mine is a quicksilver mine, and when mercury is volatilized into fumes from the ore and rock it penetrates anything, and even eats iron and solder. While superintendent of this mine for 3½ years I carried my Elgin Watch, and it never was hurt one particle. With all the jerks and knocks it has received, it has kept time to the second."

(Extract from signed statement, filed in our office.)

No mere "watch" could stand up against such extremes of climate, such exposure to the elements and to destructive acid fumes.

ELGIN Watches

both for men and women, are master mechanisms, designed and built for all emergencies. Put to any service test, the result will be in Elgin's favor.

LORD ELGIN—The Masterwatch. \$115 to \$85.

G. M. WHEELER—The Foreman's Medium Priced Watch. \$50 to \$25.

Ask your Elgineer—your local jeweler—to show you different models. Booklet on request.

ELGIN NATIONAL WATCH CO.
Elgin, Illinois

of the steel connecting-rods of the steering-gear parted under the strain and left the runner to the mercy of the seas and in imminent danger of being so battered as to be useless. On top of this the Chinese crew struck. The men, paralyzed with fear and certain that the ship was ill-omened, insisted upon remaining below in the fore-castle, burning incense to their gods, awaiting the end with sullen and silent fatalism. The writer continues:

There remained but the four of us deck officers to start in the dim light of a flickering lantern the almost hopeless task of lashing the rudder. Large six-and-a-half-inch hemp hawsers snapt like twine under the tremendous strain of the seas. After three unsuccessful attempts we were compelled to leave the poop for a time to turn our attention to an even greater danger that threatened the safety of the ship—our unbattened coal-hatches, through which water was fast pouring. The ship, in fact, was slowly filling.

The task of shoveling the loose coal from off the hatches was a heartrending one, as every lurch of the distressed steamer undid the work just done. Working feverishly, with shovels and with our hands, we at last were able to get the hatch-covers on, despite the constant shifting of the loose coal at every roll of the ship. This task completed, we once again returned to the poop to try to lash the rudder-quadrant. Realizing that hemp ropes were unable to stand the strain, we thought of a heavy steel hawser. This was stored in the fore-castle. The ship, lying in the trough of the seas, was now rolling nearly on to her beam-ends. To keep a footing on the sloping sea-swept decks was an almost impossible feat. So the task of bringing that steel hawser through the ship, dodging the heavy seas that continually broke over us, hanging on to life-lines, clutching, in short, to anything on which one could get a hold, while sea after sea swept us clean, was about the hardest I can recall. But our effort with the hawser was successful. By means of it we at last securely lashed the quadrant to the "bits," thereby rendering the rudder immovable. When divers examined the ship at Honolulu, they found one of the sockets of the rudder all but broken off; it was not lashed a moment too soon.

The day—Christmas day—broke dull and threatening. Another serious trouble now confronted us. Owing to the continual rolling and lurching of the steamer, the cargo in two of the hatches had shifted considerably, listing the ship well over to starboard. By noon she was listing fully seven degrees. There was nothing to be done but open up the hatches and retrim the shifted cargo. To open up hatches while big seas were being continually shipped was a risk we had to run. The ever-increasing list of the ship was a serious danger, one that might at any moment be the cause of the vessel foundering. Consequently the best part of the day was spent under the hatches restowing the sacks of flour. All hands, from the chief officer to the cook, were engaged. The Chinese had by now recovered from their fright since the danger of foundering was for a time averted. By night time the ship was considerably straightened.

It was not, certainly, the most ideal way of spending the season of Christmas; we had, however, no alternative. My Christmas fare consisted of some old salted pork—of very doubtful age—with the luxury of a bottle of German beer. Salt junk was the staple diet on board. Rations of one tin of milk, two pounds of sugar, and tea, had to last five of us in a mess for a week—of course it never did. We had also some tough Shanghai pigs on board. Eating them in no way compensated us for the ungodly row they raised in bad weather.

At daybreak on the following morning—Boxing-day—the clattering of chains amidships and the ship falling off her course informed us that once again the steering-gear had broken. I was on watch at the time. A glance at the compass was enough! Calling out all hands I rushed aft. In a moment I saw that the repaired rod had again parted. Fortunately the mate had had the foresight to leave in readiness the wire hawser; so it was not long before the rudder was securely lashed. Perceiving the uselessness of again repairing the rod, we substituted in its stead a length of wire rope. This answered rather too successfully, as the strength of the wire threw extra strain on the chains round the quadrant. In the night watch a link in one of these chains snapped; and—for the third time—the ship drifted helpless before the wind. The link was repaired and for the third time we endeavored to continue our luckless voyage! The old tramp was a veritable "coffin-ship"; overladen, ill-equipped, under-manned—and yet she was 100 A1 at Lloyd's! I wonder who was the surveyor.

The *Santolo* certainly bore a charmed life. It was something to have been drifted three times in the worst weather imaginable and yet to be still afloat!

The idea of continuing our attempt to make the northern passage through the Pacific to Vladivostok in our present battered condition was abandoned, despite the exhortations of the captain, who, poor devil, was anxious to make the speediest voyage possible. It was his first command. But it was obvious to all that a few more days of similar battering about would be the finish of the old steamer.

Our course was changed and we headed for Honolulu, in the Hawaiian Islands, to put in for repairs.

The weather till the 29th kept moderately good—moderately in comparison with the weather we had been lately enjoying. We made but poor progress, tho, owing to the heavy seas that were running—the aftermath of the gales that had been sweeping over these northerly waters. I would like to meet the man who gave to this ocean the name of PACIFIC!

In the evening of that day a heavy gale from the southeast sprang up. The seas soon got too high for us to proceed, and again for some hours we were compelled to heave to. When the storm abated and the seas had moderated to some extent, we resumed our course. Not for long, however, as an even stronger gale broke over the ship the following day. Again we lay hove to for hours! During all this bad weather we had with us the continual anxiety as to whether our patched-up steering-gear would stand the strain of the mountainous seas that broke over the ship. We became nervous as cats. On watch the sound of

A church that tripled its membership in eight years

—that became the liveliest thing in the town.

People throng to it and like it because it does things. The story of it all will wake up every "dead church."

CAT'S PAW CUSHION RUBBER HEELS

The
Heel
With
Nine
Lives

If you are an advocate of "Safety First" then you will wear Cat's Paw Rubber Heels. They will be your choice because of the Foster Friction Plug which prevents slipping — makes them wear longer, too.

No holes to track mud or dirt. And the Foster Friction Plug gives that crisp, little click to your step which keeps you out of the "gum shoe" class.

Remember the black cat and insist on Cat's Paw Heels. Black or tan. All dealers. 50c attached — costs no more than ordinary kinds.

Foster Rubber Co., 105 Federal St., Boston, Mass.

Originators and patentees of the Foster Friction Plug which prevents slipping.

The Foster Orthopedic Heel is a boon to weak arches — extends under the shank of the shoe — gives a firm support to the arch. 75c attached of your dealer — or sent postpaid upon receipt of 50c and outline of your heel.

the fireman damping over the ashes would strike our ears as the sound of the steering-chains unshipped; and for a moment our hearts would be in our mouths. Fortunately the gear held. We all considered ourselves very lucky that we had come out of the storm, and that the damage had been no worse. But we had no wish to try the capricious kindness of Fate too much, for fear she might take it into her head to withhold her helping hand on the next occasion. With every storm the vessel met the cabins amidships were flooded. The ship leaked like a sieve! The pumps were kept going more or less continuously the whole voyage. The bilges and bilge-pumps were now in order again, tho not till after some very trying work for the engineers.

On the last day of the year the weather cleared and the seas moderated. We set our coast southwest and rang down "full speed" — for nearly the first time since our departure.

Our oriental crew from the outset of the voyage had been constantly giving trouble, quite apart from their mutinous behavior while the ship was in distress. This day is marked on our log as the occasion of an attempt on the life of the captain by one of the crew, who had been detected in the theft of some of the ship's stores. The Chinaman was put in irons. He was kept there for forty-eight hours and was only released because he was the ship's cook. He had to thank his unspeakable deputy for the taking-off of the chains of justice, for as long as he was in irons no one could get a decently cooked meal.

They reached the Hawaiian Islands at last, where they were welcomed by ardent journalists, Americans purveying news of a varichromatic sort, who seized with glee the opportunity to feature such stories as "Three Days' Awful Battle with Elements," or "Thrilling Tales of Peril at Sea," and so on. Later these same journalists made things vastly unpleasant for the *Santolo* by featuring in the same way a rather exciting dispute between the officers and the Chinese crew. Fortunately, the Chinese consul to whom the crew appealed did not allow his imagination to be stirred, but, on the contrary, criticized the officers for having dealt so gently with the offenders. There were further minor troubles, but eventually the *Santolo* was put into repair and was ready to continue the hazardous journey. Patched up as well as she could be and still retain her identity, she set forth from Honolulu in the latter part of January. She steamed out of the harbor proudly enough, only to heave to at noon in a seemingly hopeless state of breakdown. The situation would have been delightfully comic, were they not forced to share in it. As the writer says:

The pilot had just left us when the second engineer came on the bridge with the unwelcome information that the engines of the steamer (100 A1 at Lloyd's!) were disabled, and, incidentally, that the chief engineer was lying drunk in his cabin! I could not but feel sorry for the young captain on this first command of his having such innumerable troubles; they were enough, indeed, to

try a far more experienced man. But the German sailor is no chicken-hearted type of man, and our young captain was no exception. Then and there he disrated the drunken engineer, promoting the second engineer to the position of chief. After a period of six hours lying anchored just outside the harbor, the engines were repaired, and we set our course northwest. Just one more untoward incident occurred before we had seen the last of the islands. While heaving up the anchor the flukes dropt overboard, the connecting-pin having parted, consumed by the rust of years. Had not the ship been sold to the Japanese (a nice, new, skilfully disguised wooden pair of flukes being substituted), Lloyd's doubtless would have been generous enough to supply us with a new anchor!

Mere trifles such as this we now regard as of no importance. We were quite prepared to see the funnel roll overboard. In fact, during the second part of the voyage we were compelled daily to tighten up the stays that supported the smoke-stack.

We kept fair weather with us till four days after leaving the islands, when, getting into more northerly latitudes, signs of approaching bad weather were soon visible. After one strong southeast gale had battered us about, we decided to sneak away south again. Our course was changed to west by south.

The new steering-gear that had been put in was now the source of fresh anxiety; for, being new and consequently strong, it threw an unusual and extra strain on the sheaves amidships, which, we found to our dismay, were being slowly dragged from out of the decks. Lashings were consequently fastened to prevent this happening, and one by one the old bolts were taken out and replaced by new ones. The old bolts, once seven-eighths of an inch, were worn and rusted in their center to less than three-eighths of an inch!

Once more the ship's decks were littered with lashings. The running bridge which connected the amidships quarters with the poop—over the aft-well deck—had to be lashed securely to the ship's side, as the seas that continually struck it were slowly forcing it from its support. At night time, particularly on dark nights, it was just about as much as one could do to cover the length of the decks without breaking one's neck over the blocks and tackles that lay here, there, and everywhere. About the only parts that were not lashed were the two sides of the steamer.

Steaming south and west, we ran again into more moderate weather. A week out from Honolulu we were delayed for a few more hours, our engines again breaking down. But what were a few hours to us, already weeks late? The day following—the 26th—my diary reads: "Did not live to-day; crossed the 180° meridian!"

During the three following days we ran again into extremely bad weather, a series of gales and violent squalls coming from all directions to meet the ship. On the 29th we were hove to for nearly twelve hours; our log for that day registered under ninety miles. We were "standing by" most of that night, as we feared that at any moment something would carry away, or that one of the hatches would be stove in under the onslaught of the tremendous seas that struck the ship. At daybreak the bleak and awful expanse of raging seas

Frantz Premier—^{NOW} \$25 ELECTRIC CLEANER

ter. It swept the bridge; hurled both the quartermaster at the wheel and myself to the deck, which for nearly five minutes was running a foot in water; and half-wrecked the wheel-house, smashing the windows to fragments.

On the 8th we had 75 tons of coal left, barely four days' steaming power, and we were 400 miles from Muroran and half that distance from Yokohama. As the weather seemed changing slightly for the better we decided to risk it; and our course was changed to northwest by north. We were hoping against hope that when under the lee of the Japanese coast we should be more sheltered and make better progress. This was fortunately the case; for in the afternoon of the day following our change of course we sighted in the distance the snow-clad hills of Japan—a very welcome sight!

Skirting the sheltering coast of Japan, we entered the Straits of Hakodate early on the morning of the 10th, and anchored off the port of Muroran shortly afterward. We had on our arrival less than twenty tons of coal in the bunkers. Had it not been that we had experienced comparatively good weather since sighting the shore of Japan, I fear to contemplate the position in which we should have found ourselves—adrift in those seas!

The voyage from Ladysmith to Muroran had taken us a period of exactly fifty days, instead of the nineteen days estimated when we started the northern passage. It had brought to all of us one series of incessant troubles and privations and had been to me as startling as the preceding trip round South America had been uneventful. I think I saw more in that one trip than if I had been going to sea steadily for a period of seven years.

WAR-TIME ADVERTISEMENTS IN ENGLISH PAPERS

BOTH ludicrous and grim are the stories of the uses made in war-time of the appurtenances of peace. The handsome touring-car and limousine have been seized, to supplant the army mule. Schools and libraries are turned ruthlessly into field hospitals. Everywhere effects, sacred to peaceful uses, are seized and converted, wherever conversion is humanly possible, into the necessities of war. The New York Evening Post prints a story from London, telling of the strange uses that are being made of the advertising space in the daily papers. The war, it is said, is killing the newspapers, partly because of the scarcity of paper, and mainly because the advertisements have fallen off to a startling degree. What advertising is done now is, for the most part, urged solely by the needs that are arising as the result of war. They are as different from the ordinary run of advertisements as could be imagined and constitute alone an instructive side-light upon the general conditions in England at present. "Almost every item of five or six lines," we are told, "is a news story in itself"——.

In the "Personal" column, for instance,

Insurance Can Never Pay for a Burned Home

INSURANCE can never pay for the loss of those things that are worth more to you than their mere physical value. Therefore, build *your* home as fireproof and durable as possible.

A Herringbone house costs little more than a frame one, but it is enduring, low in repair cost, an economy from every standpoint.

Herringbone

Rigid Metal Lath

grips and holds—prevents falling stucco and plaster

Herringbone makes walls that are fire-resisting, economical and durable; ceilings that never fall, crack nor show lath stains. Herringbone stucco on outer walls needs no repairs nor painting. It makes a warm house in winter, a cool house in summer.

For damp climates and wherever lath may be subject to corrosion, we recommend the use of Herringbone Armco Iron Lath. It is the purest iron made, therefore resists rust indefinitely.

If you are interested in building a home that will resist fire, decay and time, and cost little if any more than wood

Write for Book on Building Helps

It is full of illustrations of beautiful Herringbone houses and facts of value to prospective home builders. Let us help you as we are helping hundreds of others in the selection of the right building materials. Mention your architect's or builder's name so we can co-operate through him.

there are many appeals from people who want help of some kind or other that they may go to the war. Young Englishmen ask for motor-cycles, as loans or gifts or part gifts, that they may become dispatch-riders. A London doctor appeals for £600 to free him from practise for voluntary service where experienced surgeons are urgently required. A trained engineer, anxious to serve England, wants an aeroplane. A university man, wishing to take a temporary commission in the Army, is hindered by the fact that he is associated with a foreign firm, who are not prepared to make any allowances while he is absent. Will some one assist financially in the form of a loan? Eugene Sandow, the physical-culture expert, offers to take in hand men who are prevented by some physical deficiency from offering for active service in the field.

The grimmer side of war is suggested by announcements of special classes in nursing and first aid, and by requests for cars to serve Red-Cross associations as motor-ambulances. Two gentlemen are wanted immediately with £200 each to complete the volunteer crew for a large yacht now fitting out for Red-Cross work in the Baltic and the North Seas.

How the normal routine of the business world is being disturbed by the war can be seen most notably in the shipping column. The usual announcements of North German Lloyd and Hamburg-American sailings have, of course, completely disappeared. Other lines warn passengers and traders that all their sailings are liable to cancellation without notice. Some lines give lists of vessels that are to sail, but no dates. Stranded Americans appeal for staterooms on Atlantic liners at almost any price. "Willing to pay very large bonus for good cabin for two on steamship sailing under American or other neutral flag to the United States or even Latin America." The purchaser of a ticket by a boat for Montreal is unable to leave England, and asks offers for his cabin, any excess over the original price to go to the Patriotic Fund.

Auctioneers announce the postponement until next year of their intended sales of houses and estates. A firm of mineral-water manufacturers give notice that, in consequence of the Government having requisitioned a large number of their horses, it will be impossible for their vans to call on customers oftener than once a week. As to with a special view to this sudden need, another firm advertises: "If your horses are being commandeered by the Government, why not use instead a light motor-vehicle? The — light van, etc., etc."

It is in this line of articles for sale, however, that the shortage in advertising is most evident, and where it does appear it is, as in the above example, colored by the state of war. Those who have goods for sale seem to think that no one is left who will buy anything that has not a purpose connected with the war. Hence there are some rather amusing attempts to twist respectable, peace-loving wares into the machinery of warfare. X-ray apparatus are advertised for use in finding bullets, boots are soldiers' boots, and sewing-machines are displayed for use

Important Books That Deal With The Places, Peoples, and Problems

Concerned in the Present

WAR IN EUROPE

France From Behind the Veil, by COUNT PAUL VASSILI. Political and social life in France during the last fifty years, as viewed from the inside. An unusual record of great interest. Octavo, cloth, \$3.75; by mail, 16c extra.

The Fifteen Decisive Battles of the World, by SIR EDWARD CREASY. A classic narrative covering the stirring drama of the world's greatest battles from Marathon to Waterloo. 12mo, cloth, 35c; by mail, 8c extra.

The History of Civilization in Europe, by FRANCOIS GUIZOT. A wonderful series of lectures, written in Guizot's usual luminous style, and covering the various forces, problems, policies, etc., that have affected European civilization since the fall of the Roman Empire. 12mo, cloth, 35c; by mail, 8c extra.

Guizot's History of France from the Earliest Times to the Outbreak of the Revolution (abridged). A remarkable condensation of Guizot's great work, containing a thorough index, tables, etc. Octavo, cloth, \$1.75; by mail, 16c extra.

Warships and Their Story. A large, beautiful book detailing the fascinating story of the growth of the warship from the primitive craft to the marvelous fighting machines of the present day. Profusely illustrated. \$5.00 net; carriage 10c extra.

Delightful Dalmatia, by ALICE LEE MOQUE. An intimate and charming description of one of the Austrian provinces which may soon be devastated by the war. Just issued. 12mo, cloth, about 50 beautiful illustrations. \$2.00 net; by mail, 12c extra.

From Naval Cadet to Admiral, by ADMIRAL SIR ROBERT HARRIS. Filled with the romance of British naval progress from 1865 to the present day. Octavo, cloth, boxed \$4.50 net; by mail, 16c extra.

The Victoria Cross: Its Heroes and Their Valor, by D. H. PARRY. From personal accounts, official records, and regimental traditions. 8 full-page illustrations. New large edition. Octavo, cloth, \$1.75 net; by mail, 12c extra.

Funk & Wagnalls Company, 354-60 Fourth Ave., New York, N. Y.

in making Red-Cross equipment. Bookstores display only war books and maps. Even Baedeker finds a chance for profit in the present situation, and the red-backed tourist's friend is advertised as containing "the fullest general information in regard to the geography, history, and national characteristics of the States involved." Gradually the advertisements for work appear more frequently, some of which are noteworthy:

The evidence accumulates, day by day, of the sore straits in which many middle-class people find themselves through the loss of their ordinary occupations. English refugees from the Continent are looking for situations at home. "Stranded Englishman, fourteen years in Germany, expelled through war, good address, appearance, and education, married, no children, fluent French and German, seeks employment, permanent or temporary."

Anglo-Indians, detained in England by the war, are similarly in quest of posts. Members of the Stock Exchange, their ordinary occupation gone, advertise for employment that will tide them over the war. Many persons finding themselves in this plight offer their services to business firms which need emergency help in superintendence while the principals are away at the war. Some, in their anxiety for a livelihood, are ready to take the risk of going back to the Continent on difficult missions.

"Englishman, served South-African war, linguist, just arrived from the Continent, now familiar with ways and means to bring back refugees to England, is willing to return at once and bring back British and American refugees." "Cantab, speaking good French and knowing Belgium and France, willing to go out as newspaper correspondent, or to assist people to England." "An Englishman, speaking Russian, French, German, and Danish, is prepared to undertake the arrangement of business requiring immediate and personal attention in Russia or France. Influential connections, expert negotiator." Only a very few special vacancies are advertised in reply to all these out-of-works. A notable instance of this from Lady Knox: "Chauffeur, gardener, and groom-gardener, wanted, to replace men who have joined the colors. No able-bodied man who can handle a rifle need apply."

Traces may be found in the advertising as well as the news columns of the unpleasant position in which Germans, or persons with a German name, find themselves just now. "Camerer, Kuss & Co. announce that there is no foundation for the rumor that their establishment has been raided by the police. The firm has been established in London over 120 years, and the proprietor is a British-born subject."

A Manchester storekeeper with an English name publishes in a local paper a quarter-column advertisement headed "One Thousand Pounds Reward." "Some person or persons are stating that we have been fined for charging excessive prices. This is untrue, and the above reward will be paid to any person or persons who will give us such information as will lead to the conviction of the originator of this libel."

The BUILT-IN Bath Is In Vogue Today

STYLES progress in baths just as in other furnishings for the modern home. The noteworthy advance represented by "Standard" porcelain enameled built-in baths is the result of our years of effort to produce a fixture which would represent the last word in sanitation and convenience, at a reasonable cost. These baths bear the "Standard" "Green and Gold" Guarantee Label.

"Standard" PIERCON BATH
BUILDS INTO WALL AT BACK

Features of "Standard" Built-in Baths

The baths shown here are made in one-piece, enameled all-over, with the outside as glossy as the inside. (When, to lower cost, enameled inside only is desired, they should be so ordered. However, enameled all-over is more desirable.)

They build into the wall and floor, thereby reducing care and cleaning to a minimum. No reaching nor stooping to clean under and back of the bath—no space for dust and splashing.

They are lower than the ordinary type of bath, yet have better bathing accommodations. Only 18 inches from bottom to top, and 17 inches deep inside.

Consult your Architect or Plumber about "Standard" Built-in Baths, or see all types displayed in the "Standard" Showrooms listed below.

Our book, "Modern Bathrooms," showing these baths and complete line of "Standard" Plumbing Fixtures, sent free upon request to persons directly interested. If possible, send name of Architect or Plumber.

FLOORS BELOW CONDUITS

Such is the walter of announcements and appeals—pathetic, shrewd, self-sacrificing, self-seeking—that now meets the eye of the newspaper reader every morning; in the midst of all this breathless confusion, some unknown advertiser has introduced these words: "And Asa cried unto the Lord his God, and said, Lord, it is nothing with Thee to help, whether with many, or with them that have no power. Help us, O Lord, our God, for we rest on Thee, and in Thy name we go against this multitude. O Lord, Thou art our God; let no man prevail against Thee."

A NOVEL SKY-PILOT

THE celebrated feat of the lovely lady, who held enchained the fancy of a cruel and callous potentate with the fascinating tales she invented, has at last been duplicated, albeit under radically different circumstances. Instead of the dim-lighted, incense-fragrant harem, the scene was that of a very occidental Seattle Turkish bath; the keen-eyed, bearded son of the Prophet was replaced by an uncertain-visioned, staggering sailor, and the modern Scheherazade was "Mac"—George McPherson Hunter, Scotsman, rescuer of mariners marooned by ignorance and recklessness, friend of all seamen who are morally and spiritually derelict—whether they wish him to be their friend or not. The *Associated Sunday Magazines'* columns recount the incident that put Mac in the class with the mythical Queen of Story-tellers. Mac's idea of reformation is to convince his subjects that there is actually more fun in being decent than in wildness and debauch. One of his charges was wary, but Mac followed him, and the story developed as follows:

Hunter met the fellow in a saloon near a sailors' bethel. The sailor, staggering in through the doors, teetered simultaneously against a table and against Hunter. The sailor insisted upon fighting Hunter on the spot. Hadn't Hunter's table been in his way? Sure! Consequently there was nothing to do but fight. Of course a fiction version of this story should now go on and tell how the little innocent-looking Hunter cleaned up the floor with the giant brute. But, unfortunately for the melodrama and spectacularity of our narrative, this event did not occur. What did occur seems commonplace enough beside it.

Hunter, with perfect seriousness, challenged the man to a soap bath! The laughter of the drunks that crowded the place laughed the fight out of the sailor's fists, as laughter has a way of doing with intoxicated men. After a very brief pause the drunken sailor, slamming his hand down unsteadily on the table, said that "by" many marine things he'd accept.

The next morning, in the Turkish bath, when the sailor woke up, Hunter insisted on treating him to a shave. The treat negotiated, the sailor remarked that he felt so good that he thought it would be a grand idea if he and his neighbor (meaning Hun-

ter) would go out and "inhale a little red-eye."

It was up to Hunter to win the sailor back to decency now or never, and it was up to him to do it quickly. "Preaching," as he has said, he had long and vainly tried—no more preaching for him! What to take its place? His thoughts had to work with speed. They did that day. And they formed, accidentally, he admits, one of the numerous utilitarian plans that were to stand him in such effective stead in the years to come. The sailor had dropt a hint in his more lucid moments in the hot room that he was "keen on exciting dime novels." That was Hunter's cue.

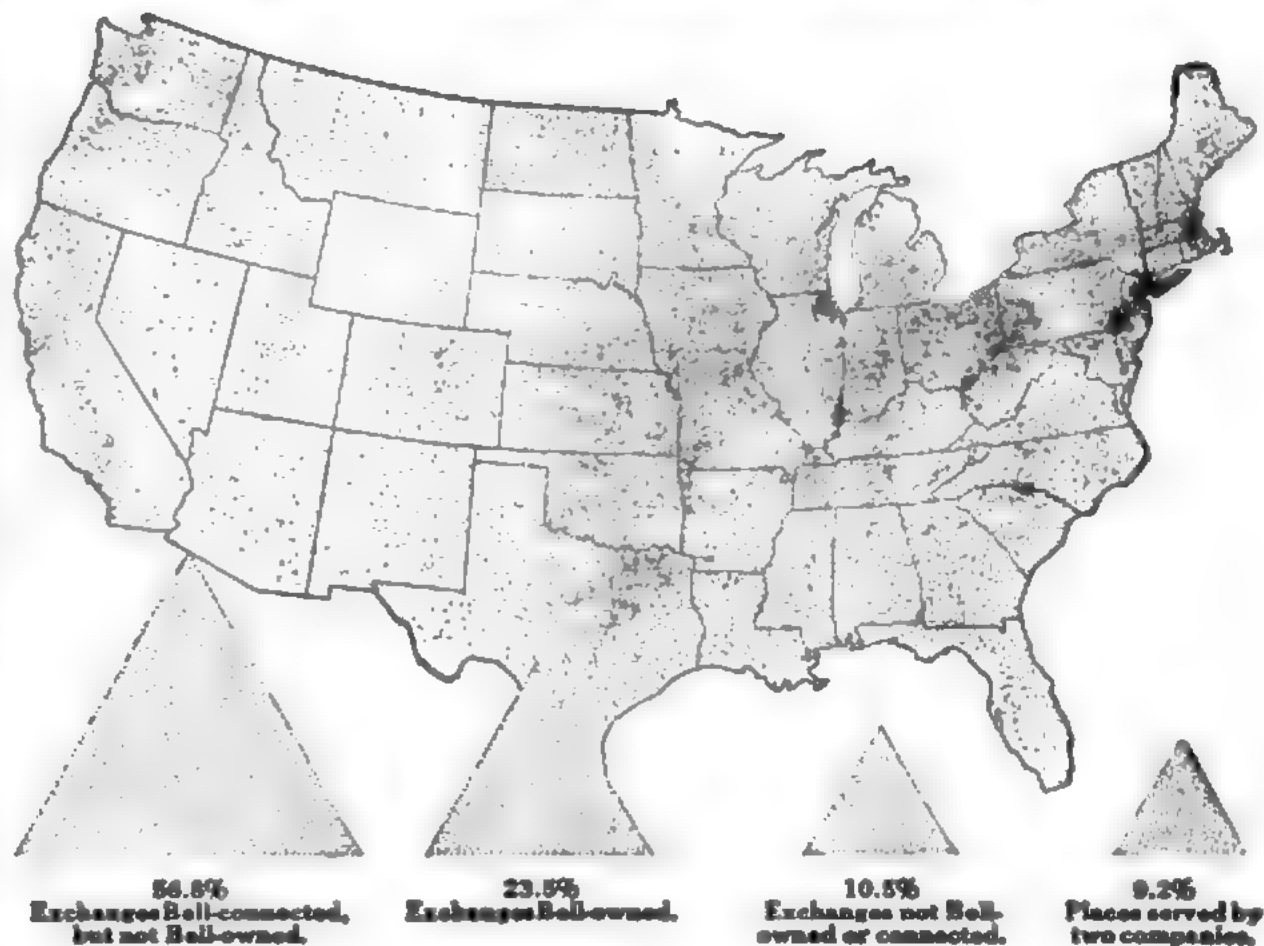

"All right," he said, relative to the invitation to imbibe, "I'll go out on a jam-boree with you to-night; but let's send out for some novels and lie around reading for a while. It'll put us in good shape," he bluffed along genially, "for this evening's party." The sailor agreed. And Hunter sent out for a couple of the detective novels of Gaboriau. If you know the detective tales of Gaboriau you are aware they are exciting tales, and also that they are pretty long. Well, anyway, Hunter managed to "excite" that sailor so with one of the novels, which he proceeded to read aloud to him, that the sailor remained passive, so far as the whisky was concerned, all through the afternoon. And the second novel, at the sailor's own suggestion, kept him away from saloons that night. The sailor slept in the Turkish bath again. He was getting cleaner, and with his increasing cleanliness of body came increasing cleanliness of mind. This is the most truthful of pious platitudes, always. And soon he began to let up on the whisky—"detective stories were more exciting, and when you were boozed up you couldn't read"—and soon he and "Mac" were comrades.

The Christianity that in its frigidity sometimes chills cruelly a naked soul is in Mac warmed by a spirit of brotherliness to a combination of good-fellowship and good fun. Doubtless this would be a weak weapon with which to war against some enemies of right living, but among the sailor folk of Hunter's parish its power is like that of some rare charm. How it works is even better shown by one incident in New York that should bring to Hunter more credit than it has—the rescue of the little handful of sailors who survived from the wreck of the *Titanic*. The newspapers counted them among the "saved," but Mac knew better and was ready for them. We read:

When these sailors reached the port of New York, they were a wretched lot, despairing of everything, prepared to "go on the loose" and drink their woes into oblivion. Hunter met them. One of their number explained to him their plight and state of mind. "We've got no money; there's nothing for us to do, that we can see, in the future; we're without clothes or food or jobs. . . What is there left but liquor?"

Hunter took these men in and told them that people were coming to their assistance; altho he didn't know positively at the time where the help, if any, was to come from, and bluffed the sailors into leading a

What the Telephone Map Shows

EVERY dot on the map marks a town where there is a telephone exchange, the same sized dot being used for a large city as for a small village. Some of these exchanges are owned by the Associated Bell companies and some by independent companies. Where joined together in one system they meet the needs of each community and, with their suburban lines, reach 70,000 places and over 8,000,000 subscribers.

The pyramids show that only a minority of the exchanges are Bell-owned, and that the greater majority of the exchanges are owned by independent companies and connected with the Bell System.

At comparatively few points are there two telephone companies, and there are comparatively few exchanges, chiefly rural, which do not have outside connections.

The recent agreement between the Attorney General of the United States and the Bell System will facilitate connections between all telephone subscribers regardless of who owns the exchanges.

Over 8,000 different telephone companies have already connected their exchanges to provide universal service for the whole country.

For bedroom walls— here's the finish ideal

Beautiful, sanitary, durable, washable—these four words tell why the ideal finish of your bedroom is

Mellotone gives a pure white finish or the choice of many hues, "soft as the rainbow tints."

Mellotone gives an absolutely smooth surface, that leaves no clinging place for dust and is washable as often as you like.

Mellotone is more economical than unsanitary wall paper or than easy-marring calcimine. It is not easily injured, does not fade and lasts for years.

**It will lighten and brighten
your whole home**

Mellotone is the most artistic and durable finish you can get for every room in the house. Write for "Harmony in Colors," and see the beautiful selection of Mellotone tints. Sold by Lowe Brothers' exclusive agents, who also handle "High Standard" liquid paints, varnishes, enamels, and stains. If you don't know our nearest dealer write and let us tell you his name.

decent life where otherwise they would have resorted to the reddish-brown nepenthes that in its time has landed tens of thousands of sailors in jail, and worse. And in token of this act on Hunter's part these grateful men of the sea, on their return to England after assistance came to them, assistance for which Hunter worked tooth and nail, sent him the following words engrossed on parchment:

"We, the survivors of the crew of the ill-fated ship *Titanic*, send to you our heartfelt thanks and extreme gratitude for your great kindness to us during our unfortunate stay in New York. 'Inasmuch as ye have done it unto one of the least of these my brethren, ye have done it unto me.' 'We were strangers, and ye took us in.'"

THE DEVASTATION OF WAR

WHATEVER the final outcome of the war in regard to Alsace and Lorraine, there is a good chance that the destined lot of these two unfortunate provinces will have been paid for at a ruinous rate. Even if they return to France and become once more French provinces, that triumph will be won only at a cost of men and wealth, property and energy, that will make the net result rather a loss than a gain. So it would seem at present, and the end is still far in the future. It is possible that fighting, desultory and active, may continue there throughout the whole extent of the war, draining the country of all its best and worthiest. A correspondent stationed at Basel, Switzerland, describes for the *New York Tribune* the scenes in the neighboring territory, recently swept by a single wave of the flood of conflict:

I have just returned from an inspection of scenes of the recent fighting between the French and Germans in the southern districts of Alsace. Dispatches from Paris and Berlin describe the engagements between the frontier and Mülhausen as "insignificant encounters between advance guards." If this be true in the military sense, and if preliminaries of war produce the terrible effects I have witnessed, the disastrous results of the war itself will exceed the possibilities of human comprehension.

As a Swiss subject, I was equipped with identification papers. I was accompanied by four fellow countrymen, all on bicycles. At the very outset the spectacle of peasants, men and women, unconcernedly at work in the fields gathering the harvest, struck me as strange and unnatural. The men were either old or well advanced in middle age. Everywhere women and girls of all ages and mere lads were working.

The first sign of war was the demolished villa of a Roman Catholic priest at a village in the vicinity of Ransbach. This priest had lived there for many years, engaged in religious work and literary pursuits. After the outbreak of war the German authorities jumped to the conclusion that he was an agent of the French secret service and that he had been in the habit of sending regularly to Belfort information concerning the German military movements and German measures of

Don't Stop Gardening Now

There's no need of it. When, with great reluctance, you see the vines, plants and flowers withering, dying and going to seed, do not consider the season for fresh, wholesome, home-grown vegetables gone. You can

GROW DELICIOUS VEGETABLES THROUGHOUT THE WINTER

by using Lutton's Miniature Glass Gardens. Thousands have learned to appreciate the easy luxury of winter vegetables and flowers grown right at their back doors. So can you. The expense is a trifle. For only \$10.50 you can get

OUR SPECIAL SASH FOR HOME GARDENERS

Anybody can set it up. Anybody can garden in it—for the complete planting instructions sent with each frame are simple and explicit.

Price complete (single glazed), ready to put together, freight prepaid anywhere in the United States, **\$10⁵⁰**

This sash and frame are 8 ft. 4 in. long and just wide enough to put in a 3 ft. space with southern exposure. The large lights of extra heavy glass allow the maximum of life-giving sunlight. Strongly made, easily ventilated. Double glazed, if desired, for \$1.00 extra.

We also manufacture regular 2, 3 and 4 sash frames and a new special portable greenhouse. Write today for catalogue.

defense, very often by means of carrier-pigeons.

The Alsations declare these accusations to have been utterly unjust, but last week a military party raided a priest's house, dragged him from his study and placed him against his own garden wall and shot him summarily as a traitor and spy. The house was searched from top to bottom and numerous books and papers were removed, after which the whole building was completely destroyed by dynamite. The priest himself was buried without a coffin at the end of his little garden plot, and some villagers placed a rough cross on the mound which marked the place of interment.

In the next large village we were told it had been successfully occupied by French and German troops, and had been the scene of stiff infantry fighting. Here we found groups of elderly men and boys burying the bodies of men and horses. Pestilence was feared. Further on were a number of German soldiers beating about on both sides of the road, searching for dead and wounded. It was said that many wounded soldiers had crawled in among the corn to escape being trodden on by troops marching along the road, and also to gain relief from the blazing sun.

On the outskirts of another large village we were shown a garden bounded by a thick hedge, behind which a company of French infantry had taken their stand against the advancing German troops. Among the crushed, downtrodden flowers there were still fragments of French soldiers' equipments, including two French caps, stained, and three torn French tunics were likewise dyed red. The walls of a cottage bore marks of rifle-bullets and the roof was partly burned.

Passing through villages we saw on all sides terrible signs of the devastation of war—houses burned, uncut corn trodden down and rendered useless, gardens trampled under foot—everywhere rust and distress.

Just outside this village there was a large common grave, in which French and German soldiers were buried together in their uniforms. A large mound marked this site. Here again the villagers had placed roughly hewn crosses.

Not far from Huningen we met an intelligent Alsatian peasant who remembered the war of 1870 and had witnessed some of the engagements during the last few days. Here is an account of what he saw:

"The bravery of both sides was amazing. The effects of the artillery fire were terrific. As the shells burst, where you formerly saw a body of soldiers you saw a heap of corpses or a number of figures writhing on the ground. Those who were unhurt would scatter for the moment, but would quickly regain their composure and take up their positions in the fighting-line as if nothing had happened.

"The effects of the other weapons were as bad. It seemed remarkable that the soldiers could see the destruction worked all around them and yet control their nerves sufficiently to continue fighting. I remember battles in 1870, five or six of which I fought in myself, but they bear no comparison with the battles of 1914. The war of forty-four years ago was child's play compared with the war at the present time."

Heats 12-Room Home for \$27⁰⁰ with an Underfeed

Here are the facts—

Meadville, Penna., Dec. 18, 1913.
Gentlemen: I have used one of your UNDERFEED furnaces for past seven years for heating our twelve-room residence. Have never had a dollar's worth of repair on it—always able to keep temperature above 70 degrees throughout the house during our coldest weather—use coking coal slack for fuel—largest fuel bill covering one year's heating \$27 00; smallest yearly bill \$22 00. These are facts which speak for themselves.

H. C. BEMAN, President,
Beman Automatic Oil Can Co., Ltd.

Over 25,000 Underfeed Users

have proved our guarantee that Williamson Underfeed furnaces and boilers cut coal bills $\frac{1}{2}$ to $\frac{3}{4}$ and deliver clean, even heat with minimum attention.

Our improved Williamson New-Feed Underfeed is the last word—the best word in heating systems. All the good points of the old Underfeed have been retained and a score of improvements added. Every possible objection has been banished. Now the attention of a 12-year-old boy twice a day for firing and once a week for removal of ashes is all that is needed.

Cut Coal Bills $\frac{1}{2}$ to $\frac{3}{4}$

Coal in the Underfeed is fed from below, and, like a candle, burns from top down. With the fire always on top, smoke and gases are consumed, making more heat with no soot, smell, smoke, clinkers or dirt, and few ashes. Cheap slack soft coal and pea or buckwheat sizes of hard coal yield in the Underfeed as much clean, even heat as highest priced coal in other heaters. Any kind or size of coal may be used. The Underfeed is adapted to warm air, steam or hot water in buildings of all kinds, large or small.

50% Saving Guaranteed We guarantee a saving over your present coal bills of at least one half by means of the Williamson New-Feed Underfeed, when properly installed and operated. This guarantee is backed by a \$1,000,000 company. Mail the coupon for our great free book "From Overfed to Underfeed." This book will surely startle you and show you how to save money.

\$30,000 for one crop from a Sober Paragon Orchard

Plant for profit or for decoration—Plant a thousand trees or a single one—Sober Paragon Chestnut will pay you more in dollars and satisfaction than anything else you could plant.

1913 crop sold for the highest price per bushel on record. Large nuts averaging 1 to 2 inches in diameter, and as sweet and delicious as the Native Chestnut. The only large sweet chestnut in the world.

SOBER PARAGON Mammoth, Sweet Chestnut

The tree pictured, seven years old, bore more than a bushel of perfect nuts. At one year from graft, bore three pints, at three years it bore three quarts. An orchard pays almost from the start, because you start with bearing trees.

Every Tree We Ship is a Bearing Tree

They are magnificent trees for park or lawn; making quick, hardy, symmetrical growth, with luxuriant spreading foliage, clean trunk and stately appearance.

We have had exclusive control of this variety since 1907, when we introduced it and sold the first trees. Every year our stock has improved, and we now have 100,000 bearing trees to offer. CAUTION—Be sure your trees bear the metal, copyrighted seal with the trade mark name "Sober Paragon."

Our 1914 Catalog and Planting Guide—Includes Nut Culture, Fruits, Roses, Shrubs, Evergreens, etc., mailed Free on request.

INVESTMENTS AND FINANCE

THE EFFECT OF WARS ON NATIONAL DEBTS

STATISTICS showing the effect of great wars on the debts of nations are presented in the New York Times Annalist, which takes England's struggle with Napoleon and the American Civil War as examples. England's struggle comprised the period from 1795 to 1815. The rapid increase in her debt during those twenty years is shown in a list of the new loans and fundings she had to make from year to year as follows:

1795.....	£34,000,000	1806.....	£22,000,000
1796.....	25,500,000	1807.....	18,000,000
1797.....	50,000,000	1808.....	10,000,000
1798.....	20,000,000	1809.....	14,000,000
1799.....	15,000,000	1810.....	11,000,000
1800.....	20,000,000	1811.....	24,000,000
1801.....	37,000,000	1812.....	36,000,000
1802.....	25,000,000	1813.....	67,000,000
1803.....	12,000,000	1814.....	24,000,000
1804.....	15,000,000	1815.....	54,000,000
1805.....	24,000,000		

In 1816 the British debt reached its maximum, which was £894,979,075. Equally rapid was the growth of our debt as a consequence of the Civil War. When the war broke out, a total debt of less than \$70,000,000 existed in this country. In 1866 the debt had reached \$2,332,331,208. This was the largest debt this country ever had. Reductions began to be made soon after the war closed, and at times were made with great rapidity. The lowest point in the debt was reached in 1892—something under \$1,000,000,000. After 1892 the debt began to rise, and during the Spanish War increased sharply. Except for that war, it would have stood for many years at a smaller figure than one billion dollars. Between 1865 and 1895 the debt was reduced about 58 per cent. Great Britain, however, in those thirty years reduced her debt less than 7 per cent.

EUROPE'S FINANCIAL PREPARATIONS FOR WAR

Charles A. Conant recently pointed out in the New York Times that, for two years or more before war broke out in Europe, the shadow of a conflict had been thrown across the horizon by the course of European finance. Germany and Russia had been for a considerable period engaged in "a relentless struggle to accumulate gold." Meanwhile, they had made heavy levies of taxation and gradual withdrawals of their balances in foreign countries. Following are points in his interesting article:

"Russia began setting her house in order by withdrawing the large balances which she had kept in German, French, and English banks, and which in time of peace she had counted as a part of her gold reserve, having the same security as coin and bullion in the vaults of the Treasury or the State Bank.

"In Germany, the story was familiarly told that the Kaiser, near the end of the year 1913, inquired of the Governor of the Imperial Bank if the German banks were equipped for war. Being told that they were not ready, he is said to have replied, 'When I ask that question again, I want a different answer.'

"To be able to give a different answer

was the end toward which the Imperial Bank strove resolutely and persistently from that moment until Germany stood forth in shining armor to oppose the intervention of Russia in behalf of threatened Serbia. By maintaining a discount-rate of 6 per cent. at the Imperial Bank from January 1 to October 27, 1913, by active bidding at the London gold auctions for the gold which arrived weekly from South Africa, and by several changes in monetary legislation, the gold was steadily piled up which might enable the Governor of the bank to answer 'yes' when again asked whether German finance was equipped for war.

"From a gold fund of \$184,000,000 on December 31, 1912, the Imperial German Bank increased its reserve to \$336,000,000 on June 30, 1914. In addition, it gathered up for the Imperial Government a sum of about \$30,000,000 to be added to the same amount stored in the vaults of the Julius-turm at Spandau.

"France and Russia were not far behind Germany in the scramble for the world's surplus gold to be added to their reserves. Russia and France were from the beginning in a much stronger position in respect to gold than Germany, even at the outbreak of the war. France piled up her gold holdings in eighteen months from \$616,000,000 to \$792,000,000, and Russia, with a reserve already approximating \$800,000,000, materially increased the amount.

"Austria-Hungary has not undertaken under the monetary reform of 1892 to pay gold freely in the redemption of notes, and her gold fund of approximately \$250,000,000 has remained comparatively unchanged in amount. It was not surprising that, under pressure like this, the New York market should have been called upon to export about \$84,000,000 in gold before the war-cloud burst, during the first six months of the present year, and that it should have lost another sum of about \$46,000,000 when Europe decided to throw over American securities at any price in order to convert her assets into money.

"The entire gold production of the world during the eighteen months ended on June 30, 1914, was approximately \$705,000,000. Of this amount about \$200,000,000 is required for the arts and \$150,000,000 went to British India. This left about \$355,000,000 to be applied to monetary uses, and the whole of this amount was absorbed by the four great central banks of Germany, France, Russia, and Austria-Hungary.

"What course Germany should pursue in respect to her monetary system in case of European war was the subject of considerable discussion in the special commission which was appointed in 1906 to consider the revision of the charter of the Imperial Bank. It was generally agreed that two steps were advisable—to permit the utmost accumulation of gold in the Imperial Bank, and to protect that gold against abnormal demands.

"These two steps were, first, the issue of notes for small amounts, with the object of substituting notes for the gold in circulation; and, secondly, making the notes of the Imperial Bank legal tender throughout the empire. In 1906 the bank had already departed from its original policy of keeping the circulation saturated with gold coin by authorizing the issue of notes for 50 marks (\$11.96) and 20 marks (\$4.76). The effort was at first made to limit the issue of notes of these denominations to 300,000,000 marks (\$72,000,000),

Reo the Fifth

A Super-Car

\$1,175 Equipped
F. O. B. Lansing

Fall Series

5-Passenger Touring Car or Roadster

Better Than It Need Be

By an Average of 50 Per Cent

R. E. Olds took this position when he first brought out Reo the Fifth:

The usual standards are not good enough for men who buy cars to keep.

So he built this super-car—a car of extremes, of vast over-capacity—ultra in its fineness, its exactness, its materials and its costly features.

This car has won men by the legions to a better grade of car.

New Additions

Countless new things have been added since this car came out. Nearly all you see is new—body, finish and equipment. And there are many new chassis features.

No car is kept more up-to-date. None has more new-style beauty.

But the standards have not been altered. The car is still built better than it need be, by an average of 50 per cent.

Severe Tests

We send test cars over country roads for 10,000 miles of rough driving. Then take them apart and inspect them. That's to learn how strong parts must be to keep their newness after years of service.

The car has 35 horsepower, but every test is based on requirements of a 50-horsepower motor.

One whole building is devoted to these tests. There steels are analyzed. There gears are tried out in a 50-ton crusher. There vital parts are required to show at least 50 per cent over-capacity.

6 Weeks to Build

We spend six weeks on each car to get utter exactness, to make sure that each part is perfect.

We use 15 roller bearings,

190 drop forgings. We use a very costly clutch to prevent the strain of gear clashing. Every chassis part is built to stand abnormal shocks.

Then we give you here the one-rod control, found in no other car. A simple turn of the wrist does the gear shifting.

In these ways we add about \$200 to the necessary cost of each car. But we save the average user twice that in troubles, repairs and up-keep.

Cost Lowered

Reo the Fifth used to cost, with full equipment, \$220 more than now. Standardization has brought that cost down. Special machinery, high efficiency and a model plant have helped. This latest model offers a value which two years ago was impossible.

This is the Long-Time Car

Reo the Fifth is built for men who want a long-time car—a car to stay new—to render years of perfect service. With proper care, a car like this should run 100,000 miles.

It is built to save trouble, up-keep and repairs. It is built to stand shocks and strain. The longer you own it the more it will show its supremacy.

Men are buying this car now faster than we can build it. There are 25,000 of them running today, showing how the car stands up. If you look at the facts or talk with users, you will choose this well-built car.

We have dealers in 1155 towns. Write for Reo Magazine, which tells and pictures how this car is built.

The Test of All Underwear Is the Washtub

COOPER'S
CLOSED CROTCH
UNION SUITS

BENNINGTON, VT.

If you men who are sick and tired of buying underwear that looks good when new, but comes out of the first wash misshapen and harsh—if you want to know the satisfaction of wearing undergarments of the highest quality—take home a couple of suits of the

Original Spring-Needle Knit Underwear Made by Cooper-of-Bennington

and see how beautifully they fit. You stretch this fabric and it springs right back to its knitted shape. But the great test is the wash-tub. With a little care, Cooper-of-Bennington Underwear comes back from the wash like new, with all its original softness, all its original shapeliness and springiness. The added comfort of the patented Closed Crotch makes this underwear the best you can buy.

At best men's stores and departments.

THOMAS B. MORTON CO., Incorporated
15 Sparks Bldg. Louisville, Ky.

but early in 1912 this limit was passed, and within the next two years the issue of these two denominations of small notes rose to 681,822,000 marks, and their ratio to the total note circulation to about 26 per cent.

"The Government of Russia had already reversed its original policy of 1897, of saturating the circulation with gold coin, and adopted the policy of issuing small notes. The notes of the smallest denomination, 1 ruble (51½c.), were indeed retired; but notes for 3 rubles, 5 rubles, and 10 rubles (\$5.15) were steadily pumped into the circulation until, as early as 1909, they constituted 46.5 per cent. of the total amount of paper outstanding. Within the next five years the gold in the State bank was increased by about \$170,000,000, which nearly covered the increase of the outstanding note issue by \$209,430,000.

"With the general suspension of gold payments at the central banks of Europe, except at the Bank of England, the banks are in a position to resist raids upon their gold and to lend their resources, as far as sound banking policy permits, to the struggle of their Governments to maintain national independence. In England, while the bank is still paying gold for notes, the policy of keeping gold in circulation has been abandoned, and the old limit of note issue, which was £5 (\$24.40), has been lowered to 10 shillings (\$2.44) and £1 (\$4.88).

"It is not the purpose of any of the European Powers, however, to carry on the war by issues of paper money. The suspension of gold payments at the banks and the issue of notes for small denominations, which are legal tender in domestic transactions, is for the purpose of husbanding the gold stock against needless runs and keeping it as a guaranty fund of national solvency. It is the course which was adopted by France at the time of the Franco-German War in 1870, but so prudently were the affairs of the Bank of France conducted that the paper never fell more than 2½ per cent. below its value in gold.

"A similar policy of reserve will probably be pursued by the banks of France, Germany, and Russia in the present contest. The Government of France has raised the maximum limit of the note circulation of the bank by nearly \$1,000,000,000, but the increase will not be used except as additional currency may be required, owing to the restriction in other forms of credit and the special demand for notes in the districts where the armies are gathered.

"The suspension of specie payments does not convey to the banking community quite the same doleful warning of the unlimited issue of paper and its steady depreciation in gold which were conveyed by specie suspension in the United States in 1861 or by Austria-Hungary and Russia in the desperate contest of the Napoleonic wars. Monetary science is better understood at the present time than in those days."

On the Run.—PUZZLED DINER—"What have you got for dinner?"

Dignified Serious BOOKS ON MARRIAGE
Which Everyone Should Read

PERSONAL GLIMPSES

THE HUMAN SIDE OF THE
FIGHTING MAN

TO speak of "the human side of war" seems paradoxical, for amid the flying death of lead and steel, the cunning little machines built to pour out hundreds of death-dealing bullets a minute, the greater enginery of the siege-guns, modern fortifications, dreadnoughts, and, more than all, the endless phalanxes of the men themselves, drilled to a machinelike precision and solidarity, there would seem to be little chance for any human aspect of the war to make itself apparent. It has appeared now and then, however, in fleeting glimpses, and even has made its way across the Atlantic cable, in spite of heavy cable tolls. The *Kansas City Star* has collected a few of the best of these narratives that "present the human side of the war—present its deeds of valor and its sufferings." We read:

The first actual witness to give a description of the fighting on the French frontier is a reservist named Jacquin, and his story is told by George W. Price, the special correspondent of the *New York Sun* and the *London Mail*. This is Jacquin's story, told on his hospital bed at Chambéry:

"All night long we listened to the roar of gun-fire. As the dawn appeared we could hear the first Prussian bullets pass our ears. It was a curious sensation. One could say at first that a swarm of bumblebees was passing him. Then we all take our breath and instinctively one opens his cartridge-pouch. The officers there are as calm as during the July 14 review in the celebration of the fall of the Bastille.

"A brief order rings out. We lie down and a fusillade begins again. What a noise! We make a few leaps forward and lie down and begin firing again. We carry out this maneuver right to the frontier posts.

"A hundred yards farther are the German positions. The charge bayonets order comes, and we leap forward and the Germans decamp. They are afraid. When we passed the frontier post and knocked against it it fell. One would have thought that the German frontier was firmer than that.

"At last we tread on Alsatian ground. Formidable shouts resound in our chests. I run fifty yards and fall senseless from sunstroke. I recovered twenty-four hours later, but the surgeon would not let me remain on the firing-line.

"At one moment on the day preceding the fight at Col du Bonhomme we saw an aeroplane with a French flag-plane over us. We were overjoyed. A minute later we saw it drop a couple of bombs near a transport-train. One fell three yards and the other ten yards from the train and buried themselves in the ground. They did no harm. An officer called out, 'Pigs! They are Germans,' and ordered us to fire, but they were too high."

Another correspondent gives a description of the fight at Ramillies, where the

The Best Conducted Department

of the U. S. Government is the Mailing Department. In many business houses the mailing department is looked upon as a necessary evil, and so treated when it is really as important as the Government regards it.

Every piece of mail should have the same careful attention. It will have, if you use the

Pence Mailing Machine

It is positively the most perfect mailing machine on the market.

Some Points of Excellence

SPEED—Seals and affixes stamps on 6,000 envelopes per hour.

ACCURACY—Keeps accurate record of stamps used.

OPERATION—Simple. Only one operator necessary.

SCOPE—Handles empty envelopes to $\frac{3}{8}$ in. thickness without any adjustment.

Places stamps in any position desired.

Affixes as many stamps as desired.

Will either seal or stamp or do both in one operation.

Affixes stickers on backs of envelopes.

ECONOMY—Uses regular postage stamps as furnished by the Post Office Department without *extra charge* for re-rolling.

Any concern mailing 5,000 pieces per month can use THE PENCE MAILING MACHINE with economy.

Write us for full information on this device. No obligation on your part.

FLEX-A-TILE Roofs Don't Spoil Rainwater

Rainwater runs clean and clear from roofs of Flex-a-Tile — for, Flex-a-Tiles can't discolor; can't rust; their surface is natural stone. We saturate pure wool felt with 100% its weight of pure asphalt; then this is coated with Gilsomite — tough, rubber-like, wear-resisting, but that's only the durable, water-proof body of

FLEX-A-TILE Asphalt Shingles

We next take chipped Vermont slate or crushed granite and force it into the tough coat of Gilsomite under tons of pressure. This gives the Flex-a-Tile a surface that looks and wears like natural stone — unfading tones of brilliant red, garnet, green, emerald or brown. There you have a shingle that combines durability with beauty and that costs less to lay than other shingles. Before you roof, get the whole Flex-a-Tile story.

Sterling Furniture

True to its name

German cavalry retreated before the French. Of the battle and what followed he writes:

"Throughout the afternoon the allied force passed through a series of burned villages from which the invaders had been forced to retreat, hastily in many cases. They had set fire to them by means of petrol. Everywhere one heard tales of desolation and of outrage wreaked by Germans as they retired before the triumphant Allies.

"I saw some houses still burning when they had been fired but two hours previously by the enemy.

"The Allies, especially the Belgians, are in a state of fury bordering on madness at these outrages and have vowed that they will exact full measure of retribution for these brutalities.

"The French cavalry completed a long forced march, of which it is not advisable to give particulars here, but when it comes to be written it will certainly rank among the finest things ever accomplished by any mounted force, not excepting Stuart's great raid during the American Civil War.

"The Belgian infantry which was attacked by Uhlans behaved splendidly. They clamored to be allowed to join the pursuit organized by the French cavalry, and if they had been permitted to do so, they would cheerfully have marched in quest of the enemy until they dropt.

"This fair land of Flanders presents a doleful picture of sad ravages of war. In fading daylight one could see everywhere on the horizon the rim of flame and the smoke from burning villages."

And there is another side of the fighting that presents itself but rarely to the imagination of him who has seen no actual warfare. What of the long hours spent by the soldiers in the trenches, awaiting attack, tense, alert, but enforcedly inactive and unable to avail themselves of the relief of physical exertion? Here as never in the day's march or campaign, or in the night's dead sleep of fatigue, must come thronging the deeper, more serious thoughts of what the fighting can mean to the individual. It is in such long watches that a man may turn craven, rather than in the peril of actual conflict, and here a sturdy concentration upon the commonplace becomes a rather fine sort of courage, as in the following case:

Percy Phillip, the Brussels correspondent of the *London News*, gives the following picture of life in the Belgian trenches:

"Sometimes the trenches are only just ditches cut like deep furrows among potatoes or along the edge of a field of corn. Others are banked on the attacking side and branches are placed over them to screen the men from the eyes of airmen.

"Along the quiet banks of the Meuse, between Namur and Dinant, are three-score of these (trenches). There I saw men lying in readiness, with rifles by their sides. Some were asleep on the earth, with a little straw under them, but ready at a word to seize their weapons. Others were gossiping.

"What do you think of to talk about

UNDERWRITERS LABORATORIES INC.
INSPECTED INSULATED CABINET

Like a Certified Check

The certification on a check does not add anything to the cash value of the check, but it does give you the assurance that the check is good for every cent it calls for. In like manner the Underwriters' Label does not add anything to the fire protection afforded by

THE SAFE-CABINET

(1914 Model)

It does, however, give you the definite assurance that the Cabinet was manufactured under the personal supervision of an inspector from the Underwriters' Laboratories, that it is identical in every detail with THE SAFE-CABINET that was tested and approved by the Underwriters' Laboratories.

Look for this label when you are selecting a filing cabinet for security. If you do not find "SAFE-CABINET" listed in your telephone directory, address

THE SAFE-CABINET CO.
Department L-2 MARIETTA, OHIO

in the trenches?' I asked a man who was off duty for a moment. His answer was: "Oh, anything—the heat, the flies, our experiences. Don't think we confide much in each other. When one is in a situation such as that, one catches at anything interesting. We do not talk philosophy, but some of us practise it. Most are only waiting for orders to kill, perhaps, just as one waits for a tram and lets one's interest be taken by anything."

A STOLEN JOURNEY

"I WANTED to do it," says Frederick Niven, a young Englishman sojourning in Canada, in the *London Daily News*, "because a man had told me I could not do it, and I was young, and he was ten years older than I, and the curve of his lips, as he said I could not do it, exasperated me." "It" was riding on the underside of a freight-car for a hundred and twenty miles, from Vancouver City up to Yale on the Fraser River. The reader has heard so often of the penniless traveling in this way, that he fails, perhaps, to give such tourists full credit for the daring they display in choosing the nether Pullman in preference to safe and sane tramping. Short of actually trying it, no better way of judging this form of travel could be found than Niven's story gives us. It was a new thing to him and a fearsome one; he experienced it intensely and has chronicled his experiences carefully. Having taken his dare and found his train, the next step was to reach a wheel-truck without detection from the train crew. Already he had been instructed in the art of "holding it down" on the road; but to attain the dark recesses below the body of the car from the station platform was a matter of momentous difficulty. At length the coast was clear. Niven was quick to grasp his opportunity:

I looked forward and back. Nobody! I swallowed my heart and made one dive of it under the car, down on hands and knees, and crawled to the front axle. It was just as I had been told it would be. I saw a brace-rod a foot from the ground, the great timber of the truck, with the springs on it, behind. But as I approached a voice said: "Full up, partner!" I wanted to yell. Yet it bucked me to hear that voice. I scuttled back to the rear truck, crawled under its front axle, and there, again, was a brace-rod.

There was a drumming in my ears, and through that drumming I heard a bell ring. I went onto that rod in a cold sweat, perched on it, leaned backward so that my shoulders were against the truck. The rod seemed thin as a match as the car received a bump, and then was twitched ahead and jerked slightly back again as the one behind received its tug. My feet, stretching out in front, just grazed a tie (or sleeper), and drawing them up cautiously I got the heels to catch on the rod on which I sat, taking care, you may be sure, to lean back against the truck with some force, remembering that the whole

Colt AUTOMATIC PISTOL

All the talk or claims in the world cannot down this one big, public-guiding fact, viz.:—

That after severe comparative tests, the Colt was adopted by the Army and Navy because of its marked superiority to any other pistol.

Marked superiority! Did you get that? Among the many leading features come automatic safety and quick action. A Colt cannot be discharged until you *purposely* pull the trigger, but it

Fires the First Shot First

because you don't have to think or do anything to release the action. Just pull the trigger—the grip safety takes care of itself and you.

"Colts to the Front" (reproduced here in miniature) is one of the most powerful pictures of modern war scenes. We have had a limited number, without advertising, finished in beautiful tones by the new offset process, size 25 in. x 20 in., on heavy white stock suitable for framing. Sent on receipt of 10c to cover cost of postage. Mention picture No. 26. Also request booklet, "How to Shoot."

WORLD'S STAR KNITTING CO.

Dept. 267, Bay City, Mich.

point was for me to make myself into a wedge between rod and truck.

We got up speed. We went over the criss-cross of terminal lines in a dance with a rebounding motion. Then we slowed down, stopt, puffed back. I took it for granted then that I had been seen, or that the man ahead had been seen, and that she had stopt so that we might be hauled out and committed to prison. Then the bell clanged again. I sat back, took the jerk forward safely—and we were off once more. I don't know what she backed for. I don't care.

We were off in earnest this time. The sleepers kept running underneath as if some one were drawing lines in haste, more haste, frantic haste, to dazzle my eyes. They charged on me and slid under sickeningly. Presently the whole world seemed going from under my feet. I wanted to lean forward and grab it, dust flying in on my face, pricking in my ears, tingling on my cheeks as flies do on summer nights when motoring. For safety's sake I looked up to the floor of the car over me, and glared at it steadily for the next quarter of an hour perhaps, tho it seemed a lifetime. The next thing I had to protect myself against was trying to balance the ears! At curves the solid body of the car overhead moved like a long compass-finger or behaved like a ship going against the wind when the wind suddenly thrusts her a point or two off, and before the steersman brings her up again.

After a little while, however, I began to feel (as they say out West) "good." A great hilarity filled me. My heart was down again where it should be; it was not going to burst after all. I puckered my eyes because of the dust and wind that rushed at me. Ever and again, in some rocky cutting, the sound went up from deafening to awesome. But it was the long trestle over the Fraser that gave me the greatest sense of being attached to life by a mere thread. These bridges are not filled in underneath; between the ties one looks down on the river.

I "held her down" to Yale, where I dropt from the rod and crawled out, feeling as if I had been beaten all over, or as if I had the severest symptoms of influenza. I crawled out and stood up, and then went down on my knees, hauled myself up again, and with wobbly knees crossed to the bushes south of the track and sat down there. A brakeman, stepping down from the cars, saw me, crossed over to the bushes, and stood looking at me long and thoughtfully.

"Got it in the neck all right," he said at last.

I merely looked up and made some kind of smile at him. I did not care very much what he did, severe tho he looked, and helpless tho I was.

"Got any dough?" he said. "Dough" is money.

I put my hand in my pocket and fished out a handful of dust and small cinders, and extracted twenty-five cents ("two bits"), which I tendered to him. The fare would be about six dollars, but it was not money-saving I was after that day. He pocketed his perquisite and strolled away contented. I, too, was contented. I had "beaten my way" underneath—"tangling up with the trimmings," in the slang of the country—to show myself that I could

Choose Jerseys

To Supply the Family Milk

An eminent doctor says:

"Those buying milk by the quart, sold at a uniform price for all breeds, will get more commercial value by purchasing Jersey milk."

Nobody attempts to deny the truth of this statement. Jersey milk is richest in butter fat and the other solids which make milk valuable.

If you keep one or a number of cows for your own use, there is all the more reason why those cows should be Jerseys.

Your Jersey cow not only supplies you with rich milk, but she keeps it up. One of the well known Jersey qualities is her persistency in milk. She

is easily kept, she produces milk economically, while her beauty and gentleness single her out as emphatically the cow to supply milk for the home.

A membership in this Club will prove valuable to all Jersey owners. We have no Jerseys to sell, but we will gladly supply you with convincing Jersey facts.

THE AMERICAN JERSEY CATTLE CLUB
324 W. 23d Street, New York City

Digitized by Google

do it. I had done it—but I never want to do it again.

THE HIGH COST OF MURDER

THE Louisville *Times* calls its readers' attention to the crisis in crime that is at present blighting Chicago. It appears that, in the trades particularly of slugging, the coup de leadpipe, and murder, the cost of protection, the underground charges, and the scarcity of raw material have brought about the situation where the criminal must receive a higher remuneration for his crimes or he will be forced to seek a more profitable occupation. Such is the disgust of some of the more expert thugs at the present conditions that they threaten to turn honest. The *Times* quotes from the Chicago *Herald* some data on the prohibitive scale of prices upon which all self-respecting Chicago thugs now insist:

A business-agent who actually has hired sluggers in times past has told State's Attorney Hoyne and the *Herald* something of the added cost.

He said that a few months ago an A No. 1 thug, competent and experienced, could be hired on an ordinary knock-down job for \$10. He would hire his own get-away, too. A complete killing would cost \$500 and a one-way ticket.

The old prices per head quoted to employing "business-agents" were about as follows:

"Simple knock-down, victim unconscious and marked up a little, \$10 to \$20.

"Vicious slugging, with a bone or two broken, victim taken to hospital, \$40 to \$75.

"Murder, where slugger had to leave town, \$500 and car-fare."

The new prices, resulting from convictions of labor gunmen and previous to the *Herald's* exposé, were given as follows:

"Hospital cases, light, medium or heavy, \$100 to \$500.

"Killing, necessitating leaving the city, \$2,500 and car-fare.

"In addition the employers of the thugs now must furnish a satisfactory swift automobile to aid in the get-away."

Well might the student of political economy face the future with dismay. With the cost of murder jumping from \$500 to \$2,500 at a single bound, it is enough to discourage even the most opulent promoter of assassination. And it will be noted, too, that under the revised schedule the thugs have eliminated the "simple knock-down," presumably because they can't afford to indulge in any sort of thuggery for such a paltry sum as \$10. Every case now must be a "hospital case," and the price has soared into the hundreds. If conditions do not improve shortly the Chicago thug may have to turn to the hazardous calling of burglary and the exponent of assassination will be obliged to do the job himself.

It is only in Louisville that the price of "hospital cases" and killings remains stationary at a maximum of \$250, provided the work is done with an automobile.

Is told in full, with abundant proof, in big 48-page FREE Book, just from the press, describing our new Course. Standard speed-method for 13 years. The one system that scientifically develops the fingers into real efficiency. Definite gymnastic exercises train every finger—every finger muscle—so as to insure perfect accuracy—highest speed. This copyrighted system is never taught in business schools—you can learn it only direct from us. The free book gives detailed information.

STENOGRAPHERS: Stop merely marking time! Mediocre typewriting is keeping your salary down, and always will. Expert ability pays high! Tulloss Touch Writers—rapid, accurate, willing with utmost ease—earn high salaries everywhere. Be able to type in typewriting—get the pace that means speed, efficiency, salary. You can—easily—at home—with top-notch results absolutely guaranteed. The book shows how hundreds of... at... these natural abilities than you will have if you are writing at expert speed, earning expert salaries.

ALL TYPEWRITER USERS: Whatever your profession—whatever your work—this book should be of the greatest value to you. Hundreds of business men, ministers, lawyers, teachers, authors have grasped this opportunity, and now write as twice, three times, four times their former speed—using all their fingers—without ever looking at, or even thinking of the keys. Don't tangle at or with a few fingers, writing at hardly more than longhand speed. Be more than a mere user—the master of your machine. Write as the pianist plays—unconsciously. Leave your mind free for thinking what to say—save precious time—do better work—get down on paper the thoughts that now so often "go glimmering."

Write NOW for the Great Free Book

Make your start toward the better ability that will mean a bigger income. There is no expense—no obligation. Any typewriter user may have a copy absolutely free. Send for yours today.

Getting What You Pay For

- Q Are you holding down the high cost of living by seeing to it that you get what you pay for?
- Q Are you sure that every peck you pay for measures a peck; every pound, a pound; every ton, 2000 pounds; every gallon, 4 quarts?
- Q Almost all household supplies are bought without checking the amount delivered.
- Q Gas is a commodity which does not ask to be bought on faith. It is measured on your premises, as you use it, and all you have to do is to verify the gas meter reading (a simple process which your Gas Company will show you how to do yourself) and you can satisfy yourself that you are getting what you pay for.
- Q Your gas meter is a simple and accurate measuring machine. This is proved by thousands of tests made by City and State authorities whose records are accessible to the public.
- Q Your Gas Company stands ready at all times to aid you in securing the most efficient results from the use of its product, but it cannot, without your co-operation, control the amount or the way it is used after it passes through the meter.
- Q The men who make and sell you gas are MERCHANTS. They have invested a large sum of money in your community. They are there to stay. Possibly, you are a shareholder with them.
- Q Wisdom, as well as common honesty, leads them to strive for public confidence and to see that you get what you pay for. They want to keep on doing business with you.
- Q When you buy GAS, YOU GET WHAT YOU PAY FOR.
- Q Send for the free booklet: "A Thousand Uses for Gas," "The Hygienic Value of Gas Lighting."

If you haven't read
"The Story of Nancy Gay"

send at once for a free copy that awaits you

Nancy says: "What! you can't read your gas meter? Why it's as easy as telling time. I read mine every few days just for the satisfaction of knowing what my light and heat are costing. And I know I'm getting all I pay for. I wish I knew that all the other things I buy were as accurately weighed and measured."

The Marvels Beyond Science

By Joseph Grasset, M.D., author of "The Semi-Insane and the Semi-Responsible."

Can You to-day draw a clear line between the Occult and the demonstrated facts of Science? This question is liable to "stump" the best of us, so great have been the advances of science in recent years. Dr. Grasset brings you face to face with a "dissected realm," presenting phenomena that formerly were looked upon as occult, but which are now fully explained and accounted for, as hypnotic sleep, the unconscious will of movers of tables, the unconscious imagination of mediums, and the unconscious memory of hypnotized persons. He believes that many phenomena still regarded as occult will in a comparatively short time be included in the catalog of accepted scientific principles—including mental suggestion, direct intercourse of thought, telepathy, premonitions, etc., etc. He reviews the whole Occult field, from Mesmer to Palladino. Cloth \$1.75 net. FUNK & WAGNALLS COMPANY, New York and London.

How to Argue and WIN!

By Grenville Kleiser, Author of "How to Speak in Public," etc.

Do you need concrete suggestions for training your mind to accuracy of thought—for training yourself to be tactful in approaching men to win them over to think as you do? Grenville Kleiser, the well-known public-speaking coach and instructor, can give you these practical suggestions. His methods are the result of many years' successful experience in teaching men to think on their feet. He insists on clearness and conciseness of statements, skill in the selection of words, and the cultivation of a strong, forceful personality. What does it mean to the lawyer?—to the preacher?—to the business man?—to the politician?—to the salesman?—to YOU?—to be able to Argue and WIN!

Cloth, \$1.25 net. Average Carriage Charges, 12c.

THE SPICE OF LIFE

A Cautious Owner.—A Pennsylvania farmer was the owner of a good Alderney cow. A stranger, having admired the animal, asked the farmer: "What will you take for your cow?"

The farmer scratched his head for a moment, and then said: "Look a-here, be you the tax assessor or has she been killed by the railroad?"—*The Argonaut.*

Zooratory.—There is no place like the House of Commons for a "nice derangement of metaphors." It will be a long time, however, before we have a mixture equal to the outburst of an effusive orator who said:

"The British lion, whether it is roaming the deserts of India or climbing the forests of Canada, will not draw in its horns or retire into its shell!"—*Tit-Bits.*

Goods Returned.—Once an old dorky visited a doctor and was given definite instructions as to what he should do. Shaking his head he started to leave the office, when the doctor said:

"Here, Rastus, you forgot to pay me."

"Pay yo for what, boss?"

"For my advice," replied the doctor.

"Naw, suh; naw, suh; I ain't gwine take it," and Rastus shuffled out.—*Norfolk Ledger-Dispatch.*

Perhaps You Know?—"Begorra," observed Pat, "making love to a widow is a quare thing to do. Before ye begin ye know what the end will be and yet you're scared that mebbe somethin'll happen. Ye make up your mind it's no use tryin' and thin ye discover ye've gone so far ye can't back out. It's full av disappointments and hopes and in the end comes the greatest surprize av all whin just what ye expected happens."—*Puck.*

Explained.—"What's yours?"

"Coffee and rolls, my girl."

One of those iron-heavy, quarter-inch, thick mugs of coffee was pushed over the counter. The fastidious person seemed dazed. He looked under the mug and over it.

"But where is the saucer?" he inquired.

"We don't give no saucers here. If we did some low-brow'd come pilin' in an' drink out of his saucer, an' we'd lose a lot of our swellest trade."—*Savannah News.*

"Wolf! Wolf!"—The heavy black clouds had massed in the east and west, the lightning was flashing fiercely between the heavy incessant rolling of the thunder.

Francis was terribly frightened, and his fond mother had gathered her young hopeful and tried logically to calm his fears.

"Don't be afraid, darling. There's nothing to fear. God sends the thunder-storm to clear the air, water the flowers, and make it cooler for us. Now, don't cry, dear; it won't harm you, and everything will be better when it's over."

The little fellow listened intently, and as his mother finished he looked up at her gravely and said: "No, no, mother; you talk exactly the way you did last week when you took me to the dentist to have the tooth pulled."—*Pittsburg Chronicle-Telegraph.*

Rare.—"Sadie, what is a gentleman?"
"Please, ma'am," answered the well-bred child, "a gentleman's a man you don't know very well."—*Pittsburg Chronicle-Telegraph.*

Too Much.—WIFE—"Ta-ta, dearie: I shall write before the end of the week."

HUSBAND—"Good gracious, Alice; you must make that check last longer than that."—*London Opinion.*

Not the Same Thing.—"A great deal of what we call pleasure is largely imaginary," said the ready-made philosopher.

"I suppose so," replied the man who was working on his automobile.

"Now, wouldn't you like to be able to take a long ride without having to worry about speed limits or spark-plugs or tires or anything at all?"

"I should say so!"

"Well, here's a street-car ticket."—*Washington Star.*

Hopper Recognized.—"Even animals show their feeling," remarked De Wolf Hopper, the comedian, to a friend the other day. "Only yesterday an animal showed me gratitude. I was wandering along a stream in the country when I met a cow in great distress. Her calf was drowning. I plunged in the water and rescued the calf and the grateful cow licked my hand."

"That wasn't gratitude," replied the friend. "The cow thought she had twins."—*Troy Times.*

The Victim.—It was a wizened little man who appeared before the judge and charged his wife with cruel and abusive treatment. His better half was a big, square-jawed woman, with a determined eye.

"In the first place, where did you meet this woman who has treated you so dreadfully?" asked the judge.

"Well," replied the little man, making a brave attempt to glare defiantly at his wife, "I never did meet her. She just kind of overtook me."—*Pittsburg Chronicle-Telegraph.*

A Costly Substitution.—"Come here, Bates!" roared the master of an English village school, one morning. "I have a letter from Mr. Johnson informing me that his son is unable to attend school in consequence of a thrashing you inflicted upon him yesterday. Is that a fact, Bates?"

"N-n-no, sir," quailed Bates, "I never touched 'im."

But the master did not believe him, and two minutes later Bates was asking permission to stand up in class.

On the following day Johnson returned, and the master sought justification for his act before the whole class. "Did you tell your father that Bates thrashed you, Johnson?" he asked.

"No, sir," piped the youth.

The master's countenance clouded. "But your father wrote to me, saying that Bates did it."

"I know 'e did," sniveled Johnson. "It was Billy Beauchamp did it, sir; but father couldn't spell 'Beauchamp,' and so he wrote 'Bates.'"—*Youth's Companion.*

HAVOLINE OIL

For that long run—
Carry a can in your Car
"It makes a difference"

in the efficiency of your engine, by decreasing its frictional loss and enabling it to develop maximum power. In this manner it enhances the general serviceability and endurance of the motor and greatly lessens upkeep costs.

It forms a lubricating "cushion" of equal thickness between the moving metals—thus preserving them against the rigid endurance test of the long run. Here's why this "cushion" retains its life and serviceability:

Havoline Oil is made only from one uniform base crude of tested quality.

It is manufactured by our "special process" which leaves the individual molecules unscathed, retaining the "rubber-ball" springiness of the oil. Nevertheless it is entirely freed from floating carbon and impurities.

Buy the Oil in the Blue Can,
2 Five-Gallon Cans to the Case.

Tell us your make and
we'll tell you your grade.

Ask your garageman or write us direct for testimonials of *Havoline* users who own your make of car. Write for the "Lubrican," our booklet on lubrication.

Nervous States

Their Nature and Causes

By PAUL DUBOIS, M.D.

Author of "Psychic Treatment of Nervous Disorders," "Influence of the Mind on the Body," "Self Control," etc.

Authorized Translation

By EDWARD G. RICHARDS, M.B., C.M.

Dr. Dubois points out that neurasthenia, contrary to a general impression, is not a new disease created entirely by the conditions of modern life. Most men and women are subject to various degrees of neurasthenia due to the influence of fatigue, by which are brought on psychic debilities, so that nature reacts and they become irritable or sad. The most healthy of men may become temporarily neurasthenic.

CURRENT EVENTS

European War

September 3.—Prince William of Wied leaves Albania.

The capture of Amiens and La Fère by the Germans is reported in London.

China protests against the landing in her territory of Japanese troops bound for Tsing-tao.

September 4.—It is reported that Russian troops are being brought to Belgium by way of Archangel, the White Sea, the Arctic and Atlantic oceans, and Scotland.

The Russian Army under General Ruzsky takes Lemberg, the capital of Galicia, while General Brusiloff's takes Halicz; 1,500,000 men are said to have been engaged in this campaign.

The German advance in France swings to the southeast of Paris, and reaches La Ferté-sous-Jouarre.

Fighting is resumed in Belgium near Termonde.

The British Prime Minister announces that two divisions of Indian troops are on their way to the front.

September 5.—It is announced in Petrograd (St. Petersburg) that Jews will henceforth be admitted as officers in the Russian Army and Navy.

Five German Army corps arrive at the Vistula River to help keep back the Russians.

The capture of Reims by the Germans is reported.

Representatives of Great Britain, France, and Russia sign an agreement that no one of the three shall make peace without the consent of all.

It is announced in Paris that the German advance is checked.

The Wilton passenger liner *Runo* is destroyed by a mine in the North Sea and twenty-five of her 238 passengers are lost.

September 6.—It is reported that the British light cruiser *Pathfinder* has been destroyed by a German submarine in the North Sea.

Dispatches tell of Montenegrin success against the Austrians in Herzegovina.

A French fleet bombards Cattaro, the Austrian seaport in Dalmatia.

September 7.—A dispatch is received in New York from five well-known American newspaper correspondents discounting reports of German brutalities.

Official statements from London and Paris report German repulses along the whole battle-line in northern France, a decided retreat of the German right wing, and victorious encounters at Percy-sur-Oise and Nanteuil-le-Haudouin.

Germany asks China to bar from her soil Japanese and British troops directed against Tsing-tao.

German troops marching to occupy Ghent defeat a Belgian force at Melle.

September 8.—The Russian capture of the strongholds of Nikolaf and Mikolofow in Galicia is reported.

The right wing of the German Army in France is pushed northward over the Marne.

September 9.—The Germans report the capture of Mauberge with 400 guns and 40,000 men.

President Wilson of the United States receives a message from the Kaiser protesting against the use of dum-dum bullets by the Allies and fighting by Belgian non-combatants.

The Russians report a victory over Austria at Ravaruska, in Galicia.

Israel Zangwill appeals to all Jews to support the Allies as against Germany.

The converted cruiser *Oceanic* (Br.) is reported wrecked on the north coast of Scotland.

General Foreign

September 2.—Representatives of the United States and the Republic of Panama, at Panama, sign a treaty giving the United States important rights in the harbors of Colon and Ancon.

September 3.—It is reported that General Aguilar has issued a proclamation of rebellion against the Carranza Government in Mexico.

An anti-Carranza revolt is reported in the State of Tabasco.

September 4.—Pope Benedict XV. appoints Cardinal Ferrata Papal Secretary of State.

September 6.—Pope Benedict is formally crowned in the Sistine Chapel.

General Carranza refuses to accept Zapata's terms for peace in Mexico.

September 8.—Sir John Henniker Heaton, "father of the Imperial Penny Post," dies in Geneva.

Insurrector movements on the part of the

Ask any business man who leads the strenuous life

how he feels at the close of a hard day's work, and seven times out of ten he will say, "Rotten, all fagged out—nerves have gone to smash."

It's the destructive toxins in the blood—uric acid and the poisons emanating from hasty overeating and consequent faulty nutrition. Kidneys no longer perform their function of keeping the blood stream clean. This condition can be corrected without loss of time from business. Simply 'phone your druggist to send you a case of

BUFFALO LITHIA SPRINGS WATER

and drink it regularly and often. Six to eight glasses a day will work wonders for you. Your toned-up kidneys will keep your blood stream clear from these destructive toxins and thereby remove the fundamental cause of your "fagged-out" feeling.

For over forty years Buffalo Lithia Water has been a standard remedy for such conditions. Eminent physicians endorse and prescribe its use. Among them HUNTER MCGUIRE, M.D., LL.D., late President American Medical Association, said: "I know from constant use of it personally and in practice that the results obtained from its use are far beyond those which would be warranted by the analysis given. I am of the opinion that it either contains some wonderful remedial agent as yet undiscovered by medical science, or its elements are so delicately combined in Nature's laboratory that they defy the utmost skill of the chemist to solve the secret of their power."

Write for our booklet, "Springs of Health."

Prepared by 56 of America's greatest legal authorities—28 more subjects and 30 more authors than any other correspondence law course. 13 volume Law Library, 60 Text Books, and 34 Case Books furnished free. Don't fail to investigate before taking up the study of law. Send postal today for your free book.

AMERICAN SCHOOL OF CORRESPONDENCE
Dept. 2377, Drexel Ave. and 58th St., Chicago, U.S.A.

Zapatistas and General Aguilar are reported in Mexico.

The new Pope holds his first consistory and elevates Mgr. Caernoch, Primate of Hungary, to the cardinalate.

Domestic

WASHINGTON

September 4.—In an address to Congress President Wilson asks for a \$100,000,000 war tax.

September 6.—The President makes public a letter in which he declines to take part in the coming Congressional campaign on the ground that the present crisis compels him "to stay on the job."

September 7.—The President makes public a letter sent to the contending parties in the Colorado mine trouble in which he outlines a plan for settlement.

September 8.—President Wilson appoints Sunday, October 4, as a day of prayer for European peace.

September 9.—After the visit of a delegation of railroad presidents to the White House and the offices of the Interstate Commerce Commission, it is reported in Washington that the Commission is seriously considering a reopening of the rate case.

GENERAL

September 4.—David J. Palmer is elected commander-in-chief of the Grand Army of the Republic.

September 7.—In a speech at New Orleans, ex-President Roosevelt attacks both old parties, criticizes the Underwood tariff, and advocates Federal development of the Mississippi River.

Pittsburg manufacturers raise \$1,000,000 to conduct a campaign for South-American trade.

September 8.—Mt. Lassen, California, is reported to be in more violent eruption than at any time since it renewed activity.

THE LEXICOGRAPHER'S EASY CHAIR

In this column, to decide questions concerning the current use of words, the Funk & Wagnall New Standard Dictionary is consulted as arbiter.

Readers will please bear in mind that no notice will be taken of anonymous communications.

"M. R. H.," Danville, N. Y.—"(1) What is the name of the scientist who has been making research into the question of the supposed language of monkeys? (2) What is the latest conclusion concerning the date of the writing of the Pentateuch in its complete present form?"

(1) Richard Lynch Garner. (2) About 400 B.C. The latest note (a single sentence) is subsequent to the period of the work of Ezra-Nehemiah.

"W. T.," Norwood, N. C.—"What is the pronunciation of Jan Sazcepanik? It is the name of a Polish scientist, said to be the inventor of the telemicroscope."

In Polish "sz" has the power of "sh," as in *ship* in English, and "cz" has the power of "ch" as in *church* in English, so that the name you submit is pronounced *shchâ-pâ-nik*—"o" as in *they*, "a" as in *art*, and "i" as in *police*.

"A.B.A." American Bankers Association Cheques

The sale of "A. B. A." Cheques for use throughout the United States continues as usual, and the cheques are affording to travelers in "the States" their customary service of protection and convenience in respect to money matters.

The sale of "A. B. A." Cheques for foreign use has been discontinued temporarily, it being impossible to give positive assurance to tourists that travelers' credits will be uniformly honored abroad at all places under conditions which change from day to day.

Through the co-operation of the Officers of the United States Government, Committees of Bankers in New York, London and Paris were enabled in a very short time to perfect arrangements for protecting all forms of travelers' credits issued by American institutions and firms; and holders of travelers' cheques and letters of credit have been by this means relieved from the serious consequences of the sudden paralysis of customary banking facilities abroad.

As soon as conditions warrant, the sale of "A. B. A." Cheques for use abroad will be resumed.

TEMPLE PANAMA CANAL TOURS

South America, Panama Canal, Alaska, San Francisco Exposition. Booklet ready. Temple Tours, 149 Tremont Street, Boston, Mass.

San Diego Panama Exposition California

WHAT MILLIONS WILL SAY Of California's Great Exposition

CELEBRATING THE OPENING OF THE PANAMA CANAL

During all of 1915 millions will come to San Diego, the first Pacific port of call for ships passing through the Panama Canal. They will come—patriotic Americans—to celebrate with California at her great expositions the opening of the canal which divides the continents but unites the world.

Every man, woman and child will go back home enthusiastic about the hospitality of San Diego, the beautiful Southern California city, resplendent in its setting of fertile valleys on the one side and placid San Diego Bay and Point Loma on the other.

They will tell of the splendid hotels, where the welcome is warm and the rates reasonable; of the mountains, the balmy, orange-blossom-laden air, even when snow and ice cover the country back home; of the wonderful flower-decked bungalows overlooking valley or bay.

And they will tell of the greatest and most beautiful of all expositions. How up on the 600-acre mesa in Balboa Park, overlooking San Diego, they saw a dream city of Sixteenth-Century Spain. For the architecture which evolved Mission and Palace and Cathedral has given birth to the Exposition Beautiful and covered its quaint walls with clambering blooms which touch the very bells in the mission towers, where pigeons nest and coo.

They will marvel that in place of still exhibits of finished products they saw the things they wear and use and eat made before their eyes by throbbing machinery, transplanted from the big factories of the world. The developments of the big inventions of the age will be a part of their education contributed by the Exposition—aerial navigation, wireless telegraphy, motion-picture photography, electricity and those other modern miracles which mark this wonder age in which we live.

You will never forgive yourself if your friends come home from San Diego in 1915 bubbling over with enthusiasm because of what this great exposition has added to their store of pleasure, education and experience. Your usual vacation trip to mountain, stream or seashore will seem insignificant by comparison.

It is none too soon to plan your San Diego trip now. Your nearest railroad agent can tell you of the remarkably low rates which they have made for Exposition year, and of the many scenic wonders en route which you have always wanted to see.

TOPICS OF THE DAY

HOW AUSTRIA FARES

AS AUSTRIA BEGAN the actual hostilities of the European conflict by its attack on Serbia, it is of interest to inquire how it has fared since then. While American

attention has been centered almost entirely on the battle-fields of France and Belgium, the Russian forces in Galicia, according to dispatches from Petrograd, Rome, Paris, and London, have been achieving successes which, if true, are declared practically to eliminate the Austrian armies as a factor in the war. Indeed, as one Russian military expert reads the situation, it was the Russian victories in Galicia that really checked the German advance upon Paris by necessitating the shifting of German troops from the western to the eastern theater of war. Russian reports tell of Austrian losses since the fall of Lemberg amounting to 350,000 men—250,000 killed and wounded, and 100,000 prisoners—and assert that the defeated armies, having lost most of their artillery and supplies, are trapped in the angle formed by the rivers Vistula and San. The Russian plan of campaign, according to a Petrograd dispatch, is to leave them bottled up there, in and around the fortress of Przemyśl, under guard of a part of the Russian Army. "The rest of Austria," we read, "will be left to the Servians and to the commotion among her Balkan nationalities, while the body of the Czar's troops will pass on to concentrate against the Germans, with Berlin the objective." Galicia, says a London dispatch,

"is now a Russian province, save only for the strongholds of Jaroslaw and Przemyśl, toward which the remnants of the shattered armies of Von Auffenberg, Dankl, and the Crown

Prince have fled." Word also comes, still by way of Petrograd, of thousands of unemployed parading the streets of Vienna, and of the third levy of Austrian reservists leaving for the front in civilian attire, the supply of uniforms being exhausted.

On the other hand, dispatches from Austrian sources deny these reports of Russian victories and claim notable successes for the Austrian troops, which they admit are greatly outnumbered. Thus Count Berchtold, Austrian Foreign Minister, in a communication to Dr. Dumba, Austrian Ambassador at Washington, explains that the Austrian retreat before superior numbers of the enemy was for the purpose of securing a more favorable position, preparatory to new actions. He reports, moreover, that the Austrians are making headway against both the Russians and the Servians. A Rome dispatch to the *New York World* tells of "100,000 Russian prisoners and nearly 500 cannons captured by the Austrians." And a Vienna dispatch to the *New York Tribune* quotes the *Vienna Neue Freie Presse* as saying after the fall of Lemberg: "We can say nothing more than that the high

moral quality of the Austrian and Hungarian troops must eventually prove victorious."

But despite these assurances that the Austrian retreats have

THE RUSSIAN COMMANDER-IN-CHIEF.

It was the success of Grand Duke Nicholas's generals operating against the Austrian armies in Galicia, believe some observers, that checked the German advance in France by causing the withdrawal of German troops from that campaign.

TERMS: \$3 a year, in advance; four months, \$1; single copy, 10 cents; postage to Canada 85 cents a year, other foreign postage \$1.50 a year. **RECEIPT** of payment is shown in about two weeks by date on address label, subscription including the month named. **CAUTION:** If date is not properly extended after each payment, notify publishers promptly. Instructions for **RENEWAL, DISCONTINUANCE, or CHANGE OF ADDRESS** should be sent two weeks before the date they are to go into effect. Both old and new addresses must always be given. **DISCONTINUANCE:** We find that many of our subscribers prefer not to have their subscriptions interrupted and their

files broken in case they fail to remit before expiration. Nevertheless, it is not assumed that continuous service is desired, but subscribers are expected to notify us with reasonable promptness to stop if the paper is no longer required. **PRESENTATION COPIES:** Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

AUSTRIAN LEADERS WHO HAVE FELT THE WEIGHT OF THE RUSSIAN IMPACT IN GALICIA.

been merely tactical, editorial observers on this side of the water are almost unanimous in regarding Austria's position as desperate. Rumors of financial exhaustion and internal dissensions give color to this view, as does the vague intimation that Austria is ready to discuss peace terms independently of her ally. In view of the terms of the Austro-German alliance, however, which preclude such action, the *Philadelphia Public Ledger* characterizes this rumor of independent peace negotiations as "unlikely." The same paper, however, quotes a German officer's reference to Austria in its present plight as "a corpse around Germany's neck." And in the *Syracuse Post-Standard* we read:

"Austria has put her last resources in the field. Hungary lacks trained troops. Within ten days, say the military observers, the Cossacks and Servian cavalry will meet on the plains of Hungary to march upon Budapest. Austria has been of no help to Germany in the war she wished on Germany."

The *Syracuse Herald* finds it easy to believe the rumor that Austria-Hungary is "in the throes of a financial panic," since "her financial affairs were in a deplorable condition when the war broke out." Austria is "the forlornest of all nations in the war," remarks the *Atlanta Journal*, which goes on to say:

"Her armies are staggered, her navy, never of formidable strength, is hopelessly locked in, her ports are blockaded, her harvests ungathered, her food-supply desperately short, her industry and business paralyzed, her financial resources at an end; every sinew of the great lumbering Empire is strained to the snapping-point and every nerve tingling with alarm."

"The expedition that was to be hurled against Servia and crush the little Kingdom forthwith is apparently abandoned. Instead, the Serbs and Montenegrins are overrunning Austrian provinces. The armies that were to deal death-blows to the Muscovites in a brief campaign, and then sweep westward to aid the Germans, have been beaten back. Lemberg has fallen. Galicia is in Russia's grasp. Vienna itself is looking anxiously to its defense."

Both Vienna and Budapest, according to the *Providence Journal*, were without fortifications when the war began. Another handicap, the same paper points out, is the fact that "Austria-Hungary entered upon the war with a third of its population Slavs of doubtful loyalty." And in the *Detroit News* we read:

"The principal weakness of this polyglot Empire is that her people are not, like the Germans, of one mind as to the war and eager to make any sacrifice for the fatherland. The elements of Austria are naturally discordant, and only the most expert management has served to keep them a united people in times of peace. The cement of the political bond is chiefly commercial advantage and opportunity. War, and especially a war that

shows a disastrous beginning and threatens a more disastrous finish, must create deep discontent bordering upon mutiny among people who at best had but a half-hearted interest in the conflict and who looked with strong disfavor upon the provocation."

The idea, however, that the internal unrest in Austria-Hungary borders on rebellion is declared false by a writer in *Fair Play*, who says:

"Whatever of it may exist is due to the economic conditions. While the Slavs of Austria and of Hungary are constantly fighting for the purpose of gaining advantages for their race, they fight in the same manner as the different political parties of this country fight each other, not for the purpose of disintegrating the Dual Monarchy, but for political advantages, pure and simple, within the Monarchy. Take, for instance, the case of the Croats and Slavonians: they are the same race as the Servians, but if the Croat hates anybody in the world it is the Servian, and he would rather see his country swept from the face of the globe than to be incorporated in a greater Servian empire or in the holy Russian autocracy, at the head of which is the semi-idiotic Nicholas. The same can be said of the Czechs, of the Poles, of the Slovaks, and of all other Slavic nationalities of Austria and Hungary."

"The Austro-Hungarian Monarchy has 15 million Germans, 10 million Magyars, and 3½ millions of Roumanians and about 20 millions of Slavs, the large majority of whom are either loyal to the Austrian or loyal to the Hungarian crown."

An Austrian collapse "might easily prove a mortal wound for Germany's cause," remarks the *Philadelphia Telegraph*. "Austria has proved a broken reed to Germany," agrees the *New York Sun*, which adds the opinion that the German withdrawal from Paris was due to the Russian victories in Galicia. Another effect of the Galician campaign is pointed out by a correspondent of the *London Morning Post*, who writes:

"One of the most important points about the Russian conquest of Galicia is the fact that Germany is now completely deprived of sources of supply of petroleum and naphtha products, almost the entire yield of Galicia having been formerly taken to Germany. As the Germans in waging this war rely mainly on a mechanical basis, the loss of motive power for motor-cars, aeroplanes, and air-ships must tell heavily on their effectiveness."

The popular impression that Austria's whole military history is a practically unbroken record of defeats is challenged by an Austrian correspondent who sends us the following list of occasions "when Austria was victor":

1618-48.—Thirty Years' War: Austrian General Wallenstein defeats Gustavus Adolphus and drives him out of Germany and Austria.

- 1683.—Austria and Poland defeat the Turks at the gates of Vienna.
- 1707.—Austrians defeat the French in Italy.
- 1714.—Prince Eugene defeats the Turks at Peterwardein and finally at Belgrade.
- 1756-63.—Seven Years' War.
- 1757.—Austrians defeat Frederick the Great at Kalin.
- 1758.—Austrians defeat Frederick the Great at Moxen.
- 1760.—Defeat of the Prussian General Fugne at Landshut by Austrians. Occupation of Berlin by Russians and Austrians.
- 1793.—Austrians defeat the French in Lombardy.
- 1809.—Andreas Hofer and Austrian Army drive the French out of Tyrol.
- 1809.—May 22, Napoleon I. defeated by the Austrians at Aspern—first defeat of Napoleon and only one suffered by him at the hands of one single Power.
- 1813.—Austrians, Prussians, and Russians, under Austrian Field-Marshal Schwarzenberg, defeat Napoleon and his forces decisively at battle of Leipzig.
- 1848-49.—Italians and Sardinians defeated by Austrians under Radetzky in several battles in northern Italy.
- 1866.—June 24, 225,000 Italians decisively defeated by 125,000 Austrians in battle of Custoza.
- 1866.—July 20, sea battle of Lissa; Italian navy decisively beaten and partly annihilated by much weaker Austrian navy under Admiral Tegethoff.
- 1878.—Bosnia occupied and civilized by Austrian Army.

TURKEY TEARING UP TREATIES

"THE SICK MAN of Europe is able to sit up and has begun to take notice of world affairs," remarks the *St. Louis Globe Democrat* as it notices Turkey's peremptory abrogation of extraterritorial treaties with the Powers. This means, we read further, the canceling of agreements "under which foreigners were exempt from occupation taxes, and the Turkish courts were denied jurisdiction of offenses alleged to have been committed by aliens." *The Globe Democrat* notes, moreover, that, owing to the general state of war in Europe, "the United States is the only country likely to suffer any present embarrassment from the abrogation." Meanwhile, we read, that as for Europe, "if the Allies are victorious, they will have little trouble in enforcing the treaties," while if they lose "they will have matters of much more vital consequence

to consider." "Turkey can not be blamed," concludes *The Globe Democrat*, "for insisting on the right to treat aliens as every other nation treats them," and "it forfeited it only by its semi-barbarous disregard of international amenities."

In the view of the *Washington Post*, Turkey's action "will cause great apprehension among Americans resident" in that country, where we maintain important American colleges and schools and have missionaries scattered throughout the Empire. That these Americans are hereafter liable, says *The Post*, "to be tried according to the methods of Turkish jurisprudence is sure to give rise to objection and complaint, and perhaps there will be an exodus of missionaries." Then it is likely that the United States will have additional reason for protest against the Porte, we learn from Washington dispatches, if, as it is reported from Constantinople, "the first result of the abolition of the capitulations is the decision of the administrators of the tariff to impose a 100 per cent. duty on foreign textiles, shoes, or alcohol." The duty on shoes, we read, "is regarded as especially affecting America." How the Administration stands in this matter is plain from the "paraphrase" of a cablegram sent by the State Department to Ambassador Morgenthau at Constantinople and given to the press as follows:

"You will bring to the attention of the Ottoman Government that the Government of the United States does not acquiesce in the endeavor of the Imperial Government to set aside the capitulations.

"Furthermore, this Government does not recognize that the Ottoman Government has a right to abrogate the capitulations, or that its action to this end being unilateral can have any effect upon the rights and privileges enjoyed under the capitulatory conventions.

"You will further state that the United States reserves for the present the discussion of the grounds upon which its refusal to acquiesce in the action of the Ottoman Government is based, and also reserves the right to make further representations in this matter at a later date."

In an interview widely quoted, our former Ambassador at Constantinople, Oscar S. Straus, reminds us that American interests in Turkey are large and important in a "human and educational way." According to Mr. Straus, "we have about 550 institutions of various sorts there and several colleges," while he is said to have added, "speaking roughly and without

Tupical War Service

On the reader's left is a crowd of Parisians watching a German aeroplane, apparently unperturbed by the possibility that it may drop a bomb. On the right a group of American volunteers are crossing the Place de l'Opéra on their way to enlist for service in the French Army.

WAR-TIME INCIDENTS IN PARIS.

exact facts in hand," that "our trade with Turkey does not amount to more than \$20,000,000, both ways, annually." Purely in his capacity as private citizen, Mr. Straus goes on:

"I think no one who is familiar with Turkey and her affairs will begrudge her the right to become sovereign in her own land, provided she will conduct herself to justify reliance upon her courts, provided she will not use her power to oppress those living in the country who are of religious faith other than Mohammedan. It is, indeed, not to be wondered at that the

A NEW TURN IN MEXICAN AFFAIRS

THE SUDDEN ANNOUNCEMENT by President Wilson that our troops are to be withdrawn from Vera Cruz, which they have been "peacefully occupying" since April 21, came as "a complete surprise," say Washington press reports, "even to State and War Department officials." Intensifying the element of surprise in some quarters is the report that on the very day evacuation is promised it becomes

known in the Capitol that the Constitutionalist authorities have confiscated the National Railways of Mexico. On top of this come prompt dispatches from Mexico City, described as from "official sources," in which we read that the railways are to be given back by Carranza as soon as he has established for his party "the legal prerogative hitherto exercised by the Government" of having a Government representation on the board of directors. President Wilson explains that his action is taken in view of "the entire removal of the circumstances that were thought to justify the occupation," and so "the further presence of the troops is deemed unnecessary." The order of evacuation, we read, is based on a report from Paul Fuller, a New York lawyer, who succeeded John Lind as special agent of the President in Mexico, and who is said to be fully familiar with conditions

through long acquaintance with the country. Says a Washington correspondent of the New York Sun:

"It is understood that Mr. Fuller reported that the withdrawal would greatly facilitate the efforts of Carranza to establish a stable government in Mexico.

"The immediate effect of the President's act will be to leave Carranza free to reorganize Mexican affairs without restraint and to put him in possession of one of the most important points in all Mexico.

"The continued occupation of Vera Cruz by the American forces has been a thorn in the side of the Constitutionals, and the prestige of Carranza was threatened if he did not succeed in bringing about the withdrawal of the American forces. His generals already had initiated a movement to bring pressure upon Carranza to demand the removal of the American forces.

"It is assumed here, of course, that Paul Fuller's reports upon the character and plans of the Constitutionalist Government are such as to satisfy President Wilson that it may safely be trusted by this Government. Doubt was expressed, however, that Carranza has given the President's representative any positive specific pledges."

The same writer reports that "Carranza has informed this Government that at the Constitutionalist convention in Mexico on October 1 he will not be a candidate for provisional President." Some other Constitutionalist, we read, will be selected as provisional President, while "Carranza has declared his intention to enter the elections as a candidate for the Presidency." The withdrawal of the American soldiers, seamen, and marines,

A SCENE IN LOUVAIN AS IT IS TO-DAY.

In a letter to President Wilson the Kaiser refers to the destruction of this historical Belgian city as a military necessity "for the protection of my troops," and says: "My heart bleeds when I see such measures inevitable." On the reader's right is the famous Hôtel de Ville, which was spared, and in the center and background is the fifteenth-century church of St. Pierre, which was partially destroyed.

Turk should seek to free himself from the trammels which the various nations, with more or less persistency, have insisted upon maintaining upon Turkish sovereignty, not—and I wish you would understand this clearly—because of a desire to brow-beat or oppress Turkey, but because of lack of reliance upon her judicial system. This system for the past one hundred years has been nominally based upon the Code Napoléon, but only nominally. The administrative system of Turkey, in truth, was archaic and medieval—it was based upon the Koranic law, but did not breathe the true Koranic spirit."

Optimistic is the mood of the *Baltimore News*, which does not think Turkey is likely to abuse her new-claimed rights; but the *New York Times* thinks that Turkey's "present denial of extraterritorial rights to foreigners will lead in the future to the imposition of more strictures upon the Ottoman Empire." And in the *New York Evening Post* we read:

"She may abrogate the treaties under which extraterritorial jurisdiction is exercised by foreign Powers, but she can not do away with the great fact that her finances are under international control, and must so remain. And as long as the power of the purse is exercised abroad, the Powers must have a voice in the management of internal affairs in the Ottoman Empire. It is an argument which may work both ways. On the one hand, the Powers may hold that a nation which remains under financial guardianship can hardly be called self-sufficient. On the other hand, the Powers may feel that the hold which they exercise through the control of Turkey's finances gives them a sufficient basis for exercising necessary pressure without bothering about the question of extraterritoriality."

Copyrighted by the International News Service.

From the reader's left the commissioners are: Count Louis de Lechterveldo, Paul Hymans, Henri Carton de Wiart, Belgian Minister of Justice, Louis de Bodeleer, and Emil Van de Velde. President Wilson replied to their allegations of German atrocities in practically the same words in which he replied to the Kaiser's letter charging the French and English troops with the use of dumdum bullets. After formal expressions of courtesy and good will he went on to say in part: "You will, I am sure, not expect me to say more. Presently, I pray God very soon, the war will be over. The day of accounting will then come when, I take it for granted, the nations of Europe will assemble to determine a settlement. Where wrongs have been committed their consequences and the relative responsibility involved will be assessed."

BELGIAN COMMISSION THAT LAID CHARGES OF GERMAN ATROCITIES BEFORE PRESIDENT WILSON.

it is reported, will take place as soon as arrangements can be made for "the delivery of the city to the properly constituted Mexican authorities," and on this point the *New York World* says:

"There is apparently no good reason why the American troops at Vera Cruz should not be withdrawn. . . . Their mission has been achieved. They were sent to Mexico in response to the insulting challenges of the usurper Huerta and as a protecting force against the prevailing anarchy. Huerta has now fled. Anarchy is giving way to order and progress toward the establishment of a Government chosen by the Mexican people themselves. If this proves to be a false conclusion and their presence is again needed, they can be sent back."

So, too, thinks the *New York Herald*, which observes that "the new order in Mexico is to suffer no embarrassment at the hands of this Government in the task of regeneration which it proclaims as its mission," and it adds:

"While all disorder has not subsided in Mexico, a period of comparative calm has succeeded the storm of civil war. The possibility of an attack on foreigners, so seriously discussed as an effect of the collapse of the Huerta régime, no longer is a factor in the situation. It may be that the occasion for our troops and warships in Mexico's principal port happily has passed forever."

In the view of the *Indianapolis News* "there is every reason to believe that affairs are developing satisfactorily" in Mexico, and it analyzes the situation as follows:

"The two foremost figures in Mexico to-day are Villa and Zapata. Both are fighters, and, we believe, both have been fighting for principle. Zapata does not intend to relinquish the hold he has obtained on the region about Mexico City until land reforms are agreed on, and it is now said that the Carranza Government is to accede to Zapata's demands, even as it has

agreed to certain of the demands made by Villa. Months ago, a conference of Constitutionalist leaders was held in Torreon. At that time it was said that a break occurred between Carranza and Villa. It was Villa's desire that a convention be called of representatives of the Constitutionalist army officers and one delegate for every thousand block of enlisted men; and that no military man be a candidate for President, Vice-President, or Governor of any State. Carranza has called a convention, but he has not as yet indorsed the proposal as to the exclusion of military candidates. It is believed, however, that he will do so, for Villa is firm on this point."

This journal holds that "Mexico does not want a military leader," and it adds that "it has had too much of the army already." We read then:

"There is no friction between the Carranza faction and the American Government. Carranza has not been 'recognized' by the United States, for the good reason that he is not even provisional President. He is still but 'first chief' of the Constitutionlists. In the accepted Mexican sense, Carranza is not a military man—certainly he is not the military chief of the Constitutionlists, as this honor belongs chiefly to Villa. The Carranza faction has been compelled to give in on important issues to Villa and the independent rebel, Zapata. This may be for the best, as thereby Carranza is restrained from usurping the power."

A much less tranquil frame of mind is shown by the *Washington Post* when it says:

"Congratulations on Mexican policies of the past eighteen months can wisely be deferred until slaughter of human beings ceases under the men those policies have placed in power, until there is evidence that Americans are safe in every quarter of that Republic, until it is a certainty that our governmental agencies have not been made the instruments of capitalistic conspiracies to plunder the Mexican people through loans, concessions, and grabbing of their transportation facilities."

UNCLE SAM'S QUANDARY.

—May in the *Cleveland Leader*.

WHAT MAINE'S ELECTION SHOWS

"THE RESULT of the election in Maine was expected," is Colonel Roosevelt's reported comment in speaking of the Democratic victory that is supposed in some quarters to foreshadow a general Democratic triumph in November. "All the Progressives could hope for," he adds, "was the defeat of the Republican candidate, and that they achieved." Some such crumb of comfort this election will provide for all parties, according to the independent *Newark News*, which explains that the Republicans will find theirs in the reelection of three Congressmen and "the gain of more than 30,000 over the Taft vote of 1912." The Democrats will point to the election of a Democratic Governor and Legislature and reelection of one Congressman "as evidencing that Maine upholds the national Administration," while the Progressives will figure out that "a vote of 17,000 in an off-year election, even tho it does mean a falling off of more than 30,000 from the Roosevelt vote, indicates that the party is still a factor to be reckoned with." But with this the *New York Globe* (Rep.) disagrees, discerning as "obviously the most impressive feature of the returns" that the Progressive party, "which two years ago attracted two-thirds of the Republican party," is in a state of "practical collapse." Yet this journal, unlike some observers, sees nothing "anti-Roosevelt in the result," and it points out that altho Colonel Roosevelt "dubs himself Progressive," he appears to be "the favorite Republican of Maine Republicans," and "the unanimous preference, one may assume, of the 17,000 remaining Progressives who hold the balance of power in Maine." To the Progressive *Baltimore News* the Maine result is merely "the familiar demonstration that the Democrats can defeat the Republican party when it is split." And *The News* adds that "last year with the Progressives indorsing Governor Haines he was successful," while "this year with the Progressives opposing him he is defeated," so that "whatever else may be said of the election, it certainly makes clear that the best asset the Democrats can have is a united party opposed by a divided one." Another Progressive organ, the *New York Evening Mail*, observes that "Maine sounds a warning that must be heeded by Republicans in every State in which they hope to retrieve their fallen fortunes."

A decidedly opposite view is expressed by the Republican *Boston Transcript*, which says that the Maine affair "might be called a stand-pat election as far as its national aspects are concerned," and it adds that "a reduction of 60 per cent. in the Progressive strength within two years gives them little encouragement and less justification for a continuance of their organization."

Other Republican journals, such as the *New York Tribune*, also see in the Maine result "the gradual disintegration" of the Progressive party as "an independent political force," and the *Philadelphia Public Ledger* (Ind.) concurs in this opinion. Rather appreciating its serviceableness to Democratic interests, the *New York Times* (Ind. Dem.) tells us that:

"If the rest of the country votes as did Maine, in this entirely normal and average-man election of hers, we may conclude, first, that there will be no landslide; secondly, that the expected revulsion against the party in power will not be strong enough to turn it out; thirdly, that the Progressives are strong enough to prevent the Republican party from returning to office. . . . If Maine means anything, President Wilson will have a Democratic Congress to support him to the end of his term; and if Maine is not a prophet, at least no election could be held under conditions which made an approximate forecast safer than that in Maine."

Finally, in the judgment of the *New York Evening Post* (Ind.), "the Maine election tends strongly to confirm the impression, which we believe most impartial observers have formed that . . . the Democratic party may expect to make a showing in November which, all things considered, will be highly encouraging as to the future."

SUMMARY OF THE EUROPEAN WAR

A digest of the newspaper reports

THE AUSTRO-SERVIAN QUARREL

JUNE 28.—The Archduke Francis Ferdinand, heir to the throne of Austria-Hungary, and his morganatic wife, the Duchess of Hohenberg, are assassinated in Serajevo, Bosnia, by a Serb student.

JULY 2.—Gabrinovics, who made an unsuccessful attempt upon the life of the Archduke, makes a sworn statement implicating the Secretary of the Pan-Servian Union and others in the murder of the Austrian heir.

JULY 23.—Austria sends an ultimatum to Servia.

JULY 24.—Servia requests an extension of time for consideration of the ultimatum, but the request is refused.

JULY 25.—Servia concedes all of Austria's demands save that of Austrian participation in the investigation of the Austrian Archduke's murder, and asks for Hague mediation. The Austrian Minister leaves Belgrade, declaring this reply to be unsatisfactory. King Peter withdraws the capital of Servia from Belgrade to Kragujevatz.

JULY 27.—Sir Edward Grey makes unsuccessful efforts to convene an international peace conference.

JULY 28.—Austria declares war on Servia.

JULY 29.—An Austrian force attacks Belgrade.

AUGUST 1.—Emperor Francis Joseph orders a general mobilization of the Austrian Army and Navy.

THE EUROPEAN WAR

JULY 28.—Russian troops are reported as beginning a partial mobilization on the western frontier.

JULY 29.—The British first fleet leaves Portland under sealed orders.

JULY 30.—Germany sends an ultimatum to Russia, demanding that Russian mobilization cease within twenty-four hours, else Germany will mobilize.

AUGUST 1.—Germany declares war upon Russia. The French Cabinet orders general mobilization.

AUGUST 2.—German troops enter Luxemburg. An ultimatum demanding free passage for German troops is addrest to Belgium.

AUGUST 3.—Belgium appeals to England for diplomatic aid. Germany sends ultimatums to Sweden and Holland, requesting avowals of neutrality. The German Ambassador leaves Paris.

AUGUST 4.—England sends an ultimatum to Berlin demanding unqualified observance of Belgian neutrality. Berlin rejects the ultimatum. Germany declares war on Belgium. President Wilson issues a proclamation of United States neutrality. Engagements are reported between Germans and French at the French border near Belfort.

AUGUST 5.—England declares war on Germany. A German force crosses the Belgian border and attacks Liège. In addition to the German Army in Luxemburg and that crossing the border near Belfort, a third division, between these two, is reported entering east of Nancy, from Lorraine. Germany demands Italy's assistance upon the terms of the Triple Alliance.

AUGUST 6.—Italy notifies Great Britain that she will remain neutral. Austria declares war on Russia. The Austro-Servian situation is reported unchanged.

AUGUST 7.—The Germans enter Liège, after reducing two of the twelve forts. French troops cross into Alsace.

AUGUST 8.—Portugal announces her alliance with Great Britain. Montenegro declares war on Austria. The German armies form an irregular line extending from Altkirche and Mülhausen in Alsace, through Lorraine to Metz, thence northwest and north to Liège.

AUGUST 10.—France proclaims a state of war with Austria. Servian troops are said to be invading Bosnia, assisted by the Montenegrins, who are believed to have retaken Scutari.

AUGUST 11.—The circling movement of the Belgian, or north, wing of the German Army begins, reaching Landen, later to include Tirlemont, Diest, Louvain, Malines, and Brussels. The mass of the invading army is still southwest of Liège. The Luxemburg division of the Germans is reported as making slight headway.

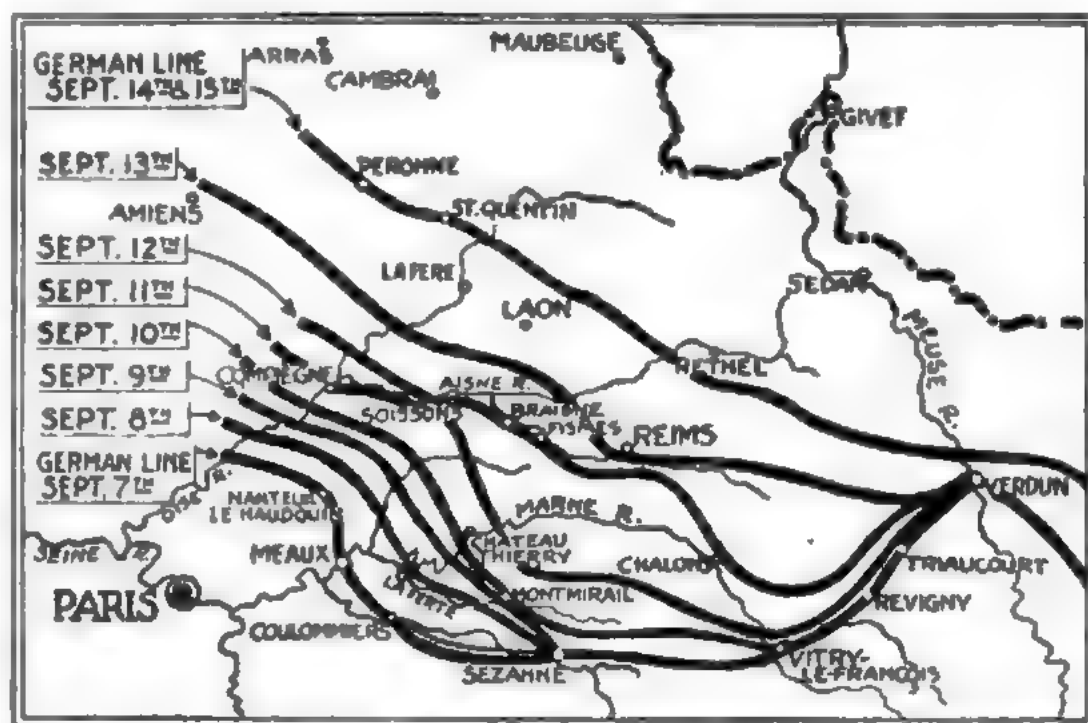

AUGUST 12.—Montenegro declares war on Germany. Huy, southwest of Liège, is captured by the Germans.

AUGUST 13.—England declares a state of war to exist with Austria. France reports small victories over the German armies of Luxemburg and Lorraine, and contradicts Berlin's statement that the French have been driven out of Alsace. Small Russian successes in Galicia are reported.

AUGUST 14.—Belgian engagements center about Diest. The junction of the three Allied Armies of France, England, and

August 26.—The French Cabinet is reorganized upon a non-

AUGUST 29.—From St. Quentin one wing of the German force approaches Amiens, to the west, while the eastern portion

From The New York Sun.

THE GERMAN RETREAT FROM SEPTEMBER 7 TO SEPTEMBER 15.

SEPTEMBER 9.—Emperor William protests to President Wilson, alleging the use of dum-dum bullets by the Allies. Italy warns two classes of her reserves not to leave the country.

Copyrighted, 1914, by "The New York Evening Post."

THE GERMAN ADVANCE FROM AUGUST 8 TO SEPTEMBER 8.

AUGUST 28.—The English and French retreat from Mons slackens. The Germans gain St. Quentin and are spreading westward. Five German war-vessels are reported sunk in an

Holland refuses to violate her neutrality by sending supplies to the Germans. German forces in the northeast of France are storming the important fortified border town of Maubeuge on the Sambre River. Berlin states it has succumbed. Paris denies this report.

SEPTEMBER 10.—The Germans are driven into a V-shaped position, of which the apex is Vitry-le-François, the right arm running up through Châlons to Reims, the left to Verdun. At Vitry the Germans assume the offensive, endeavoring to split the Allies' line and sever the French and English forces. The Russians report a victory at Ravarusska, forty miles north of Lemberg. Petrograd admits decided reverses in East Prussia.

SEPTEMBER 11.—The German right wing is reported to have been pushed back over forty miles, to Compiègne and Soissons. Germans are withdrawing from the north of Belgium and hurrying south.

SEPTEMBER 12.—The German retreat extends along the whole line, the apex of their front now resting at a point opposite Châlons. The right wing is said to have abandoned Amiens, while the left is driven above Lunéville and St. Die. Antwerp reports that the German Army in Belgium has been cut in two. Petrograd announces a second great battle in Galicia, with an Austrian loss of 130,000.

SEPTEMBER 13.—The Germans resist all day the British passage of the Aisne River, but fall back at sunset. The French

regain Soissons and towns along the Alsace-Lorraine frontier. A Servian army is reported from Servian sources as marching on Budapest, anticipating a junction with the Russians at that point. German-English engagements in British Central Africa are reported.

SEPTEMBER 14.—The Germans make a stand north of the Aisne River from Noyon to Verdun. The Austrian forces in Galicia rally about the fortress of Przemyśl. German marines cut the British cable at Fanning Island in the Pacific Ocean.

SEPTEMBER 15.—Paris characterizes the present German position as firmly entrenched and capable of offering the most stubborn resistance. The Russian Minister of War declares that country's whole policy to be the capture of Berlin, and that no general invasion of Hungary is planned. The Kaiser leaves the western campaign and hastens to East Prussia.

SEPTEMBER 16.—President Wilson notifies the Kaiser that for the United States to act at this time as referee would be "unwise," "premature," and "inconsistent with its neutral position." The situation on the Aisne holds. Berlin does not recognize a reverse, referring to "the battle of the Marne" as still progressing favorably. The three Austrian armies are said to be united at Rzeszow, between and slightly north of the two Galician fortresses of Przemyśl and Cracow; it is reported that the Russians have cut communications between these two points.

FOREIGN COMMENT

GERMANY'S DEFENSE

DEEP RESENTMENT is felt in Germany and expressed in the German press at the grave charges made against their troops and the accusation that the Kaiser was responsible for the war. Our newspapers have been filled with stories of the murder or maiming of women and children and accounts of other atrocities, mostly cabled from London, Paris, or other points in lands at war with Germany. A reply to these charges was made last week in the British House of Commons by Premier Asquith, who said, according to a cable report, "that no official information had reached the Ministry of War concerning the repeated stories that German soldiers had abused the Red Cross flag, killed and maimed the wounded, and killed women and children, as had been alleged so often in stories of the battle-fields." He added that "this subject was under consideration, and that an inquiry was being made." A French report some days ago told of the capture of a German soldier who had kept a diary of the war, one entry saying that two hussars had been executed for killing a child, showing that in one case, at least, a crime had occurred, but had met its due and just punishment. The Belgians have sent a commission to President Wilson to complain of their grievances against the Germans, but the German press on both sides of the Atlantic resent and repudiate such charges. To give an example of German opinion, the *New-Yorker Staats-Zeitung* declares that the commission constitutes merely a resurrection from the dead of Baron Munchausen, "the famous world champion of liars." This paper editorially remarks:

"Belgian emissaries of the liars have now landed. They have brought with them as baggage a whole sack of lies, and wherever they go they are followed by a curious crowd. The fact of the matter is that the Belgian Government has sent this commission here merely for the sake of stirring up hard feeling against Germany. An English journalist has expressly declared that he has read accounts of atrocities attributed to Germany, but he does not believe them. Nevertheless, he declares, he would be very ready to believe what is heard of the cruelties permitted by the Belgians."

In a public address delivered in London, Professor Lamprecht, the celebrated historian and apostle of culture in the University of Leipzig, declared that the effect of the present war would be to establish a German unity all over the world—a unity of culture from which only one country would be excluded, and that country, he said, was England. To quote his words:

"The German world to-day is one. There is only one renegade brother. Up and at him! English culture must be in a bad way indeed when it allies itself with the Mongolians. We wait to see what America will say of these things. Germany is now the protector of European civilization, and after bloody victories the world will be healed by being Germanized."

The most famous of German living poets, Gerhardt Hauptmann, publishes in the *Berliner Tageblatt* a diatribe against England, placing all of the responsibility for the war upon that country, and we read:

"The war we are now waging is merely a defensive war. He who doubts this is attempting the impossible. Our enemy has come from our western, our eastern, and our northern frontiers. Our brotherly relation with Austria accords with our duty of mutual support. We were forced to take up weapons from the moment the Kaiser and the Czar exchanged telegrams and the King of England received the news. To speak plainly, the weapons are in our hands and we do not intend to drop them until in the sight of God and man we have maintained our sacred rights. But who set on foot this war? Who has summoned Mongolians as a contingent? Moreover, our foe has called up the Cossacks to trample under foot the civilization of Europe. It is widely known that this opening concert of slaughter has for its impresario and conductor an English statesman."

Referring to the alleged massacres of non-combatants without regard to sex or age, with which the German soldiers are blamed, the *Kölnische Zeitung*

declares, with semiofficial authority, that the Belgians were altogether to blame, for the burning of Louvain, by serving out ammunition to the general population to provoke the unsuspecting Germans by repeated volleys from the roofs and windows of their houses. "German patrol-wagons were also attacked. Street-fighting for twenty-four hours was the consequence, and in the mêlée houses were set on fire and burned to the ground. As a precautionary measure civilians found with weapons were shot." Says the *Vossische Zeitung*:

"The art treasures of the old town exist no more. It is true that art lovers will grieve, but there was no other way of punishing this population, whose devilish women poured burning oil from their windows upon the passing German soldiers."

A similarly bitter view is expressed by the Berlin *Lokal Anzeiger*, which hopes "the world will realize that the blame for all the suffering of the people of Louvain rests with the half-civilized men and women who live there."—Translation made for THE LITERARY DIGEST.

WRECKAGE DUE TO A "ZEPPELIN" VISIT.

House in Antwerp after a German air-ship passed over in the night. Twelve non-combatants were killed in the city in this manner.

POLISH VIEWS OF THE CZAR'S OFFER

THE NEWS that Sienkiewicz, the famous Polish author, has been imprisoned by the Austrian authorities for advising the Austrian Poles to fight on Russia's side, shows how important the Polish attitude in the struggle has become. The press of Russia and England have represented the Poles as overjoyed by the Czar's proclamation offering them national autonomy under the Russian scepter, but there is some question if such pictures are not overrosy. The Polish Socialists of Austria have published a declaration, quoted in *The Review of Reviews*, ridiculing all such promises. They say:

"Do not lend yourselves to these promises. They are false. None of the invading armies intends to fight for the sake of

JAILED FOR FAVORING RUSSIA.

Henryk Sienkiewicz, who wrote "With Fire and Sword" and "Quo Vadis," advised his fellow Poles in Austria to fight for Russia, and the Austrian Government sent him to prison.

Poland. Every one of them is fighting for the interests of its respective State, and these States care nothing about us. They simply want to use us for their own purposes at this critical moment, and he is a blind dreamer that tells you Austria, in alliance with Prussia, aspires to restore Poland."

The Poles in America have been very cautious in their utterance through the press in commenting upon the Czar's proclamation. Thus we find the *New York Robotnik Polski* (The Polish Worker) quoted as saying:

"From Peter the Great to Alexander III. Russia was half German. The reason that Slavonic Poland was dismembered was mainly because she was surrounded by three German States. Almost to the present day Germany in whole, Austria by half, and Russia 30 per cent. were German. When it has now come to a terrible war of Russia against Germany, Russia has vehemently begun to purge herself of Germanism; and she must become truly Slavonic - there is no other help for it. That is the reason why the Russian Czar has come forth with such an important manifesto, acknowledging that the partition of Poland was a crime, reminding us of our triumph over the Teutonic Knights at Grünwald, and promising to unite the three parts of Poland and to give us autonomy with the freedom of the Polish language."

So it narrows down to the question whether the Poles hate Russia or Germany most:

"Russia has unmercifully wronged the Poles for more than one hundred and thirty years; but Germany has been a racial

foe of the Poles for a thousand years, from the day when, in 900, Margrave Gero put to the sword the Lechite tribes on the Havel and the Spree, to this day, when Emperor William II. allows Drzymala and many Poles like him on the Warta to live—not in houses built on land, however, but in carts."

According to the *Zgoda* (Chicago), a Polish organ which aims at the unification of the scattered Polish colonies, there is something sinister and underhanded behind this recent movement of Russia toward the conciliation of her subject races, and we are told:

"Only this is certain, that the reconstruction of Poland as a neutral State, constituting a barricade between Russia and Germany, is of great consequence to the States to-day allied with Russia. Hence, the Czar's manifesto has been greeted so joyfully and heartily by the French and English papers; hence, the French and English have been overjoyed by it probably more than the Poles.

"For the Poles, having been taught so often by sad experience that no confidence can be placed in any manifestoes and promises of the rulers of the Powers that dismembered the Polish Republic, can not reconcile themselves to the thought that this manifesto also may not be merely an empty promise by which they should not be deluded.

"Hence, the manifesto promising Poland freedom, but under the scepter of the Czar, must also be taken coldly and prudently by the Poles."

LABOR AND THE WAR IN ENGLAND

ANTIWAR PARTIES have been a piquant feature of British politics in nearly every war the Empire has waged. America had her friends in the House of Commons during her fight for independence, and during the South-African war the present British Chancellor of the Exchequer openly sympathized with the enemy. In Germany, as recently noted in these pages, the Socialists are heartily supporting the Government, but in England the Labor party are taking a more critical attitude. The laboring people themselves appear to be showing their feeling by flocking to the colors, but their leaders think they are misguided. Thus a bitter objection to the intervention of England in the European struggle is expressed by Mr. Ramsay MacDonald, a Labor member of Parliament, who publishes in *The Labor Leader* (Manchester) the following severe criticism of Sir Edward Grey:

"The justifications offered are nothing but the excuses which ministers can always produce for mistakes. Let me take the case of Belgium. It has been known for years that, in the event of a war between Russia and France on the one hand and Germany on the other, the only possible military tactics for Germany to pursue were to attack France hotfoot through Belgium, and then return to meet the Russians. The plans were in our War Office. They were discusst quite openly during the Agadir trouble, and were the subject of some magazine articles, particularly one by Mr. Belloe. Mr. Gladstone made it clear in 1870 that in a general conflict formal neutrality might be violated. He said in the House of Commons in August, 1870:

"I am not able to subscribe to the doctrine of those who have held in this House what plainly amounts to an assertion that the simple fact of the existence of a guaranty is binding on every party to it, irrespective altogether of the particular position in which it may find itself at the time when the occasion for acting on the guaranty arises."

"Germany's guaranties to Belgium would have been accepted by Mr. Gladstone. If France had decided to attack Germany through Belgium, Sir Edward Grey would not have objected, but would have justified himself by Mr. Gladstone's opinions.

"Such are the facts of the case. It is a diplomatists' war, made by about half-a-dozen men. Up to the moment that ambassadors were withdrawn, the peoples were at peace. They had no quarrel with each other; they bore each other no ill will. A dozen men brought Europe to the brink of a precipice, and Europe fell over it."

Mr. MacDonald finds a brilliant supporter in Mr. Keir Hardie, also a Labor member, who has been harassing the Government

PATRIOTIC POST-CARDS CIRCULATING IN GERMANY PREDICTING THE ROUT OF THE ENEMY.

by his parliamentary utterances until he has provoked from the *London Daily Mail* the following rebuke:

"If any doubt could possibly remain as to the justice of the British cause in the present war, it has been removed by the attitude of Keir Hardie. We can read no other meaning into his questions in the House of Commons yesterday than that he wished his country disloyally to abandon its pledges and from sheer cowardice to forsake a small and weak State in the hour of its agony. We are convinced that he spoke only for himself. Socialists in this country have rallied to the British Government as faithfully as the Irish Nationalists. Keir Hardie stands alone, determined to satisfy his inordinate vanity by making capital out of the public misfortune and attracting to himself attention which his real standing in his party and the country does not for a moment deserve.

"In somewhat similar circumstances Abraham Lincoln was attacked by Vallandigham for carrying on the war against slavery. Lincoln, of all nineteenth-century statesmen the wisest and best, devised an original method of satisfying his critics' desire for fame. He gave orders that Vallandigham should be conducted to the enemy's lines and there handed over to the enemy whose cause he had so warmly espoused. So Keir Hardie might be forwarded to Ostend and sent upon a tour of inspection to Brussels. The German wireless service would meantime keep this country advised of his doings."

Along with this may be set the words of Rudyard Kipling in a speech delivered at Brighton in support of Lord Kitchener's appeal for recruits:

"Our petty social divisions and barriers have been swept away at the outset of our mighty struggle. All the interests of our life of six weeks ago are dead. We have but one interest now, and that touches the naked heart of every man in this island and in the Empire.

"If we are to win the right for ourselves and for freedom to exist on earth, every man must offer himself for that service and that sacrifice, while the State sees to it that his dependents do not suffer.

"There is no middle way in this war. We do not doubt our ultimate victory any more than we doubt the justice of our cause. It is not conceivable that we should fail, for if we fail the lights of freedom go out over the whole world.

"They may glimmer for a little in the western hemisphere, but a Germany dominating half the world by sea and land will most certainly extinguish them in every quarter where they have hitherto shone upon mankind, so that even the traditions of freedom will pass out of remembrance. If we do our duty we shall not fail."

INDIA'S PRESS ON INDIA'S CALL TO ARMS

THE CALL to the stalwart Sikhs and other fighting races of India to rally side by side with other British soldiers in the battle-line in France has aroused enthusiasm in Hindustan which has no parallel in the history of the Dependency. Ever since the British annexed the Punjab (the large Province in the northwest portion of India) in the middle of the nineteenth century, the Sikhs have not confronted a European force in armed conflict. Not since the Indian Sepoy Mutiny of 1857 have the Moslem and Hindu soldiers fought European armies. Therefore the warrior clans of India, whose battle traditions and exploits of valor stretch back to the misty morn of romance and chivalry, antedating anything of the kind that Europe possesses, are thirsting for the blood of Britain's enemies in Europe. A twofold reason for this desire is that the Indian soldier wants to demonstrate his loyalty to Britain, and to prove to the world at large that he has mastered the Occidental methods of fighting and gained such command over the Western weapons of war and is so heroic and fearless that he is able to pit his strength and skill at arms against the crack regiments of Germany and give a good account of himself. The columns upon columns that every newspaper in India is devoting to the subject eloquently speak of India's burning ambition to take its own share of Britain's burden of battle. The following is from *The Bengalee* (Calcutta), which has been throughout its long career under the editorship of Babu Surendranath Banerjea, who was dismissed from the British service, and who ever since that event has been one of the leaders of agitation against British administration in India and one of the sharpest critics

PREACHER WENT OUT A-HUNTING.

CARTOON THRUSTS AT THE WARRING RULERS.

of the British-Indian Administration. It is typical of what the Hindu and Moslem editors are printing in their papers:

"Of the state of preparedness or the efficiency of the Army we are not in a position to speak with anything like authority, tho we are confident that the Commander-in-Chief will be able . . . to give a splendid account of the great army which he commands. But of the attitude of the people we can speak with greater confidence, and we desire to say that behind the serried ranks of one of the finest armies in the world there are the multitudinous peoples of India, ready to cooperate with the Government in the defense of the Empire, which, for them, means, in its ultimate evolution, the complete recognition of their rights as citizens of the finest State in the world. We may have our differences with the Government, but in the presence of a common enemy, Germany or another, we sink our differences and offer all that we possess in the defense of the great Empire with which the future prosperity and advancement of our people are bound up. . . . The Indian people desire . . . to demonstrate their devotion practically."

The enthusiastic manner in which the Rajas, of whom there are close upon 700, ruling a territory which exceeds 700,000 square miles in area and is peopled by over 70,000,000 inhabitants, and who, among them, maintain an army and armed police whose strength in peace times is about 200,000, officers and men, which can be easily raised to many times that figure, can be seen from the following telegram sent by the Nawab of Sachin to the Governor of Bombay and published throughout the Indian press:

"Earnestly request your Excellency to make use of my services either attached Staff of General Office or to regiment. Am confident that I shall not be

disappointed. Please inform where should join duties. Am prepared to start on receipt of orders. All my State greatly concerned to hear war news. Assure your Excellency of our loyalty and support, and pray for success of British arms."

The Nawab of Palanpur regrets that age prevents him from fighting, but adds:

"My son and heir, not only as belonging to a house ever loyal to the paramount power, but also as a lieutenant in his Majesty's Indian Army, is ready at a moment's call for active service, and so is my second son."

The reason why India is standing so staunchly by Britain is clearly set forth in a letter from Ram Rai in *The Times of India* (Bombay), a portion of which we quote:

"Indian interests are so closely connected with British interests that there should be unanimous support on the part of India to help Britain. Imperial interests are concerned, and the protection of British interests are so vital to India that at this moment controversy in this country must end and cooperation must begin."

"More professions of loyalty are futile. Action is needed. . . . We should forget our home quarrels and hush our complaints. Every government has its faults, and every people have their complaints, but where the common cause is at stake the Government and the people must unite. Where imperial interests are concerned individual interests must be pushed aside. That is true nationalism. That is the true spirit of a nation. If Indians claim to be a united people, it is time now to prove it by unanimously pledging her government popular support, both of men and money. . . . In Britain's safety lies our own safety."

THE ONLY PEACE IN SIGHT.

—*Amsterdammer.*

SCIENCE AND INVENTION

DISCOVERING NATURE'S CURATIVE METHODS

THE MOST ADVANCED students of medical science have always maintained that among the mechanisms of the human body were devices for setting it right when it fell out of order. They have regarded human therapeutics as methods for letting nature alone, for beating back the agencies that might interfere with it, and for reenforcing its acts, if possible. Our ability to do this has been greatly increased by the discoveries and inventions of the German physiologist Abderhalden. According to Abderhalden, the animal organism automatically finds out what ails it and proceeds to apply the remedy. He has studied nature's processes and enabled us to understand what it is doing and to help it. In reading nature's diagnosis by examination of the patient's blood, the method has been particularly successful, and it seems likely to add to our ability to combat not one disease, but a great variety of different maladies. Says a writer in *The Scientific American Supplement* (New York, August 22):

"Every organ of the animal organism has its own particular function; in order to properly carry out this function, it is provided with a chemical and molecular constitution of its own. The liver-cells, whose functions differ entirely from those of the lung-cells, are also constructed chemically on quite a different basis. But the blood must always remain homogeneous, if it is to fulfil its life-preserving task. Therefore, the different organs must pass on to the blood the dead cells, used up by the process of life, and their own products of assimilation and disassimilation in a chemically homogeneous form. To do so, every organ performs extremely complicated chemical decompositions, each according to its own peculiar system.

"If any one organ gets out of order, such disarrangement seems to affect first of all this process of decomposition. Parts of insufficiently decomposed cells or of imperfectly decomposed products of the assimilation and disassimilation enter the blood and disturb or even menace its functions. The organism at once sets about to produce protective ferments capable of finally decomposing the cell-constituents of the diseased organ, 'digesting' them, and thus rendering them innocuous.

"It is the great, the undying merit of Abderhalden to have discovered the formation of these protective ferments, and his merit is the greater because his discovery was not an accident, but the result of many years of serious and painstaking research.

"The discovery made by Abderhalden proves that the organism diagnoses its own illness automatically. It remains for us to learn to understand its language. And this diagnosis has the enormous advantage of being infinitely more exact, more rapid, and more certain than all that human art can ever attain."

Each organ contains special ferments within its cells, the writer goes on to tell us. These are attuned to the particular cell-substance of the organ, and show indifference toward the cells of other organs. Under normal conditions these cell-ferments are found only within the cell itself, but as soon as there appears in the blood a foreign substance still showing the "cell-

characteristics," the corresponding ferment also appears in the blood as a protection, often only a few hours after the first disturbances in the function of the organ. To quote further:

"These ferments are, as has been said already, extremely characteristic in their effects, decomposing only the cell-parts of the organ to which they belong. Therefore, by the methods elaborated by Abderhalden, we have the possibility of diagnosing organic disorders at their very first stage, and this, as shown by experiments with chemical substances, very often after only a few days or even hours, while under ordinary circumstances, weeks and months, even years, may elapse before the effects of the disorder have grown to the proportion of pathological symptoms. An imaginary example, anticipating the expectations placed upon Abderhalden's discovery, will show this more clearly.

"Some one comes to his doctor complaining of strong and continuous headaches accompanied by insomnia. The examination reveals no symptom permitting a definite diagnosis. The doctor takes a small quantity of blood from the patient and distributes it in a number of test-tubes. Into each test-tube is then put a piece from a different organ of the animal used for the control: a piece of brain matter, a piece of liver, of the lung, of the kidneys, of the heart, of the thymus, and of the thyroid gland, as the patient's headaches may have the most various causes. Controlling the test-tubes twenty-four hours later, it is found that lung, liver, kidneys, and heart have not been altered by the serum, but that the brain and the thyroid gland show signs of being decomposed. This proves that the blood of the patient contains ferments from the brain and from the

thyroid gland. The presence of these ferments in the blood indicates that the functions of these two organs are disturbed, thus introducing into the blood cells insufficiently decomposed.

"The secretion of the thyroid gland being of extreme importance for the proper function of the brain, the positive reaction of this part of the experiment shows that the disturbances of the brain-cells are caused by the thyroid gland supplying the brain insufficiently with this necessary secretion. Thus the doctor knows exactly where his treatment has to set in.

"One must know the difficulties that beset the timely and correct diagnosis of disturbances of the internal organs, more especially when it is a case of functional disturbances as yet not showing any alterations of the respective organ itself, to be able to appreciate the overwhelming importance of this discovery for the curing of disease.

"This importance accounts for the fact that medical authorities of universal repute have felt it their duty to draw particular attention to this discovery. Should the experiments that are being conducted in all the great centers of Europe prove the theory of Professor Abderhalden to be universally valid, based as it is already on a great number of definite facts and experimental results, then medical science enters upon a new epoch and the name of the German scientist Abderhalden will have its indelible place in the golden book of humanity's greatest men.

"It is too early to form any final conclusion as to the ultimate success and scope of the methods initiated by Abderhalden, but indications are exceedingly favorable in relation to a number of diseases, especially sarcoma (cancer), and certain troubles of the nervous system and brain."

DR. EMIL ABDERHALDEN.

The eminent German physiologist whose discoveries and inventions are enabling us to find how the organs diagnose and prescribe for their own ailments.

STATUES PAINTED ON WIRE

THE PRINCIPLES of reinforced-concrete construction are now applied to the production of statuary, and especially to the making of plaster models for architectural and sculptural designs, both large and small. The new method, we learn from an article in *The Technical World Magazine* (Chicago, September), is the invention of a New York sculptor, Miss Angelica Schuyler Church, who expects that it will prove to

PAINTING AND SCULPTURE COMBINED.

"The Rescue," now in bronze, purchased by Andrew Carnegie and presented to the New York Police Department.

be a great time-saver over the old methods of making plaster models by hand. The plaster model may be reproduced in bronze, marble, or any other desired material. Miss Church uses half-inch wire net, shaped roughly as needed, and then covered with plaster by applying it with an ordinary flat bristle brush, as one would put on paint. Says the author of the article:

"The brush is first dipped in clear water, then laid lightly on the dry plaster. This adheres, and is at once, while thus freshly moistened, applied to the wire netting, or armature, with one firm and sweeping stroke. The plaster speedily hardens and adheres solidly. The brush is rinsed after each application of the dry plaster, otherwise it would coagulate or set, and it would be difficult to make it clean and soft again.

"Miss Church claims that a little practice and dexterity are all that are needed in acquiring this method of producing a firm foundation for working up a design. Plaster used in this way can be cut almost like stone and altered at will.

"Most of Miss Church's work has been, up to the present time, concerned with subjects close at hand, subjects found in the city of New York, familiar to all the people of the metropolis. Her work, 'The Rescue,' which shows the New York mounted police at work, an officer stopping the runaway horse of a feminine equestrian in Central Park, was purchased originally by Andrew Carnegie. He presented the statue to the New York police department, where it now is.

"Miss Church has also immortalized the mounted traffic-officer who guides the automobiles and horse-drawn vehicles of the city's crowded streets, keeping them always on the move but always in good order. The figure of the man she has drawn is

strong and vigorous, the animal on which he is mounted typical of the magnificent horses used in this branch of the service. She also did a statue of the late Mayor Gaynor.

"All of this work was done by using the plaster-painting system which the young sculptress originated and with which she is able to do much faster work."

GEOLOGY AND MILITARY TACTICS

TO THE MANY branches of knowledge which a crack army officer is required to have at his command it has been suggested by a Roumanian officer that another be added, namely, that of geology. The idea occurred to Mr. G. Teodorescu to utilize the geologic map of Roumania for purposes of military strategy. In commenting on this the French journal *Le Tour du Monde* (Paris, July 25) says:

"It is clear that not only the topography of a country, but also the nature and consistence of the earth might be matters of military importance. Let us first consider mountainous regions like our Dauphine: the soldiers are called upon daily to ascend heights or hills whose difficulties are very unequal, according to whether their rocks are composed of granite, chalk, grit, or more or less decomposed schist. Sometimes there is a good foothold, but sometimes the earth gives treacherously beneath iron-shod shoes.

"An alpinist who knows his business always studies the ground of the mountain he means to climb, and troops have a far weightier interest in such matters than he. . . .

"In a country where there are plains, hillocks, or plateaux, geological knowledge is likewise of prime utility in military service. In case of rain, for example, there is a considerable difference between maneuvers on earth which dries promptly, like sand, gravel, and chalk, and that which not only absorbs water like a sponge but clings to the feet, like clay or peat."

It is of course not suggested that officers should familiarize themselves with the technical and chronological aspects of geology, such as properties and characteristics and eras of Old Red Sandstone and Jurassic and Devonian strata, but merely

ANOTHER SPECIMEN OF BRUSH-WORK ON WIRE.

An animated bit by Miss Church.

with the nature of the earth in regions where campaigns are to be undertaken.

"Thanks to such knowledge the officer can seek dry solid earth for the march of his troops and can force the enemy into positions where his men will have to struggle with clay or peat-bogs. Moreover it will be of great use in determining questions of the transport of trains of artillery, the digging of trenches, and the paths to follow in thick forests or in the intricate mazes of mountains."—Translation made for THE LITERARY DIGEST.

MECHANICAL INTELLIGENCE

WHAT IS THE QUALITY that manufacturers demand of their employees? E. H. Fish, writing in *The American Machinist* (New York, August 23), says that all agree in calling it "mechanical intelligence," but that none can define it, except by saying that it is "intelligence along mechanical lines," which is a rewording of the phrase rather than a definition. His article is an attempt at definition and explanation. Mechanical intelligence, he says, consists in knowing what will happen in the mechanical world as a result of some other action. A child that has learned that a toy that is dropt falls downward instead of upward, or sidewise, has taken a first step in the direction of mechanical intelligence. A man who persists in trying to run a belt on a pulley from the side from which it runs off has a limited idea of why a belt stays on or off a pulley. He goes on:

"We might say, then, that mechanical intelligence consists in a knowledge of mechanical laws, together with sense enough to see that they have practical applications under our noses. Teaching these laws is an inadequate way of instilling intelligence about them unless they can be forcibly brought home in familiar terms. Teach a machinist to repeat parrotoke the phrase, 'a body at rest tends to remain at rest, and a body in motion tends to remain in motion in a straight line,' and it means nothing to him in those terms. Show him that in every case that he can bring up of where some part of his machinery appears to start of itself, there is some force, perhaps of friction or gravity, that really starts it. And if he tells you that a baseball will curve on its way without touching anything, let him get a chance to try to turn an aeroplane propeller by hand until he is satisfied that there is such a thing as pressure exerted by apparently unresisting air.

"It is not necessary or desirable that he should be taught to compute the results of his or your deductions; if he knows that the long end of a lever is the easy one to get hold of, it is not necessary that he should know that there are three orders of levers, nor is it especially necessary that he should be able to figure where to put the fulcrum. . . . He should know enough to multiply the load by its distance from the fulcrum, and the applied force by its distance, and to know that the two must be equal provided that the friction is negligible.

"He may not appreciate the full significance of $r = \sqrt{2gh}$, but he should learn that anything that he drops gets going pretty fast pretty soon, and soon afterward it gets going mighty fast. Perhaps you will say that every fool knows that. Possibly he does, but he never stops to think about it as applying to a drop-hammer, unless his attention is brought to it, and then he is apt to wonder why it would not be better to rig a drop about 100 feet high instead of using a steam-hammer. Then there is a chance to usher him into the mysterious relations between force, work, and power, which are things about which even our technical graduates have none too certain opinions.

"Then in power transmission, there is a chance to teach him better than to lace a belt through a ladder; he should learn that only one body can occupy the same space at the same time, tho he may doubt it when he sees some one mix up a batch of concrete and only get as much as he had stone to begin with. If he gets an idea that a belt drives by sticking to the pulley, he should be gotten out of it and shown that it is the difference in tension that pulls. This may sound like a technical education, but he does not need to know the formula for the increased pull due to greater wrap to understand that it is a great advantage to add even a few degrees of wrap if possible, much less is it necessary for him to deduce the formula.

"He knows that a revolving fly-wheel has momentum, for he

has heard it talked about, but does he stop to realize that everything else that moves has momentum also; does he understand why it is desirable to have pulleys well balanced, or does he think that it is just a bug on the part of the boss? Does he know that a wedge can be wrapt around a shaft to advantage and that we call it a screw? Does he know what the mechanical advantage, to use an old term, of the wedge is? Does he realize that with a train of gearing, or a lever and a screw or any combination of mechanical powers, the applied force times the distance through which it moves is equal to the force overcome times the distance it moves? And does he know that this last statement is not true because he can not make a machine that will be frictionless? Does he understand the conservation of energy better by some other name, or well enough so that he will not try to build a perpetual-motion machine? Does he know that we are surrounded by perpetual motion, that it is free as air, but that we can not steal it?

"So we might go on for page after page, enumerating the things which any shopman might well know, and that in most shops he would be worth more if he did know. Without this knowledge he is blindly following orders. To those who do know these things, it seems as if he were sometimes terribly stupid, but that is only because these things are so much a part of the life of the rest of us that they seem entirely obvious.

"Some one will say that all this is only saying that mechanical intelligence is only knowledge of mechanics. That may be so to some extent, but it is not the kind of mechanics that is taught in our schools. If a corporation school, or a continuation school, decides to teach mechanical intelligence, it would be unwise to put a copy of Church's or Merriam's or any other of the standard works on mechanics in the hands of the pupils and expect them to digest it. It would be equally futile to take any of the high-school books on physics, because all these books have been written by men whose viewpoint is exactly opposite from that of the pupil. This is a misfortune for the pupil, but we should be ready to offer him something besides sympathy.

"The high-school method is all right for the boy who knows how to handle algebra, but who never saw a pair of gears to know them by that name. The boy or man in the shop knows what gears are and what they are for, but does not know any algebra. If we tell him that he must study algebra before he can study gearing, he will laugh in our face and say that he already knows more about gears than we can teach him. He is wrong, but we can not get a chance to prove it unless we are willing to begin where he can understand us."

A DINNER FROM THE SCRAP-HEAP—It has always been said that a French family can live well on what an English or an American family throws away. In an "Interview with a French Chef," printed anonymously in *The National Food Magazine* (New York, August), the following story is told in illustration of this alleged fact. The chef is justifying the salary of a thousand dollars that he is receiving. "How on earth can they afford to pay him that!" he quotes. "You shall know. I feed very well and save. You feed yourselves badly and waste." He goes on:

"A year or two ago I was chef in a country gentleman's household. The morning after my arrival I looked around the kitchen-garden and in the dust-bin that stood in the back yard I saw a mixture of food that could have been made into a first-class dinner. In about four quarts of milk that had turned sour were swimming stale half loaves, drumsticks of fowls, old ham bones, cold boiled potatoes, trimmings of dough made for pie-crusts, cracked eggs, some old codfish, and some spoiled macaroni. Next day I found a second consignment, very similar, about to be carried away and thrown out. I stooped this lot, sorted it out,

and, with the help of a little stock, half a dozen eggs, and a hare that had been shot on the estate, served a seven-course dinner for a family of ten that night, and the master of the house called me up and complimented me before the whole family on the best dinner they had had for a year. Afterward his wife sent for me and told me that tho pleased with the dinner she feared I had been too extravagant, and said that her rule was not to allow more than seven shillings per head in housekeeping. It was a severe shock to her to hear I had fed the family on the sins of the cook that had left the day before, the cost being not over ninepence per head."

ELECTRICITY FOR CANCER

DURING THE LAST DAYS of July, a meeting of the French Congress for the Advancement of Science was held at Havre. One of the most interesting papers read during the session was one by Dr. Doyen, giving the results of his extensive study of the treatment of external cancer by means

tion, when properly applied, is capable of curing all cancers which are accessible and localized, on the sole condition of being able to heat the whole extent of the pathologic tissues to a temperature of 55 to 58 degrees centigrade. When one is operating on the tongue or on regions where a secondary hemorrhage is to be feared, it is prudent to make a ligature of the principal artery as a preventive measure."

Dr. Gaston Walch, of Havre, also gave it as his experience that electrocoagulation of cancer was the method to be preferred in many cases; it exposes the patient less to autoinoculation than does the use of the knife. Electrocoagulation, he said, gives surprising results in cases where it is almost impossible to make use of the knife. Dr. Nouëno, of Havre, also confirmed the efficacy of this new method. Dr. Doyen thanked his colleagues for their confirmatory remarks, and added:

"My experience with electrocoagulation, which is now more than seven years old, shows that this method occasions far less risk to the patient than extensive surgical intervention. Moreover, it does not expose him to recurrence if the tumor is still sufficiently limited to be completely destroyed.

"Therefore thermic electrocoagulation is a sovereign remedy for accessible cancers, on condition always that the penetrating thermic current has been able to destroy totally the neoplastic tissues without attacking the organs essential to life."

ARE ALL MEN ALIKE?

UNDER this caption the basic identity of human races claimed by Prof. Franz Boas, of Columbia University, is discussed in *American Medicine* (New York). Dr. Boas's contention is that all European populations are a mixture of numerous types which have amalgamated successfully and that there is no biologic objection to the marriage of Japanese and Europeans. The comment of the magazine just named is as follows:

"If this is true, then negroes and whites could fuse, but the experience of the medical profession is that they can not amalgamate to form a permanent type, because the mulatto proves to be of weak material, susceptible to disease, and unable to stand surgical trauma. The reason seems to be the lack of physical adjustment to the environment. Each parent is adapted to a certain climate and decays in places markedly different from the normal, but the mulatto is a mixture which is not adjusted to any

place on earth, and hence dies out anywhere before either parent stock. The same facts are found in mixtures of races not so widely separated. Types do not mix so much as Boas thinks. We recognize them in Europe because they do persist, tho each intruded type undergoes change by survival of the fittest variations. There has unquestionably been a great slaughter of the unfit to accomplish this adjustment, and the hybrids are far less numerous than they would be if they were the fittest. The population of a place tends to become uniform and forms a certain type which is not a mixture. Boas had made himself notorious by praising the high mentality of the negro, and we must give scant courtesy to his present opinion as to racial unity. He has, perhaps, been unduly influenced by Zangwill's fantasy of America being a melting-pot. Divergent types may marry here but can not expect to produce a permanent new type. The future population of a place must be what the law of survival dictates. Southern Italians are vastly different from Danes, yet each land has been repeatedly overrun by invaders who have settled and married the 'natives.' Florida can not expect to evolve the same type

GREASE SPOTS AND HOW TO REMOVE THEM.

The accompanying table, an unusual instance of condensed information, is from *La Nature* (Paris), and requires little explanation. In order to find out the effect of any particular cleansing fluid on any particular kind of stain, look for the name of the liquid in the left-hand column, and for the stain at the head of the table. A triangle refers to a fresh stain, a circle to an old one.

of electrocoagulation. It was in 1906 that Dr. Doyen experimented for the first time on the action of heat upon accessible cancers. The *Temps* (Paris) of July 31 quotes him as follows:

"Studying the action of hot water, of superheated steam, and of hot air, I determined that the virulence of cancerous cells was destroyed by temperatures of 55 to 58 degrees centigrade, while healthy cells, which are more resistant, do not die until beyond 60 degrees centigrade. In July, 1907, I determined that the best means of producing a penetrating heat was by the application of electric currents of high frequency and of low tension, which up to that time had not been employed in surgery.

"Since that time I have obtained remarkable cures in a large number of cases where all other treatments had failed, notably x-rays and radium, which, in true cancers, are not even palliatives."

After outlining some of the technical details of the process, Dr. Doyen goes on to show the limitations of his treatment:

"It has now been demonstrated that thermic electrocoagula-

Maine, and no amount of intermarriage will effect the final result in either place. We are afraid that the anthropologists need a little more biology if they approve of Boas. Races had better keep separate, as half-breeds are a nuisance to themselves and to each parent stock."

HOW NAVAL GUNS ARE AIMED

ANY ONE who has fired a weapon at a distant object knows that its distance is an important element in taking aim. The shot does not move in a straight line, but in a curve, and the farther away the target is the more the weapon must be elevated when it is fired. In target-firing on land, the distance of each range is known exactly. During a naval battle the enemy's distance can not be ascertained by direct measurement, hence the employment of telemeters, or range-finders, which do the business by using well-known optical principles. The operation of the latest instruments, of this kind is explained by Sauvaire Jourdan in an article on "The Evaluation of Distances at Sea," contributed by him to *La Nature* (Paris, August 1). Says Mr. Jourdan:

"When powerful artillery has been installed on board of a war-ship it is of the utmost necessity to give to those who are to operate it the means of doing so with the greatest efficiency. Among these means, the education and training of those who are

DIAGRAM SHOWING HOW THE TELEMETER WORKS.

to serve the guns stands in the first place, and immediately afterward come the instruments that make it possible to know the distance of the object to be hit.

"It is considered, and experience proved it at Tsushima, that the vessel or naval force that is the first to get the range and the first to send a shell against the enemy will have gained an incontestable advantage and will have, in a manner, protected itself from attack.

"The instrument now used on most vessels to obtain the distance of a point is the telemeter of Barr and Stroud, of English origin. This telemeter was invented in 1888.

"Its length, which is precisely determined, serves as the base of a triangle, of which the point whose distance is to be measured is the apex. An optical arrangement, to be described below, serves to measure the angle at this apex. A very simple formula then gives the distance sought.

"The light-rays, reaching the two extremities of the base, strike the reflecting surfaces of two mirrors, R_1 , R_2 , placed at the ends of the telemeter, and are reflected through the lenses L_1 , L_2 to the center of the instrument, where two other mirrors M_1 , M_2 , placed one above the other, receive them and reflect them into the eyepiece.

"Each object-lens forms an image of the object seen, and the

SYSTEM WITH
IMAGES SIDE
BY SIDE.

observer sees in his field of vision two images that, according to the type of instrument, may appear to touch each other or be slightly separated. . . . In the latest model, the two images appear one above the other, separated by a fine line, as may be

seen in the figures. The image seen in the upper half of the field is formed, for example, by the telescopic element at the left of the instrument, and the lower part of the field by the right-hand element.

"Suppose that a distant object is seen along the rays indicated,

by full lines on the first diagram and that the two partial images are seen in perfect alinement as in the left flag figure below.

"If, now, the object seen approaches the left end of the telemeter, the ray received by the reflector placed at the right end will assume a new direction as represented by the dotted line, and the partial images reflected by the two central mirrors will no longer appear in exact coincidence, but rather in the relative positions represented by the figure at the right below.

"The interval between the two partial images might thus serve as the measure of the distance, since, as the object approaches, the interval will become greater; but the measurement of this interval would be very difficult to effect with sufficient precision, and it would be impossible to obtain it even approximately if the instrument or the object were in

PARTIAL IMAGES, COINCIDENT AND SEPARATED.

motion. This is why optical or mechanical devices have been adopted, by means of which the trajectory of one or other light-ray, in the interior of the instrument, is modified so as to bring the two partial images back into coincidence. An ivory scale measures the amount of motion necessary to do this, and thus gives the distance sought.

"It is evident that the length of the base employed is an important element, on which depends in great part the precision of the telemeter. On the bridge of a ship the length of the instrument is limited. The [French] Navy now uses telemeters about six feet long.

"To reduce the chance of error to a minimum, the measurement taken by a single telemeter is not accepted as correct. Several instruments are used at once and the average is taken.

"In the English Navy, 'batteries' of several telemeters are used, so connected that the operation of one moves the others, and a single reading gives the mean distance.

"The Barr and Stroud is certainly an excellent instrument, but the march of progress is continuous, and there is now talk of a new telemeter in which the base used shall not be six feet, but the total length of the ship on board of which the observation is made, that is to say, with modern armored ships about 600 feet. The precision will, then be practically perfect."—*Translation made for THE LITERARY DIGEST.*

LETTERS AND ART

IS AMERICAN HUMOR DECLINING?

NO VERY BRIGHT outlook for "the future of humorous writing on our continent" is discernible to Mr. Stephen Leacock, a Canadian author and college professor, whose own contributions to this field of literature have moved some critics to hail him as the inheritor of Mark Twain's mantle. As Mr. Leacock sees the situation and reports upon it in *The Nineteenth Century*, "the original impetus which created American humor has largely spent its force, nor is it likely that, in the absence of a wide-spread literary spirit, anything else will be left of the original vein of Yankee merriment except the factory-made fun of the Sunday journalist." Humorous writing, he argues, can not stand alone and continue to flourish without the sustenance afforded by a literary background and atmosphere. And "it is hard to see how the prevailing neglect of letters, the prevailing attempt to reduce education to a mechanical, visible, provable process that often kills the spirit within, the prevailing passion for specialized study that substitutes for the man of letters of the Oxford type the machine-made pedant of our American colleges—it is hard to see how all this is likely to aid in the creation of a great national literature."

As a prelude to this gloomy conclusion Mr. Leacock casts a backward and analytical glance over the record of American achievement in the field of humorous literature. Admitting that American humor "enjoys a peculiar distinction," and "has become a tradition," he goes on to say:

"The distinction enjoyed by American humorous writing becomes all the more notable when one realizes the peculiar position it occupies in the general body of American literature. The quantity of American literature—worthy of the name—produced in the last one hundred years is notoriously small. Its quality is disappointingly thin. It is an evident fact which had better be candidly confessed than courteously concealed that we people of America have not shown ourselves a literary people. Taking us altogether, black citizens and white, we outnumber the uncolored people of the British Isles by two to one. We have long outnumbered them, and a count of heads, dead and alive, for the whole nineteenth century would stand largely in our favor. Yet the great bulk of our reputable common literature of the past one hundred years has been written by the novelists, essayists, poets, and historians of the British Isles. . . .

"Now, in this literary dearth there has been one salient exception, and this exception has been found in the province of humorous writing. Here at any rate American history and American life have continuously reflected themselves in a not unworthy literary product. The humorist has followed, and depicted, the progress of our Western civilization at every step. Benjamin Franklin has shown us the humor of Yankee commercialism and

Pennsylvanian piety—the odd resultant of the juxtaposition of saintliness and common sense. Irving has developed the humor of Early Dutch settlement—the mynheers of the Hudson Valley, with their long pipes and leisurely routine; Hawthorne presents the mingled humor and pathos of Puritanism; Hans Breitmann sings the ballad of the later Teuton; Lowell, the Mexican War and the slavery contest; Oliver Wendell Holmes, the softer side of the rigid culture of Boston; Mark Twain and Bret Harte bring with them the new vigor of the West; and, at the close of the tale, the sagacious Mr. Dooley appears as the essayist of the Irish immigrant. No very lofty literature is this, perhaps, yet faithful and real of its kind, more truly and distinctively American than anything else produced upon the continent."

Mr. Leacock then makes an excursion in search of "the basis of the humorous," which, he finds, "lies in the incongruity, the unfittingness, the want of harmony among things." Since the crudest and most primitive form of all disharmonies is that offered by the aspect of "something smashed, broken, defeated, knocked out of its original shape and purpose," there is ground for Hobbes' assertion that the prototype of human amusement is found in the exulting laugh of the savage over his fallen foe, whose head he has smashed with a club. And "this humor of discomfiture, of de-

structiveness and savage triumph, may be expected to appear not only among a primitive people, but also in any case where the settlement of a new country reproduces to some extent the circumstances of primitive life." Thus in American literature "the humor of the Arkansas mule, of the bucking bronco, of the Kentucky duel, is all of this primitive character." This primitive form of fun is "of a decidedly antisocial character," since "it runs counter to other instincts, those of affection, pity, unselfishness, upon which the progressive development of the race has largely depended." Consequently, in the course of human evolution the basis of humor tends to alter its original character. We read further:

"Now, this principle of intellectual pleasure excited by contrast or incongruity, once started on an upward path of development, loses more and more its antisocial character, until at length it appears no longer antagonistic to the social feelings but contributory to them. The final stage of the development of humor is reached when amusement no longer arises from a single 'funny' idea, meaningless contrast, or odd play upon words, but rests upon a prolonged and sustained conception of the incongruities of human life itself. The shortcomings of our existence, the sad contrast of our aims and our achievements, the little fretting aspiration of the day that fades into the nothingness of to-morrow kindle in the mellowed kind a sense of gentle amusement

Courtesy John Lane Company

CANADA'S HUMORIST.

Mr. Stephen Leacock, who sees America in the period of an interregnum of humor.

from which all selfish exultation has been chastened by the realization of our common lot of sorrow. On this higher plane humor and pathos mingle and become one. To the Creator perhaps in retrospect the little story of man's creation and his fall seems sadly droll.

"It is of this final stage of the evolution of amusement that one of the keenest of modern analysts has written thus: 'When men become too sympathetic to laugh at each other for individual defects or infirmities which once moved their mirth, it is surely not strange that sympathy should then begin to unite them, not in common lamentation for their common defects and inferiorities, but in common amusement at them.' This is the sentiment that has inspired the great masterpieces of humorous literature—this is the humor of Cervantes smiling sadly at the passing of the older chivalry, and of Hawthorne depicting the somber melancholies of Puritanism against the background of the silent woods of New England. This is the really great humor—unquotable in single phrases and paragraphs, but producing its effect in a long-drawn picture of human life, in which the universal element of human imperfection—alike in all ages and places—excites at once our laughter and our tears."

Not much of what is called American humor, declares Mr. Leacock, is of this last class. Most of it, he says, has been the humor of discomfiture, of incongruity, or of exaggeration. Even so, he concedes its place of eminence in the forefront of American literature. But now, he argues, it is on the decline, and until American life undergoes another change he can foresee no recovery.

His explanation, remarks the *New York Evening Post*, "is that of a funmaker facing a situation that is no joke." Yet *The Post* refuses to be despondent. For, it argues—

"The best reason for clinging to hope, despite this prophecy, is in the doubtfulness of Mr. Leacock's classification. For all its suggestiveness, it has an appearance of artificiality. Incongruity and exaggeration may explain Nasby, Nye, Artemus Ward, and much of Mark Twain; but the humor of Irving and Lowell, Bunner, Holmes, and Eugene Field, which Mr. Leacock glosses over, is founded on less analyzable elements. Among secondary writers it reaches a broader basis still—a basis extending in theme from William Allen White's stories of rural Kansas to a Chicago versifier's sonnets of an office-boy. Any attempt to condemn our humorous future by a classification of its subject-matter not only overlooks the obvious truth that humor is mainly in the seeing eye, but involves itself in contradictions."

WHAT MAKES GOOD WAR-POEMS?

EVERY ONE, nearly, has taken a shot at the war-poems and called them feeble. Kipling's is voted by some to be the best, but Mr. Simeon Strunsky finds two reasons why it fails to appeal to him. One is the little line following the title—"Copyrighted, 1914, by Rudyard Kipling"; and he reflects that Deborah would never have thought of copyrighting her song of triumph for the Israelites, nor blind Tyrtæus when he made songs that sent the Spartans on the road to empire. The other reason is that the theme was too big for Kipling's or any other man's poem to strike fire. By the converse proposition, the Poet Laureate's verses, to Mr. Strunsky probably the poorest of the lot, were the best for the purpose. In the *New York Evening Post* he gives us this reason:

"The greatest poems have been written about little wars. The 'Iliad' was written around a siege carried on by a handful of barbarian chieftains against a city of the second class. The Battle of Chevy Chase was a border skirmish following upon a cattle-stealing expedition. And Kipling's imperial muse is at her best when she sings of petty wars with colored tribesmen. Britain's far-flung battle-line was far flung against dervishes and Afridis; it was seldom brought into collision with field intrenchments and siege-artillery.

"Little wars, or else big wars in anticipation or retrospect,—these are the rich soil for the poet. A great war in the actual, the fate of an empire truly at stake, may make poets out of the common crowd, but subdues the poet to the level of the common crowd. There is a solemn tone about Kipling's latest verse which has its effect. Only it is not exhortation we wanted,

but exultation; not an appeal, but a clarion-call. When an entire nation is aflame the poet is apt to find his mission rather perfunctory.

"The poetry on which modern wars are fought, involving the destiny of nations, is the poetry of the music-hall and the cabaret. Men go to their death on doggerel. Were the fate of these United States on trial to-day, our battalions would be going under fire to the tune of the latest nasal Broadway 'rag,' unless it was the classic, immortal doggerel of 'There'll be a hot time in the old town to-night.' I don't know what the Kaiser's quarter million men sang as they marched through Brussels. Being Germans, the presumption is that they sang the tunes and the exact number of verses prescribed by the General Staff. But that is only a guess. Even German infantrymen, I imagine, are allowed to sing what comes nearest to their hearts—something very cheap and stirring.

"That is why I consider the Poet Laureate's verses fully as good as any that England has produced in the moment of crisis. Mr. Bridge's lines are not only stirring; they come so close to the swing of doggerel that we can easily imagine English soldiers going to their death to the lilt of them in the face of the German hosts."

MAETERLINCK'S "INEXORABLE RESOLUTION"

ONE of those disappointed of the privilege of bearing arms was the poet Maurice Maeterlinck. He offered to enlist, but was declared too old, so he turned out into the fields with the women and helped gather the crops. Here he was found by a newspaper correspondent of the *New York Sun* who reported his depression at being unable to write. "The thought that only a few hundred kilometers away millions of men are ranged against one another to kill, maim, or destroy blots out every other thought." This Belgian reveals himself appalled by the terrible waste of war. "After men have fought so valiantly against disease and death, after we have struggled so successfully against natural forces, to fall at the will of a despot into this welter of carnage!"

These were the words of the man in the first days of the war. Since then he has pulled himself together to write what is perhaps the bitterest arraignment of Pan-Germanism so far printed. "When the hour shall have come for settling accounts," he writes in an article printed simultaneously in the *New York Sun* and the *London Daily Mail*, "we shall have forgotten much of what we have suffered and a censurable pity will creep over us and cloud our eyes." Now is the moment, he declares, for us "to frame our inexorable resolution." It follows here:

"After the final victory, when the enemy is crushed—as crushed he will be—efforts will be made to enlist our sympathy. We shall be told that the unfortunate German people are merely the victims of their monarch and their feudal caste; that no blame attaches to the Germany we know that is so sympathetic and cordial—the Germany of quaint old houses and open-hearted greetings; the Germany that sits under its lime-trees beneath the clear light of the moon—but only to Prussia, hateful, arrogant Prussia; that homely, peace-loving Bavaria, the genial, hospitable dwellers on the banks of the Rhine, the Silesian and Saxon—I know not who besides—have merely obeyed and been compelled to obey orders they detested, but were unable to resist.

"We are in the face of reality now. Let us look at it well, and pronounce our sentence, for this is the moment when we hold the proofs in our hands; when the elements of the crime are hot before us and should out—the truth that will soon fade from our memory. Let us tell ourselves now, therefore, that all we shall be told hereafter will be false. Let us unflinchingly adhere to what we decide at this moment when the glare of the horror is on us.

"It is not true that in this gigantic crime there are innocent and guilty, or degrees of guilt. They stand on one level, all who have taken part. The German from the north has no more especial craving for blood than the German from the south has especial tenderness and pity. It is very simple. It is the German from one end of the country to the other who stands revealed as a beast of prey that the firm will of our planet finally repudiates. We have here no wretched slaves dragged along

by a tyrant king who alone is responsible. Nations have the government they deserve, or rather the government they have is truly no more than a magnified public projection of the private morality and mentality of the nation.

"If eighty million innocent people merely expose the inherent falseness and superficiality of their innocence—and it is a monster they maintain at their head who stands for all that is true in their nature, because it is he who represents the eternal aspirations of their race, which lie far deeper than their apparent transient virtues—let there be no suggestion of error, of intelligent people having been tricked and misled. No nation can be deceived that does not wish to be deceived. It is not intelligence that Germany lacks. In the sphere of intellect such things are not possible, nor in the region of the enlightened, reflecting will. No nation permits herself to be coerced into the one crime man can not pardon. It is of her own accord she hastens toward it. Her chief has no need to persuade. It is she who urges him on."

We have forces here quite different from those on the surface, he continues, "forces that are secret, irresistible, profound." Proceeding:

"It is these we must judge, must crush under heel once for

injustice, tyranny, suffering, the other striving for liberty, right, radiance, joy. These two powers stand once again face to face. Our opportunity is to annihilate the one that comes from below. Let us know how to be pitiless that we may have no more need for pity. It is the measure of organic defense; it is essential that the modern world should stamp out Prussian militarism as it would stamp out a poisonous fungus that for half a century had poisoned its days. The health of our planet is the question. To-morrow the United States and Europe will have to take measures for the convalescence of the earth."

THE WAR AMONG THE SCHOLARS

ONE OF THE CURIOUS ASPECTS of the present war is the participation in it of a class especially devoted to the arts of peace—college professors. Ever since the first days of the firing, Germany's chief advocates in America have been conspicuous holders of university chairs. There is now developing a sort of international feud between the various members of this profession. It is reported that German professors are renouncing the honors and distinctions conferred on them by English universities, and Professor Roentgen, more picturesque than the others, is said to have given the gold medal bestowed upon him by the British Royal Society to be melted up for the Red Cross. A notable declaration has issued from two of Germany's leading philosophers, Prof. Rudolf Eucken and Prof. Ernst Haeckel, reporting that "the whole German world of letters is to-day filled with deep indignation and strong moral reprobation of the behavior of England." These writers acknowledge the former "fruitful reciprocal interchange of English and German culture," but declare that England has proved "subject to the old evil of a brutal national egoism which recognizes no rights on the part of others, which, unconcerned about morality or immorality, pursues only its own advantage." This document appeared first in the *Vossische Zeitung* (Berlin), and in translation has been printed in several American papers. Its closing paragraphs read:

"It is England whose fault has extended the present war into a world war, and has thereby endangered our joint culture. And all this for what reason? Because she was jealous of Germany's greatness, because she wanted to hinder at any price a further growth of this greatness. For there can not be the least doubt on this point that England was determined in advance to cast as many obstacles as possible in the way of Germany's existence in this struggle of the giants, and to hinder her as much as possible in the full development of her powers. She (England) was watching only for a favorable opportunity when she could break out suddenly against Germany, and she therefore promptly seized on the invasion of Belgium, so necessary to Germany, in order that she might cover with a small cloak of decency her brutal national egoism. Or is there in the whole wide world any one so simple as to believe that England would have declared war on France also if the latter had invaded Belgium? In that event she would have wept hypocritical tears over the unavoidable violation of international law; but as for the rest she would have laughed in her sleeve with great satisfaction. This hypocritical Pharisaism is the most repugnant feature of the whole matter; it deserves nothing but contempt.

"The history of the world shows that such sentiments lead the nations not upward but downward. For the present, however, we trust firmly in our just cause, in the superior strength and the unyielding victorious spirit of the German people. Yet we must at the same time lament deeply that that boundless egoism has disturbed for an immeasurable period of time the spiritual cooperation of the two peoples which promised so much good for the development of mankind. But they wished it so there—on England alone fall the monstrous guilt and the historical responsibility."

Prof. Frank Jewett Mather, of Princeton University, declares in the *New York Times* that "to see these two venerated thinkers, international figures both, indulging in violent, unconsidered, and malevolent nationalism is a profoundly depressing spectacle." He writes:

"I am a university teacher, and there is something profoundly

RUDOLF EUCKEN.

Who, with Professor Haeckel, accuses England of "hypocritical Pharisaism" in her defense of her position among the nations at war.

all, for they are the only ones that will not be improved, softened, or brought into line by experience, progress, or even the bitterest lesson. They are unalterable, immovable. Their springs lie far beneath hope or influence. They must be destroyed as we destroy a nest of wasps, since we know these never can change into a nest of bees.

"Even tho individually and singly Germans are all innocent and merely led astray, they are none the less guilty in mass. This is the guilt that counts—that alone is actual and real, because it lays bare underneath their superficial innocence the subconscious criminality of all. No influence can prevail on the unconscious or subconscious. It never evolves. Let there come a thousand years of civilization, a thousand years of peace, with all possible refinements, art and education, the German spirit which is its underlying element will remain absolutely the same as to-day and would declare itself when the opportunity came under the same aspect with the same infamy.

"Through the whole course of history two distinct will powers have been noticed that would seem to be the opposing elemental manifestations of the spirit of our globe, one seeking only evil,

humiliating to my profession to find two of its most distinguished lights, philosophers both, writing without composure, judging without consideration of the data, applying with the cheap phrases borrowed from chauvinistic journalism to an entire nation, England, the condemnation which, if true, could apply only to a few leading individuals. . . .

"It makes a teacher wonder if civilization be after all only skin deep. Is the sweet reasonableness to promote which we teachers are dedicated merely an illusion, and the reality just latent jealousy and hatred between men of different skin and speech? For what purpose have I given years to produce in American young men admiration of the great literature and art of European nations, including that of Germany, if German scholarship itself is to foment distrust and hatred among the peoples? Again, and in a broader view, when great idealists like Professors Eucken and Haeckel sink to the level of common chauvinists, how shall any university teacher dare to hope that he will hold faithful to standards of feeling and thinking inherited from Plato and Aristotle? Where Professors Eucken and Haeckel have fallen, who shall stand?

"From meeting their arguments I scrupulously refrain. Were they right, the tone of the manifesto does little credit to their scholarship and repute, and it is only too evident that the gravamen of the charge against England is merely that she has put Germany at military disadvantage. This is the unpardonable sin. That this could be honorably done, be a mistake, not a knavery, conceivably be right from another point of view, is not for a moment admitted by minds that have coped with the ultimate complexity of human motives and with the very riddle of the universe. What a melancholy demonstration of the obscuration of two great intelligences under the spell of militarism!"

That the social breach between university men and thinkers of the various warring countries can be final is not entertained by the *New York Evening Post*. One of the consequences of the war, it admits, "for a shorter or longer term of years, will necessarily be a sad breaking of that tie of common aspirations, common interests, and common endeavors which unites the men of science and the men of letters of all nations into something like a real and inspiring union of heart as well as of mind." Moreover:

"Particularly poignant must be the regret that attaches to this thought in the case of Germany and England. Of kindred speech, and in many ways of kindred traditions and ideals, there have been, in the case of these two great nations, over and above those relations which occur as a matter of course in the intellectual world, some examples of mutual appreciation and of reciprocal benefit which shine with a special luster, and have been peculiarly precious to both peoples. The German reverence for Shakespeare, and the maintenance of the Shakespeare tradition upon the German stage have been of incalculable value to England as well as to Germany. The influence of Goethe upon Carlyle, and through Carlyle upon two generations of Englishmen, is something almost unique in literary history; and the name of Coleridge is sufficient to suggest the part that has been played by German thought in the shaping of English literature. To mention but one other instance, it was in Germany that the most illustrious of the English scientists of the nineteenth century made his first general conquest in the scientific world; for the teachings of Darwin had been accepted at their full value by the leading German scientists at a time when in England Huxley was still having a hard time in fighting the battle for their recognition.

"But it is one thing to look forward to a temporary break in a noble tradition, and quite another to think of it as final or lasting. That this will prove to be the case, we do not for a moment believe. The tie that binds together the noble spirits and lofty intellects of the world is too strong to be snapt for good and all by the doings of a time of strife and bitterness, even so terrible as that through which we are now passing. And more than that is true. For it is not only the intellectual leaders, but the rank and file too, that are united by bonds of the intellect which know no national boundaries. The devoted labors of the searchers for scientific truth, the idealistic efforts of men of letters, the obligation of gratitude which these labors and efforts impose upon all who love the true and the beautiful—these are agencies that will work constantly toward the wiping out of bitter memories, the obliteration of resentment and hate. Time is on the side of the children of light, and they will conquer in the end. The loss that would be involved merely in an abandonment of the German feeling about Shakespeare would in itself

be tremendous, incalculable; but it will not take place. Even at the outbreak of hostilities, there came from some of the foremost men of letters and science in England a protest against the war, inspired above all by a feeling of the awful sacrifice involved in breaking the ties that bound to each other the German and the English intellectual world. We may rest assured that, whatever the feeling of the moment, that feeling still exists, deep down in the hearts of the scholars and scientists and literary

ERNST HAECKEL.

Whose joint statement with Professor Eucken is described by an American professor as "the obscuration of two great intelligences under the spell of militarism."

men of both countries. And the time will come when that feeling will not only reassert itself in their relations with each other, but will be one of the powerful agencies toward the reestablishment of a humane and friendly sentiment as between the peoples of the two countries, as a whole."

WHERE THE ENTENTE FAILS—Between enemies it is not surprising that alien words that have enjoyed a temporary hospitality should be shown the door. So we understand Russia in getting rid of her German words. But even the *entente cordiale* does not make the old French journalist, Gaston Jollivet, take kindly to the Britannic invasion of the language of *la belle France*, as the *Indianapolis News* points out to us:

"He is of the opinion that the only language that may be called upon to 'enrich' the French in which only two vocabularies, one German, 'sauerkraut,' and the other Italian, 'dilettante,' have become acclimated, is the English. Many of the new terms, among which is the word 'stayer,' come from the boxing-ring. 'I do not,' he says, 'revolt against the adoption of "wagon" and "rail." I even understand that "sport" must be admitted, being shorter than "*exercices du corps*," but I do revolt against "select" when I may say "*choisi*," or of "first rate" when I have "*de premier choix*." I revolt against the mania for importing words, holding them as impertinences when the writer who employs them forces me to recognize that I do not know English, or that, knowing it, I do not know as much of it as he does. I bring this modest contribution to the excellent work of the "*Amis de la Langue Française*" (Friends of the French Tongue), which bears the interesting subtitle, "National Society for the Protection of French Genius and the Protection of the French Tongue Against Foreign Words and Useless Neologisms with All Their Menacing Deformities." I read with pleasure in the last published number that a French family should blush to invite one to a "garden-party" or a "five-o'clock tea.""

RELIGION AND SOCIAL SERVICE

NATIONAL SINS THAT CAUSED THE WAR

IN PLACING THE BLAME for the present war, *The Lutheran* (Philadelphia), organ of the Evangelical Lutheran Church of North America, finds that none of the great nations now engaged can escape. They have all, says its editor, "drunk deep at the well of irreligion and mammonism," and "acted on the principle that they must seek first all other things and let the Kingdom of God shift for itself." It foresees a day when they will be "called to give an account of their stewardship before a greater tribunal than that of the American press, and it will then appear where the chief responsibility for this war lies." Representing, as it doubtless does, the religious feeling of a large part of the German-American element of our population, it takes the impartial stand that all these contending nations have "shared in creating the conditions" for the war; "all have acted from motives of rivalry and jealousy and fear; several have more at stake than others; but the proper balancing of accounts must be left to him who looks beneath the surface, and with whom in the last analysis rest the destinies of the nations." Where men own to the dual relationship to Church and State, that fact is "responsible for much confusion of thought in the minds of all who are shocked at the present war." Reading on:

"Men read their ideals of peace and good will into situations created by national rivalries, jealousies, and hatreds, and wonder why there should be such a thing as war. The truth is, national rivalries, jealousies, and hatreds have heaped up wrongs and injustice in the face of Christian ideals of peace and good will, as in the present war, and it has now become a question as to whose sword is the longest and whose arm is the strongest. It is easy to stand aghast at the horrors of war and to declaim loudly against its wickedness; but self-protection and self-preservation are, with perhaps two exceptions, the ruling motive among the contending nations that has made Europe an armed camp for forty years, and compelled a balancing of accounts; and all this humanitarian declamation against the present war is superficial. It does not take into account injustice, or intolerable situations, or human nature in its unredeemed and unsanctified state. When the ulcer is ripe, it must be opened. No one doubts that the ulcer in Europe, so long in a festering state, was ripe.

"How impotent peace sentiment and peace movements of the Carnegie type are has been demonstrated again and again. Why? Simply because they proceed on the assumption that the conduct of men and nations can be regulated by reason and common sense. These are great helps; but how are they going to create in men and nations a clean heart and renew a right spirit within them? Right here is where our peace theories and ideals fall to pieces.

"The spiritual law in the mind of nations is not yet strong enough to resist the fleshly law; nor is the sense of justice and righteousness equally strong in all nations. Hence when religion, common sense, and reason have exhausted their resources the only recourse is to force. That is why we have war. It is a favorable sign that in the present instance each nation is seeking to justify its course with an ethical motive; but God and history will scrutinize that motive, and then the full truth will be made plain as it can not now. No categorical answer to the question as to whether this present war was justifiable can, therefore, be given, tho it is easy to see that it was inevitable."

The present war is the outgrowth of sin, this writer asserts, and "in its root-essence that sin is materialism—mammonism":

"Begin with France, where irreligion and atheism are so much in evidence. Her culture and civilization are worldly to the core. She has removed the chief mainstay (and a poor one at that) of her religious life, the Roman Catholic Church, and approached the cultural stage where Greece was on the eve of her decay. She sets the pace for frivolity in conduct and dress,

and has robed her immorality in brilliant costume. Her liberal interpretation of the sanctity of the marriage vow is rivaled only by that of Japan. She is honeycombed with secret-society-ism, and her churches and cathedrals are empty. Her achievements in science and intellectual culture are brilliant; but it is like building an Eiffel Tower on a bar of sand. She is a republic and has no 'war-lord' to worship; but the growing unbelief and licentiousness of her great cities, her decreasing birth-rate, and her indifference to the things that make for sturdy character are sure indications that of all the great nations of the earth she is least fit for a republican form of government where liberty spells license. God preserve the United States from that type of democracy!"

Nor does Germany escape. Says this Lutheran writer:

"Then take Germany. Here, too, we are compelled to say with Ezekiel: 'Gray hairs are here and there upon her and she knoweth it not.' She proudly boasts of her advanced and sturdy civilization, and no one will dispute her title in this regard. Through the encouragement of her Emperor, she has forged to the front and is to-day leading the world in science, philosophy, art, industry, and religion in its intellectual form. She has the most thrifty people and the best-governed cities in the world. There is an atmosphere of discipline and law and order in that country which is in marked contrast with the libertinism so strikingly in evidence in France. But great changes are taking place. Protestantism under the guardianship of the State has in many parts gone to seed. The devil has been sowing the tares of rationalism and atheism among the wheat until the latter in such cities as Berlin and Hamburg has been well-nigh strangled to death. Socialists and savants in universities are decrying the Church that saved Germany and gave democracy to the world, and ridiculing her faith. Militarism ranks higher than the Church, and the people are being trained to put their trust in princes and in guns rather than in the Lord and religion. French levity and immorality are finding their way into the cities and resorts, and animalism is stalking abroad and making beautiful German idealism its prey. Were it not for the undercurrent of religious seriousness among the elect who are praying and weeping for Zion, one might well despair for the future; but the fact remains that materialism is fast robbing Germany of her spiritual grandeur and glory."

Of Austria, the writer finds little more to say than that "she has for centuries been suffering from medievalism in Church and State, and her people are more to be pitied for their devotion and superstition than chidden:

"Austria has not yet emerged from her medievalism sufficiently to enjoy a sun-bath in twentieth-century liberty and enlightenment, tho this is not saying that there are not elements of strength in her culture and civilization. Her political life stands on no higher level than her religious life."

Russia is pictured in pretty dark colors, but England is where the fell forces of mammon are seen at their highest mark:

"And what of Russia, that priest-ridden and aristocracy-ridden country of multiplying and unassimilated peoples? It is Europe's most backward civilization, if we except only the Turks. Nothing thrives there but ignorance, superstition, and colossal hierarchical and imperial ambitions. It is our conviction that Russia is responsible for the conditions that have brought on this appalling war more than any other nation. One has compassion for her people, but not for her rulers. Her schemes have been a constant menace to the integrity of Austria and to the Teutonic civilization in general. If Napoleon's prediction, that Russia will some day rule Europe, should come true, it would, of course, mean the downfall of Austria and Germany, and with them the subjugation of the Scandinavian peoples. Will God permit such a calamity? Whatever calls to repentance France and Germany and Austria need, Russia is a menace, for she would throttle the life of Europe and make a revival of religion in those countries impossible.

"Of England it must be said that materialism and mammonism have reached their high-water mark in her borders, and their waves have dashed upon our American shores. She is a commercial nation. Her aristocracy have exploited the resources of backward peoples in all parts of the world, and money and wealth which others have earned and sweated for has flowed into her coffers. England is not a race of producers, as are the Germans; but chiefly a nation of manipulators who grow rich on what others have produced. It is a nation of lords and landlords, and commerce and luxury are its leading assets. Neither intellectually nor spiritually has it held its own, and signs of deterioration became manifest during the Boer War and are in evidence in the present suffragette fanaticism. With all her genius for diplomacy in politics and for humanitarianism in religion, she has lost much of the moral strength and fiber of the somewhat coarser but more vigorous civilization of the Elizabethan age. She has become grasping and greedy, and supercilious withal, and when Germany's prosperity threatened her commercial supremacy she saw fit to break her blood and cultural ties with that country, and cast in her lot with a backward civilization. That step proved fatal to the peace of Europe, and war was the result. Mammonism triumphed.

"A war without a righteous motive or aim is an unrighteous war. A war that looks to the advantage of one nation without the slightest regard for the rights or the welfare of another nation is an unrighteous war. A war waged in the interests of a dynasty rather than in the interests of the people is an unrighteous war. A war brought about by conflicting selfish interests between the nations, by racial hatred or jealousy, by a thirst for dominion, is an unrighteous war, the conditions may be created through those which may make war inevitable and even justifiable in the case of such nations whose interests and very existence are thereby threatened."

CALIFORNIA ON PROHIBITION

AFTER FORTY YEARS of agitation and education in favor of Prohibition, says a writer in *The National Advocate* (Prohib.), California is at last "lined up in a State-wide campaign." The campaign has been on for nearly a year, and the result will be revealed by the vote on election-day, November 3. Victory in that State is no easy matter, thinks this Prohibition supporter, because "California, with its extensive wine interests, including immense vineyards, large numbers of high-class tourist hotels scattered throughout the State, and the State-wide interest in the World Fairs of 1915 at both San Francisco and San Diego, presents a peculiar and interesting field for the study of this problem . . . with its special difficulties." The "key to the situation," in his opinion, will rest with the women, who, having the right of suffrage, should vote "to protect their boys and girls from the pitfalls and temptation of the open saloon." In the same journal we read an "amazing" warning to "the breweries, wineries, and

liquor-dealers of the State," which is taken from the *Sacramento Bee*. According to *The Bee* the liquor interests face a crisis "of their own creation," and "can blame its being and its strength on none other than themselves." "They fashioned the Frankenstein," *The Bee* continues, "which may pursue them to their undoing, and they fed it until it grew into the monster from which they run affrighted." Consequently, in the view of this journal, "if the brewery, wine, and liquor interests of California expect the voters to go their way next November they must approach them with clean hands—clean hands which they intend to keep clean," and it adds:

"*The Bee* has no use for Prohibition. It does not believe in it, either as a principle or as a policy. It considers it unjust in its essence.

"As a matter of equity, of democratic and inherent right, the majority have no more righteous authority to prevent the minority from drinking wine or beer—always provided it be done with sobriety, in moderation, and without disorder—than they would have to order the same minority not to smoke cigars or to eat pork.

"But if Prohibition be unjust in its very kernel, it is less unjust than the rank injustice which has so strengthened it—the combination of wine and beer with boyish crime and girlish licentiousness.

"If these hellish evils are not to be remedied—if the dive, the deadfall, the low saloon, the wedding of liquor and lust are not to be cast out of the traffic—if it is still to continue a menace to our boys and a lure to our girls, then the State of California had better embrace Prohibition as the least offending and offensive of two evils, the milder injustice of two injustices.

"And if the beer, wine, and liquor interests should elect not to repent and reform, and still Prohibition should not win this year; or, if promising to repent and reform, they should go back to their evil ways, that result would be the Dead Sea's fruit of a victory that would turn to ashes on the lips, for the battle would be renewed at the next general election, and Prohibition then would sweep the State of California like a prairie fire."

A spokesman for the liquor interests appears in the *San Francisco Wholesalers' and Retailers' Review*, who argues on economic grounds that "from an industrial standpoint Prohibition would be ruinous to California." Gaging it as a moral issue, he states that while "intemperance is deprecated by all," he questions whether Prohibition would prove "an efficient remedy." Then he tells us that "the history of Prohibition in the United States has been one of absolute failure. Eleven States have tried and abandoned it," he adds, while "in Maine it is a disgrace, and in Kansas, Georgia, and other so-called Prohibition States it is a farce." Why should California, he asks, try a remedy "that has proved a failure everywhere else"? In short, he declares sweepingly, Prohibition "is foolish, unfair, dishonest, destructive, drastic, un-American, inhuman, and ruinous."

GETTING READY TO BURST.

THE BLACK HAND.

AFRAID TO TAKE EITHER.

ANTI-PROHIBITION CARTOONS FROM THE WHOLESALE AND RETAILERS' REVIEW, SAN FRANCISCO.

IS WAR OF GOD OR THE DEVIL?

THE HEART, and not the head, is the source of a good deal of the writing and thinking about the current war, says a New York clergyman. He doesn't in the least believe that "war is a return to barbarism, the demolition of a century of progress or world-civilization." When we apply such terms as retrogression, reactionism, reversion to animalism, wanton destruction, monstrous barbarism, fiendish inhumanity, which this writer has found thickly strewed through the public prints, we "utterly obscure the dynamic reality of things unseen on the surface which this war is manifesting to us." Is it not the case, asks the Rev. Holden E. Sampson, of the Corpus Christi Church, New York, "that the consensus of opinion of the greatest philosophers in the most philosophical country in the world—Germany—is entirely on the side of the man of destiny, who is charged by 'civilization' as the criminal instigator of this greatest of world-wars?" In the *New York World* we read a continuation of the argument:

"How different is this canting and pharisaical view of war, and of the present belligerents, from the older ideas and conceptions of warfare, which gave to mankind the inspiration of nobility and that superaltruism that rises high above the thing called 'patriotism,' which held a purview of nationalism coextensive with divine and cosmical destiny, and comprehended ultimate issues and culminations of world-development resulting from the world's birth-travails!

"We have ceased to be philosophical and are living in an age of sentimentality. The voice of the 'seer' and the 'prophet' has yielded to that of the sentimentalist and pessimist. As long as the world is as it is at present constituted, its evolution to higher states of racial unity and consciousness can come only by cataclysmic upheavals and the breaking up of the incrustations of time-hardened conditions.

"History demonstrates that no world-progress ever has achieved permanency that did not receive its initiative and potentiality by the clash of nations. War is a natural and necessary factor, under present earth conditions, of progress among the races of mankind. War is not a symptom of decadence or of barbarism; it is a 'travailing in birth' of a new life—a higher life; it is a part of the crisis of world-evolution ushering in a better world for posterity.

"The ancient philosopher (wiser than are we) would say that war is the seed of this reincarnation sown for a better state of existence in future incarnations.

"It is because we have lost the genius of the ancient philosophy, in great part, that we have such a panicky, pessimistic perception of the present war.

"War breaks up the static and stagnant condition of a moribund past, to create from the débris new dynamic conditions for the reconstruction and upbuilding of a new age. Not until this finality, the new age, is reached, in the evolution of time, will the period come when the prophecy shall be fulfilled that 'war shall be no more.'

"It is not by human legislation, statesmanship, or wisdom, nor by any popular peace propaganda, that the world shall cease warfare. The Hague tribunal and other present movements peace-ward are symptoms of the fulfilment of the peace prophecy; they are not factors.

"Cessation of warfare, the 'turning of swords into plowshares and spears into pruning-hooks,' will come by evolution, by the master handiwork of the unseen overrulers. World-peace will come when the 'age of peace' has sprung up from the ground of human nature after it has been plowed, harrowed, and broken up by warfare and other cataclysmic cosmic forces."

This "philosophic view" of the great world-upheaval, which every human heart regards with horror and grief, declares the writer, "is that of a divine and cosmical necessity—the culmination of natural and psychological causations essential to the world's uplift to higher and more divine issues." Further:

"Monarchs and statesmen are not to be blamed for being instrumental in bringing about the occasions of war, and of its dire temporal consequences. They are all no more than puppets and pieces of cosmical destiny and overrule, instruments of an unseen force of cosmical necessity. . . . There is no question of 'right or wrong,' of a 'casus belli,' in the cosmical reasoning. 'Casus belli' are negligible and futile; they are accidents at times, and the

pawns of supertime, or eternity. Philosophy sees from a higher point of view. It sees God raising up this monarch or that, to serve him as his 'whip' to castigate a nation, to bring righteous judgment for wrong-doing. And often the 'scourge of God,' in the act of scourging, scourges himself, and the retribution recoils on all that merit the chastisement. It is reciprocal.

"So it has always been in history, interpreted by philosophy. Can we honestly attribute solely to the caprice of the ruler's will the warfares that have made history—the warfares of Joshua in the conquest of Canaan, of David in settling the Kingdom of Israel, of Nebuchadnezzar, of Darius the Mede, of the ancient Greek conquerors, of Alexander the Great, of the Roman Cæsars, of the early Saxons, Teutons, and Normans, who made Britain, of Frederick the Great, who made Prussia; of Napoleon, who was the real founder of the French Republic; of William of Prussia, who made the German Empire?

"We are in the habit of thinking far too self-centeredly. We shrink from death. We take an exaggerated and sensual stock of life. We live in fear of death all our lifetime. Death is the great catastrophe to be avoided, despite our pious belief in future life and bliss. All we live for is to live to prolong and insure the tenure of life. Therefore to us the great horror of war is the sacrifice of life. It appals us. When men perish by tens of thousands and women's hearts bleed, all we can think of is the cruelty of it, the bloodthirstiness, the horribleness of the battle-field—because it cuts up human life.

"But this war, the most decimating of all wars in history, more probably, is more merciful, less cruel, than peace in this respect as times are. To many thousands it is far better, happier, to die on the battle-field than to live in our present 'civilization.'

"More thousands are cut off, bloodlessly, by death, through the evil economic, social, and industrial conditions in our great centers of civilization, by disease, starvation, and a thousand cruelties that are part of our system of exploitation of men and women, body and soul, in the world's seething battle-field of the 'struggle for existence.'

"The 'barbarism' of Christendom is more grossly exemplified and intense than the alleged 'barbarism' of warfare. The death-roll of the 'warfare' of 'civilization' is vastly greater than the death-roll of all the battle-fields the world has ever witnessed and the pitiless cruelty of the death-roll of 'peace' is greater thousandfold than the 'cruelty' of the battle-field of 'warfare.'

Tho these thoughts fill the *World's* news columns, editorially, it expresses astonishment at the argument that many thousand find it better and happier to die on the battle-field than to live in our present civilization. It goes on:

"With great respect for the views expressed . . . by Rev. Holden E. Sampson, we must dissent from the opinion that, as people now are, progress is most easily and naturally gained by carnage. It is true that great things have been achieved by war, but there is nothing to show that they could not have been gained in peace. If we admit that in wars the earth is scourged and purified in some respects we can not overlook the fact that evils unspeakable always follow.

"War is not of God. It is of the devil. If civilization to-day is decrepit and cruel; if it is burdened with unjust laws; if weakness is imposed upon; if greed is paramount; if religion and charity are practised only spasmodically and half-heartedly; if physical and mental infirmities, handed down from father to son, are increasingly evident, and if taxation is taking the heart and life out of industry, it is war—war past and war present, in which the awful responsibility must rest. Peace has no such consequences.

"A God of justice and of mercy does not thus punish his children. Mankind suffers to-day from the gathered guilt of older times, accentuated by its own blood-guiltiness. Every sentiment which attaches decent men to home, religion, and civilization; every impulse that aspires to a better day; every consideration of justice; every idea of enlightened progress; every aspiration for mercy, every charitable thought, and every hope of good government under which the average man, woman, and child may expect to have a chance in the world, is based not upon war but upon peace.

"Castigation and retribution by God? Chastisement and destruction and desolation by God? No! These things proceed from earthly war-lords and war-gods. It is not weakness; it is not the fear of wounds and death, it is not love of ease, that make men cry out against the awful sacrifices of war. It is the spirit of humanity and knowledge prevailing powerfully against the dictates of savagery. That is the force, armed only with its right, which some day must subdue the world."

CURRENT POETRY

WAR continues to hold the attention of most of the poets of England and America. Not yet, however, has it caused one of them to write a poem that has fired the world's imagination; a poem comparable, for example, to Ralph Waldo Emerson's majestic lines about the embattled farmers who "fired the shot heard round the world."

Perhaps the poets are too much impressed by the war's magnitude to give their thoughts adequate expression. American poets, at any rate, are not expert in the art of making war-songs. They are more skilful in writing the sort of rimed social criticism illustrated by this quotation from *The Smart Set*. Miss Miller considers only one aspect of Newport, but as a commentary on that aspect her poem is an effective bit of cynicism.

NEWPORT

BY ALICE DUER MILLER

On these brown rocks the waves dissolve in spray
As when our fathers saw them first also.
If such a one could come again and see
This ancient haven in its latter day,
These haughty palaces and gardens gay,
These dense, soft lawns, bedecked by many a tree
Borne like a gem from Ind or Araby:
If he could see the race he bred, at play—
Bright like a flock of tropic birds allured
To pause a moment on the southward wing
By these warm sands, and by these summer seas—
Would he not cry, "Alas, have I endured
Exile and famine, hate and suffering,
To win religious liberty for these?"

Here is a poem done in a formula many centuries old, but done so simply and gracefully it needs no novelty to increase its appeal. It appeared in *The Academy*.

THOUGHTS

BY WILFRID THORLEY

The dead stars in the sky
Are still beheld,
Tho centuries gone by
Their fires were quenched,
From such unreckoned height
Doth fall their light.

So thoughts that barren seem
And without hour
May like a dead star beam
In souls forlorn,
When those that writ them sleep
Unfathomably deep.

Oliver Onions is writing such excellent novels that since the publication of "Great Youth" people can hear his peculiar name without laughing. And Henry Herbert Knibbs is associating his equally unpoetic name with poetry that is fresh and charming. Dialect verse is somewhat in disfavor nowadays (did the critics of the day call Robert Burns's lyrics "dialect verse"?), but he must be indeed a purist who is offended by such colloquialisms as those of this pleasant song. We take it from *The American Magazine*.

NOTHING TO DO BUT GO

BY HENRY HERBERT KNIBBS

I'm the ramblin' son with the nervous feet
That never was made for a steady beat;
I had many a job for a little while;
I been on the bum, and I've lived in style,
But there was the road windin' mile after mile . . .
And nothing . . . to do . . . but go.

So it's heat it, Bo, while your feet are mates;
Take a look at the whole United States.
Oh, the little fire and a pipe at night,
And up again in the mornin' bright,
With nothing but road and sky in sight . . .
And nothing . . . to do . . . but go.

Then heat it, Bo, while the walkin' is good;
While the birds in the trees are sawin' wood.
If to-day ain't the finest for you and me,
There is always to-morrow that's goin' to be,
And the day after that is a-comin'—See?
And nothing . . . to do . . . but go.

So heat it, Bo, while you're young and strong;
See all you can, for it won't last long;
You can stop for only a little spell
On the long gray road to Fare-Ye-Well,
That leads to Heaven or mebbly Hell, . . .
And nothing . . . to do . . . but go.

This well-turned sonnet (from *The Independent*) is better than most of the anti-war verse which contemplation of the European chaos has caused Mr. Scollard to write. It is reminiscent, perhaps, of Shelley's "Ozymandias of Egypt," but the sextet is not without novelty, particularly in its first three lines.

AT SAMARIA

BY CLINTON SCOLLARD

We climbed the hill wherefrom Samaria's crown
In marble majesty once looked away
Toward Hermon, white beneath the Syrian day;
And lo, no vestige of the old renown,

Save a long colonnade becarved and brown,
Remained to tell of Herod's regal sway,
The gold, the gauds, the imperial display,
He heaped on Judah's erstwhile princely town.

Ruin was riotous; decay was king;
An olive-root encript the topmost stone
As tho it clutched and crushed the thing called
fame;
Seemed as a fragile wind-flower petal, blown
Into the void, the past's vain glorying,
And Herod but the shadow of a name!

Mr. Don Marquis's column, "The Sun Dial," in the *New York Evening Sun* recently was headed with this poem, evidently Mr. Marquis's own work. In answer to it, it may be pointed out that freedom from what he calls the "rotten breed of kings" has not kept the United States from war and is not to-day making France a peaceful nation. But "The Only Peace" is a stirring poem, and in poetry there are things more important than logic.

THE ONLY PEACE

BY DON MARQUIS

There is no peace, nor will be peace,
Till out of war there springs
A Europe free from chains, to whelm
Its rotten breed of kings.

Peace, with the Hapsburg on his throne?
Peace, while the Russian Czar
Crushes the hearts and hopes of men
'Neath his imperial car?

Peace, while the Teuton, free of yore,
Submits him, soul and mind,
Bending before a despot's whim
As reeds before the wind?

Imperial England! Ye that hold
The lordship of the waves,
Do ye now peace through all the lands?
Nay, empires must have slaves!

O ye that out of shop and field
Marched at the hugh's call,
One gesture with the arms ye bear
And all your kings must fall!

Poor fools that lard the earth with blood—
Whose victories are defeat—
Fat crops grow of your sacrifice,
But only princes eat.

War . . . war . . . a planet red with war
And loud with rolling drums . . .
Perhaps e'en now across the verge
Of night the morning comes . . .

Then haste, make haste, O Liberty!
Thy peoples bleed—make haste!
The shag beast harries all the fields,
The tusked boar lays waste.

Come thou in peace, if peace can be,
Earth's only overlord . . .
Come thou in peace . . . but if thou must,
Come with thy cleansing sword!

Come with Christ's love and Plato's light
To claim the fruitful years . . .
But if thy path be clogged with kings
Come red, and ringed with spears!

Come clad in peace . . . but if thou must,
Lift up the battle gage,
And come in thunder and in flame
And helmed with holy rage!

No peace there is, no peace can be,
So long as moon or sun
Sheds light upon some despot's act
Of foul oppression done.

No peace there is, nor peace can be,
Till out of strife there springs
A Europe strong, and nerved to whelm
Its rotten breed of kings.

The name of the author of the poem quoted below (from *The Pall Mall Gazette*) is not well known in America, but surely the other verse of so imaginative and sincere a writer must be worth reading.

THE SONG OF THE BRITONS

BY ANTHONY KIRBY GILL

The Dead

Deep beneath the fallen years,
Slain by glittering forman's spears,
With empty hands and a brow uncrowned,
To our native land our eyes we turn
By snares encompassed round.
Ah! God, as we gaze our steely hearts yearn!
About her head, like a wind that veers,
The vultures of war whirl thick in the skies,
Hate in their hearts, in their gleaming eyes
Hate, and she stands, gentle of breath,
Watching the venomous eyes of Death!

O would we could range there, row on row,
Facing her foes at our sons' right hand,
Smile them, sift them like dust, and go
Deathward again to our motherland.

The Living

Lord God of Hosts, within Thy keeping hold
Our motherland! With mercies manifold
And gracious gifts divine point Thou the way
Her feet shall follow to the Judgment Day,
Lord God of Hosts!

When for the great assize
Thy trumpet sounds, O grant her strength to rise
Peerless from her omnipotent estate,
With honour, power, and fame inviolate,
Lord God of Hosts!

Overland

\$850

MODEL 81

With ELECTRIC STARTER
And ELECTRIC LIGHTS

A few of the many Model 81 Features

30 H. P. motor
Stream-line body
Ample room for five passengers
Electrically started
Electrically lighted

PERSONAL GLIMPSES

GERMANY'S CROWN PRINCE

THE warlike tendencies of Germany's Crown Prince have in the past been represented as a source of much embarrassment to his father, who, apparently, was most desirous of building up a peaceful reputation for Germany. But now Prince Frederick William's firebrand policies, as well as his absolute devotion to the German Army and the militarist idea, have stood him in good stead, and, combined with his undoubted valor upon the field, have won for him the coveted Iron Cross and the frank commendations of the Emperor. The *New York Times* quotes, in discussion of the militarist Prince, a book, entitled "Der Kronprinz," by one Dr. Paul Liman, of Berlin, which gives an excellent idea of the young man. Dr. Liman has endeavored to explain the Prince to his people, reconciling his sometimes rather puzzling eccentricities with the character and mentality of one destined to be Germany's future ruler. His view of the Prince is particularly interesting just now, as it was written with the firm belief that Frederick William as Kaiser would one day become involved in the same sort of struggle that exists at present. The writer remarks:

Dr. Liman felt sure that war was coming, but he thought that it would not come until Kaiser Wilhelm II. had been gathered to his fathers. Instead of heading armies in Lorraine as Crown Prince, the German author assumed that Wilhelm II.'s eldest son would direct them as Emperor in Berlin.

Dr. Liman paints an attractive portrait of the Kaiser's heir. In spite of all his vagaries, we learn that he is popular throughout Germany, totally devoid of "side," and the keenest sort of a sportsman. Moreover, and this is less known, we hear of him as a diligent reader of books, especially on history, and as a warm admirer of Napoleon, despite the fact that the great Corsican humbled Germany to the dust in his campaigns.

In his endeavor to show the Crown Prince as he really is, Dr. Liman has not forgotten the book on his hunting experiences which the Kaiser's heir published a couple of years ago. In its pages, he says, the Prince appears to us quite without vanity or literary frills, without the craving for noisy acclamation.

The hunting-book was written after the Crown Prince's journey to the Far East. It describes tiger-hunting in India and Ceylon and all sorts of exciting experiences in far-away lands, but the young hunter does not forget the countless expeditions that he has undertaken within the boundaries of his native Germany, and which form an important part of his regular round of existence. And it is in describing these that much of his real nature rises to the surface, as, for instance, in these sentences:

"We hunters pity from the bottom of our hearts those men to whom hunting comes in some form or other is impossible

or unknown. And when I say hunting, I really mean stalking. To my mind, whosoever thinks at all of hunting—that wonderful combination of fighting, enjoyment of nature, and self-contemplation—is thinking in reality only of stalking, and recognizes things like a tiger-hunt only as a sort of exercise in shooting, by no means as anything truly sportsmanlike.

"To the real sportsman the great book of beautiful nature opens itself willingly. In the brilliant sunrise, in the tired, silent mid-day sleep, in the soft evening which spreads peace over forest and field, in the wild, howling mountain-storm, the voice of nature speaks to us solitary huntsmen in accents always different and always impressive, and sings to us the noble song of the Creator.

"Such hours, spent alone . . . only they make life on earth worth living! For beauty and peacefulness many an evening of hunting that I have enjoyed is, in my opinion, surpassed by nothing in the world. How often during those evenings have I thought of those words inscribed by the Grand Moguls over their palace in Agra: 'If there is a Paradise on earth it is here, it is here.'

"Nothing binds friends so closely as hunting experiences which they have shared. When at night the flames are flickering in the fireplace, when happy sportsmen are stretched out in big leather chairs, cigars between their lips, eyes glancing toward the trophies on the wall, reminding each other of 'how we stalked the deer together that time,' then it is that genuine comradeship is engendered."

Dr. Liman calls this a "free, honest confession," and it is indeed the confession of one whose instinct and love for the hunt might well breed in him a passion for that greater, more thrilling hunting pastime—war and the hunting of men. At all events, the Crown Prince has ever been on the side of the Army. The present writer quotes from the preface of the Prince's book dealing with the Army and the Navy, "Germany in Arms," a few lines that show how ardently the author embraced the cause of militaristic aggression:

"Our fatherland, more than other lands, is compelled to look to its defenses. Badly protected by its unfavorable geographical position, lying in the center of Europe, not looked upon by all nations with affection, the German Empire more than all other nations of this old earth has the holy duty before it of keeping its Army and Navy always up to the highest point of readiness for war. In that way alone, leaning on our good sword, can we win our place in the sun, which, tho our due, is not willingly allowed to us."

And further along in the same warlike piece of writing the Crown Prince has this to say:

"We are living in a time when men proudly point to their culture, a time which is but too willing to plume itself on its cosmopolitanism and takes pleasure in dreaming idle dreams of the possibility of eternal peace.

"Such a conception of life is un-German. It is not for us. The German, who loves his country, who believes in its greatness and future, and does not wish to see any lessening of its prestige, will not close his

eyes in such dreams, not allow himself to be lulled to sleep by the peace lullaby of the Utopians. . . .

"If the German people decide to risk life and property in a war, then let the world be full of devils and rise against us in arms; we can handle it, no matter how great the peril of the hour!"

Like his father, who has dabbled in the fine arts, his heir also has tried his hand at composing music and painting pictures. But, avers Dr. Liman, he is not at all conceited about his productions. When he has finished a picture he smilingly inquires of those privileged to see it whether they can guess what it represents—a snowy landscape or a negro chieftain, still life, or a battle-scene.

But such activities are merely secondary; first and foremost the young man is a soldier.

"He does his duty just like any one of his comrades, from early morning until the moment when the rest of his fellow officers are relieved. And sometimes even he stays behind a couple of hours to listen to the instructions of superior officers, cheerfully observing: 'Oh, my wife will send me some sandwiches and a half bottle of wine.'"

STIFLING WAR CORRESPONDENTS

ONE of the most painful features of the European war is the ban that has been put on all communications from within to the outside world—painful, that is, to those whose trade it is to fill the columns of dailies in neutral countries. These men, experienced and able, answered the call and were mobilized almost as quickly as the Kaiser's Army, but to no avail. Had the German soldiers, accoutered and mobilized, found, when once the field of battle was gained, that their cartridges were made of bits of wood and sawdust, they would have been no more chagrined than the newsmen have been. The information which the censors will pass is of the thinnest variety, and none of the real details of the scenes the correspondents witness or the events in which they take part can reach the cable. A correspondent of the *New York Globe* gains what solace he can from a humorous version of the war reporter's woes:

Perhaps you can not understand why the wife did not get that cablegram you sent her from Paris. Perhaps she can not understand it, either. Perhaps—such things have happened—she has said in that patient way that women have:

"You knew I was dying of anxiety, but you didn't think enough of me to send a cable—"

Well, this story ought to square you, because it will explain some—not many, but some—of the vagaries of a war-time censor system. It will make you acquainted with the fact that your cable was never sent and never will be, and that you haven't a Chinaman's chance to get your money back. It cost you 25 cents a word, you may remember, and you didn't stint the words because you wanted to bring cheer to the little woman.

"Where," asked the manager of a great news-distributing agency in London one

As Good as it is Beautiful

You are not deceived when you look at a sheet of Crane's Linen Lawn. It is just as good as it looks. It looks best when compared with the best writing papers you know. MAXIM SILENCER

Enjoy Noiseless Shooting

You can hold target practice or shoot noiselessly anywhere by fitting your rifle with a Maxim Silencer. It's fine for hunting because there is no report noise to frighten game. Improves marksmanship—reduces the recoil and stops flinching.

WRITE FOR FREE BOOK

Filled with interesting experiences of sportsmen it with the Maxim Silencer—stories of actual records that will surprise you. Ask your dealer for a Silencer. If he has none, tell us his name and we will arrange to supply you.

MAXIM SILENCER CO.
119 Lakeside Ave., Hartford, Ct.

THE favorable comment you can create by the excellent appearance of your delivery service is next in importance in your selection of motor trucks to durability of construction and economy in operation. In Lippard-Stewart trucks you will find all these qualities combined through characteristic features of construction. Noiseless, fast, beautiful—they call attention to the efficiency of your methods.

Lippard-Stewart trucks for years have been accepted trucks of proven merit. Today they are operating in over 70 lines of business. Over 40 firms are using two or more, in many cases purchasing from one to twelve after the first cars have proven their worth. They are used by the U. S. Parcel Post, by the U. S. Army. They are popular in Omnibus, Patrol, Ambulance work where quick service, durability and economy are such important factors. You see fleets of them in nearly all leading cities doing work for newspapers, department stores, general dealers, wholesalers, builders, manufacturers. They have proven their excellence.

In Government Mail Service

We use the Continental Motor with Automatic Speed Governor; Eisemann Magneto; Brown-Lipe Transmission; Timken Axles and Bearings; David Brown Worm Drive (extra above level drive on $\frac{1}{2}$ ton and $\frac{3}{4}$ ton size); Big Size Tire Equipment.

This standard of excellence is carried through the entire construction.

1721 Elmwood Ave., Buffalo, N. Y.

day some weeks ago, "is the story of the tennis-match at Fox Hills, New York?"

The cable manager didn't know. It had come through seven hours before, he said, and had been turned over to the censor. The censor was called upon. This censor was a tall, blond young Englishman, with a monocle and a thirst for tea. He turned that severe eye upon the news manager.

"Certainly," said he. "I held it up. A most suspicious message, I must say."

The message read as tennis scores usually do read: "White won, 6-2, 7-5, 8-4." So it looked like a code message to the bright young censor. Code messages are forbidden. The news manager suppresses a desire to kill that censor. The news manager suppresses a desire of that sort about twice an hour nowadays. He asked, mildly:

"But why didn't you send for me? I could have explained it. This was really a most important message, you know—championship match, and all that sort of thing."

"Haw!" laughed the censor. "Very good, old chap, what? News of a tennis-match important, yes. Very good, indeed. It would do to-morrow quite as well."

In which opinion he is still Britishly firm. The buyer for a little department store in an Illinois town visited Paris on a vacation. While there he picked up a bargain in fall coats for misses.

"Ten small sizes shipped," he cabled. "Am watching winter designs."

The censor got it into his head that Jake Rosenthal, of Corn Center, Ill., was wiring to that flourishing center some code information about the movement of the British ships in the North Sea. The word "winter" suggested that to his alert mind at once. So he killed Jake's message. But Mr. Rosenthal was not informed of this nor did he get any money back. The cable companies were told by the British authorities that they must not give any information to their anxious patrons as to the fate of messages. As a return of money would convey some sort of hunch to a really brilliant mind, this was forbidden. Here is an example of this wooden reasoning:

The London correspondent of a New York paper cabled a list of Americans who were sailing by the day's steamers. Two hours later his paper demanded the names of the steamers which had been included in the first cable. An hour later his paper wired:

"What do you mean by cabling 'steamers were' and omitting names?"

The censor had been at it. He had cut the names of steamers out of the first message. He had also cut them out of the second message, but had permitted the utterly meaningless words, "steamers were" to go through. The correspondent mildly approached the censor—note: "mild" is emphasized; the censor could order the correspondent out of England if he wished—to get a little light.

"We want to cooperate with the censors," said he, "and I assure you we will not send anything you do not wish sent. But why did you not tell us you did not want the names of the steamers used?"

The censor turned a look of intellectual superiority—mingled with astonishment—upon him.

"My dear boy," said he, patiently. "don't you see that would never do? If we let the public know what we do not

TRUTH That's More Thrilling Than Fiction!

The romantic side of the world's most serious projects. want sent, then the public would know what it is we want to keep secret."

That cryptic utterance has been prying on the correspondent's mind ever since. One of the persons engaged in that conversation is quite balmy—and there were only two persons in it. One of my friends went into the general post-office in London to wire a friend in Switzerland. In obedience to the rule that messages must be in the language of the country to which they are addressed he had written it in French.

"Can't take this," said the clerk. "Messages must be written in Swiss."

"What?" said my friend. "In Swiss?" Some unseen person called the clerk behind the screen. When he came out he was as cocky as ever.

"Oh, all right," said he. "Let it go this time."

On August 2 there was an important news development. So the Paris correspondent of an American paper shot it on to the office. In the crush of new news it was forgotten. On August 23 the correspondent got a note from the censor in Paris—where they are a shade more human than in London:

"Your message, filed August 2, was rejected by the censor."

Another correspondent, of the New York *Evening Post*, complains dolefully to his paper of the hopelessness of the situation, and cites a few more instances of the censor's trying ways:

A war correspondent who tries to be active has no easy task just now. Austria has packed all the foreign correspondents she could get hold of across the frontier by special train into Italy. Germany has given notice that no such correspondents need apply, as she has an elegant sufficiency in her own native sixteen. France censors all dispatches and, until now—perhaps because military transport has occupied all the trains—mailed letters have not crossed the frontier unless carried in pockets; and even these are under censorship, like letters coming into France, which delays their arrival in spite of the fair and courteous good will the authorities are showing. As in Belgium, no foreigners are allowed at the front.

Lord Kitchener, for the transfer of British troops to France and Belgium, has obtained complete newspaper silence for a week—to such a degree that, while the censorship at Dover was public, not one continental paper, even in neutral Switzerland and Italy, had wind that Southampton was the port really concerned. The unbroken loyalty of the English press which, if it knew anything, printed not a word, is to-day the object of universal admiration—a comforting instance of true, faithful, obedient, disciplined patriotism. For the general credit of journalists in these difficult days, it should be added that the press of the belligerent countries, particularly of France, Germany, and Austria, have fallen into disciplined line behind their Governments.

From the depths of mysterious Russia we hear little—except that cinematographers are welcome along her interminable, incommunicable lines of battle. Swiss and Italian papers are no longer allowed to cross the German frontier of Switzerland, and I find it is much the same on crossing into France—except that persons are not searched. Switzerland has

You Can Cut Your Coal Costs In Two Ways!!

A Kewanee Smokeless Firebox Boiler will burn cheap soft coal *without smoke*. That means it is unnecessary to burn high priced Anthracite or smokeless coals—even in cities where a stringent ordinance prohibits smoky boilers. That is one saving.

And it has been proven by many tests in actual installations and in scientific laboratories that a smokeless type

of boiler, such as the Kewanee, will get about 25% *more heat* from a ton of coal than the ordinary type of heating boiler.

Building—Goodyear Tire Co., Toronto, Ont.
They write us that they expect the saving in fuel made by the two Kewanee Smokeless Boilers installed will soon pay their cost.

KEWANEE Smokeless Firebox Boilers

are proven fuel savers.

Whether your city has a smoke ordinance or not you should install a Kewanee Smokeless and burn soft coal because it is a sure way of reducing fuel bills to a minimum.

Building owners in every state in the Union and in Canada are saving thousands of coal dollars yearly by burning soft coal in Kewanee Smokeless Boilers.

We can prove it. Will you let us?

THIRTY FIVE DOLLARS TEN CENTS
"Protection to the Penny"

Now is the Time —Procrastination the Thief!

Fifteen million dollars was lost last year through check-raising and forgery. It was lost when it could have been saved—Procrastination was the cause.

For over two years it has been possible to prevent such losses through the use of—

PEERLESS CHECK WRITERS

—because when a Peerless Check Writer is used, it is impossible to raise the check.

The Peerless originated "Protection to the Penny." Furthermore, the Peerless method of check writing is the fastest way to write checks known. It writes and protects in one operation, printing a word at a stroke and cutting each letter into shreds.

Now what about you—are you going to wait until money is actually stolen before you investigate? Or are you going to sign your name to your business card or letter head now and mail it for reproductions of raised checks and literature about the Peerless? Which?

Peerless Check Protecting Co., Dept. E, Rochester, N. Y.

also been protecting vigorously the secret of her preparations to defend her prized neutrality against aggression from either side. In dispatches and letters—which must be sent open—to and from the 200,000 troops she has mobilized, no place name is tolerated from which their situation or massing together may be guessed.

This regulation is extended to foreign dispatches, with one funny experience for myself. An army friend, getting back to Paris to join his corps, was kind enough to take a message to my janitor, or *concierger*. He sent me a short dispatch, which the Swiss telegraph service faithfully delivered—after cutting out the word *concierger*, which would have indicated the place! After second thought, the telegraph-office sent me next day the entire dispatch! The rule, or *consigne*, for Switzerland had been applied to France.

The answer to questions that such is the *consigne* ("It's orders") has been exasperating many stranded Americans here of late, particularly when it has been accompanied by the rapid shutting of a bank wicket. I fear we are getting the reputation of asking the "Why?" of orders.

One of my Italian colleagues was hauled up severely, arrested, and obliged to make a heavy deposit as bail for provisional liberty by the Swiss authorities a week ago. They have not extended their censorship to letters sent abroad, and his correspondence had given details which the Swiss newspapers were forbidden to print. The London *Times* correspondent at Basel—a vantage-point for observing the shock of the French and German-Austrian armies now coming together in Alsace only a few miles away, within hearing of gunshot—has just had to appeal to the representative of his Government for a telegram that had been held up as possibly infringing Swiss neutrality. All this has given a strain of hilarity to news announcing the arrival of sixteen American war correspondents in England, furnished with gold to the extent of needing a whole cabin and sentinel to guard it on the way over from New York.

GENERAL JOSEPH JOFFRE

WHO will be the great twentieth-century military leader? It is almost too early as yet even for speculation. If Germany develops a leader who can whip the Allies, he will go down in history with Frederick the Great, but at present there are those who point significantly to the exploits of the French commander-in-chief and the splendid record he made for himself in the first important engagements of the war. Nor does the past history of General Joffre's career fail to give warrant for whatever measure of praise is now bestowed upon him. At the beginning of the war his reputation was already twofold. He was famed alike for his powers of organization in times of peace and for his mastery of offensive tactics. The latter trait, as may be seen from a study of the General's career, was evinced from the very beginning, when, as a young second lieutenant in command of a battery of artillery, he took his part in the siege of Paris. More

remarkable than this, however, considering the volubility for which his countrymen are noted, is his trait of silence, which has earned for him the title of "Joffre the Taciturn." "Like William the Silent, and Moltke, who was 'silent in seven languages,'" says a correspondent of the New York *Evening Post*, "General Joffre is noticeably taciturn; and he has been silent through a laborious military career of forty-four years." It is not exaggerating greatly to say that this tendency toward listening and thinking in preference to eloquence was the one thing that won him recognition at first. At any rate, the story goes:

Joffre was a first-year military engineer at the difficult *École Polytechnique*, and only seventeen years of age when the war of 1870 broke out. He enlisted and fought like the rest to the bitter end. He came out a lieutenant and was employed, when peace allowed, on the plans for the new fortifications of Paris. Marshal MacMahon, who was himself not a talker, noticed his calm silence amid the other officers in a visit to one of the forts and unexpectedly saluted him—"My compliments, Captain!" So he was a captain at twenty-two, long before his time; and he was sent to organize the defenses of Pontarlier, just where the Germans, if they break through at Belfort, may now sweep down along the Swiss frontier. Then he went out to build forts in Tonkin; but Admiral Courbet, who was in charge, scented the born commander, and set him to fighting at the head of the troops. He was kept fighting, next in Dahomey; and he was the first to enter Timbuctoo—speaking never a word. He was silent in Madagascar, where he fortified Diego Suarez mightily. Back in France, he was made a professor at the Higher War School, and became successively general of brigade, of division, and of a *corps d'armée*. He came to have the confidence of all as a strategist and organizer—and, with all the Radical hostility to the Army, he was never reproached with Reaction or not being faithful to the Republic. When the nomination of general-in-chief had to be made by the Higher War Council, General Pau, who lost his arm at Sedan, pointed with his remaining hand to Joffre—and the nomination was unanimous.

The public knows little of persons; but it knew that the law of three years' compulsory service, which has saved France, was due largely to General Joffre's foresight. And these three weeks of his command have made confidence in him universal. Time will tell how far his silence will lead to victory; but, until now, no newspaper correspondent even knows where General-in-Chief Joffre and his headquarters were placed yesterday or to-day, or shall be to-morrow. "Joffre's headquarters?" said a military man who may have known and may not; "it's a monastery!"

The General is now sixty-one, but still in the full vigor of his strength of body and mind—and by far the most noteworthy figure which this surprising war has so far disclosed. Clemenceau sharply criticized him and the others of the General Staff, but he too has reversed his judgment since the mobilization proved their foresight and complete organization of the military

Get the most from your coal!

Do you put tons of coal into your cellar each Fall and let your heater burn it with no check or regulation? Are your rooms at times over-heated—fuel wasted? If so, you can make your heating uniform and reduce fuel losses by an

IDEAL SYLPHON REGITHERM

which occupies a few inches of space on the wall of a living room and automatically controls by wire-cable your heater draft- and check-dampers. The slightest change in room temperatures causes the REGITHERM to supply the fire more or less draft, and you get from your radiators the exact warmth needed for zero, average or mildest weather. You can have all rooms held evenly at about 70° temperature (or any degree from 60 to 80). REGITHERM is all metal—has no diaphragms, no machinery, no batteries, will work scores of years without repairs. You never need run to cellar to fix the dampers; your nights and mornings are comfortable, and coal wastes are prevented—a SYLPHON REGITHERM pays for itself in fuel economies.

Send for "New Heating Aids" booklet explaining REGITHERM, SYLPHON Packless Radiator Valves (always steam- and water-tight,) NORWALL Air Valves (make your radiators do their best)—and other heating im-

provements which save your time and money. Drop us a letter today.

For manufacturing, drying, baking and other purposes requiring uniform heat in air or liquids REGITHERM or SYLPHON Tank Regulators save expense and promote best workmanship. Send for booklet "SYLPHON HEAT REGULATORS."

The Choice of the Road

For ten years the Truffault-Hartford Shock Absorber has been the inevitable choice of motorists who give the three-fold problem of greater comfort, safety and economy the study it deserves. This standard device has "made good" by making "Every Road a Boulevard," and today a quarter-million motorists enjoy constant comfort through its use.

Truffault-Hartford SHOCK ABSORBER

Twenty-five leading makers recognize the Truffault-Hartford as "The Pioneer and the Best" by adapting it as part of their regular equipment. Inventive ingenuity earned for the Truffault-Hartford the exclusive right to use the principle of Rotary Friction. Science and results prove that this is the only principle that actually absorbs shocks and vibration. Constant comfort, lowered up-keep cost and greater safety are logical results.

resources. A little more and General Joffre will be the incarnation of the soul of France in her life-and-death struggle.

Perhaps this all but universal war will drift suffering humanity toward a new era where silence shall be appreciated as strength. And this time, let it be noted while it lasts, the silent man is the Frenchman.

MOVIE-ITIS IN CENTRAL AMERICA

AS yet no one has written a manual of etiquette for movie audiences. To talk or not to talk; to applaud the thrilling feats of the shadowed performers, or to maintain a sophisticated silence; or how to salute your favorite actress, since there are no footlights over which bouquets may be handed? These be questions as yet officially unanswered for the patrons of the darkened playhouse. Here in our own country we maintain the traditions of the "legitimate" theater, tempered by a realization of the artificiality of screen drama. We still converse in whispers with our neighbor, but only rarely do we mete out applause to the silent players, and then with a blush at our ingenuous appreciation. It is interesting to contrast this dignified behavior with the spontaneity of audiences in other lands. In *Lippincott's Magazine* a writer describes movie etiquette in Central America. There, if anywhere, the motion picture receives the acclaim that is its due. The fascination of the pictured play has seized upon the natives with hypnotic force. We are told that they will walk long distances to attend a movie, and that they will spend their last real for an opportunity to yell themselves hoarse over the pictures. What do they care that the players can not hear them? The play is the thing, and in their childish delight over scene and incident they can successfully lose all sense of its unreality. The writer continues:

Whatever happens on the film is as real as life itself to the audiences made up of Spaniards, Indians, and Caribs, who at exciting moments rise in their seats, shouting admonitions to the actors, yelling encouragement to the noble heroes, and hooting the villains, until the theater is like a gathering of excited bedlamites.

At La Ceiba, a port town on the east coast of Spanish Honduras, an enterprising priest opened a moving-picture show, giving the Passion Play on the opening night.

During the Last Supper it was no fault of the audience that the Apostles did not find out what kind of an *hombre* Judas was, as they were warned often enough from the front, and told to "watch out!" While the crucifixion scene was enacted, several fat señoras fainted and had to be carried out, but when Christ rose from the dead and came out triumphant from the tomb, they cheered him to the echo, all but yelling their heads off with shouts of "Viva el Cristo! Viva el Cristo!"

The Western film, however, is the most liked and surest of a crowded house. The natives have come to think that the entire population of the United States is made up chiefly of cowboys, Indians, and soldiers, who spend their time chasing one another. The sympathies are always with the cow-

boy, and he is notified in plenty of time when the wily red man is waiting for him in ambush.

The spectators writhe in their seats and wring their hands when the Indians scale the stockade and the ammunition is exhausted save the single cartridge which the Colonel reserves for his beautiful daughter.

"Hijo de Maria! [Son of Mary!] Don't lose, old man!" they plead, with the tears all but streaming down their faces, and the "bravos!" and shrieks which split the air when a cloud of dust tells them the cowboys are riding to the rescue would stampede a band of Ogallala Sioux.

A CAST-IRON DIET

THE days of the welsh rabbit are numbered. Once it held its own as one of the most difficult of dishes to prepare to a nicety, and one which only the hardiest constitutions could consume with impunity, but its supremacy is no more. Dumboy completely overshadows it in these and many other respects. The *Washington Evening Star* calls dumboy, which is the national dish of Liberia, the gastro-nomic wonder of the world, and describes at length its characteristics and the method of its manufacture:

If allowed to stand long after being prepared for the table, it becomes very hard, broken pieces of it being a favorite kind of shot for use in the long, muzzle-loading guns of the natives. A casing of dumboy is also used to stiffen the leather sheaths of the native swords and knives, according to G. N. Collins, in a communication to the National Geographic Society.

To attempt the description of some novel food is like attempting to describe a landscape, writes Mr. Collins.

The constituent parts may be described, and the manner in which they are combined, but it requires something more than accurate description to reproduce the sensation of the original. The principal ingredient of dumboy is cassava, or "cassada," as it is called in Liberia. The edible roots of this plant are the source of tapioca and some forms of sago.

To prepare the roots for dumboy, they are peeled, boiled, and all fibers from the center removed. The cooked roots are then placed in a large wooden mortar and beaten with a heavy pestle. This beating requires considerable skill and experience. In the hands of a novice the result is lumpy and inedible.

The beating requires about three quarters of an hour and is hard work. As the beaten mass becomes homogeneous, the pestle produces a loud crack each time it is drawn from the mortar. These sharp reports can be heard long distances through the forest, and are very welcome sounds at the end of a day's journey. When the dumboy reaches this stage the operator may rest without injury to the product, but once the beating is carried past this point it must be rapidly completed and the dumboy eaten at once. The natives say it is actually dangerous to eat dumboy that has stood for more than a few minutes after it is beaten.

As soon as the beating is finished, the dumboy is taken from the mortar and placed in shallow wooden bowls. The

McCormick Bldg., Dayton, Ohio

The New SAXON—\$395

Best Two-Passenger Automobile in the World at Anywhere Near Its Price

The Saxon car today is the best two-passenger automobile in the whole world at anywhere near its price, for the following reasons:

The Saxon has more room than any other; it is more comfortable to ride in; it is better looking; it has better materials in it; it is lighter; it is more up-to-date in design; it has more style; it is more distinctive; it has plenty of power for all emergencies and all road conditions; it can be kept running for less cost per mile than any other car.

People Have Wanted This Type of Car

The Saxon is an advanced example of the type of car toward which public demand is tending. It is the real embodiment in an automobile of *Efficiency* and *Economy*—the two great watchwords of the present day in all lines of life and business.

Good and Good-Looking

When you look at the Saxon, however, you do not think first of low price, for the Saxon car does not look like a cheap car. It has *style* individuality. People tell us it is better looking than any other low priced two-passenger automobile.

In body lines it follows the most up-to-date French practice. It has the same type of body that cars costing \$1500 to \$2000 possess. Its tapered bonnet, characteristic radiator, molded oval fenders, wire wheels (without extra charge), graceful running boards give it a snap and character never before approached in any low priced car.

A Roomy, Comfortable Car

When you sit in the Saxon you are impressed with its wonderful *roominess*. Plenty of width for two big people to sit comfortably. Plenty of length for the tallest man to stretch his legs. The Saxon has good cushions to sit on and a comfortable back to lean against. Its cantilever springs, so popular abroad, will surprise you by their easy-riding qualities.

On starting the car you will be pleased to notice how *quiet* it is, how free from vibration, how smoothly it runs along—fast or slow at will. It will throttle down better than any other low priced cars. It has more power in proportion to its size; and will develop more speed with less effort.

Further, the Saxon motor keeps cool under all conditions.

The Saxon is easy to steer. It is nimble-footed. Quick to run in and out of traffic. It turns short. It takes up little room. It is far easier to drive than any larger car.

You Know You Can Afford It

Saxons everywhere are averaging from 28 to 32 miles per gallon of gasoline; 75 to 100 miles on a pint of oil; 3500 to 5000 miles and more per set of tires. And when replacements are necessary a complete new tire costs the owner only \$12 or less.

Quality Inbuilt in Saxon

The success of the Saxon car at \$395, the great public interest in it, the enthusiasm of Saxon dealers and Saxon owners has done more than any other one thing to make a number of companies in the low-priced field reduce their prices.

But the price of the Saxon car, already lower than that of any other two-passenger car of standard specifications, does not need to be cut in order for it to continue to sell in large quantities. We put full value into the Saxon car in the beginning.

Public Shares the Profits

We offered in the beginning a car of superior merit for \$395. We shared our profits with the public from the start, because we never could have built the Saxon car to sell for \$395 unless we had been willing to accept a very small profit per car.

We are still accepting a small profit, because we are here to continue doing business on a larger and larger scale, and that is possible only when buyers are getting big value for their money.

We give every buyer of a Saxon car more than he can get in *any other car in the world at anywhere near the price.*

Test the Saxon Yourself

A personal trial—backed by the experience of 6500 owners—will convince you of the merit of this car, will prove that it is the car for you. Our dealer is eager to show you the Saxon. Arrange today for a demonstration.

Send coupon for catalog and dealer's name.

SEAT COVERS—We can now furnish on order handsome covers for seat cushion, seat back, and inside of doors of Saxon cars. These covers are of durable, dust-proof material, with patent leather trimmings. They add to the neat appearance of your car. Price \$15.

CHILD'S SEAT (Open)—With this neat, compact, folding seat you can carry a child as a third passenger in your Saxon. The seat, attached to the side of the body, is comfortable and substantial. Price \$10. Note also the trim handsome appearance of cowl board, carrying the switch key and hand throttle.

FIR AMERICA'S
GREATEST
ALL-UTILITY
LUMBER

For the "Bones" of a Building—

the load carrying members—the framing timbers, sills, studding, rafters, braces, of a house—or the columns, beams, and floors of a big mill-construction factory—there is a special value in

Douglas "AMERICA'S
TIMBER
GIANT"

In the first place DOUGLAS FIR is the strongest, stiffest structural lumber in the American market. And, furthermore, it is about 25 per cent lighter in weight than any structural lumber which even approaches it in strength. This combination of great strength with light weight gives it a commanding position as a building lumber.

And this is one of the reasons why DOUGLAS FIR is so largely specified by architects in foreign countries, where this lumber is in steady demand and its qualities appreciated.

This also explains the general preference for DOUGLAS FIR among the great American railway companies, for all uses where great strength, light weight and extreme durability are requisite. These advantages mean economy in all kinds of construction.

For flooring, the more severe the wear the more certain is the economy and value of DOUGLAS FIR, cut "Vertical Grain." In the construction of factories, schools, stores, theatres and churches this is worthy of special and particular consideration.

For porch floors DOUGLAS FIR is universally recognized, by those who know, as the top-notch of superior value.

When in addition to these facts you consider that DOUGLAS FIR is pronounced by architects who know it and use it, as one of the most beautiful woods for interior finish, you will begin to realize that DOUGLAS FIR has very definite advantages, which fully justify its reputation as the "Greatest All-Utility Lumber."

You will find it worth while to ask for our booklet and if there is any special information you desire tell us what you want to know and you will be fully and freely advised.

Your Lumber Dealer Should Have DOUGLAS FIR in Stock and Be Able to Show You Its Quality

WEST COAST LUMBER MFRS. ASSN., 706 Tacoma Building, TACOMA, WASH.

native method is to place the entire quantity in one large bowl, from which all the partakers eat. If divided, the customary portion for each person is a piece about the size and shape of an ordinary loaf of bread.

A soup which has been prepared while the dumboy is being beaten is now poured into each bowl. There is great variety in this soup, which imparts most of the taste to the dish. There is always a stock of some form of meat. This may be either chicken, deer, fish, monkey, or even canned beef. To this are added as many vegetables as can be obtained.

As soon as the soup is added, the dumboy is ready to be eaten, and while the ingredients are somewhat bizarre the method of eating the dish strikes the traveler as even more startling. The mass of dumboy, which can best be described as a sticky dough, will adhere instantly to anything dry, but is readily cut with a wooden spoon if the spoon is kept moist with soup.

An incredibly large piece is cut off with the moistened spoon, taken up with a quantity of soup, and swallowed whole. No one thinks of chewing it, and it is customary to caution the novice by tales of the frightful operation necessary to separate the jaws once the teeth are buried in the sticky mass.

As might be expected, few Europeans like dumboy on first acquaintance, and with some the initial distaste prevents further experiments. If a second or third attempt is made, however, and the dish has been properly prepared, the habit is usually formed, and before long every night spent in the bush without a meal of dumboy is counted a privation. Among the white residents of Liberia fondness for this dish amounts almost to a cult. It is regarded as a sort of guaranty that one's tenderfoot days are over.

BRAVE FOLLY IN THE ANTARCTIC.

A FOND and foolish little volume has recently been published in London whose very folly lends it a deeply pathetic interest. It is "The South Polar Times, April to October, 1911." In its type-written pages, of which only a few hundred copies have been printed, are gathered up the trivial little spurts and flashes of fun and fancy with which the ill-fated Scott antarctic expedition helped to while away the long hours preceding their departure. The New York Evening Post book reviewer quotes and comments upon the different items as follows:

Among them are "Extracts from Some Antarctic Archives," by E. L. Atkinson, in the style of the amusing "Tablets of Akit Tigleth Miphansi." One of these tells of a depot journey in January, 1911, and is made up of such entries as these:

Scothe-Ohnah and with him eight others left for Kapevana. Thalef thejonah.

Thelce bluout.

They got phrostbit. Algot phrostbit.

Bill Esau mimemp-Rahs.

Knushagrud-as-a-phost.

Another is the tale of a winter journey made by three of the party:

Tha-goto-thebariah, the koldalstreamedopbit.
Th'en Itwaskold. Minhaussephen-to-sephen.

Humor in a temperature of -77 degrees! But nothing could dash the spirits of the editors of *The South Polar*. Mr. Ponting has a narrow escape from death at the jaws of killer whales, recorded thus:

When at last we reached the ice, he landed in a trice.
And hurried off to photograph the whales. Oh!
But the killers heard the sound and quickly turned around.
And nearly made a meal of poor old Ponco.

Ponco, remarks the *London Times* in its notice of the publication, was evidently one of the most popular members of the party. His enthusiasm for the camera was one of the standing jokes, so that "to pon" became a familiar word, meaning to pose for Ponting. A more serious tone is infused into the volume by dreams of home:

... the tolling from Tom Tower or the chiming from Cambridge Arches.

The last item in the collection, and not the least affecting of them, is verses by Dr. Wilson, written immediately before the start for the southern journey:

And this was the thought that the Silence wrought
As it scorched and froze us through.
The secrets hidden are all forbidden
Till God means man to know,
We might be the men God meant should know
The heart of the Barrier Snow.

A TOURIST-IMMIGRANT

THERE are many Americans who in the last few weeks have learned to have a wholesome respect for the immigrant who braves the discomforts of the steerage for the sake of reaching the Western Promised Land. Of those who had the same choice the immigrant has, of crossing the Atlantic in the discomfort of the overcrowded quarter below decks or of staying in Europe, there were few who gave up that opportunity to set foot on neutral ground at last. But all who crossed in the steerage have had an experience they will not soon forget, and if peaceful days dawn again and discover them traveling luxuriously once more in first-class cabins, the event will find them looking down from the safe vantage of the upper decks into the tiny air-space granted to these humblest of the liner's passengers with a deal more sympathy and understanding than they have ever felt before. The *Philadelphia North American* prints the story of one American tourist who reached home in this fashion. The traveler recounts incidents experienced in London, which ended in a safe departure between-decks on one of the few liners sailing from the other side in the early part of August:

With Europe 3,200 miles away, a few American dollars screaming out the freedom of the land, and the prospects of a Turkish bath, I can smile at the experience of the last few weeks.

I was one of the fortunate ones who were kindly informed by some German soldiers that it were better to seek an English-speaking land. This was before there was any tangible expression of the feeling that has made Europe the battle-ground of great nations. From conversations in

Tom, Tom, the barber's son
Left his job and away he run.
He made more money, quick and clean

rear absolutely ac-
cessible avoiding danger
of spilling gasoline in front
of car. Underslung rear
springs 56 inches long.
Full floating
rear axle

While other manufacturers are still seeking ideas from Europe's 1915 automobiles we have already anticipated them. We offer for immediate delivery a replica of Europe's most elegant type of automobile. It is equipped with a wonderful motor; the same type of motor which won the first four prizes in the Indianapolis races this year. Rene Petard, the famous European engineer, whose name recalls his former association with the Italia, Fiat, Unic and Daracq cars, has designed a small bore, long stroke, high speed motor, the

Lewis Year-In-Advance Six

and Wm. Mitchell Lewis, that pillar of American automobile industry, is building this wonderful car in his own new shops at Racine. Into the motor Monsieur Petard has incorporated all the genius of his great engineering skill; into its appearance he has displayed all the beauty, all the identifying grace of the highest price European 1915 cars.

And above all he has produced a car that sells for \$1,600

Compare it with every car made; place it beside Europe's and America's finest cars—even those costing twice as much—and you will still be proud to own a Lewis Six.

Don't wait several months for delivery on a next year's "Six". Investigate the one that is ready for delivery now; the year-in-advance car—The Lewis Six.

A \$3,000 car in appearance for \$1,600

Germany and France I gathered that the crisis was foreseen by many. I was firmly installed in London before the war-cloud burst, and with a feeling of security I was able to watch the quickly moving picture.

At the arrival of boats from Holland and France the fund of harrowing tales grew to enormous proportions. In true American style every one talked to every one, without introductions. Some recitals were tearful, some bitter, grateful, despairing, and many were humorous. The lounge of the Savoy was the clearing-house for ideas on war, concerning which all agreed Sherman had the right idea.

Contrast was the key-note. A sweet young woman in an afternoon dress and not \$15 in her pocket would be swayed between regrets for her five trunks at Heidelberg and anxiety about the sailing of her steamer.

Men with hundreds of dollars in checks and many five-pound notes were feeling the pangs of hunger, for restaurants were refusing everything but gold in payment for food. "Have you gold?" the head waiter would courteously ask, as he led you to a table. If you were just paper-rich you were refused. Prices rose, more tourists arrived, the bank holiday was extended, making it more difficult to get money, and conditions moved from the humorous to the serious.

The tickers in the corners of the lounges of large hotels were watched, and shrieks of dismay from women, with imprecations from men, would greet the announcement that the *Olympic* would not sail or that the *Rotterdam* would not stop at Southampton. Through it all could be heard the supprest voices of the London "newsies" announcing the latest victory over the German Army. One poster was really funny. It was two isolated sentences from the Kaiser's speech: "We are Germans. God help us." Who said the English have no humor?

Outside in the streets there were thousands of quiet Englishmen walking in orderly masses up and down, stopping at Trafalgar Square before moving down to Buckingham Palace to see the royal family come out on the balcony. When the King, Queen, and the Prince of Wales appeared there was wonderful cheering, and then the singing of "God Save the King" was the signal for the breaking up of the mob. The serious, orderly acceptance of the inevitable was impressive.

Troops of reservists, huge trucks of canned goods, small squads of soldiers, officers in motor-cars, bands of youngsters with paper caps and tin pans—all made night and day very stirring. Theaters, music-halls, and tea-drinking have received a setback.

At Liverpool, the Mekka of Americans, there was the stir of drilling raw recruits in front of the Soldiers' Hall. Some were very raw indeed. Clerks (pronounce it clarks please) were dressed in new khaki and were put through the preliminary drill that was watched by hundreds.

The large hotels were commandeered by the Government for officers' quarters, and the waves of incoming tourists broke over a city unable to accommodate them. "Full-up," the desk clerk would say. That meant that we had to take up our tents and steal away to the next sign.

I came home in the steerage. It is quite the thing. Just now the steerage is the peerage. The passengers of the large boats that have been taken for transport service, or have for the sake of prudence hugged

American docks, were glad to take anything. It is good to see things from below. The other side of the bar frequently changes the key of a song. I think there will be numerous philippics launched against conditions that obtain below the water-line. Have you ever been in the steerage? Go. You will appreciate a feather pillow, fresh air, water, and general sanitary conditions afterward. The food that we ate was steerage food, "with a difference," I believe.

Our steward informed us that we were treated with consideration. To be sure, the line was confronted with almost insurmountable difficulties. Hundreds of passengers, a semistrike of the crew, a new departure from unknown docks, bookings that were for the same berth, tired, nervous human wrecks, made trials for the captain. The lot of the steerage passengers is another story.

We ate at long tables, and poured copious drafts of terrible tea from large pots. We tried to conquer the butter, but it was too much for us. What mattered it if the knives and forks were only wiped before the next meal? We were going home.

We proved that it is hard to kill an American's good spirits. There were millionaires, prominent men of all professions, opera-singers, students, experienced travelers, and every one was a good sport. Some one in the upper class objected to our promenading on the deck in front, and when the railing was roped up, we took the cut direct with good grace. We lined up for the inspection of our vaccination marks, and passed in file before the quarantine doctors in respectful, immigrant manner. We cared little whether the ship's cat caught the fighting rats in the rafters. We were going home.

A SOLDIER'S STORY OF THE BATTLE-FIELD

THE baptism of lead that thousands are now experiencing for the first time is a test that brings out the hardest qualities, the not often the most humane, in those subjected to it. Various accounts appear from time to time, excerpts of letters written by the soldiers to their friends and relatives, giving glimpses of how this test is met by the different individuals. In some cases the first few moments are of calm unconcern, to be followed by a storm of terror and disgust roused by the sight of death and disfigurement. In other cases terror is only subdued by will-power and the habits of discipline. Often it is impossible for the victim to feel the full force of the emotions that his surroundings tend to rouse in him, until after some days of the harrowing and unhallowed experiences of the battle-field, emotion becomes paralyzed, carnage and slaughter take the guise of every-day affairs, and he finds himself going about the task of death-dealing as merrily and unconcernedly as he would go about his trade at home. We read of soldiers whistling, humming, and joking in the trenches as they lie loading, aiming, and firing at the bodies of other soldiers across a field. It is not in the spirit of bravado, but merely because

means *real* floor-saving and rug-protection.

The only casters which do fully what a caster should do are

FELTOIDS

Ordinary iron, rubber, wood and leather casters cost less than Feltoids. But the great ruin they cause makes them an extravagance in the end. The few cents you save by using cheap casters soon run into dollars in floor repair bills.

The marless — noiseless — durable Feltoids give a service a hundred times more valuable than the extra price asked for them. Made of specially processed material, they are capable of bearing tremendous weight without losing their resiliency which eliminates floor and rug damage.

There are no casters like Feltoids—none that can do the Feltoid work.

To be had at furniture, hardware and department stores.

they have become as used to warfare as the butcher is to the somewhat unpleasant tasks of sheep-killing and pig-sticking. The New York *Evening Sun* prints a letter from a wounded French soldier that gives the reader somewhat of an understanding of how such an attitude of mind may be induced. The writer describes the events of the battle in which he was wounded, as follows:

Since some time the rattling of volleys is audible. Then at a distance a heavy detonation of a gun is heard. Arrived at the crest, we drop down, and there, right in front of us, on the opposite hills, and making for the plain between, are the enemy, engaged in a fight with a division of the allied troops.

I can distinctly see the German artillerymen moving about the guns on the hilltops and slopes. I see a mighty flash from one of the guns; the heavy report is echoed by the surrounding hills. It is strange, but in the face of death and destruction I catch myself trying to make out where the shell has fallen, as if I am an interested spectator at a rifle-competition. I am not the only one. I see many curious faces around me bearing expressions full of interest, just as if the owners of the respective faces formed the audience at a highly entertaining theatrical performance without having anything to do with the play itself.

The human mind is a curious and complicated thing. Now that we were shooting at the enemy and often afterward in the midst of a fierce battle I heard some remark made or some funny expression used which proved that the speaker's thoughts were far from realizing the terrible facts around him. It has nothing to do with heartlessness or anything like that. I don't know what it is. Perhaps I shall have an opportunity to philosophize on it later.

Volley after volley was sent in the direction of the enemy. The German shells and bullets passed over our heads. The Germans may be, and are, our superiors in executing parade-steps, but they are infernally bad shots.

A rain of hostile bullets passed over our heads. Instinctively we stopt, altho when one hears the bullet it has passed already. It is a queer sensation which comes over us the first time we are met with a hail of bullets. We suddenly feel as if attacked by fever, but this feeling soon leaves us.

The earth was shaken by the incessant cannonading, and the air was torn by continuous rattling rifle-fire. A comrade on my right stumbled, dropt forward without uttering a sound, killed by a shot in the breast. A man in front of me threw his arms up, fell, struggled to his feet, and fell again.

A shell exploded near us, followed by a terrible cry. Five of us were lying dead in a little square. One man had both legs blown away and was still alive, conscious, and imploring us to kill him. An officer ran past, stopt, and after a short look at the man, shot him through the heart. "Ça vaux mieux," he said, "pauvre diable!"

The officer opened his mouth to utter a command and at the same moment got a bullet in the mouth. He turned around twice and fell heavily on the dike close by me.

At a good distance behind us Red Cross soldiers and Red Cross friars carrying the Red Cross flag were stooping over the wounded and removing them to ambulance-vans. A shell exploded over their heads, and only a couple of the Red Cross men were left.

More hostile troops have been advancing. They have suffered heavy losses, but on our side the number of casualties is very large and our position seems to become critical. We are retreating. Our men display a remarkable self-control. Notwithstanding the appalling scene around me, I, too, feel perfectly calm now. Terrible tho it may seem, I confess that without a moment's trouble I aim at my living targets, shoot, and watch the effect of my bullet.

The retreat is carried out splendidly. I have just reached the crest of a hill when I feel a slight shock in the left shoulder, nothing else. I do not heed it, but some moments afterward I feel a burning pain and I perceive that I am wounded and that the weight of my arm seems to increase. Some time afterward I find myself neatly installed in a field hospital.

THE PEACE ARMIES OF THE BOY SCOUTS

AN army drilled for peace may be something better than a military force equipped with the armaments of war and taught to kill. We are discovering, observers tell us, that armed forces do not maintain peace indefinitely. Soon we shall understand that an army meant to preserve peace must be drilled for peace, instead of being perfected in the arts of war. In the Boy Scouts of the World, we have a few such armies, but we are apt to regard them somewhat alightingly and unsympathetically. A man in a soldier's uniform is one who has pledged himself to die, if necessary, for his country, and there is romance in the thought. A boy in the uniform of the true peace soldier, the Boy Scout, pledges himself to live for his country, every day of his life, whether stern necessity calls him or not. To the average thought there seems little romance in this; it savors too much of hard work. Just at present the Boy Scouts are submitted to a peculiar test. They are called upon to wage their war of peace in the midst of world-wide slaughter and destruction. In England Lieutenant-General Sir Robert S. S. Baden-Powell has issued a statement and instructions to the Boy Scouts of that country, making clear to them their position in the present difficulties. Under the caption, "How the Boy Scouts Can Help," he writes:

In this time of national emergency comes the opportunity for the Scouts' organization to show that it can be of material service to the country.

Just as the boys of Mafeking were utilized to take the lighter work of men in order that these might be released to the more arduous duties of war, so can the Scouts now give valuable assistance to the State at home—and for this their training

The Eight Cylinder Cadillac

Eight power impulses in every cycle—overlapping so completely that they melt and merge, one into another, in a steady flow of power.

This is the story, in a single sentence, of the Eight-Cylinder Cadillac.

Complete continuity—not theoretical, but actual.

You can figure the effect of this overlapping of power impulses as well as we can describe it.

You can imagine it, that is,—from what you know of comparative or approximate continuity.

But your imagination will fall very far short of the facts.

You have never had a ride such as your first ride in the Eight-Cylinder Cadillac will be.

You have doubtless discerned that different types of motors produce different sensations in riding.

But none of these differences are so pronounced as the difference which exists between this Eight-Cylinder motor and all other types.

When scientists and mathematicians cannot carry a calculation to a higher, or to a finer point, they say that it has reached the n^{th} degree.

This Eight-Cylinder Cadillac carries the principle of continuous power to the n^{th} degree.

It produces eight power impulses during each complete cycle; four power impulses during each revolution of the fly-wheel—one every quarter turn.

What follows is not merely a revelation—but actually a revolution in riding results.

It is infinitely more than a matter of simply furnishing greater power.

It is the velvety way in which that greater power is furnished by the Eight-Cylinder Cadillac which overturns all your previous conceptions of motoring.

We said in the caption that the impulses overlap so completely that one melts and merges into another.

That is literally true.

We said that this produces a steady flow of power.

That is also literally true.

But this is only a part of the truth—and a very small part.

The power ebbs and flows so flexibly that the car can be operated almost continuously under throttle control, without change of gear.

The steadiness of its application imparts a like steadiness to the car itself.

After your first ride in the Cadillac Eight you will revise your idea of what constitutes freedom from vibration.

You will revise your idea of efficiency at high speed; and of efficiency at low speed.

When you climb a hill you scarcely feel as though you were climbing a hill at all.

You will be more apt to feel, instead, that the hill has accommodatingly subided into a level roadway.

The fluid flow of uninterrupted power gets better riding results out of all kinds of roads.

If the road be level, and good, the Cadillac Eight extracts from it a new and a superlative smoothness.

If it be rough and uneven, the steady, unbroken torque minimizes the jolts and jars.

The motor does not seem to be driving the car, but rather to have given it wings.

It is difficult to treat the subject in calm and temperate terms in view of the impressive fact that this Eight-Cylinder Cadillac has created a new kind of motoring.

We can see nothing ahead but a demand so overwhelming that it will be impossible for the Cadillac Company, within a year, to satisfy that demand.

and organization has already, to a great extent, fitted them.

Their duties would be non-military, and would rather come within the scope of police-work, and would therefore be carried out under the general direction of the chief constable in each county. They would include the following:

(a) Guarding and patrolling bridges, culverts, telegraph lines, etc., against damage by spies.

(b) Collecting information as to supplies, transport, etc., available.

(c) Handing out notices to inhabitants, and other duties connected with billeting, commandeering, warning, etc.

(d) Carrying out organized relief measures among inhabitants.

(e) Carrying out communications by means of dispatch-riders, signallers, wireless, etc.

(f) Helping families of men employed in defense duties, or sick or wounded, etc.

(g) Establishing first-aid, dressing, or nursing stations, refuges, dispensaries, soup-kitchens, etc., in their clubrooms.

(h) Acting as guides, orderlies, etc.

Sea Scouts watching estuaries and ports, guiding vessels in unbuoyed channels, or showing lights to friendly vessels, etc., and assisting coast-guards.

WORK FOR KING AND COUNTRY

Their organization by counties under their commissioners, and their even distribution in small units under scout-masters all over the United Kingdom, render mobilization easy, and put the Scouts at once on the scene of their operations.

With their ability to rig their own shelters, to cook their own food, and to regulate their own roster of duties in their patrols, the Scouts are, already organized, the best practical units for such duties.

It is assumed that they will be excused from school attendance by the education committees and from work by their employers.

The above list does not exhaust all the duties which they might undertake; it merely gives an outline which commissioners can no doubt elaborate to suit the local requirements and conditions in their respective areas, after consultation with their chief constables and defense authorities.

I am confident of one thing, and that is, that all ranks will pull together with the greatest cordiality and energy on this unique occasion for doing a valuable work for our king and country.

I am delighted with the ready and effective response which has already been made by counties to my suggestions to organize Scouts to help civil and municipal defense authorities in their own localities. My warmest appreciation and congratulations to all concerned.

(Signed) ROBERT BADEN-POWELL,
Chief Scout.

According to a dispatch to the New York Times, the Scouts of Holland are already engaged in service. The account of their exertions forms a remarkable contrast to the accounts that come in of the fighting armies, of Germany and Austria, composed for the most part of boys only a trifle older than they, and drilled only to march, to kill, and to offer themselves as a bulwark of living bodies

against the guns of the enemy. The Times says:

In a dispatch to *The Daily Chronicle*, Edgar Rowan, a special correspondent at Amsterdam, tells of the interest which the Boy Scouts are taking in the war.

Each of the European nations now at war has its Boy Scouts, he says, ready to do all in their power to serve the State and the individual, but the Dutch Scouts are probably the first to see active service on the battle-field. Continuing, he says:

"When I was on the Dutch-Belgian frontier the other day, south of Maastricht, overlooking the battle-field around Liège and Visé, I saw a Boy Scout in the familiar 'Baden-Powell hat,' with all the look of self-confident efficiency that marks the movement, sitting in a motor-car that was rushing the wounded at top speed to the Dutch hospitals. He had a Red Cross on his arm, in addition to a brave show of the usual badges, and he looked, as the Boy Scouts look the world over, ready for any amount of fun, danger, or responsibility.

"I was told that the local troop of Scouts—in Dutch, 'Padvindere,' or pathfinders—had given splendid help to the Red Cross Society, their training in 'first aid,' their willing adaptability, and their cheery work through long hours of rain and darkness contributing much toward the work of mercy which has made Maastricht famous in Holland and far beyond. Nor could the townspeople have distributed food to the refugees from the burning villages before Liège so promptly had not the ever-ready lads with the bare knees and the 'B.-P. hats' taken a hand in the relief work.

"Since I returned to Amsterdam I have had a chat with G. de Vogt, a warm admirer of Sir R. Baden-Powell, who introduced the movement into Holland, and at the Dutch headquarters I found all the activity of a boys' army mobilized for active service. The headquarters are in the pavilion in the Vondelpark, and there is a constant coming and going of Boy Scouts on cycles, a ringing of telephone bells, and a studying of new plans for helping the country.

"There are already 400 Padvindere in Amsterdam alone, and as the schools are now closed, most of them have reported for duty. The majority are certified to render 'first aid,' and a strong contingent is working with the local branch of the Dutch Red Cross Society, making and repairing beds and equipment, so that almost at a moment's notice the town could care for 11,000 wounded in schools and other public buildings.

"Then over 100 of the boys, and the number grows daily, are acting as cyclist dispatch-bearers for the military authorities, carrying messages at top speed from the staff headquarters to the outlying forts and military posts. Others are collecting books and papers from people in town and distributing them among the soldiers who have been stationed in lonely spots or billeted in remote villages.

"Do you wonder, if you know the boy and the Scout, that they all want to go south at once and bring in wounded from the Belgian battle-fields? The Amsterdam headquarters have telegraphed to Maastricht, offering a strong body of trained Scouts to help the local Red Cross Society, but the answer came back that with the Scouts already on the spot they could deal with the situation.

"The Scouts also offered to give their

QUEED
and *"V.V.'S EYES"*
of which 400,000 copies already have been sold

IF you learned to love "Queed" and have lost yourself in the joyful pages of "V.V.'s Eyes," Harrison's new novel, "Angela's Business," is for you. It begins in the October

METROPOLITAN

"The Livest Magazine in America"

"Angela's Business" repeats all the charm and humor of the earlier books. But this time Mr. Harrison has written a love story so original and ingenious in its plot—and so important—that you will follow it with the piqued interest of a riddle. And it will set women readers by the ears.

A young author starts out, with all the enthusiasm of youth—and lack of experience—to solve the great mystery of Woman and her Destiny. At the very outset of the quest, he himself falls headlong into his problem and all because of two real women, whose contrasted types send his heart groping as well as his head. Of course he falls in love; of course he wins a woman.

But—what kind of woman is the right kind of woman? A great American story of today is "Angela's Business," told with the charm of Locke and the shrewd insight of Bernard Shaw.

In the October METROPOLITAN

—on all good newsstands—15 cents

Here are a few of the interesting features in the October METROPOLITAN:

Really big fiction by Booth Tarkington; W. W. Jacobs; Larry Evans; Earl Derr Biggers, and the first of a series of great double-barrelled detective stories by Max Pemberton and G. K. Chesterton.

services free in the harvest-fields in the absence of men called to the Army, but there are enough unemployed to meet the demands of the farmers, and, as I have seen in motoring from end to end of Holland, the women and old men are getting in the corn with splendid energy. But the Boy Scout is not to be baffled in his search for opportunities of service. Already he has found many ways of being useful, and if there is anything more to be done the country will not call on him in vain."

VIGNETTES OF ACTIVE SERVICE

THE Boston Herald prints a cable dispatch, which, if it was sent just as it was printed, deserves to be treasured as the briefest thriller on record. In a hundred words the story is complete:

Colonel Folque, commander of a division of artillery at the front, recently needed a few men for a perilous mission, and called for volunteers.

"Those who undertake this mission will perhaps never come back," he said, "and he who commands will be one of the first sons of France to die for his country in this war."

Volunteers were numerous. A young graduate of a polytechnic school asked for the honor of leading those who would undertake the mission. It was the son of Colonel Folque. The latter paled, but did not flinch. His son did not come back.

Comedy is doubtless scarce in the present foreign situation, but some, such as is evident in the following, printed by the Albany Journal, must occasionally occur, providing a most rare and welcome comic relief to the real horror and black sorrow that are war:

Before the war broke out, René Biere was managing editor of *The Excelsior*, one of the largest of the daily newspapers of Paris.

As in all other establishments of any considerable size, a porter was employed in the *Excelsior* building.

When the general call to arms was issued the managing editor and the porter were both among those who responded. But the porter went as an adjutant, while the managing editor took his place in the ranks, a private soldier.

As they happened to be assigned to the same company, the former managing editor is taking orders from his former porter.

Which shows that in real war, the pen is not mightier than the sword.

In the following story from the Chicago Tribune, as in the editorial reflections which it inspires, the emphasis is on its grim irony, a phase most characteristic of any devastation, but of whose presence in the present struggle we have heard comparatively little as yet. We read:

After the first German forces had gone into Belgium against Liège, there was found on one of the roadways the body of a man holding an umbrella. Some orderly, circumspect citizen, accustomed to guarding himself against such accidents of life as a sudden downpour, had gone from home, carrying that protection of re-

FOR PHYSICIANS An Entirely New Work JUST ISSUED

Genito-Urinary Surgery

By

J.W. Thomson Walker, M.D., C.M.Ed., F.R.C.S.

Hunterian Professor of Surgery and Pathology,
Royal College of Surgeons of England
(1907); Surgeon to Hampstead General and
North-West London Hospital; Assistant
Surgeon to St. Peter's Hospital for Stone;
Urinary Surgeon to the Radium Institute.

With 24 Colored and 21 Black-and-White Plates, and 279 Illustrations in the Text

With a very few exceptions the illustrations are from cases that have been under the author's care, or from specimens that have been removed by operation. They include a splendid series of cystoscopic drawings obtained direct from the patient, and chosen from a large collection made during a number of years. There are also many illustrations of operations.

The author retains the anatomical classification of diseases, since the book is intended to serve as an aid to clinical work. The pathology given is not the pathology of the postmortem room, but the living pathology met with by the surgeon in the operating theater.

"As a guide to the man in general practice it will find its first usefulness, for it will give him the practical suggestions he most needs and sound advice in all that is most recent in this special field. To the medical student as well as to the practitioner the book will be of very real value."—JAMES BAYARD CLARK, M.D., New York.

Life, Death and Immortality

By William Hanna Thomson, M.D., LL.D.
Author of "Brain and Personality"

The Independent, New York:

"Life, Death and Immortality, is a book which supplies much food for thought. Dr. Thomson's conclusions will be found a support to Christians' faith in immortality."

Examiner, Chicago:

"It is especially interesting in that the author, a scientist and physician, points in his conclusions emphatically to the doctrine of the immortality of the soul. Readers will appreciate the vigor in handling a discussion of perennial interest."

Herald, Boston:

"His argument for immortality rests upon the nature of personality. He maintains that the origin of life has never yet been discovered and that from a scientific point of view, everything points to immortality."

Philadelphia Telegraph:

"The statement of the case for immortality on scientific grounds is clearly stated, ingeniously argued and urged with entire reasonableness as not only possible but most probable."

Herald-Republican, Salt Lake City:

"Deep thinkers will enjoy this book and find in it ideas that make them think still more."

spectability, an umbrella. Respectability does not submit willingly to the discomfort of dripping clothes, and the umbrella is the token of a precise nature.

His fate was sufficiently terrible in its irony to get a line in the cables, and the picture of the man with the umbrella lying dead in the roadway as the troops passed on was given us.

The man with the umbrella was the individual, and Europe no longer is made up of individuals. It is made up of masses. The individual has been lost. A regiment may be scattered, a brigade routed, a division hammered, but the individual is gone.

A few weeks ago the life of the man with the umbrella was sacred. He might have been a timid person, but he would have gone almost anywhere in Europe protected by his own consciousness of his individual value. Society was organized to protect him. Laboratories and law, health officers and policemen, bacteriologists and surgeons, worked to guard him.

His individualism was consciously important. Suddenly it becomes nothing. Only masses count. The individual is lost.

Another story, the scene of which is laid in London, presents a picture worthy of a great artist's best efforts. It would make an admirable etching, entitled merely "In the Rain." Incidentally, it gives to the reader an impression of London as it must be for many thousands of souls to-day, a London whose truest, deepest desolation our imaginations are feeble to conjecture. The writer, whose story appears in the *London Telegraph* of August 8, sketches in his background painstakingly, and then gives us speaking word-pictures of the main figures:

It rained in London yesterday, now and again. From very dawn to sunset the silver skeins slanted down upon the wet streets, the dark shining roofs, and the gray-green circling Thames. It was a fit accompaniment for the mood of London—and not of London only. After the fitful tension of our life here for the last week the cool and quiet lapse of the rain reflected the breaking of the fever that we could—and did—control, but needs must confess. There is something in mere rain that brings the country across the footlights of the town. All the week we had been walking in sunlight over our own shadows upon the pavement, self-centered and something egotistical. With the rain came the remembrance of the long, rich levels of Lincolnshire, the blue-green depths of the Weald, the quiet sunken lanes and meadow-sweet of Devon; and London drew up to herself once more the land for which she stands eternal sponsor. We were all England in the rain. We had made our terrible election, and we thanked God that at least dishonor could never be ours.

Outside a graystone house there was a crowd, not a very large one. Most of the crowd were women, who waited steadily in the showers. After a while one looked at them with new eyes. It was a symbol of that awful waiting, that waiting, helpless and dry-eyed, that must always be woman's lot when the last appeals have failed and the fight has to be fought out. Among them there was a keen-eyed, thin-

Fifteen Minutes At Bedtime

JUST
15 MINUTES
AT BEDTIME

In only those few minutes a day it is possible for you to get the knowledge of literature, the broad culture, that every University strives to give.

This no idle promise. Dr. Chas. W. Eliot, from his sixty years of reading, study and teaching—forty years of it as President of one the world's greatest Universities—has put aside those few great Poems, Dramas, Biographies, Histories, Works of Travel, Science, Philosophy and Religion that best picture the progress of the human race from the earliest times down to the present day. "I believe that the faithful and considerate reading of these books will give any man the essentials of a liberal education, even if he can devote to them but fifteen minutes a day."—*Eliot*.

What books? The answer is contained in the *free* booklet mentioned below; it is the most valuable booklet ever written for the man who wants advice on what or how to read. It contains the story of

The Famous Five-Foot Shelf of Books

Now Yours for Only a Few Cents a Day

One hundred thousand business men are using the pleasant, helpful reading courses therein laid out. They are reading the great histories, seeing the great plays, hearing the great orations, meeting the great men of history.

-faced little suffragist, with a wisp of party-colored ribbons and a few papers to sell. A policeman, in a wet waterproof cape, paced slowly up and down outside the group. There was another on the step, holding the half-opened door. Nothing was said, except now and then in a low tone; and the rain came down steadily.

If you had asked the women why they waited, scarcely one could have told you. Only they could no longer stay at home. Was there nothing, nothing that they could do? This sentence of perpetual uselessness at the greatest of all moments in the life of England was monstrous, archaic, unbearable. Yet there was a sense that its injustice was not of man's making, and at the last, perhaps, some realization that there were much and great work and patience to be achieved in dull homes. A small, lithe figure in a dark-blue robe and a nurse's headgear made its way, bag in hand, through and up the steps. The policeman saluted and opened the door.

A moment later a well-groomed, gray-eyed woman with dark hair went up the steps—and was refused admittance. There was something that made the little crowd murmur together that she was French. Turning at the word, she paused a moment on the upper step. Her young face was well cut, but almost haggard. She said, quietly, "No, I am Austrian." There was a silence. The policeman saluted. She came down the steps, and a path of respect and sympathy was made for her. One can never have the last touch of grace with some gracious women. She bowed a finger's breadth, and said quite simply, "But this does not happen except in England. Thank you."

She was gone; the crowd filled in and turned again to its own tortured self-control. The suffragist put away her papers and became as other women. One sobbed, but those near her said "Hush!" because they wanted to hush themselves. She pulled herself together. The door opened and the capable little nurse reappeared with her bag. She came down the steps, and as she came the suffragist spoke to her. "Is there nothing that I can do?" The nurse looked at her, and her keen glance melted a little. "I'm afraid not; not yet . . . not yet. Perhaps afterward." A moment later she, too, was gone, a

compact and businesslike little helper in time of trouble.

Was there nothing to be done by women? Nothing? The little crowd remained, and the rain came down steadily upon them.

DRY TOAST

IT is fitting that each great epoch should have its bard, to celebrate immortally the fading glories and the dawning effulgences. In our own Southland, it appears, a momentous change is taking place, a departure from the traditions of centuries. It is the end of an old epoch, the beginning of a new. Doubtless there will eventually appear the bard celebrant, who will make famous his native land, his age and himself. But until he come, we must turn to lesser lights. *The Times* of Cuba favors one hot-weather poet, anonymous, whose effusion depicts with feeling the pathos and promise in the situation in the South:

Lay the jest about the julep in the camphor-balls at last,
For the miracle has happened, and the olden days are past!
That which made Milwaukee famous does not foam in Tennessee,
And the lid in old Missouri is as tight-locked as can be;
And the comic-paper Colonel and his cronies well may sigh,
For the mint is waving gaily, and the South is going dry!

By the still-side on the hillside in Kentucky all is still,
And the only damp refreshment must be dilt up from the rill.
Nawth Ca'llina's stately ruler gives his soda-glass a shove,
And discuses local option with the So'th Ca'llina guv.
It is useless at the fountain to be winkful of the eye,
For the cocktail glass is dusty, and the South is going dry!

It is "water, water, everywhere, and not a drop to drink!"
We no longer hear the music of the mellow crystal clink;
When the Colonel, and the Major, and the General, and the Judge
Meet to have a little nip, to give their appetites an edge;
For the egg-nog now is nogless, and the rye has gone awry,
And the punch-bowl holds carnations, for the South is going dry!

All the nightcaps now have tassels, and are worn upon the head!
Not the nightcaps that were taken when nobody went to bed;
And the breeze above the blue-grass is as solemn as is death,
For it bears no pungent clove-tang on its odorific breath;
And each man can walk the chalk-line when the stars are in the sky,
For the fix-glass now is fixless and the South is going dry!

Lay the jest about the julep 'neath the chestnut-tree at last,
For there's but one kind of moonshine, and the older days are past,
The water-wagon rumbles through the Southland on its trip,
And it helps no one to drop off to pick up the driver's whip;
For the mint-beds now are pastures, and the corkscrew hangeth high;
All is still along the still-side, and the South is going dry!

WARNING!

BEWARE OF SUBSCRIPTION SWINDLERS!

Swindlers are at work throughout the country soliciting subscriptions for popular periodicals. We urge that no money be paid to strangers even tho they exhibit printed matter apparently authorizing them to represent us, and especially when they offer cut rates or a bonus. THE LITERARY DIGEST mailing list showing dates of expiration of subscriptions is never given out to any one for collection of renewals. Better send subscriptions direct, or postpone giving your order until you can make inquiry. If you have reason to suspect that the members of your community are being swindled, notify your chief of police or sheriff, and the publishers, and arrange another interview with the agent at which you can take such action jointly as may seem proper.

INVESTMENTS AND FINANCE

LOSSES AND GAINS FOR US FROM THE WAR

FINANCIAL writers have been discuss-
ing possible gains and losses to this
country as consequences of the war in Eu-
rope. While a diversity of opinion exists, all
agree that there will be notable gains in
some directions and notable losses in
others. All point out difficulties in making
forecasts, chief of which is the absence of
anything like similar conditions at any other
time in the world's history. Moreover,
"our industrial machinery is now quite too
complicated in its workings to permit the
problem to be solved." Such statistics and
other information as can be obtained show,
however, in the opinion of *The Boston News
Bureau*, that "several leading industries
are bound to make substantial profits." At
the same time they "utterly dispel the
fallacy that the American people can profit
through the carnage in Europe." The
writer presents a table, showing gains and
losses for fourteen important commodities,
products or lines of business, as already
indicated in price, or other changes, since
July 25.

GAINS		
Item or Commodity	Yearly Output or Turnover	Yearly Rate of Gain
Corn	2,596,000,000 bushels	\$363,720,000
Wheat	896,000,000 "	286,720,000
Oats	1,116,000,000 "	140,618,000
Sugar	2,000,000,000 pounds	52,000,000
Steel	31,300,000 tons	51,645,000
Leather	1,000,000,000 pounds*	10,000,000
Spelter	712,292,000 "	7,600,000
Total of above gains		\$912,201,000

LOSSES		
Item or Commodity	Yearly Output or Turnover	Yearly Rate of Loss
Cotton	15,000,000 bales	\$396,100,000
Foreign trade	\$4,258,500,000	*119,700,000
Commercial failures	265,000,000	96,500,000
Crude petroleum	222,000,000 gallons	55,500,000
Lumber	38,387,000,000 feet	20,000,000
Copper	1,232,000,000 pounds	12,320,000
Silver	67,000,000 "	2,028,000
Total of these losses		\$704,148,000
* Estimated.		

From this it appears that advances al-
ready made in seven leading commodities,
when applied to the total yearly output in
America, would show a gross increase in
value of more than \$912,000,000. On the
other hand, there are seven other com-
modities or items which show a loss of \$704,-
000,000. From these figures the super-
ficial observer might infer that this country
in a full year would make a profit of \$208,-
000,000 out of the war. This, however,
is far from being the case, since "there are a
large number of profits and losses which
are beyond calculation." Among losses
are those due to idleness of labor and
capital, "the consequences of which no one
can figure up." Likewise, it would be
impossible to determine to what extent
losses in the value of cotton and crude
petroleum "will diminish the profits of
retailers." The writer says further:

"Other incalculable factors are the high
interest cost of new capital, and of ordi-
nary loans to corporations and individ-
uals; the depreciation of idle plants or
machinery, the increase in the cost of
living, and the losses involved in the cessa-
tion of stock and bond business and other
financial transactions. Much of the 'gain'
shown above is gain to the producer and
loss to the consumer, so that it offsets
itself. Present indications are that our
total foreign commerce is running at the

rate of about \$1,197,000,000 per annum
below last year; and assuming a 10 per cent.
margin of profit, this would involve a loss of
nearly \$120,000,000 per annum. However,
for any twelvemonth period the shrink-
age in our foreign trade does not seem likely
to be more than half of the present shrink-
age. The war increase in commercial
failures seems to be at the rate of approxi-
mately \$98,500,000 yearly.

"Still no itemized account can ever tell
the story; and those who wish to obtain
some notion, however rough, of our net
profit or loss may better judge from the
August decrease in bank exchanges. This
decrease was at the rate of \$29,400,000,000
yearly; and net income in the United
States available for personal expenses is
equivalent on the average to about 6 per
cent. of bank exchanges. Six per cent.
of this loss in exchanges is \$1,764,000,000,
while the total income of the American peo-
ple has been estimated at \$26,000,000,000.

"Nevertheless with four European na-
tions virtually fighting—according to the
common financial view, for the protection,
if not the preservation, of our business in-
stitutions, we can afford to be cheerful in
face of a rather substantial net loss."

It is believed by many writers that our
manufacturing industries will, on the whole,
make gains. Some writers—for example,
one in the *Springfield Republican*—are
inclined to think that New England "may
enjoy an industrial boom" in consequence
of the war. He recalls how the great
textile industries of New England prac-
tically had their origin in the Napoleonic
wars:

"New England's troubles during the
Napoleonic wars, a century or more ago,
resulted in the establishment of textile
manufacturing in this section. The first
cotton-mills in the Blackstone Valley were
started earlier, but what diverted New
England capital into the business on any
considerable scale was first the embargo on
commerce imposed by President Jefferson,
which ruined almost the flourishing New
England merchant marine, and then the
war of 1812-14 with England. Present
conditions are enough like those of a century
ago to suggest not very dissimilar industrial
results. That is to say, the present
general European war has destroyed foreign
competition in the American market and
brought to New England a special oppor-
tunity in supplying the domestic demand
for manufactured goods. Manufacturing
to-day is to be abnormally stimulated,
perhaps, just as it was then. The war,
evidently, means that New England may
enjoy an industrial boom; but this will have
a much wider basis than that of the infant
manufacturing boom of a century ago if the
American export trade to neutral coun-
tries can now be promoted by the develop-
ment of an American marine and the
establishment of American banking con-
nections in neutral markets."

RAILROAD DIVIDEND PROSPECTS

Until the directors of the New York
Central Railroad met in the second week
of September, and declared the road's
regular dividend, it had been felt in some
financial circles that a reduction might be
made. There had also been intimations
that other roads might be compelled to
reduce their dividends, in part because of
war influences, in part because of the poor
business and low rates that prevailed before

he war began. The question is asked now whether many other standard roads reporting poor earnings will be able to follow the example of the New York Central and maintain their regular rates. Among these are probably a dozen roads that have large surpluses from which they could, if they chose, maintain their present dividends for some time to come in case poor earnings continued. On this point a writer in the New York Evening Post says:

"When business is good, every well-managed railroad builds up a profit and loss surplus to take care of dividend obligations and meet other pressing payments during a period of trade reaction. The following table shows the annual dividend requirements and the profit and loss surplus of several railroads which must in the near future take dividend action:

	Annual Dividend Payments	Profit and Loss Surplus
Pennsylvania	\$38,394,248	\$29,027,181
New York Central	12,965,794	11,343,021
Nicholson	10,398,780	20,560,801
Baltimore & Ohio	9,120,976	37,410,162
Hurlington	8,867,128	91,039,156
Rock Island	8,028,800	33,186,718
Union Pacific	21,663,370	151,153,387
Great Northern	14,698,660	45,143,106
Northern Pacific	17,360,000	53,699,770
High Valley	6,060,170	25,066,231

"As a profit and loss surplus simply represents the excess of total assets over total liabilities, with a more or less arbitrary value placed on assets, too much importance can easily be placed on that item. In many instances, however, a profit and loss surplus includes a large cash account. In the case of Pennsylvania, for example, actual cash stood at \$30,267,605, with miscellaneous investments at \$12,502,000, loans and bills receivable at \$13,799,000, accounts receivable at \$18,170,000, and marketable securities at \$86,930,000. With those assets and current liabilities of less than \$50,000,000, the company could manage to pay unearned dividends for a longer period than is likely to be experienced."

A list of the railroads and industrial companies which in the past twenty months reduced, or passed, their dividends was recently printed in *The Wall Street Journal*. The number was 115; the annual payments for the 115 having amounted to \$85,000,000. In the month of August twenty-three companies passed their dividends mainly in consequence of the war, but because also of poor general conditions. The figures given relate only to the larger corporations. No account is taken of smaller concerns, since from them it would be impossible to obtain definite data. Of the 115 companies that passed or reduced their dividends, twenty were railroads, the remainder being industrials. Following is a list of the railroads, with the former rate paid, the present rate, the amount of the former payment, and that of the present:

Road	For. Rate	Pres. Rate	Former Payment	Pres. Pay.
Big Four pf	2%		\$300,000	
Boston & Maine pf	6		188,988	
Boston & Maine com.	4		1,580,215	
Ches. & Ohio	5		3,139,630	
Chi. R. Isl. & Pac.	5		2,743,860	
Colo. & Sou. 1st pf	4		340,000	
Colo. & Sou. 2d pf	4		340,000	
Florida J. & G. com.	2		50,000

Well Fortified Investments

Every investment, to be safe, must be amply fortified and safeguarded against all possible contingencies, including such events as those through which we are now passing.

First Mortgage investments founded on the land are fortified with especial strength against present conditions. The land is the rock-ribbed basis of our whole financial and commercial structure. Foreign wars can not take the land away nor seriously affect its value.

Safe Investments for \$1000 or More

We offer a variety of first mortgage 6% serial real estate bonds, which afford safe investments to those seeking non-fluctuating securities, and whose value is not impaired by periods of international conflict and commercial tension. They offer a safe refuge for the funds of both American and foreign investors.

The securities we have sold for the last 32 years have successfully met the tests of several such periods as this, without the loss of either principal or interest to any investor.

These bonds are in convenient denominations, \$100, \$500 and \$1,000. As they mature serially they give the investor a choice of maturities. Write for Circular No. 346-K.

Nervous States

Their Nature and Causes

By PAUL DUBOIS, M.D.

Author of "Psychic Treatment of Nervous Disorders," "Influence of the Mind on the Body," "Self Control," etc.

Authorized Translation

By EDWARD G. RICHARDS, M.B., C.M.

Dr. Dubois points out that neurasthenia, contrary to a general impression, is not a new disease created entirely by the conditions of modern life. Most men and women are subject to various degrees of neurasthenia due to the influence of fatigue, by which are brought on psychic debilities, so that nature reacts and they become irritable or sad. The most healthy of men may become temporarily neurasthenic.

HIGH COMMODITY PRICES

"War-time prices still prevail for a host of commodities," says *Bradstreet's* of September 12. The writer believes, however, that "the acute tension has disappeared from quarters that were more or less perturbed by the stoppage of imports of certain articles." At the same time, the situation continues "highly sensitive to influences growing out of the war, as well as to domestic conditions arising from strong demands for accessories, groceries, and provisions in general." About the only article that has "displayed a sharp slump" is tin.

As to the general tendency, there has been a slight drop from the record high point reached on August 15. The index-number now works out for September 1 at 9.7572, the ratio of decrease from "the hitherto unequalled price level of August 15 being 9.1 of one per cent." It is curious to note, however, that the September 1 index-number was only 5.8 per cent. higher than the number for September 1, 1912, a year in which prices were "exceptionally high." Following is a table showing the groups of articles employed in making up the index-number at four recent dates:

	Sept. 1, 1913	Aug. 1, 1914	Aug. 15, 1914	Sept. 1, 1914
Brandsstuffs	\$0.0950	\$0.0913	\$0.1001	\$0.1138
Live stock	.4245	.4700	.4880	.4920
Provisions	2.3173	2.2438	2.5006	2.5205
Fruits	.2263	.1847	.2305	.2355
Hides and leather	1.3075	1.3900	1.4300	1.4475
Textiles	2.5195	2.3829	2.3704	2.4004
Metals	.7348	.5542	.8707	.6460
Coal and coke	.0072	.0087	.0087	.0087
Oils	.3855	.3585	.3755	.3792
Naval stores	.0711	.0792	.0794	.0784
Building materials	.0843	.0822	.0822	.0815
Chemicals and drugs	.5967	.6046	1.0096	1.0096
Miscellaneous	.3307	.2906	.3088	.3431
Total	\$9.1786	\$8.7087	\$9.5495	\$9.7572

It appears from another statement in the same paper that on September 1, thirty-five articles were higher than on August 15, that sixteen articles had declined, and fifty-four remained stationary. Following are lists of these articles:

SEPTEMBER 1, 1914, COMPARED WITH AUGUST 15, 1914

INCREASED		
Wheat	Butter	Silver
Oats	Wackerel	Copper

Digitized by Google

ELECTRIC-RAILWAY MILEAGE

There are now in this country 45,000 miles of electric railway, Pennsylvania having the greatest amount, with New York coming second and Ohio third. The average capitalization per mile in bonds and stocks issued is \$124,793. New England shows the lowest capitalization per mile, while the Eastern States show the largest. The smallest mileage is shown in Nevada. These facts are derived from a summary, prepared for *The Wall Street Journal* from data previously given in *The Electric Railway Journal*. Following are other interesting facts:

"At the close of 1913 there were 1,187 companies, with a total of 45,003 miles of track, 97,721 cars, \$2,801,852,525 issued capital stock, \$2,814,334,098 funded debt outstanding, and a total authorized capitalization of stocks and bonds of \$8,740,822,263, of which \$5,616,186,625 had been issued. The figures for the various sections of the country show as follows:

	No. Cos.	No. Cars	Miles of Track
New England	109	15,628	6,379
Eastern	478	34,349	13,553
Central	222	28,086	15,456
Southern	95	4,418	2,331
Western	153	13,330	7,291
Total	1,157	97,721	45,002

	Capital Stk.	Funded Debt	Total
New England	\$221,043,680	\$249,086,300	\$470,129,980
Eastern	1,216,400,940	2,237,072,250	3,453,473,190
Central	979,774,850	1,467,789,473	2,447,564,323
Southern	282,848,000	441,064,400	723,912,400
Western	780,073,000	885,649,400	1,665,722,500
Total	3,480,140,440	5,280,641,823	8,760,782,263

	Capital Stk.	Funded Debt	Total Issued
New England	209,701,750	179,994,250	389,696,000
Eastern	1,037,409,750	1,214,607,100	2,252,016,850
Central	745,341,050	817,261,648	1,562,602,698
Southern	197,404,170	176,959,600	374,363,770
Western	611,963,925	425,511,500	1,037,475,425
Total	2,801,852,525	2,814,334,098	5,616,186,623

"It will be seen from these figures that the 45,004 miles of electric line in the country are capitalized at an average of \$124,793 a mile in issued stocks and bonds. The New England States have the lowest capitalization per mile, the 6,379 miles in that section averaging in issued stocks and bonds but \$61,000 a mile. The Central States come next with an average of issued stocks and bonds of \$101,102 a mile.

"The Western States have a capitalization of issued stocks and bonds of an average of \$142,489 per mile, while the Southern States have a capitalization in issued stocks and bonds of \$160,671 per mile. The Eastern States, with the large capitalization of the city electric lines in New York and Pennsylvania, have the largest average capitalization per mile, there being \$166,131 of bonds and stocks per mile issued against their lines.

"Pennsylvania is first among the States in mileage of electric lines with 5,015 miles, while New York is second with 5,001 miles. Ohio is third with 4,154 miles, Illinois fourth with 3,597 miles, and Massachusetts fifth with 3,495 miles. Nevada has but 0.3 miles of electric road and New Mexico as but 10.5 miles, while South Dakota has but 25 miles and North Dakota but 25.5 miles."

Wrong Cue.—MOTHER (sternly)—Young man, I want to know just how serious are your intentions toward my daughter."

DAUGHTER'S VOICE (somewhat agitated)—"Mama! mama! He's not the one!"—MOTHER (sighs).

This Book—Free to You— will tip the balance between

Wasted Profits

You sell the article you make—say for a dollar. It ought to cost seventy cents to produce and sell. But it really costs seventy-nine cents—the nine cents shows thirty or forty leaks you don't know about.

That nine cents of wasted profit doesn't do anyone any good—it's just a plain, economic waste.

It's a waste you cannot afford.

It's the waste that may be responsible for that passed dividend.

It's the waste that may have prevented you from paying good salaries and keeping your good men.

It's the waste that may break the business.

Saved Profits

Business is a gamble when you guess—and a certainty when you know. When you guess that an article costs seventy-nine cents, the chances are it will cost that much—or more.

When you know that it ought to cost seventy cents—why, then, you make it cost seventy cents and put into your pocket the nine cents of saved profit.

If you are manufacturing on a losing basis, it won't help you any just to increase your sales by tremendous and costly sales and advertising efforts. Few can raise prices. But all can save profits. Saved profits are the only sure profits.

Cost Keeping that Protects "Profits"

"Efficient Cost Keeping"—the book—is a guide to getting lower manufacturing, accounting and selling costs by efficient management, as well as a text book on cost keeping, cutting the cost of cost keeping and what to do with cost figures after you have them. It answers your question, "How can I protect my profits?"

It has 286 pages, adequately illustrated. Kindly request your copy, on your firm's letter-head. We will gladly send it postpaid, without charge or obligation.

BURROUGHS ADDING MACHINE COMPANY

Why England and Germany Went to War

*The Official "White Papers" of Both
Countries in Pamphlet Form*

Also the correspondence between the Kaiser Wilhelm and King George

The full text of the diplomatic correspondence leading up to the war is given in the "White Papers" of the British Foreign Office and the German Government, both of which were published in *The New York Times*, *the only newspaper in the world that published them in full.*

These two important documents have been reprinted by *The New York Times* in pamphlet form, and will be mailed to any address for ten cents. This pamphlet is absolutely essential to any one who wishes to form an unprejudiced opinion of the relative positions of Germany and Great Britain as to responsibility for the war. The diplomatic correspondence is complete and official.

Mailed to any address.

PRICE TEN CENTS

Address: "White Papers"

The New York Times

Times Square, New York

Occasionally the public interest to be served by the distribution of a pamphlet is so great that the newspapers owe it all the free advertising they can give. Such is the case with the full text of the White Paper of the British Foreign Office and the memorandum issued by the German Government, which *The New York Times* has brought out in pamphlet form and is selling at ten cents.

Everybody who wishes to form a coherent and unprejudiced opinion of the relations of the two great powers—Great Britain and Germany—should read the diplomatic correspondence. And no one who fails to do so has longer any intellectual right to express a cocksure opinion on the struggle. Here is a body of evidence of the most substantial character. It deserves the attention of every thoughtful citizen. Up to date nothing has thrown such a clear white light on the sources of the present desperate calamity as the full text of the diplomatic correspondence of the two powers, in whose leadership a large share of the civilization of the world rests. —From an editorial in *The Boston Herald*, Aug. 28, 1914.

THE SPICE OF LIFE

Another Family.—"This plant belongs to the begonia family."

"Ah! And you are taking care of it while they are away."—*Boston Times*.

Premonitory.—**BLOBS**—"Why do you call Groughleigh the human tadpole?"

SLOBS—"Oh, he always feels that he has a kick coming."—*Philadelphia Record*.

Good Proof.—**DADDY**—"No, yer mother never drest the way you girls do to-day to catch a husband."

DAUGHTER—"Yes, but look at what she got."—*Boston Record*.

A Poser for 'Arry.—A movement is on foot to induce Mr. Charles Garvice to change the name of his play, "A Heritage of Hate," as so many patrons of melodrama have experienced difficulty in pronouncing the title as it stands at present.—*Punch*.

A Docile Gun.—*The Daily Chronicle* on the latest submarine:

"It will also be equipped with a quick-firing gun, which disappears when the vessel is submerged."

This is far the best arrangement; it would never do for it to be left floating where any passer-by could pick it up.—*Punch*.

Two Views.—**YOUNGMRIGH**—"Don't you think that after a girl has been taken to the theater, given bonbons, and treated to a good supper, she should let the young man kiss her good-night?"

GRUMPY OLD BACH—"Huh! I should think he'd done quite enough for her."—*Boston Transcript*.

The Moral of the Story.—The kindergarten teacher recited to her pupils the story of the wolf and the lamb. As she completed it she said:

"Now, children, you see that the lamb would not have been eaten by the wolf if he had been good and sensible."

One little boy raised his hand.

"Well, John," asked the teacher, "what is it?"

"If the lamb had been good and sensible," said the little boy, gravely, "we should have had him to eat, wouldn't we?"—*New York Times*.

Informed.—The plebe, sitting on the Monument beside the first-class man, looked across the river from West Point to Constitution Island. The plebe was inquisitive. He wanted to know what the Government intended to use Constitution Island for. The first-class man coughed discreetly, blushed, and looked around him carefully for eavesdroppers.

"It isn't generally known," he said, "but you're a cadet now. If the Signal Corps experiments go through successfully, they'll use it as an aviary." His voice dropt mysteriously.

"For birds, eh?" said the plebe. "Carrier-pigeons?"

"Not exactly," answered the knowing one. "They'll be pigeots, as they call 'em—cross between a carrier-pigeon and a parrot, to carry verbal messages, you know. Don't tell."

And the plebe didn't—until this last commencement.—*New York Evening Post*.

Forestalling Him.—**BARBER**—"Your hair's very thin on the top, sir."

CUSTOMER—"Ah, I'm glad of that; I hate fat hair."—*The Tattler*.

Enough!—**WILLIE**—"Paw, what is the difference between genius and talent?"

PAW—"Talent gets paid every Saturday, my son."—*Cincinnati Enquirer*.

Dangerous Wit.—"What is the charge?" asked the magistrate.

"Nuthin' 't all," snickered the prisoner at the bar; "this's on me."—*Buffalo Express*.

Parried.—She was very much in love with him, and one evening, while they were alone, she asked:

"Frank, tell me truly; you have kissed other girls, haven't you?"

"Yes," replied the young man, "but no one you know."—*New York Times*.

The Real German Victories
"Kaiser Drives Roosevelt to Last Page."
"Germans Hold 1. W. W. Prisoners in a Paragraph."

"Militants Overwhelmed by Attack of Uhlans."

"Germans Fear Invasion of First Page by Giants."

—*New York Tribune*.

* Subject to change without notice.

Inclined to Hedge.—**COUNSEL**—"Prisoner is the man you saw commit the theft?"

WITNESS (a bookmaker)—"Yes, sir."

COUNSEL—"You swear on your oath that prisoner is the man?"

WITNESS—"Yes, sir."

SPORTING JUDGE—"Are you prepared to give me five to two on the prisoner being the man?"

WITNESS—"Ah, I'm sorry, me lord, but I'm taking a holiday to-day. Nothing doing."—*Punch*.

A Forlorn Hope.—It was a recruit's first appearance at the rifle-range. The range-officer tried him first at five hundred yards, and the recruit could not come within a mile of the target. Next the officer tried him at three hundred yards, then at two hundred yards, and finally at one hundred yards. His last shot was even worse than his first. The officer looked at him with disgust and, losing his temper, shouted the command in his face:

"Attention! Fix bayonet! Charge the target! It's your only chance!"—*Sacred Heart Review*.

The Crisis in the Barber Shop
The barber to the right of me was hocking for the Kaiser,
The barber to the left of me was hacking for the Czar,
A gentleman from Greece was shearing of my fleece,
While very near a swart Italian stropped his simitar.

And when presently discussion, polygot and fervid,
On political conditions burst about my chair,

I left the place unshaven—I hope I'm not a craven,

But I sort of like to wear a head beneath my hair!

—*Don Marquis in the New York Evening Sun*.

CURRENT EVENTS

THE EUROPEAN WAR

September 10.—The heaviest engagement between the Allies and the retreating Germans in France is at Vitry, where the Germans, in a wedge-shaped formation, attempt to sever the opposing line and split the allied armies.

A Russian army in central Poland is reported to be within threatening distance of Breslau. Petrograd admits reverses in east Prussia.

September 11.—News is received that a German station at Lagenburg, in German East Africa, is captured by a British steamer, which, after shelling the town, lands a small force and takes possession.

Paris reports that Maubeuge, in northern France, holds out against the German attack.

September 12.—The Belgian Army, defeating a German force at Cortenberg, between Louvain and Brussels, declares that the German Army in Belgium is cut in two.

September 13.—A Servian army marches into Hungary, planning to join Russian forces in an attack on Budapest.

Engagements between German forces and a British detachment from Lake Victoria Nyanza are reported from British territory in central Africa.

September 14.—The German Army north-east of Paris makes a stand north of the Aisne River from Noyon to Verdun. Its left wing has joined the Crown Prince's army from the Department of the Meuse.

September 15.—German troops for reinforcements in France are being withdrawn from Belgium, with corresponding Belgian gains in territory.

September 16.—The Austrian loss in Galicia since the taking of Lemberg is computed by Russia at 250,000. The Kaiser is reported as hurrying to east Prussia to direct the defense against the Russians.

President Wilson replies to the Kaiser's protest of the 9th, and holds that the United States can in no way interfere as referee in the present war.

Formal charges of atrocities by the German armies are laid before the President by the Belgian High Commission. The President refuses to act in any way as referee until the war's end.

GENERAL FOREIGN

September 13.—Eight survivors of the Stefansson Arctic exploring vessel *Karluk* are rescued from Wrangell Island and brought home by the revenue cutter *Bear*.

The greatest gold strike in the history of Alaska is reported from Tacoma, Wash.

September 14.—The French Government contracts with Armour & Company for 1,000,000 pounds of meat a day for one year.

Ambassador Gerard announces from Berlin that he will not accept the nomination for United States Senator from New York if abandonment of his post for campaign work be necessary.

September 15.—The Canadian Government in Ottawa receives \$5,000,000 in gold from J. P. Morgan & Company, to meet New York City obligations abroad.

The United States armored cruiser

Two Wholly New Dictionaries

Entirely Revised and Reset from
Cover to Cover

The Funk & Wagnalls Standard Dictionaries spell e-f-f-i-c-i-e-n-c-y in the classroom; insist upon their use if you are connected with school or classroom work.

The NEW COMPREHENSIVE STANDARD DICTIONARY

(Abridged from the Funk & Wagnalls New Standard Dictionary)

AN ideal small dictionary for all general purposes—widely used in homes and offices, especially adapted, and already widely adopted for use in schools. Defines and explains 18,000 words and phrases, including among them many important terms not found in any other dictionary designed for similar use. The definitions are all by simple, explicit statement, and not by long or abstruse synonyms that must in turn be looked up. 1,000 pictorial illustrations clarify the text. The work contains an exclusive compounding system which clearly indicates how and when the hyphen should be used. It shows at a glance which words should be written with capital initial letters, because only such words as should be so written are capitalized in the book.

SPECIAL FEATURES:

Exact, Inclusive, Definitions.—The most common meaning is always placed first.

The Spellings conform to those adopted by the best philologists.

Exclusive Compounding System.—It indicates the difference between hyphenated compounds and close compounds.

Thorough Etymologies are given in clear and simple form. A wholly new feature in a dictionary of this size.

Exclusive Capitalization.—It capitalizes only such words as require capitals.

Exclusively has 8,000 New Words found in no other dictionary designed for similar uses.

"This thoroughly up-to-date and remarkably compact dictionary is admirably adapted for general use where an unabridged dictionary is too unwieldy for practicality."—*The Philadelphia Press*.

"Very convenient. The inclusion of proper names and abbreviations in one alphabetical order with the other words is a convenience in a dictionary of this size."—*The Sun, New York*.

PRICE:—Cloth, \$2.00; Indexed, \$1.25

The NEW CONCISE STANDARD DICTIONARY

(Abridged from the Funk & Wagnalls New Standard Dictionary)

Defines and explains about 33,000 words and phrases, and contains 700 pictorial illustrations.

Pronunciation.—Pronunciation is indicated by the Revised Scientific Alphabet and also by the Text-book Key, or old system of notation.

Definitions.—The definitions are clear and explicit—simple and easy to understand—written in definitive statement, not expressed by many-syllabled synonyms beyond the student's comprehension.

Capitalization.—The book is a sure guide in the matter of capitalization; only such words as should be written or printed with initial capital letters are capitalized in the vocabulary.

Prepositions.—The Concise indicates the correct use of prepositions.

Appendix.—The Appendix embraces several novel features: *Faulty Diction; Rules for Spelling; Proper Names of All Kinds; Foreign Words and Phrases; Symbolic Flowers and Gems; Abbreviations and Contractions, Etc.*

"A book that should appeal to all persons who need a handy dictionary—one just large enough to drop conveniently into the pocket."—*The Baltimore American*.

"The little book will prove a convenience to many."—*The Sun, New York*.

Get the NEW CONCISE Standard

If you would have the best ready-reference dictionary for your children; or for your own general home or office use.

For schools it is the PROVEN SUPERIOR of all dictionaries of its size.

FUNK & WAGNALLS COMPANY
354-40 Fourth Avenue, New York City

Tennessee arrives in Weymouth from Havre with American refugees.

September 16.—Carranza reads publicly, during the celebration of Mexico's Independence Day, Secretary Bryan's order for the withdrawal of American troops from Mexican territory.

DOMESTIC

WASHINGTON

September 10.—The Trade Commission Bill passes the House and goes before the President, for appointments in December.

September 11.—The President vetoes the bill to raise the postal-savings limit.

The Senate passes the Currency Bill amendment, making commercial paper 75 per cent. security for the issue of currency.

September 12.—Congress leaders urge a two-cent postage rate to South-American countries as a stimulus to trade.

September 15.—By unanimous vote the Democrats in the House reject the proposed freight tax, because of the stubborn opposition evinced in Congress.

GENERAL

September 11.—The centennial of the writing of the "Star-Spangled Banner" is celebrated throughout the country.

September 12.—Colonel Roosevelt seeks change of venue from Albany County, New York, in the libel suit brought against him by State Chairman William Barnes.

The Montana Supreme Court grants Butte mine leaders the writ of habeas corpus refused them by the Federal Court.

September 14.—In Maine, the only State holding a September election, the Democrats win by a plurality vote over the Republicans and Progressives.

September 15.—Twenty-seven people are drowned near Lebanon, Mo., when a train plunges into a lake formed over the tracks by a recent cloudburst.

THE LEXICOGRAPHER'S EASY CHAIR

In this column, to decide questions concerning the current use of words, the Funk & Wagnall New Standard Dictionary is consulted as arbiter.

Readers will please bear in mind that no notice will be taken of anonymous communications.

"E. R." Bellville, Ohio.—"Please answer the following questions: (1) Can a passive verb take a direct object? (2) In the sentence, 'John was given a book,' what is the subject? (3) Is 'book' the direct object?"

A passive verb expresses action done to a person or thing, and must have an object and an agent. An indirect passive is a passive verb that takes an object, as, "he was handed a book." Here the indirect passive is "was handed" and "a book" is the object. This sentence is an exact parallel of the one you submit in which "was given" is indirect passive, and "a book" the object.

"R. J. A." Pittsfield, Mass.—"The phrase 'sailed the Seven Seas' comes before me occasionally. Exhaustive search fails to show me which 'seven.' Will you please help me?"

The phrase "the seven seas" is used to denote the world over. The seas referred to are: the Arctic, Antarctic, North and South Pacific, North and South Atlantic, and Indian Oceans.

"M. M." Chicago, Ill.—"Which is better English: 'We find the reason the product is so poor, the materials used are not of the best quality,' or 'We find the reason the product is so poor is that the materials used are not of the best quality.'"

The word "reason" is construed with "why," "wherefore," or "that," and in the sentence you submit an extra "that" must be inserted. "We find that the reason the product is so poor is that the materials used are not of the best quality."

"L. T. F." Fremont, Neb.—"Please tell me which of the words in this sentence is to be used: 'You may let, leave the papers lie on your desk.' Why?"

"You may leave the papers on your desk" is correct, and "You may let the papers lie on your desk" also is correct, but not "leave them lie," because "leave" implies "lie."

"H. L. H." Sioux Rapids, Iowa.—Robert Bridges is the Poet Laureate of England at the present time.

"C. E. D." New York.—"Kindly inform me what one word is properly used to designate the person (a lady) in whose honor a reception, etc., is given."

Not one word, but three, "guest of honor."

"J. M. C. H." Champaign, Ill.—"Kindly say whether the word 'repast' is correctly used in the following sentence: 'I will return at noon and repast with you.'"

Repast is a noun, not a verb, and can not be used as you suggest.

"J. S. F." Logan, Utah.—"Is it correct to say 'I am not posted on that subject'? Is informed a better word? Why? One person said informed was a better word because 'Bills are posted.'"

Posted in the sense of "informed" is colloquial English. Informed is the better word to use in the sentence submitted.

"L. K. W." Portland, Me.—"Kindly state if the word 'carefully' in the following clause is not redundant. 'After carefully examining the check to see that it was properly drawn.'"

The word "carefully" may be dispensed with in the sentence you submit, but its use is evidently intentional, possibly for the purpose of emphasizing the fact that a more than cursory examination was made.

"G. H. T." Pittsburg, Pa.—"While it is good English to say 'all day' and 'all night,' it is not such to omit the definite article and say 'all week,' 'all month,' and 'all year.' What is the rule or custom, if any, in regard to the use of, or non-use of 'the,' between 'all' and a following substantive?"

"All day" and "all night" are English idioms that date from the years 1000 and 1325 respectively. "All spring" and "all summer" are like idioms of more modern times, but while the genius of language, which governs usage, has approved these, we have found no examples in English literature approving "all week," "all month," or "all year." Usage alone governs the case, and while it sanctions the omission of the article in the one case, it does not do so in the other.

"T. F. H." Milwaukee, Wis.—"What is the correct pronunciation of 'oblige' and 'obligor'? Is it proper to omit the preposition 'from' from such expressions as 'escaped the asylum'; 'protest the action of the commission'?"

"G" before "o" is always as in "go"—oh'll-gor, altho the tendency is to pronounce it as "j" in this word by analogy with oblige, which is pronounced with a "j" sound as in gem. The "g" retains its normal force in obligation. Usage permits one "to protest an act," but it is restricted to the United States. "Escape an asylum" is not good use, altho one may "escape a pestilence" and "escape the asylum," but in the latter case the sense is different. The use of from is preferable in both cases. See escape (verb), both transitive and intransitive, in the NEW STANDARD DICTIONARY.

Chalmers

"Light Six"

\$1650

Our Fastest Selling Car

Over 40,000 people now drive Chalmers cars.

But the Chalmers 1915 "Light Six" is the fastest selling car we ever built.

First announced last May, over 3500 "Light Sixes" were delivered in three months.

In this time the motor-wise of the country tested this wonderful car in nearly 3,000,000 miles of service.

As a result of these tests in the hands of owners, the demand for "Light Sixes" is far exceeding our anticipations.

A second factory order of "Light Sixes" was started two months earlier than had been planned.

At \$1650 the Chalmers "Light Six" is setting new sales records. It is the fastest selling car at its price on the market.

At this writing, sales records show that we have delivered more cars in the last three months than in the same three months of 1913. And this in spite of the fact that 1913 was the biggest year in the automobile industry.

There are many reasons for this tremendous sale of the Chalmers "Light Six." Here are just a few of them:

A *different* kind of automobile beauty; unusually

handsome finish; Pullman-like comfort; a 48 H. P. long stroke non-stallable motor which "stays put"; graceful molded oval fenders of both strength and beauty; *4½-inch tires—"Nobby" tread on rear wheels*; unusually complete equipment including Chalmers-made one-man top of silk mohair; quick acting storm curtains; five demountable rims; one motion Chalmers-Entz electric starter; Klaxon horn; electric lights, etc. And perhaps the greatest reason of all, the unusually high quality in a car at such a price.

Get Full Value in Your Motor Car Investment—Write for Book

There are many other reasons why the 1915 "Light Six" is the fastest selling of all Chalmers models. These additional reasons are given in a special issue of Chalmers "Doings" which has just come from the press. This latest Chalmers book has a full color cover and pictures of both the "Light Six" and our larger "Master Six." It is filled with facts and information which will enable you to compare the Chalmers with all other cars. It contains complete description and photographs of all models, including the Limousine, Sedan and Coupelet.

Send the coupon today and get your copy of this attractive book. Every automobile buyer should read it before investing in so important a thing as a motor car.

THE LITERARY DIGEST

PUBLIC OPINION (New York) combined with THE LITERARY DIGEST

Published by Funk & Wagnall Company (Adam W. Wagnall, Pres.; Wilfred J. Funk, Vice-Pres.; Robert J. Cuddihy, Treas.; William Nessel, Sec'y), 354-360 Fourth Ave., New York

Vol. XLIX., No. 14

New York, October 3, 1914

Whole Number 1276

TOPICS OF THE DAY

THE GERMAN SUBMARINE VICTORY

THE SWIFT AND SILENT DESTRUCTION of three big British cruisers by a German submarine or submarines in the North Sea last week attracts wide attention, because the episode is not only, as the *Boston Transcript* remarks, "the most spectacular so far of the war," but is also, as the *Springfield Republican* points out, "much the greatest feat performed by submarines in the entire history of these craft." The incident may even mean, in the opinion of many observers, that the day of the big unit in naval warfare, the dreadnought and superdreadnought, is over. That this would be one of the facts revealed by the next great naval war was predicted only a few months ago by a British Admiral, Sir Percy Scott, who saw in the submarine the war-vessel of the future. His opinion, however, was vigorously challenged by no less an authority than Admiral Mahan. Previous to this war the record of the submarine in 135 years has been chiefly one of self-destruction. Nevertheless, as the *Brooklyn Eagle* remarks, the German victory lends color to Admiral Scott's theory, "which, if correct, condemns the policy of every first-class naval Power in the world, including Germany herself."

While there is still some vagueness of detail as to just what happened in the North Sea on the morning of September 22, all accounts agree that the British armored cruisers *Aboukir*, *Cressy*, and *Hogue* were torpedoed and sunk in rapid succession by an invisible foe. These cruisers, which were all of the same type, cost \$4,000,000 each when they were built, about fifteen years ago, and each carried a crew of more than 700 men. While many survivors of the disaster were picked up by trawlers and other craft, the loss in men and officers is said to have been more than 1,300. Some of the rescued sailors say that the attack was made by five German submarines, two of which were sunk by the guns of the cruisers. A Berlin dispatch, however, states that one submarine, the *U-9*, with a crew of twenty men, destroyed the three cruisers single-handed. According to one of the steamers that came to the rescue of the survivors the encounter took place about twenty miles north of the Hook of Holland.

The first dispatches from London told of the "thrill of horror"

caused by the announcement of this blow, the greatest mishap to the British Navy since the war opened. Later dispatches from the British capital, however, sound a more optimistic note, and even pay tribute to the skill and daring of the men who executed this startlingly successful attack. In this tribute of praise, according to the correspondents, the English papers are joined by the surviving officers of the lost cruisers. "It would be idle to deny," remarks the *London Daily Mail's* naval expert, "that the exploit reflects the greatest credit on the German submarine service." "The British public," says a London dispatch to the *New York Journal of Commerce*, "finds some compensation for these losses in the statement of the Admiralty that the

command of the sea had resulted in the maintenance of ocean traffic by 4,000 merchantmen, with the loss of only twelve by capture since the beginning of the war." After remarking that raiding by German submarines was "one of the things which the British Navy has been led to expect," another London correspondent of the same paper goes on to say:

"Nevertheless it came as a shock to Englishmen that big ships such as those sunk could so easily be attacked and destroyed, while the German Fleet has been able to remain in safety in its mine- and fortress-protected harbors. However,

the British Fleet must keep the seas to insure Great Britain's food supply and, in doing so, must run great risks.

"The ships which were sunk, while obsolete, still were very useful vessels, and it is little satisfaction to England to know that her cruiser fleet is still double in number that of the Germans, and that, as Winston Spencer Churchill, First Lord of the Admiralty, has said, she will be able to build during the war three to Germany's one."

Since "vessels under way can not carry torpedo-nets out-rigged," remarks the naval expert of the *London Chronicle*, the safety of battle-ships from submarines "seems to lie in vigilant observation," and "still more in rapid movement and in altering their course, so as to make it impossible for a submerged assailant to determine their position." The *London Daily News* remarks that in the present war "four cruisers, totaling 136,000 tons, have been sunk by gun-fire," and "five cruisers, totaling 41,000 tons, have been sunk by submarines."

INTERNATIONAL SUBMARINE STRENGTH

TERMS: \$3 a year, in advance; four months, \$1; single copy, 10 cents; postage to Canada 85 cents a year, other foreign postage \$1.50 a year. **RECEIPT** of payment is shown in about two weeks by date on address label, subscription including the month named. **CAUTION:** If date is not properly extended after each payment, notify publishers promptly. Instructions for **RENEWAL, DISCONTINUANCE** or **CHANGE OF ADDRESS** should be sent two weeks before the date they are to go into effect. Both old and new addresses must always be given. **DISCONTINUANCE:** We find that many of our subscribers prefer not to have their subscriptions interrupted and their

files broken in case they fail to remit before expiration. Nevertheless, it is not assumed that continuous service is desired, but subscribers are expected to notify us with reasonable promptness to stop if the paper is no longer required. **PRESENTATION COPIES:** Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

Published weekly by Funk & Wagnall Company, 354-360 Fourth Avenue, New York, and Salisbury Square, London, E. C.

Entered at the New York Post-office as Second-class Matter.

On the left is the *Aboukir*, one of the three 12,000-ton British cruisers sunk by a German submarine attack in the North Sea on the morning of September 22. On the right is a German submarine, a 300-ton craft armed with three 18-inch torpedo tubes and two small guns.

GOLIATH AND DAVID.

It also points out that all the British naval losses, except that of the *Pegasus*, have been caused by mines or submarines, while "every loss inflicted on the enemy, except one, has been caused by gun-fire." As the naval expert of the *London Globe* sees it, the sinking of the *Aboukir*, *Cressy*, and *Hogue* "will rouse the British Fleet to action as nothing else could have done, and the success of this submarine attack may yet prove the death-knell of the German Navy."

After pointing out that the loss of three cruisers is in itself trifling "to a fleet which has about 120 to call upon in addition to all the auxiliary cruisers and converted merchantmen it has at its disposition," the *New York Evening Post* goes on to say:

"The German submarines must needs repeat their terrible victory many times before there is sufficient attrition to make a serious numerical showing. With the psychological factor, however, the situation is different. There can be no doubt that the German achievement will not only increase the unhappiness of the British public, but that it will enormously increase the strain upon the blockading British Fleet. While the exact situation of the lost vessels is unknown, they were plainly not far distant from the Dutch coast; but that these German underwater boats have shown amazing daring and gone long distances from home is apparent. It is now officially admitted that it was a submarine, and not a mine, which sank the *Pathfinder*, September 5, on the east coast of Scotland, roughly 400 miles from the nearest German harbor. The Germans claim to have laid mines through submarines at the outbreak of the war at the very mouth of the Thames; it is beyond dispute that they deposited some quite near the east coast of England. A letter from a German sailor just published tells of a long voyage to England for reconnaissance purposes, and of passing unseen under a British squadron off Scotland.

"That this is not impossible appears from the fact that a submarine built at Kiel in 1908 is known to have had an ordinary

range of action of 1,000 miles, coupled with the ability to make nine knots under water for a period of three consecutive hours. Since then improved vessels have been built—Germany has thirty-nine submarines built or being built—indeed, it has been stated that the newest British submarines have a cruising radius of 2,000 miles, with an above-water speed of twenty-one knots and a submerged speed of not less than fifteen. The French submarine *Mariotte* has a radius of 2,200 miles at ten knots. One of the ninety-six English submarines built or being built has already accounted for one small German cruiser, the *Hela*, and others took some slight part in the battle off Helgoland. But no submarine feat in naval history is comparable to this disposal in twenty minutes of three great cruisers."

While interest in the present war has been largely centered on the land operations, a glance at the lists of ships of the belligerents sunk or captured in various parts of the world reminds us that naval activity has been considerable, despite the absence of any large naval battles. Thus the *New York Times* prints

a list issued by the State Department at Washington showing that since the beginning of the war 483 vessels have been sunk or seized on the high seas as prizes of war. The great majority of these boats were small trading-vessels flying the German or the Austrian flag.

The world was warned at the very outset of the war that the Germans had "surprises" in store for their opponents, the *New York Evening Sun* reminds us, and it goes on to say that their efficiency with the submarine has not been the only one of these surprises to materialize. First, it points out, there was the great German siege gun, which went far to prove, by its effects at Liège and Namur, that "the reliance in fortresses had been vain." More than any other factor, according to *The Evening Sun*, these German howitzers contributed to the opening defeats of the Allies. Then came the German submarine raid in the

THE MAILED FIST.

—Carter in the *New York Evening Sun*.

North Sea, a raid whose success was the more startling because of the secrecy and mystery that have been maintained concerning German submarine construction. But this apparently is not all. *The Evening Sun* thinks that the possibilities of a Zeppelin raid upon London are such as to "warrant graver apprehension than that city knew in Napoleon's time."

WHAT THE PEACE TALK REVEALS

WHAT MAY BE EXPECTED when the time comes for one side or the other to dictate terms is indicated by the informal "conversations" on the subject of peace initiated by American ambassadors at some of the European capitals. While it is true, as one paragrapher remarks, that the only immediate outcome of these discussions is the knowledge that "the Allies positively refuse to accept the peace overtures which Germany positively refuses to offer," they nevertheless evoked a number of semiofficial comments which throw a revealing light toward the future. Thus Sir Edward Grey, British Minister for Foreign Affairs, makes it known through Ambassador Page that Great Britain could never become a party to peace negotiations which failed to provide for complete reparation to Belgium for the violation of her neutrality and the damage inflicted by German troops; Winston Spencer Churchill, First Lord of the Admiralty, declares that while "peace with the German people might be arranged in good time" there would be "no peace with Prussian militarism short of the grave"; Paris and Petrograd agree in repudiating any peace terms that fail to dispose of Prussian militarism; and the German Imperial Chancellor von Bethmann-Hollweg announces through Ambassador Gerard that Germany "could accept only a lasting peace, one that would make her people secure against future attack." Germany's attitude is further elucidated by the statement of her Ambassador at Washington, Count von Bernstorff, that "until Germany is absolutely guaranteed that not one inch of her territory will be taken from her, she will fight." As quoted by the *New York World*, the Count goes on to say:

"Remember, there can be no lasting peace if even one square inch of German territory is taken. When I say German territory, I refer to her colonial possessions as well as her territory in Europe."

Turning from these informal pronouncements from official sources to the comments made by newspapers and by unofficial

individuals, we find that nobody, apparently, is willing to consider peace until the arbitrament of arms has resulted decisively one way or another. The *Paris Temps* wants no "delusive peace," and declares: "It is necessary to pursue a single idea—the end of the militarist German Empire." In the *Journal des Débats* we read:

"Treaties, written prohibitions, and restrictions will not suffice. All these the Imperial Chancellor, Dr. von Bethmann-Hollweg, has declared to be merely scraps of paper.

"What is needed are material measures immediately executed that will constitute guaranties for the future. This is the destruction of German territory, organizations, and instruments of war."

The *London Times*, commenting on the rumors of mediation and the discussion of possible peace terms, has this to say:

"The Allies, who are ranged against the Napoleonism of the German Kaiser, have no thought of placing any yoke, Napoleonic or otherwise, upon the people of Germany. But they are firmly and irrevocably resolved not to stay their hands until German militarism, its causes, and its effects are destroyed once and for all. They are determined that the institution and forces that have brought this unspeakable calamity upon the world at the instance of William of Hohenzollern with the acquiescence of his subjects, shall be crushed beyond hope of repair. Not until the German people have been compelled to perceive this struggle in its true light, as a revolt of the invincible forces of civilization against the systematized ethic of barbarism forged by German potentates and professors, can there be a prospect of lasting peace for the world. Against this ethic of barbarism there must indeed be a fight to a finish.

"Deprecatory recommendations that the Allies should avoid the humiliation of Germany are entirely beside the point. No hostile force or combination of forces can inflict on Germany greater humiliation than that which she has incurred of her own choice."

In a London dispatch to the *New York Sun*, Sir Gilbert Parker is quoted as saying:

"I believe I speak the mind of 95 per cent. of my fellow countrymen when I say that this country is in this war to her last man and her last penny to break the militarism which is at present and would be a perpetual danger to the world if it were allowed to dominate Europe.

"If Germany is dismembered it will not be by Great Britain. It will be through the revolution of her own people. She has been a great nation, great in industries and commerce, and I believe she will still be so when the issue is decided against her. But Germany has been Prussianized, and militarism has been the Prussian method of progress. From Prussia it has spread

"ON TO PARIS!" "ON TO BERLIN!"

THE HARVEST-MOON IN EUROPE.
—Wallace in the *Denver Post*.

through all the German Empire. If Austria breaks in pieces, if the German Empire falls apart, it will be by no act of dismemberment of the Allies."

Russia's aims are stated in a London dispatch to the *New York Evening Sun* to be "a recasting of the map of Europe, and at the same time the abolition of Prussian domination in the German Empire." According to this dispatch:

"The Petrograd press are unanimous in declaring that as a result of the war Prussia must be reduced to a second-class State and apportion her territory somewhat as follows: Alsace-Lorraine to France, the Aix district to Belgium, Schleswig-Holstein to Denmark, Posen and part of Silesia to be included in the future Poland, East Prussia as far as the Vistula to Russia. It is also stated that Russia requires the restoration of the Hanoverian dynasty.

"Regarding Austria-Hungary, Russian opinion is that Russia must have Galicia and the Russian portions of Bukovina, that Hungary must lose Bosnia, Herzegovina, Croatia, Dalmatia, Clechia, and Moravia, while she must also give up Trieste to Italy. Transylvania, Oart, and Bukovina, inhabited mostly by Roumanians, must be freed."

In America the newspapers are virtually unanimous in the opinion that the time is not yet ripe for further talk of mediation, and they point out that President Wilson's early offer of this Government's good offices still stands whenever any of the contestants wish to avail themselves of it. That a premature peace in Europe could only result in another war is the view taken by such papers as the *Albany Knickerbocker Press*, *Chicago Tribune*, *Philadelphia Public Ledger*, *New York World*, *Globe*, and *Tribune*, and the *Boston Transcript*. In *The Transcript* we read:

"On all sides it is agreed that this is a war against war—to abolish it, if may be, forever. We who stand on the side may look on with pity and horror; but we must realize that the supreme issue of general disarmament can not be decided until the conflict is fought to a finish. The spirit in the army of the Allies is that militarism must be ended, now or never, and for that end multitudes of brave men are willing to pay the ultimate price of all mortal flesh. But to interrupt hostilities for futile negotiations which would, at the best, allow Germany to stand out for terms preserving her formidable armaments, and which might, at worst, enable her to recuperate for a resistance so much the more bloody and stubborn after the breaking off of negotiations, would be a fruitless business of infinite cost to the world."

According to *The Globe* "there is no considerable public opinion in either Great Britain or France in favor of the dismemberment of Germany." And *The World*, whose general

editorial discussion of the war has been of a nature to preclude any suspicion of partizanship, declares that such a dismemberment would be "a crime against civilization." On this point it goes on to say:

"If Germany is decisively beaten, Germany must expect to pay the cost of this war to the last penny. She must be prepared not only to meet staggering indemnities, and submit to a limitation of armament, but also to surrender the Reichsland and Prussia's Polish provinces, which are the fruits of military conquest. But the Germany that is truly German, the Germany of which the German people themselves are the bone and flesh and blood and brain—to dismember that Germany would be a calamity to mankind. Instead of making for the peace of Europe, it would be a continuing incentive to new wars of revenge and hatred. A peace that outraged German nationality, or compelled men who are German by race, speech, tradition, and culture to live under another flag would mean only a peace of the sword, and the world has seen enough of that in Alsace-Lorraine."

EXPERT FORECASTS ON THE WAR

THAT THE WAR in Europe will last "from nine to eighteen months," and that Germany, "unless she is superhuman, will be defeated," is the consensus of opinion of more than two score active American army officers reported to the *New York World* by one of its Washington correspondents. These men are all of or above the rank of captain, we are told, and their names are withheld, because of the President's orders that Government officers are not to comment on the war. Their judgment is said to be "wholly academic, from a military standpoint, and without regard to personal sympathies." No prophecy about the probable length of the war is ventured by the *New York Herald's* special military correspondent at the capital, but he does predict as one thing certain that "the longer it lasts, the stronger and more capable will the German armies become." *The Herald* expert explains this remark by saying that until now the German armies, however excellent, have been the product merely of text-books and maneuvers. They have all the theory they need, the writer says, and at present are learning in actual war "what our armies learned in struggles North and South over fifty years ago." In this respect, however, he reminds us, "both France and Great Britain have similar opportunity," and we read that "in three months' time the armies will be trained; in six months the great battles will be fought by veterans." Altho the officers interrogated by *The World's* correspondent differ in their hazards

PRINCE OSCAR.

PRINCE AUGUST WILHELM.

PRINCE JOACHIM.

Prince Oscar, who is twenty-six years of age, received a flesh wound from a piece of shrapnel during a battle near Longwy in the first week of the war. Prince August Wilhelm, who is one year older, was reported wounded in the battle of the Marne. Prince Joachim, the youngest, who is twenty-four, was wounded in the thigh by a shrapnel fragment while serving with his regiment between Meaux and Montmirail.

THREE SONS OF THE GERMAN EMPEROR WHO HAVE SPILLED THEIR BLOOD FOR THE FATHERLAND.

on the probable duration of the war, they are all agreed that "this is a war not only of ready resources, but of all resources, and until one side has about exhausted all its resources, the fighting will go on." Whichever side is beaten, we are assured, it will be "so crushed that it will require a half century or more for even a waking recovery." *The World* correspondent gives then a digest of several military opinions on the struggle as far as it has gone. We read:

"Germany has thrown into the western theater of war—in France—the flower of the great military machine which she has been building since the Franco-Prussian War, and which has been the admiration and envy of the military world. At first nothing seemed to be able to check the onward march of this tremendous power. Held up a few days by the heroic courage of the Belgians, this wonderful machine literally sped to within forty miles of Paris.

"What happened then? Despite the greatness of the organization, the perfect working of the integral parts of the machine, without the miscarriage of a single one of the complicated plans for the taking of Paris, it was found the whole thing was flesh and blood and that it could not do almost the impossible.

"There was in the situation around Paris when Generals von Bülow and von Kluck and the Crown Prince were at its gates that which the Union Army found in Virginia, South Carolina, and Georgia several times during the Civil War—a certain desperation on the part of the defenders which comes only to the man protecting his family from harm."

A new fighting spirit was produced in the ranks of the Allies by the rapid advance of the German forces, and we are told that:

"This spirit will triumph over the spirit of national aggrandizement upon which the German cause is built if the teachings and writings of its own statesmen—Sybel, Giesenrecht, Treitschke, Droysen, and Hausser—are to be accepted as the thought of the German nation.

"There must be the material as well as a fighting spirit in the armies of a victorious nation or alliance, and a close study of the resources shows that the Entente—Great Britain, France, and Russia—in money, men, and geographical location, are better equipped for a long war than is Germany. Great Britain alone probably would succumb in a test of resources, but Great Britain and Russia combined have more resources than Germany."

As to the comparative strength of the combatants, this digest of military opinion has it that now, and also in the future, the Allies will outnumber the Germans, and we read:

"According to reports the artillery of the Allies is equal, if

not superior, to the Germans. Only in the big siege-guns do the Germans excel, and, according to reliable information received here, the Allies are rushing work on siege-guns to equal those of the Krupps.

"The greatest battle is yet to come. It will be the decisive battle, too, and it will occur in Germany. It will be when the Allies, working inwardly by the retreat and advance movements, get the German armies in Germany and begin hammering from all sides.

"This will be months from now, and when this battle takes place all the belligerents virtually will have new armies in the field. Germany must get hers from where she got her present army, from among the German States. Great Britain will obtain hers from the British Isles, Canada, India, Egypt, and Australia. Russia will bring her forces in from Siberia and south Russia. France will draw more on her African possessions. The resources of the Allies are greater than those of the German Empire."

RUSSIA INVITES OUR EXPORTS

A PRESSING INVITATION to come and sell our goods to Russia's 170,000,000 consumers has a sound like prosperity to our editorial observers. The immortal Colonel Sellers had visions of great wealth when the teeming millions of the East used his eye-water, and one of his successors figured out that if every Chinaman added an inch to the tail of his tunic our cotton-mills would be kept running day and night. Such ideas were mere humorous fancies. But now we are actually asked to come and reap the commercial harvest of the Czar's huge Empire. The Russian Minister of Foreign Affairs, Mr. Sergius Sazonoff, says in an interview with the Petrograd correspondent of the *London Times* that "there now exists a situation and an opportunity in trade and commerce with Russia which, to England and America, may mean more in decades to come than it is easy to realize." In the view of the *Washington Times*, "the fact that, tho using an English vehicle, he observed that 'for America especially does Russia open opportunities for an industrial outlet such as hardly can be over-estimated,' gives particular significance to what he said." Then this journal points out that while Germany, "next-door neighbor, among all the great industrial countries, to Russia, has enjoyed first call on the trade of the great domain of the Czar," nevertheless "the national source from which Russia should draw its manufactures is America, rather than either Germany

or Great Britain." *The Times* proves this contention by the fact that Russia, like the United States, is "a country of acres and area rather than of dense population, a country in which development, whether of agriculture, of transportation, of commerce, must be extensive rather than intensive." Mr. Sazonoff's statement is reported in part as follows:

"It is the country which forces the situation commercially in Russia that will reap the enormous benefits that the Russian markets now offer. It is not enough that merchants and manufacturers should offer their goods here. Experts should be sent here now, even while the war is still in progress, to study and examine the wants of our country. Our duties, our manner of doing business, and our present and future wants and growing

BERLIN CELEBRATING THE ARRIVAL OF THE FIRST WAR TROPHIES.

demands should be studied scientifically, so that when peace comes those channels, which have for decades flowed deeply with German products, may continue to flow with products from America and England.

"For America especially does Russia open opportunities for an industrial outlet such as can hardly be overestimated. We have an empire of 170,000,000 souls, and the \$300,000,000 we have been paying Germany yearly is but the beginning of a demand that will soon make Russia among the most desirable and valuable markets in the world. Railroad-building and new developments everywhere are the prelude to an era of prosperity in this country such as has never been seen here before."

At this juncture it is of interest to consider just what our trade with Russia has hitherto amounted to. We learn from James Davenport Whelpley, writing in the *New York Independent*, that:

"Figures issued by the Government at Washington credit Russia with less than \$30,000,000 worth of imports from the United States, whereas, owing to the fact that the larger part of the trade is indirect, the total is at least five times that amount. Over \$50,000,000 worth of American cotton now goes to Russia each year, and it will not be long before \$100,000,000 worth will be needed. Harvesting machinery of American design and manufacture is sold in Russia to the amount of over \$25,000,000 annually. American life-insurance companies are carrying over \$100,000,000 insurance in Russia, as shown by the \$25,000,000 kept on deposit in Russian banks to guarantee these policies. American steel and iron products, shoes, machinery of all kinds, and, in fact, something in every line that goes toward modernizing the life of a country, make up the total of the Russian imports. These are nearly all goods that can be obtained elsewhere, but 'Made in America' has been, until the recent misunderstanding between the two nations over the passport question, a supreme recommendation to the Russian buyer."

VIRGINIA'S PROHIBITION STRIDE

VIRGINIA'S SWEEPING DECISION for State-wide Prohibition by 32,000 to 35,000 majority makes it, as many note, the tenth State to adopt the reform. Firm upholders of the cause rejoice in the event as showing the constant growth of the Prohibition idea, and we read in the press of a day's service of "celebration and thanksgiving" being held in all Virginia churches. On the other hand, there are those, like the *New York Tribune*, who see something of "hypocrisy and futility" in the provision of the Prohibition measure that permits wine, cider, and beer to be made within the State's borders, but only for export purposes. Among other restraints of the

Virginia law, which, the press inform us, takes effect November 1, 1916, is that no spirituous liquors may be manufactured, nor any sold even in clubs. It is estimated that the new statute will cause a loss in liquor revenues amounting to \$700,000 annually. Of further interest in the local situation is the discovery that Richmond, Alexandria, and Norfolk are the only large cities voting "wet," while it is reported as a surprise of the election that "dry" majorities prevail in Petersburg, Newport News, Roanoke, Portsmouth, and Lynchburg. *The News* of the last-named city makes answer to the "doubting Thomases" who question the State's ability to make the law effective. This journal says:

"The contention generally relied upon by local-option leaders, that the chief weakness of Prohibition resides in the difficulty

of enforcing the policy in communities whose public sentiment largely favors license, has just been rendered irrelevant by the cold logic of the election returns. From that source it develops that in no Virginia city does a decisively anti-Prohibition sentiment prevail. Upon the contrary, the total city vote of Virginia shows a majority of 4,883 against the licensed liquor traffic. Of the State's nineteen incorporated municipalities only three are included in the anti-Prohibition column; Virginia's two largest cities, Richmond and Norfolk, which generally have been regarded as secure local-option strongholds, gave but feeble majorities for that policy. It is fair to state, therefore, that both throughout the rural districts and in the larger centers of population, Prohibition has received a decisive measure of indorsement. It is equally fair to conclude the methods of satisfactory enforcement will be facilitated by the support to be derived from a strongly sympathetic public opinion."

The "real problem" for Virginia, according to the *Richmond News-Leader*, is this "enforcement of the law rather than the choice of the principle," and it points out that:

"The one encouraging feature of the election was the size of the majority. As the voters of Virginia are at this time determined to prohibit the licensed sale of liquor, it was well by every count that they should voice their will with impressive decision. . . . Virginia must take up the battle to make Prohibition not a soothing name, but a living fact. *The News-Leader* will do its full part, ungrudgingly and without complaint, to give the law a fair test."

In support of the proposition that "the law must be upheld" stands also the *Richmond Times-Dispatch*, even tho it has opposed State-wide Prohibition as an issue. It now says:

"A majority of the voters of Virginia gave their sanction to

ARCHITECTURAL IMPRESSIONS FROM THE WAR ZONE.

the passage of a bad law. *The Times-Dispatch* believes State-wide Prohibition to be a violation of the principle of local self-government, and the result of the balloting has not changed that belief. The law has been passed, however, and when it becomes operative it will have no more loyal supporter than this newspaper. By its rigid enforcement alone will the voters be able to determine whether or not the majority were wise in the way they voted."

A strictly Prohibition view is that of the temperance organ, *The National Advocate*. The editor of this journal is authority for the statement that the liquor interests in Virginia tried to persuade the tobacco growers, dealers, and users that if Prohibition should win at the election, tobacco would come next under ban. He sees nothing surprising in the Virginia result, and explains:

"That Virginia should go 'dry' was but the logical result of benefits from Prohibition, shown since that policy went into effect, on July 1, in West Virginia. Those benefits have been both moral and material, and have stood out in bold relief, so that there could be no intelligent question about them."

The spread of Prohibition is seen by the *New York World* in the fact that there are now ten commonwealths that enjoy it in State-wide form. These are Maine, Kansas, Georgia, Mississippi, North Carolina, North Dakota, Oklahoma, Tennessee, Virginia, and West Virginia. Consequently, says *The World*, "of the 91,000,000 people in the continental United States at the last census, approximately 16,550,000 are now subject to State-wide prohibitory laws." Then, too, as between the Northern and the Southern impulse in the movement,

"At the South, Prohibition has religious and racial inspiration, and in some cases has been carried by the whites solely for the purpose of depriving negroes of strong drink. At the North, it is urged now chiefly in resentment against the dominance and corruption of saloons in political management."

Rather severely critical is the tone of the *New York Tribune*, which concedes the significance of the Virginia vote "as a demonstration of an awakened public conscience," but holds that "as a practical measure designed to deal with the problem of drunkenness, it promises next to negligible results." *The Tribune* notes in particular that:

"The new law is to contain a clause permitting the manufacture of wine, cider, and beer within the State, provided the entire product is shipped beyond its borders. Besides protecting

thus in its bosom certain interests permanently arrayed in active opposition to Prohibition, Virginia at the very outset destroys all moral sanction for the enforcement of its law. . . .

"Then, it is only the legitimate liquor interests which will feel the weight of the law. The illegitimate interests, the blind tigers of the hills on which the notorious Allens and their kind have fattened for generations, having no dependence on legal sanction in any case, will flourish as never before."

THE VILLA-CARRANZA BREAK

WHAT ALL HAVE FEARED and many have predicted has happened in Mexico, says the *New York Globe* in noticing the rupture of friendly relations between Villa and Carranza. This latest trouble springs from the clash of "their personal animosities and ambitions," according to *The Globe*, which fears that "unless something is speedily done to put out the fire, the distracted country will be plunged into another protracted civil war." Of course the order for the evacuation of Vera Cruz, thinks this journal, must now be revised. But Washington dispatches inform us that the Administration has no intention of rescinding that order or of altering its policy toward Mexico. We read, too, that the Government has reports which indicate that the differences between the two Constitutionalist leaders are of such a character that they are "capable of adjustment by amicable means." Even if Governor Carranza and General Villa can not compose their differences, observes the *New York Sun*, "the United States will remain strictly neutral, letting them fight the quarrel out to the bitter end." And it argues, in support of the reported determination of President Wilson not to revoke the Vera Cruz order, that our promise to withdraw our troops can not be recalled "without exciting a suspicion in Mexico that the first conflict between the partisans of Carranza and Villa will bring armed intervention and the occupation of the capital." Retracing the course of events from the time Carranza "raised the standard of revolt in Coahuila," *The Sun* reminds us it was Villa who "made its success possible by a series of victories in the field that stamped him as a military genius." Only in name was Carranza First Chief of the Constitutionalist Army, we read, and "at any time after the taking of Torreon, Villa could have displaced him, so great was the man's popularity with the rank and

file in northern Mexico." *The Sun* cites instances then of Villa's forbearance and loyalty and accounts for the present difficulty thus:

"As Governor Carranza and General Villa were constantly at odds during the military campaign, it was highly improbable that they would agree about the establishment of a provisional government and the manner of holding the national election. It has never been a secret that General Villa, who is extremely radical in his views, was opposed to the ambition of Governor Carranza to make himself President of Mexico. If he desired to be a candidate at the polls, General Villa insisted that he should not serve as provisional President in defiance of the Constitution. Governor Carranza formally agreed to this. It was decided that the provisional President should be chosen in the City of Mexico at a conference on October 1, but the basis of representation was in dispute when General Villa arrested Obregon, a Carranzista general, at Chihuahua, and Governor Carranza retaliated by suspending railroad traffic north of Aguascalientes. Villa's vigorous manifesto declaring hostilities followed."

Villa's manifesto states that Carranza's agent, General Obregon, has been released, and continues:

"In view of the attitude of Venustiano Carranza, which has been the cause of great injury to our country, and since he could never govern a republic nor make happy a country which aspires to a real democracy, a country which wants to have a Government emanating from the people subject to an interpretation of the national feelings, we have been obliged to renounce him as Commander-in-Chief of the Constitutionalist Army, in charge of the Constitutional party, and we have declared hostilities, being disposed to fight until the last—until he is forced to abandon his power and place, and place the same in the hands of the real representatives of the people, who are disposed to remedy all evils of the republic and to direct it through the proper road of progress and well-being."

"We are not in favor of personalism, but we are defenders of principles, and consequently we will not fight against any other of the chiefs who have contributed to the downfall of the usurper Huerta, our difficulties being against the person of Venustiano Carranza."

"The States of Sonora, Zacatecas, and part of Coahuila have seconded us to present our attitude, and shortly we will be joined by adherents from other localities. General Obregon will leave to-night for El Paso, Texas."

An optimistic view of the outcome is taken by the head of

the Constitutionalist Agency at Washington, Rafael Zubaran Capmany, who is reported in the press as saying that he has hopes that the disagreement will be "peacefully and satisfactorily composed for the reason that there is no real cause for its existence." Yet, besides the already noted fact of the difference of opinion between the two leaders on the subject of the national convention to elect a President, we are informed by a *New York Times* correspondent at Washington of an additional source of friction. We read:

"The idea seems to prevail among Administration officials that Carranza, who is a member of the land-owning classes, is not now as anxious as he appeared to be to bring about the agrarian reforms to which he and the others engaged in the Constitutionalist cause were pledged."

"Zapata, it was pointed out, took the same position as Villa, namely, that there must be a distribution of land, with the compensation to the owners first by the Government and not by the owners themselves."

Speaking editorially, *The Times* remarks that "it may not be worth while to consider too gravely the causes of Villa's defiance of Carranza" but, it adds, war costs money, and wonders whether Villa's backer "will turn out to be the same man or company of men who financed the revolution against Huerta and elevated Carranza to his present position." We read then:

"If this is the case, it must be that Carranza's too obvious shiftiness and tendency to repudiation of foreign debts have caused his former friends to lose faith in him. His one aim, apart from his arrogant attitude toward the United States Government, which has done so much to help him, seems to be to undo everything, good or evil, accomplished by Huerta. He has lately repudiated certain concessions to Japanese which would have been very profitable to Mexico."

"That we in the United States are rather disappointed in Villa, who, we believed, had determined to keep the peace and aid Carranza in establishing a Government, is not to the point. That Carranza is probably not to be permitted to establish a Government, and that his misfortunes are largely due to his own lack of capacity, however, are important facts. Villa has not nearly so many armed men to support him as he pretends, but he is a fighter who will never admit defeat while he lives, and with Villa in opposition to Carranza there can be no peace in Mexico."

FOREIGN COMMENT

"PEACE," WHEN THERE IS NO PEACE

THE PUBLIC OPINION of the world in presence of a war, bloody and cruel beyond the records of history, is naturally being influenced by the desire of peace. But prospects of an early peace do not seem to be bright. Ramsay McDonald, Charles Trevelyan, Norman Angell, and others representing in England "the Union of Democratic Controls," a new society of pacifists, have actually laid down the conditions which should form the basis of a peace treaty, to be drawn up, they say, as the result of a popular movement to preclude the possibility of an arbitrary transfer of territory or establishment of foreign alliances without the consent of the peoples involved. But the animus of the governments, as Herman Ridder declares in the *New Yorker Staats Zeitung*, is opposed to the scheme. England is making peace impossible, says this German-American editor:

"The call of peace will not down, and yet, why cry 'Peace, peace, when there is no peace'? The word has gone out from England that she will not desist from the war until she has garnered her harvest. To those who have read her history aright this was not unexpected. It is, as well, in line with her conduct throughout this whole miserable affair and the years that led up to it. When, after a decade of diplomatic intrigue, she has succeeded in isolating Germany, England, by the assertion of a superior moral standard, covered her real motives by a plausible defense of Belgian neutrality, and

succeeded in arranging a situation which fulfilled the fondest dreams of Edward VII. She had absolutely no reason to enter the war but that of commercial aggression, and had she been actuated by those motives of higher morality which she is now proclaiming to the world, she would have worked for peace in the first instance and not for war. She was in a position to

force it. This, however, did not coincide with her world policy.

"It has ever been the story of England that she allowed her allies to do the fighting, and herself comes in strong only when the booty is to be divided. She is obviously playing the same game to-day. Afraid to attack Germany alone, she challenges the moral respect of the world by jumping in when the odds are already enormously against the enemy. This is her right, but is it to her credit?"

Most of the German and British press seem to agree that the war must be a fight to a finish. The *Norddeutsche Zeitung* semiofficially declares that Germany will not stop fighting until she has earned the

guaranties she wants for the future. The *Berlin Tages-Zeitung* says Germany is not only fighting for an honorable peace, but for a peace which will assure her for a generation at least a peaceful place where in safety she can accomplish her mission in and for the world. Germany, this editor declares, demands that such a peace be guaranteed not by treaties, which this war has shown are not worth the paper on which they are written, but

by facts. Less rigid, however, is the Socialist *Vorwärts*, which says:

"We wish only a peace which will include a guaranty of our continuity. We hope our arms and our clever statesmanship will make such a peace as soon as possible."

Even the religious papers of England are implacable in scouting

COMPANY FOR AUSTRIA'S ASSASSINATED ARCHDUKE.

DEATH—"Your Royal Highness must not be without a fitting escort." —*Amsterdammer*.

the idea of an early and easy peace, and we read in the most important and authoritative organ of the Established Church, *The Guardian*:

"There is absolutely no room for magnanimity. It is imperative that the disease of militancy which has laid hold upon an entire people should be extirpated. It is absurd to say that conditions of peace must not be such that a proud nation can not accept them.

"We have to do, not with a proud, but with a criminal nation. She must be deprived of the power of ever repeating her abominable assault upon the freedom and independence of other peoples by indemnities, necessarily heavy, especially where Belgium is concerned, by losses of territory, and by collateral disabilities. She must finally be deprived of the power to do mischief.

"'Never again' must be the motto of the Allies when the final reckoning comes."

In the same strain the leading organ of the non-conformists, *The British Weekly* (London), proclaims:

"We have been deceived. We must face our task. That task is to bring an end to the militarism of Germany. It has been suggested in some quarters that non-conformists will be ready to welcome a speedy temporary peace; that to be relieved of the pressure and the misery of war they would sacrifice the future.

"They little know the spirit of the free churchmen who think so. The free churches, we believe, are absolutely one in the determination to see this thing through. They will not suffer it to wither the lives of their children.

"There can be no end to it till the Allies are together in Berlin imposing upon the conquered people terms of peace which will not be savage or vindictive, but just. Justice will be enough.

"Nor is it to be imagined for a moment that this business can be settled by treaties. We must not build on foundations of sand. What are treaties to Germans? They are 'scraps of paper' to be torn up when they become inconvenient and hampering. It is deeds that must serve us, and these deeds must be such that no renewal of this war, no fresh possibilities of arming, shall be possible for Germany.

"There may be those who think that German militarism is the gospel of only a few among the German people. For this we see no reason. Militarism is not a temporary flush of spirit. The color behind it has been prepared for with persistent assiduity, with infinite duplicity, with illimitable cunning, for a long term of years. In fighting the war-lords of Germany we are fighting Antichrist. That arrogance must be crushed out with iron heels."

But we read in the *Kreuzzeitung* (Berlin), the conservative and aristocratic organ of militarism, the following editorial:

"No hour has been more ardently desired by us than that of a reckoning with England.

"History tells us that no wars are so gruesome and so hard as those between people of the same race. So be it, then.

"We must have satisfaction, and if ever a war should be regarded as a judgment of God, it is this one.

"We know and feel more every day that England is not unconquerable. We have seen her mercenaries in France fight and fly. We have noted the disparity between the numbers of the killed and wounded and the number of those made prisoners.

"We know that the more England sends troops to the Continent, the more her position of military defenselessness must be accentuated. We know, as many instances have recently shown, that her ships approach and familiarize themselves with the place, whether in the Baltic or the North Sea, from which we shall be able to drive a blow into the heart of the British Empire.

"It should and must be, however, not merely retribution, but, above all, the facing of the question of which European Power shall in future exercise dominion on the seas beyond the German Ocean.

"The one that remains victorious in this struggle holds the trident in his powerful fist. The trident in German fist, however, will not be a symbol of domineering injury to foreign rights. No; but the sign of moderation, discipline, morality, and justice."

CHINA IN THE EUROPEAN WAR

MANY American editors in a humorous vein are wondering what the "heathen Chinese" think of the Christian nations of Europe casting aside all restraint on short notice and cutting each other's throats. To the Chinaman himself, however, the European situation is not a thing to be looked upon so light-heartedly, for it has a direct, vital bearing upon the welfare of his country. Kiaochow, which Japan is trying to wrest from Germany, with the declared intention of restoring it to China, is not the only thing which worries the Chinese, and especially the Government at Peking. What worries the Yuan Government even more greatly than the possible retention of the German territory in Japan's hands is the financial strain in which the European war will place China. Such is the editorial observation of the neighboring Japanese press. The *Tokyo Asahi*, for example, editorially informs us that the Chinese Government is on the verge of bankruptcy as the result of the European war. The editorial continues:

"So far Yuan Shi Kai has been able to maintain his rule and carry on his government solely through the power of the funds which he managed to obtain from European Powers. Had it not been for such funds, his Government would have long ago foundered upon the rock of revolution. But now that the European nations are busy with their own troubles, they have no heart to look after the finances of the Chinese Government. It is rumored that the Peking Government is so short of money

HOW GERMANY THINKS THE WORLD WAS MADE.

—*Tokyo Puck*.

that it is beginning to doubt whether its administrative machinery will not stop running before the year expires.

"Nor is this all. Yuan knows that his army alone could not maintain peace and order in north China without relying upon the foreign troops, numbering some 7,000, stationed in Chihli and Shantung provinces. Should these troops be withdrawn by the exigencies of the war, who can guarantee the safety of foreigners?"

The foreign troops stationed in north China are listed by this journal as follows: British, 2,700; American, 1,400; French,

1,200; Russian, 1,040; German, 500. The number of German troops given here does not of course include the garrison at Kiaochow. Japan has about 1,000 troops in Chihli Province.

Next to the financial problem, the disposition of the German territory of Kiaochow is the matter with which Yuan Shi Kai is

MAP OF KIANTUNG PENINSULA

Japanese troops reached Pingtu September 11. Tsin-tau, where some German troops are stationed, is the birthplace of the sage Confucius. Wei-hai-wei is British.

most seriously concerned. The German territory, leased for ninety-nine years from November, 1897, and declared a "Protectorate of the German Empire" on April 21, 1898, has an area of 200 square miles, exclusive of the bay, which covers about the same area. Surrounding the leased territory and bay is the so-called "neutral zone," whose outer limit is thirty miles from high-water mark on the coast of the bay, its total area being about 2,500 square miles. In the leased territory China relinquished her sovereignty, while in the neutral zone, where China still retains her sovereignty, Germany enjoys the right to station troops.

Japan's ultimatum to Germany proposes to restore this territory to China. But can she be relied upon to adhere to the proposition? China is not at all sure of Japan's sincerity, and the Peking *Jipao*, semi-official organ of the Chinese Government, cautiously warns the Japanese in these words:

"It is to be hoped that Japan will make it clear to China that she has no territorial ambition. She would be ill-advised to incur Chinese resentment by simply driving Germany out of Kiaochow and occupying it herself."

In the opinion of the Peking *Daily News*, an English organ of the Yuan Administration, Japan's ultimatum to Germany is an "overbold step" which will seriously affect Chinese interests, but it goes on to modify this statement by saying:

"Such an opinion may be unwarranted when the nature of the consultations between England and Japan are fully known. The fundamental principle of the Anglo-Japanese Alliance is the preservation of the territorial integrity of China, and in proposing to wrest Kiaochow from Germany and restore it to China Japan is no doubt acting in accord with the spirit of the alliance with England.

"The permanent occupation of Kiaochow by Japan will not be approved by England, and it is strongly disapproved by China. Japan's overture to return it to the Chinese Government is, of course, satisfactory to us, but in the ultimatum to Germany Japan does not say how soon she will return Kiaochow to China. But as long as Great Britain can be relied upon to be true to the spirit of the Anglo-Japanese Alliance, she will exercise her influence and employ her good offices to secure the restoration of Kiaochow to us, on condition that Tsing-tao, the capital of Kiaochow, be kept open as an international port, like Shanghai."

The Peking *Gazette*, an English journal published by an Englishman, is inclined to think that Japan has gone too far in declaring war against Germany, but admits that circumstances compelled her to take the step she has taken. The decided advantage which Japan will gain by this move *The Gazette* describes in these words:

"Not only will Japan win the good-will of Great Britain, but she will be enthusiastically acclaimed by Russia and France as their friend. Russo-Japanese friendship will grow much stronger while the Japanese immigration question in Australia will be satisfactorily settled."

Turning now to the Japanese press, we find that editorial opinion is not entirely unanimous with regard to the disposition of Kiaochow. Altho the leading journals are silent on the question, a few minor papers have published editorials asserting that the immediate restoration of Kiaochow presupposed the peaceful surrender of the territory by Germany. As if the Japanese Government entertained the same opinion, the *Japan Mail* (Yokohama), generally recognized as a mouthpiece of the Foreign Office, publishes the following comment from its Tokyo correspondent:

"It should be clearly understood that the ultimatum does not presuppose the forceful resistance on the part of the German Government. It simply limits itself to the case of a peaceful transfer of Kiaochow to this country."

At the same time such influential journals as the Tokyo *Jiji* repeatedly protest that Japan is absolutely sincere in proposing to return Kiaochow to China. All allegations freely circulated in China and the United States questioning Japan's sincerity in this case are, this journal thinks, manipulations of Germans who are anxious to alienate Chinese and American sympathy from Japan. In the words of the *Jiji*:

"Whether Japan takes Kiaochow peacefully or by force of arms, she must, and surely will, restore the territory to China. This proposition of Japan's is based upon the conviction that the establishment of a foreign naval base in Chinese territory is not calculated to insure the peace of the Far East. In proposing to restore Kiaochow to China, Japan does not wish to ingratiate herself into China's favor, tho she is by no means actuated by altruistic motives. Japan believes that her safety

can be best insured by maintaining China's territorial integrity, and the surest means of maintaining it is to refrain from occupying any territory in China. We know that our strength lies in the isolated position of our territory, and we have consistently striven to prevent other Powers from becoming our neighbors by seizing Chinese territory. Had Russia kept her hands off Manchuria and Korea, we should never have gone over to the continent and installed ourselves in territory contiguous to that of Russia. It is only as means of self-defense that we have occupied Korea and Port Arthur. We shall certainly not invite more Powers to become our neighbors by occupying permanently the little stretch of land called Kiaochow. The game is not worth the candle."—Translations made for THE LITERARY DIGEST.

BRITISH ACCUSATION AND GERMAN REPLY.

GERMANY'S ECONOMIC PINCH

THOSE WHO COMPLAIN of the economic pinch here might get a crumb or two of comfort by thinking of the economic chaos and ruin in the warring countries of Europe. An attempt to face the problem courageously in Germany is made by Dr. Emil Lederer, a high financial authority, who does not utter a word of complaint or criticism on the war policy of his Government, altho he deplores in the strongest terms the economic inconveniences it occasions. Writing in the *Vossische Zeitung* (Berlin), he admits that the removal of all men capable of bearing arms has annihilated German industry, but he goes on to say, hopefully:

..What are the decisive economic facts? Does the complete break-up of industry, which threatens the Germans, involve a disruption also of agriculture and the supply of necessities?

..The war means for Germany, first, the prevention of exports, especially of articles of luxury; secondly, the prevention of imports, of the means of subsistence, especially of raw materials, such as cotton and copper; thirdly, the reduction or alteration in the demand of all those at the front and the restriction of the demand of all those remaining at home. There is no longer any demand for articles of luxury.

..Against these facts, which apparently involve the gloomiest outlook for the near future, must be set others equally decisive. Germany has had a remarkably good harvest; so, on the whole, the purchasing power of the agricultural industry is relatively big. The same applies to the industries which supply the needs of the army and other public purposes.

..The problem is to use this purchasing power in such a way as to revive all those branches which supply the needs of the above-mentioned industries."

The great Socialist paper of Berlin, *Vorwärts*, takes a more gloomy view of the situation and contemplates the injury to be suffered by German commerce and industry from the withdrawal of virtually all the able-bodied men engaged in national activities. Its article was written several weeks ago, but its figures hold good and are very instructive. The expected British blockade is, of course, now a fact. It says:

"If the British blockade takes place, the imports into Germany of roughly \$1,500,000,000 and exports of about \$2,000,000,000 would be interrupted—together an overseas trade of \$3,500,000,000. This is assuming that Germany's trade relations with Austria-Hungary, Switzerland, Italy, Belgium, Holland, Denmark, Norway, and Sweden remained entirely uninfluenced by the war—an assumption the optimism of which is self-evident. A glance at the figures of the imports shows the frightful seriousness of the situation. What is the position, for example, of the German textile industry if it must forego the imports of overseas cotton, jute, and wool? If it must forego the \$155,000,000 of cotton from the United States, the \$18,000,000 of cotton from Egypt, the \$15,000,000 of cotton from British India, the \$25,000,000 of jute from the same countries, and, further, the \$30,000,000 of merino wool from Australia, and the \$5,750,000 of the same material from Argentina, what could she do in the event of a war of longer duration without these raw materials, which in one year amount in value to nearly \$250,000,000?"

Coming down to items that are smaller, but still important, we read:

"Germany received in 1913 alone from the United States about \$75,000,000 of copper. Further, the petroleum import would be as good as completely shut down. The German leather industry is largely dependent on imports of hides from overseas. Argentina alone sent \$17,550,000 worth of hides. Agriculture would be sensibly injured by the interruption of the exports of Chilean saltpeter from Chile, which in 1913 were of the value of not less than \$32,550,000. The significance of an effective blockade of German foodstuffs is to be seen in the following few figures: The value of wheat from the United States is \$41,250,000, from Russia \$20,050,000, from Canada \$12,550,000, from Argentina \$18,750,000—\$92,600,000 from these four countries. There will also be a discontinuance of the importation from Russia of the following foodstuffs: Eggs worth \$20,000,000, milk and butter \$15,150,000, hay \$8,000,000. Lard from the United States worth \$28,000,000, rice from British India worth \$11,000,000, and coffee from Brazil worth \$37,550,000 should be added to the foregoing. No one who contemplates without prejudice these few facts, to which many others could be added, will be able lightly to estimate the economic consequences of a war of long duration."

SCIENCE AND INVENTION

PARLOR AVIATION

THE PRINCIPLES that govern the flight, control, and stability of aeroplanes may be studied indoors with no more formidable apparatus than a sheet of stiff paper and a pair of scissors. One may find amusement for hours by repeating the experiments made in this way by Captain Duchêne, of the French Navy; but it was far from this officer's mind simply to devise toys for children, young or old, to pass an idle hour. By means of his paper "gliders," he believes that he has established some fundamental principles in the theory of aviation, and in particular that he has proved the present arrangement of the planes or wings in most of the standard machines to be radically wrong. Whether he is right or not, his methods are interesting in that they require no costly laboratory apparatus, but may be repeated by any one who has the requisite ingenuity and patience. They are described in *La Nature* (Paris, August 1) in an article by B. Chassériaud entitled "Aviation Experiments for Everybody." Says this writer:

"Captain Duchêne has been endeavoring to render tangible,

the aeroplane, as at present built, is not a good kite. This is why:

"If a kite pivots about an axis not placed very far forward, the most ordinary experience shows that instead of standing in the wind it dodges from side to side; it is a badly made kite.

"If, on the contrary, the axis of rotation is sufficiently far forward, the kite stands up to the wind as it ought.

"It is the same with the aeroplane. Its surfaces should lie behind the center of gravity and not on both sides of it, as is the case to-day.

"Such an aeroplane would 'drink up' the gusts of wind, as Captain Duchêne picturesquely puts it, instead of exposing itself to them as our present machines unfortunately do.

"So much for lengthwise balance, which affects dipping or plunging motion. Now

for the crosswise balance, with its rolling motion.

"Suppose that we look at an aeroplane from the front; we shall see that its wings form either a straight horizontal line or a more or less pronounced V. . . . Or, on the contrary, they may resemble a circumflex accent (\wedge). This last arrangement, which is exceptional, is used in only one machine, the Fubayon, but Captain Duchêne regards it as the arrangement of the future.

1. DIAGRAM ILLUSTRATING THE SUPPORT OF AN AEROPLANE.

2. HOW TO MAKE A PAPER GLIDER.

3. A MORE ELABORATE TYPE.

by a series of simple experiments, which belong to the type of 'scientific recreation,' the principles that govern the flight of aeroplanes—principles often misunderstood by inventors full of ambition and good intentions but without technical preparation.

"The first point that will aid us in getting our bearings amid the chaos of movements to which an aeroplane is subjected is

"When the flight is in still air, the V form, generally adopted, gives good stability . . . as may be seen by making a little glider of paper. . . .

"Take first a simple rectangular sheet about six by three inches, lightly creased in the middle, lengthwise, and ballasted by one or two strips of paper placed a quarter of an inch

4. CIRCUMFLEX OR INVERTED TYPE, WHICH DUCHÊNE ASSERTS IS THE MOST STABLE

5. "CANARD," OR DUCK TYPE, THAT REQUIRES NO BALLAST.

its center of gravity. Mechanics show that an aeroplane behaves, so far as its balance is concerned, as if suspended by its center of gravity from a fixed support and acted on by a blast of air.

"A device thus suspended acts in general like a kite. But there are kites and kites, and, according to Captain Duchêne,

from one of the ends. This sheet will behave very well when launched in a glide, if the median crease has been properly made.

"This done, make at the rear of the sheet three notches, to form up-and-down rudders. By the angle at which these rudders are now bent we can control the general inclination of the glide.

"Again—and better still—cut in a sheet of paper, folded

two, the outline shown in Figure 3. Bend up the wings and tail along the dotted lines, letting the wings form a slight V in the cross-section. Ballast the forward end. Such a device, after regulating the position of the ballast by trial, will make very pretty glides."

Another type, the *Canard*, which will balance without any ballasting at all, is made by following the pattern given in Figure 4. A tendency to turn aside is corrected by bending the tail slightly on the opposite side. Finally, says the writer, we have in Figure 5 a singularly instructive type. Here the wings must be so bent as to form, not a V, but a circumflex accent.

"The ridge of the crease will now be uppermost. Within this crease we paste (1) toward the front, in the prolongation of the crease, a small strip of pasteboard cut from a visiting-card, about two or three by one-half inch, weighted as shown; (2) in the rear, perpendicularly to the ridge of the fold, another rectangle of paper, about two by six inches.

"Launch this glider and we shall probably find that it does not glide; this is because its regulation is delicate, but we shall make it work at length by raising slightly at the rear the extremity of the wing opposite to the side to which it turns. If it rolls too hard we move the ballast forward, or if necessary we make notches at the end of the tail or increase the circumflex form of the wings. When adjusted, the glider has the form shown in the figure. Its shape may seem paradoxical. (Captain Duchêne justifies it in two words:

"In order that the experiment may be quite striking the paradox must be complete. By bending the wings back into a V the glider will be seen to turn over. This happens generally, tho not always.

"At any rate, the 'circumflex' device has shown itself to be stable in calm air, and it is interesting to know that both the observation of sea-birds and theory show that it should be equally stable in agitated air. Now the ordinary V form, incontestably stable in calm air, is no longer so in agitated air.

"Whenever the machine tends to rock under a blast of air, if it is V-shaped the wing that gets the shock rises and the plane turns with the wind. The aeroplane thus yields to the wind, but is more exposed to its action. If, on the other hand, things are so arranged that the wing that gets the shock drops, the plane is steered in the opposite direction; that is, the aeroplane turns into the wind, which lessens the effect of the disturbance instead of exaggerating it.

"We must not despise such methods as this, simple tho they are, in getting scientific ideas. The study of gliders has already rendered great service to aviation. . . . Men of astute mind still seek in this study useful suggestions for the huge machines that now navigate the atmosphere. Those who desire to imitate them should take heed."—*Translation made for THE LITERARY DIGEST.*

ARE THERE TWO KINDS OF LEAD?—The announcement that metallic lead is the final term in the series of substances produced by the disintegration of radium is now followed by the discovery that lead so produced is not the ordinary variety, but apparently a distinct chemical element, with an atomic weight of its own, tho identical with lead in all other properties. Varieties of the same element are familiar to chemists, and their existence is known as "allotropism," but the difference of atomic weight forbids us to class this case as an instance. We must have here two chemical elements, very nearly related to each other. This new instance of the way in which discoveries in radioactivity are turning the older chemistry topsyturvy is briefly touched upon in the "Monthly Review of Recent Discoveries," in *La Science et la Vie* (Paris, August). Says this magazine:

"Radium, which itself comes from uranium, is the ancestor of a long series of substances that begins with its 'emanation' and ends with polonium; but polonium also disintegrates, and its suicide leaves as a residue a body without appreciable radioactivity which scientists believe to be identical with lead. New investigations made in Germany and France by Maurice Curie, nephew of the illustrious scientist, have confirmed this view, and at the same time have shown that matters are more complicated than was first thought. In fact, if we analyze the lead obtained in the residue of pitchblende, which comes, in all

probability, from the disintegration of polonium, we find that its atomic weight is 206.7, while the atom of ordinary lead weighs 207.1. This result pleases professors of radioactivity, whose learned theories it confirms, but it also follows that the lead that is a residue of radium is not identical with that of which we make our lead pipe and bullets; and this is a new complication."—*Translation made for THE LITERARY DIGEST.*

WHY SOME SOLDIERS RUN AWAY

A SOLDIER IN BATTLE rarely runs away because of individual, personal cowardice. He and his companions may retreat together before a pursuing foe, as a military necessity. But when a body of troops casts aside its arms and accouterments, and gives itself up to a wild flight, the act is not that of single persons, but of a crowd as a group. The cowardice is that of a connected body, and has features entirely different from that of an individual soldier. It is, in fact, a phenomenon of "crowd psychology." A crowd of people, as the French psychologist LeBon and his school have taught us, has a mind of its own, which is not simply the sum of its components' minds. It is in some respects more primitive and uncivilized than the individual mind and is more subject to unreasoning panic. Says a writer in *Minerva* (Rome, August 1), abstracting an article in the *Deutsche Revue*:

"When a number of persons are seized with a common idea, the minds of the separate individuals coalesce and form, as LeBon says, 'a collective mind which, tho transitory, has a definite character. Such a psychological group constitutes a unit that obeys the laws of mental unity of crowds.' Individual differences are annulled; feeling is vivified; the crowd feels and acts in an absolutely different manner from the single individual.

"In his momentary coalescence with a psychological crowd, man descends several grades in the scale of civilization; he assumes the spontaneity, the vehemence, the ferocity, but also the enthusiasm and heroism, of primitive man. . . . 'Not intelligence,' says LeBon, 'but stolidity is the characteristic of a crowd.'

"A crowd is stronger than the sum of the strengths of its component individuals; . . . it has no sense of responsibility; it accomplishes easily and lightly acts of enormous gravity.

"Another force that acts to form psychological crowds is imitation. The spirit of imitation is powerful over men as over animals. In a crowd it reaches its maximum, because it is communicated from one individual to another in the form of mental contagion or suggestion. Such suggestions may assume vast proportions; the Crusades, and specially that of 1212, the processions of Flagellants, the risings of the Anabaptists, were the effects of true and actual collective suggestion.

"We have been speaking of psychological crowds that are more or less heterogeneous. In a military camp we have a homogeneous crowd; an army is composed of individuals, different in origin, education, and habits, but fused into a homogeneous mass by the effects of military discipline and training.

"How does a panic arise and spread? Certain individuals, endowed with exceptional impressibility, are unexpectedly seized with fear, and show it, involuntarily, in gesture and voice. Others feel the contagion, and the mass resists no longer; it is under this sole dominion of emotion; fancy, unrestrained by the intellect, acquires a hypnotic force.

"It is difficult to ascertain the nature of the group of individuals in which the panic originates. None of the fugitives . . . can give precise information on this point. . . . The phenomenon must not be confounded with the flight of a defeated army before the victors. Always in the cases of panic described in history we find a common element . . . ; the troops that are panic-stricken are always in a physical and mental condition favorable to the phenomenon.

"We find stories of flight due to panic in the military annals of all peoples. By what remedies may it be averted? The Italian military penal code provides that whoever, during a battle, runs away or incites his comrades to do so by word or act shall be punished with death.

"The provisions of law, however, are of no avail to arrest a 'psychological crowd' that has been panic-stricken. In such a case Sartorius thinks that the best remedy is to oppose another peril to that which menaces the fleeing troops. Thus did Massena, when, at Wagram, he destroyed the only bridge over which the fugitives could pass, and fired on them with artillery.

By courtesy of "The American City," New York.

These pictures show the hoseless and invisible sprinkling system in a park lawn in Los Angeles when in action and out of action. The pipes run at a depth of a foot or more, and the sprinkler-tops, flush with the surface, are invisible when not in action.

A LAWN THAT DEFIES DROUGHT.

Kruger, at Poplar Grove, ordered the Boers to fire on their own fleeing companions, but his order was not obeyed. . . . A most effective measure, in fine, consists in the use of arms by the officers against their fleeing soldiers."—Translation made for THE LITERARY DIGEST.

HOSELESS LAWN-SPRINKLING

PERMANENT instalments of underground piping, with vertical nozzles, are now in use for sprinkling the grass in many southern California parks, notably in the city of Los Angeles. The cost of irrigation has been a serious matter there, especially because it must practically be used throughout the whole year. Any eastern park department, says Laurie D. Cox, writing in *The American City* (New York, September), that has had to keep a lawn in shape during an August drought, will realize what similar conditions for ten months on a stretch might mean. Mr. Cox, who is landscape architect for the Los Angeles Park Board, tells us that, in this state of things, hoseless sprinkling by a permanent plant actually saves money. The principal experimentation since the plan was adopted, four years ago, has been in the form and arrangement of the sprinkler-tops. Says Mr. Cox, in substance:

"Since the first use of the system by the Park Department here, there have been numerous new ideas brought forward regarding the form of the sprinkler-tops and their arrangement. Some of these are of considerable complexity, such, for example, as the disappearing top for use in shrubbery and flower-beds. This rises to a height of several feet to operate and drops below the ground out of sight when the water is shut off. The simple fixt top is, however, the standard, and a number of such tops are on the market. These differ principally in the amount of water which they distribute and the pressure under which they work.

"The newer forms of tops are designed so as to withstand weight and hard usage, such as that given by horse and power mowers. The earlier forms did not do so, and much breakage of tops ensued.

"In using the system for shrubbery and flowers a greater variety of sprinkler-tops is possible, as the top can be kept above the ground and may be of more delicate construction. For this work a sprinkler which distributes the water so as to leave the walks or other adjacent areas dry is desirable. The most ingenious form yet seen by the writer is one making use of gas-jets set slightly above the ground and arranged in the grass or curb border of the bed.

"Besides the system making use of buried pipes and fixt sprinkler-tops, there are several systems using pierced pipe which lie flush with the surface of the lawn. Such a system will sprinkle splendidly a strip of lawn twenty feet on either side. The system is especially good for flower and shrub borders or for long, narrow strips of grass such as street parkings. It is much cheaper to install than the underground system and dis-

tributes the water in a finer mist. It is, however, more trouble to operate, and the labor cost of irrigation is probably twice as great as with the underground system.

"The underground system as used by the Los Angeles Park Department consists of a series of pipes laid in radiator circuits 12 to 15 inches deep in the ground, having stand-pipes with attached sprinkler-tops placed flush with the surface of the lawn at intervals of from 15 to 20 feet. The grass soon covers the tops, so that the system when inactive is absolutely invisible."

Underground piping for lawn-sprinkling is not new, of course, but the usual plan has been to provide simply outlets for attaching hose instead of the permanent sprinkler-tops now used in California. The latter make it possible to maintain high pressure and are more satisfactory in every way. The only trouble, Mr. Cox says, is that the workmen have to be watched, or they will be apt to give the lawns too much water. The cost of installation he gives at \$400 to \$800 per acre.

WIRELESS ON DIRIGIBLES

THAT wireless signals can be received by a balloon, floating freely in air, was demonstrated by Slaby soon after the invention of wireless telegraphy. In 1909 signals were exchanged between the balloon *Condor*, of the Prussian military balloon corps, and the Palais de Justice in Brussels, as well as with the Eiffel Tower in Paris. It is possible that the Belgian station is again working as a German terminal, but it is safe to say that messages with Paris are not being exchanged at present. However, we are told by Percy G. B. Morriss, writing in *Aero and Hydro* (Chicago, September 12), that the German *Zeppelins* are well equipped with wireless apparatus and can talk either to one another or to stations on the ground, under control of their own forces. Writes Mr. Morriss:

"Experiments have proved that Hertzian waves are radiated to great heights in the atmosphere, and that the part played by the earth itself in wireless is of far less importance than was hitherto assumed. Thus one of the chief technical objections to the application of wireless to balloons has been proved fallacious. The practical utility of radio apparatus on a scouting balloon was demonstrated for the first time on the *Gross II*, during the German army maneuvers of 1909. The many advantages posessed by this craft over the *Zeppelin*, which shared the aerial work in the maneuvers, but was not equipped with wireless, so satisfied the German authorities that since that event all *Zeppelin* air-ships have been equipped with wireless.

"While of inestimable advantage, the presence of wireless apparatus on a dirigible exposes it to one danger—that of accidental ignition of the large volume of inflammable gas necessary for flotation by sparks set up inductively by the rapid changes of potential necessary for the transmission of wire-

signals. But in a thunder-storm a balloon is subject to sudden variations of electric charge which may also produce sparks capable of igniting its contents. Therefore, this danger may be said to be overestimated, as it is yet to be proved that the presence of wireless has been responsible for any accident of this character. It seems probable that the destruction of the *Zeppelin* air-ship at Echterdingen was due to atmospheric electric discharges during a thunder-storm, while the catastrophe which befell the French military dirigible *La République* in September, 1909, also appears to have been due to an electric spark. But this was prior to the time precautionary measures against such accidents were instituted, and since then accidents of this character have been comparatively few."

In the case of flexible balloons, the writer goes on to say, as the gas can not be ignited by discharges from the envelop itself, but can be easily set on fire by sparks from the metal parts, it is obvious that all metal or other electrical conductors must be eliminated from the envelop. This being done, dirigibles of this class are no more liable to ignition than are free balloons. Yet in the *Zeppelin* type, with its aluminum frame and gas-bags filled with hydrogen, the condition of ignition is present. Between the frame, which is more than 500 feet long and over 50 feet in diameter, and the surrounding air there may exist a difference of potential of 70,000 volts when the dirigible is on an even keel, and 53,000 volts when the ship is at a steep climbing angle. A spark capable of causing ignition may be generated by a difference of potential of less than 3,500 volts. To quote further:

"It being impracticable to substitute wood for the aluminum frame, Professor Zehnder suggests the use of lightning-rods projecting beyond the reach of escaping gas. He also recommends making the gas-container of sheet metal, as no electrical discharge could take place within this metallic envelop, and any inductive charge on the surface would escape harmlessly into the atmosphere from projecting points and seams.

"The general type of wireless apparatus used on the German *Zeppelins* is built along Telefunken lines. The hanging aërials are coupled directly onto the closed oscillatory circuit. A one-kilowatt high-frequency alternator situated in the middle of the runway which connects the two gondolas supplies the power, and this, with a specially built transformer and means for adjusting the inductance in the closed circuit of the transmitter, forms the chief component parts of the transmitting outfit."

MONKEYS AND YELLOW FEVER—That the wild monkey in tropical countries may contract yellow fever, under certain circumstances, and transmit it to man, is believed by Dr. Andrew Balfour, director of the Wellcome Bureau of Scientific Research. Dr. Balfour accidentally learned that the negroes of Trinidad had a belief that prior to an outbreak of yellow fever the red howler monkeys were found dead or dying in the neighboring woods. Says an editorial writer in *American Medicine* (New York):

"Balfour has unearthed some facts which could be explained on the supposition that the organism existed in monkeys and only occasionally killed them when, perhaps, their normal immunity was reduced by some other adversity. The same suspicion of the monkey had been held by other observers, and Manson had suggested that a reservoir of the infection existed in some lower animal as in the case of plague and sleeping sickness. The United States has no wild monkeys, and yellow fever is invariably an importation. It seems, also, that the fever is endemic only where monkeys abound. Of course, careless or bad sanitation might keep the disease endemic where there are no monkeys, but no amount of sanitation will prevent sporadic cases due to accidental contact with mosquitoes infected by monkeys, if this new hypothesis is correct. That is, the possibility of eradicating this disease from the earth is dependent upon eradicating either the carrier mosquito or the animals which harbor the germs permanently. There is no ground for despair, as greater wonders have been wrought. The sanitary conquest of the tropics has only just begun, and its possibilities for human betterment are inconceivably great. Here, then, is one more argument for the control of tropical countries by white men in self-protection. Governments by

tropical natives have utterly failed to safeguard the lives and property of resident or visiting aliens, and are now known to be inimical to the health of northern neighbors through the occasional emigration of endemic infections. We can not quarantine against them forever. Our manifest destiny is to remove the sources of trouble for our mutual welfare. Those 'little Americans' who object to such control as would bring safe government are opposing the welfare of humanity."

HAS OUR NEW VOLCANO COME TO STAY?

THAT the Lassen volcano is an effort of old Vulcan's to do his part toward the success of the Panama-Pacific Exhibition is suggested in a recent press bulletin of the United States Geological Survey with a playfulness quite unusual in a government department. Mr. J. S. Diller, the geologist sent to investigate conditions in the vicinity, has made an interesting report, reproduced in part in the bulletin, from which we make a few extracts below. Mr. Diller has been familiar with Lassen Peak for over thirty years, and his present observations are those of a geologist who had made a special study of this volcano on several previous visits. That the activity of Lassen Peak is really volcanic, Mr. Diller entertains no doubt. Photographs of the eruption show the familiar features of other volcanic outbreaks, and that Lassen was formerly an active volcano the outpourings of old lava about it bear abundant testimony. Says Mr. Diller:

"In all there have been eleven eruptions up to . . . June 21. The most violent was at 9 A.M., June 14, when several over-venturesome persons were injured by falling or rolling stones. The eruption was visible from the Sacramento Valley, nearly forty miles away, and created profound interest. The last eruption to date was Friday, June 19, and of relatively small energy. [The 48th eruption occurred September 21, jarring houses nine miles distant.] Mr. Rushing reports that eruptions are generally, if not always, preceded by a complete cessation of escaping steam. . . .

"With successive eruptions the new crater is enlarging. June 20, when Mr. B. F. Loomis and I visited it, it was 400 feet long and 100 feet wide, with a depth of not over 100 feet. It appears to follow a fissure running a little north of east and south of west. The escaping steam from the southwest end of the fissure is visible in the excellent photograph obtained by Mr. Loomis [shown in these pages a few weeks ago].

"The other hot holes about Lassen Peak, as far as I can learn, have not increased their activity, unless it is Bumpass Hell, which is always fuming; but nothing like an eruption has been reported.

"No definite molten products have been found in connection with the recent eruptions of Lassen Peak. The ejected dust, as far as can be judged from an examination with a small pocket lens, is disintegrated or pulverized dacite; perhaps in part decomposed. The quartz and apparently also the glassy feldspar are bright, but the hornblende, augite, and mica are of course not so abundant in the dacite and are less evident. An examination with a petrographic microscope confirms the conclusion that the dust is the product of the pulverizing action of the explosive gases on the rocks through which they are escaping, and not due to the explosive expansion of gases in a liquid lava.

"That heat has recently risen in the core of Lassen Peak is evident from the fact that whereas it was once cold, now it is hot and steaming. When E. E. Hayden and I were on the mountain in July, 1883, and slid down the 2,000-foot snowbank into Hat Creek on our way to Yellow Butte, there was no sign of heat in the summit of Lassen Peak. The rocky summit of the peak, struck by many thunderbolts during storms and superficially fused here and there by the lightning to fulgurite, is still as it was then, and the little lake is there as in 1883; but the heat and the crater are new. Mr. Rushing tells me that these new features appeared with the first eruption. But the fact that the other hot places about the mountain are not yet perceptibly hotter indicates that the rise of temperature is local and does not, at least as yet, affect the mountain mass. Time alone can tell what Lassen is going to do. The volcano may subside to its former quiescence. But we must not forget that it was only the top of the old Vesuvius that was blown off to make Monte Somma and the Vesuvius of to-day. Krakatoa blew up from the very base with tremendous effect. There

seems no good reason at present to fear a Krakatoan outbreak at Lassen Peak, but the part of wisdom dictates a close watch.

"Eruptions as a rule break out suddenly. Sightseers will generally find the view-point from which Loomis's photographs were taken close enough if the mountain is active, but if all is quiet and the seeker after knowledge must see the crater for himself, he should be sure to ascend on the windward side, and approach with caution."

FRANCIS BACON, EFFICIENCY ENGINEER

THAT THE NUCLEUS and gist of all the modern "efficiency" systems, as applied to business and industry, are to be found in the writings of Bacon, is asserted by H. D. Minich, in an article contributed to *The Engineering Magazine* (New York). This discovery, he thinks, strikingly bears out the statement of one of the most prominent efficiency experts, to the effect that the principles of efficiency are not new, and that credit for originality is due only for the recognition and correlation of certain laws of economics, psychology, and physics in their relation to the problems of business. The time-element is the important part of all efficiency systems. He who can do a thing most quickly, while continuing to do it easily and well, is the most efficient worker. Here is what Bacon has to say on this point, as quoted by Mr. Minich:

"Time is the measure of business as money is of wares; and business is bought at a dear hand where there is small dispatch. . . . He that doth not divide will never enter well into business, and he that divideth too much will never come out of it clearly. To choose time is to save time, and an unseasonable motion is but beating the air. There be three parts to business—the preparation, the debate or examination, and the perfection. Whereof, if you look for dispatch, let the middle only be the work of many, and the first and last the work of few."

On this, Mr. Minich comments as follows:

"The nucleus of all discussions of efficiency is this same subject of dispatch. We recognize the principle of the division of labor, and call to mind the lately created functions of purchasing, credit, advertising, rate-setting, safety, and experimental departments. We recall cases in which there no doubt have been failures to 'come out of it clearly.' Time-study and motion-study can not be epitomized much better than by the epigrammatical statement, 'To choose time is to save time, and an unseasonable motion is but beating the air.' A planning department is practically advised by the emphasis placed upon the examination and debate to which work should be subjected as compared with the actual preparation and execution. While we read here that preparation and perfection only should be the work of few, we might also quote modern writers who maintain, one and all, that actual fabrication should be done by smaller numbers of highly efficient workers. . . ."

"In retrospection we observe marvelous strides in many branches of knowledge. We see the achievements of chemistry and physics, the victories of medicine, the rewriting of history, the clarification of religion, and the birth of psychology and other sciences. We note that this seeking after truth has been confined largely to those subjects which could be dealt with in the quiet of the laboratory or study, among books, test-tubes, microscopes, and equations. There is a noticeable omission of subjects the knowledge of which demands a vigorous participation and a varied experience. The problems of the mine, the quarry, and the farm, of the carpenter, the mason, and the business man, have begun to receive such study only in recent years. A growing necessity, heightened by the turning back of

the frontiersmen and the increased feeling of irksomeness in the performance of certain tasks as compared with other more recent and less energetic forms of money-making, has brought one subject after another into the foreground. . . ."

"The development of a science of business will not be along lines radically different in its essentials from those of any other science. Phenomena will be examined, named, and classified. Out of the multitudes of combinations of causes and results certain constant reactions will be discovered. Variables whose manifoldness now baffle the majority of men, clouded in the daily fog of routine and habit, will be reduced to a system admitting of mathematical treatment. . . ."

"The need . . . reduces itself into four parts: a development of the complementary sciences at their points of contact with business experience; a scheduling, guiding, and a governmental provision for intelligent research; a recording and correlating of the vital facts; and a system of collecting and disseminating information from a central bureau."

TO AID THE LOST IN BOSTON

THE HOPE THAT the stranger may hereafter be able to orient himself in the intricacies of Boston's streets is held out by a writer in *Engineering News* (New York, September 10), who describes one simple device that has already been installed for the purpose and suggests its multiplication. He writes:

"The accompanying picture is not a wall. It is a view of the sidewalk at the feet of the photographer. The sidewalk is at the corner of Hawley and Franklin streets, in the city of Boston, Mass. The streets of Boston are said to follow the cow-paths of colonial days. Every uninitiated traveler in Boston believes this is true. We don't know who is responsible for the brass marker shown in the sidewalk at the bottom of the accompanying illustration, but it is a pity the city government of Boston does not adopt the scheme generally, for even Bostonians are hazy on the points of the compass. The new custom-house tower, forming a conspicuous landmark, is said by natives to be in a different place on the horizon when viewed from certain locations than that which they would have naturally supposed. The proper marking of street corners is a part of the municipal public work which is frequently overlooked."

HOW INSECTS BREATHE—When man breathes he uses his muscular strength to draw in the air, and it is afterward forced out automatically. Insects, according to Regen, a recent German investigator, reverse this process, expelling the air forcibly and taking it in automatically. The following is abstracted by *The Scientific American Supplement* (New York) from a description of the experiments by

a writer of the Berlin *Umachau*:

"The insect is placed in a horizontal glass tube with a hole at the end, through which the antennae are allowed to protrude. Through the bottom of the tube a pin passes upward and is applied with its head against the abdomen of the insect, which is the part of the body in which respiration takes place. The motions of the pin are transmitted to a lever and thence to a tracing-point which traces a curve on a sheet of blackened (smoked) paper. It is interesting to note that the operation of breathing in insects differs from that in man and mammals generally. In man inspiration is a muscular art, while expiration follows automatically, the thorax being simply allowed to assume its relaxed position. In the case of insects, these conditions are exactly reversed, expiration being active, inspiration passive."

A RECOGNITION OF THE INTRICACY OF BOSTON STREETS.

This brass figure showing the points of the compass to aid the bewildered visitor is set into the pavement at Franklin and Hawley streets.

THE "CULTURAL" WAR

IN MANY DEFENSES of the war from German sources occurs the word "culture." Germany has announced herself as fighting the fight of civilization against Russia, "sunk in barbarism and without culture." Respecting her enemies on her western frontier, the plea has been put forth that their civilization has become effete and lacking in moral values. These positions are, of course, taken as challenges, and many pens are engaged in estimating the culture which Germany

claims to be admitted in behalf of the warring parties of Europe for their various contributions to its civilization. Professor Matthews does not disguise his bias in speaking of himself as "an American who feels himself a sharer of the noble heritage of English literature, and who has sat for more than forty years at the feet of the masters of French literature." As such, he expresses his surprize that "scholars of the high character of Eucken and Haeckel should be possess of the conviction that Germany is the supreme example of a highly civilized State, and the undisputed leader in the arts and sciences which represent culture." We read:

"Perhaps it is too petty to point out that manners are the outward and visible sign of civilization, and that in this respect the Germans have not yet attained to the standard set by the French and the English. But it is not insignificant to record that the Germans alone retain a barbaric medieval alphabet, while the rest of western Europe has adopted the more legible and more graceful Roman letter; and it is not unimportant to note that German prose style is cumbrous and uncouth. Taken collectively, these things seem to show German culture is a little lacking in the social instinct, the desire to make things easy and pleasant for others. It is this social instinct which is the dominating influence in French civilization and which has given to French civilization its incomparable urbanity and amenity. It is to the absence of this social instinct, to the inability to understand the attitude of other parties to a discussion, to the unwillingness to appreciate their point of view, that we may ascribe the failure of German diplomacy, a failure which has left her almost without a friend in her hour of need. And success in diplomacy is one of the supreme tests of civilization.

"The claim asserted explicitly or implicitly in behalf of German culture seems to be based on the belief that the Germans are leaders in the arts and in the sciences. So far as the art of war is concerned there is no need to-day to dispute the German claim. It is to the preparation for war that Prussia has devoted its utmost energy for half a century—in fact, ever since Bismarck began to make ready for the seizing of unwilling Schleswig-Holstein. And so far as the art of music is concerned, there is also no need to cavil.

"But what about the other and more purely intellectual arts? How many are the contemporary painters and sculptors and architects of Germany who have succeeded in winning the cosmopolitan reputation which has been the reward of a score of the artists of France and of half a dozen of the artists of America?

"When we consider the art of letters we find a similar condition. Germany has had philosophers and historians of high rank; but in pure literature, in what used to be called *belles lettres*, from the death of Goethe in 1832 to the advent of the younger generation of dramatists, Sudermann and Hauptmann and the rest, in the final decade of the nineteenth century—that is to say, for a period of nearly sixty years—only one German author succeeded in winning a world-wide celebrity—and Heine was a Hebrew, who died in Paris, out of favor with his countrymen, perhaps because he had been unceasing in calling attention to the deficiencies of German culture. There were in Germany many writers who appealed strongly to their fellow countrymen, but except only the solitary Heine no German writer attained to the international fame achieved by Cooper and by Poe, by Walt Whitman and by Mark Twain. And it was during these threescore years of literary aridity in Germany that there was a superb literary fecundity in Great Britain and in France, and that each of these countries produced at least a score of authors whose names are known throughout the world. Even sparsely settled Scandinavia brought forth a triumvirate, Björnson, Ibsen, and Brandes, without compeers in Germany. And from Russia the fame of Turgenev and of Tolstoy spread abroad a knowledge of the heart and mind of a great people who are denounced by Germans as barbarous."

The Professor sees it likely that "in the field of science, pure

THE DESTROYER.

—Satterfield in *The Day* (New London).

offers to supersede those she aims to displace. One of the striking rejoinders is the statement recently issued over the signature of forty-one British authors deploring the fact that German historians and teachers have "inculcated upon the present generation of Germans" the plea that "German culture and civilization are so superior to those of other nations that all steps taken to assert them are more than justified." "Many regard German culture with the highest respect and gratitude," says this document, "but we can not admit that any nation has a right by brute force to impose its culture upon other nations." This paragraph follows:

"Whatever the world destiny of Germany may be, we in Great Britain are ourselves conscious of a destiny and a duty. That destiny and duty, alike for us and for all the English-speaking race, call upon us to uphold the rule of common justice among civilized peoples, to defend the rights of small nations, and to maintain the free and law-abiding ideals of western Europe against a rule of blood and iron and the domination of the whole Continent by a military caste."

In the *New York World* articles have appeared from time to time from the Italian historian, Guglielmo Ferrero, and in one of these he touched off the cultural qualities of Germany and France in a pointed phrase. Germany, he says, "represents the quantitative element in modern civilization, and France the qualitative." In the *New York Times* Prof. Brander Matthews takes up the question in detail and endeavors to strike some balance of just

and applied," the defenders of the supremacy of German culture "would take their last stand." He goes on:

"That the German contribution to science has been important is indisputable; yet it is equally indisputable that the two dominating scientific leaders of the second half of the nineteenth century are Darwin and Pasteur. It is in chemistry that the Germans have been pioneers; yet the greatest of modern chemists is Mendeleef. It was Hertz who made the discovery which is the foundation of Marconi's invention; but altho not a few valuable discoveries are to be credited to the Germans, perhaps almost as many as to either the French or the British, the German contribution in the field of invention, in the practical application of scientific discovery, has been less than that of France, less than that of Great Britain, and less than that of the United States. The Germans contributed little or nothing to the development of the railroad, the steamboat, the automobile, the aeroplane, the telegraph, the telephone, the phonograph, the photograph, the moving picture, the electric light, the sewing-machine, and the reaper and binder. Even those dread instruments of war, the revolver and the machine gun, the turreted ship, the torpedo, and the submarine, are not due to the military ardor of the Germans. It would seem as tho the Germans had been lacking in the inventiveness which is so marked a feature of our modern civilization.

"In this inquiry there has been no desire to deny the value of the German contributions to the arts and to the sciences. These contributions are known to all; they speak for themselves; they redound to the honor of German culture; and for them, whatever may be their number, the other nations of the world are eternally indebted to Germany. But these German contributions are neither important enough nor numerous enough to justify the assumption that German culture is superior or that Germany is entitled to think herself the supreme leader of the arts and of the sciences. No one nation can claim this lofty position, altho few would be so bold as to deny the superior achievement of the French in the fine arts and of the English in pure science.

"Nations are never accepted by other nations at their own valuation; and the Germans need not be surprized that we are now astonished to find them asserting their natural self-appreciation, with the apparent expectation that it will pass unchallenged. The world owes a debt to modern Germany beyond all question, but this is far less than the debt owed to England and to France. It would be interesting if some German, speaking with authority, should now be moved to explain to us Americans the reasons which underlie the insistent assertion of the superiority of German civilization. Within the past few weeks we have been forced to gaze at certain of the less pleasant aspects of the German character; and we have been made to see that the militarism of the Germans is in absolute contradiction to the preaching and to the practise of the great Goethe, to whom they proudly point as the ultimate representative of German culture."

The professor calls the foregoing a "disinterested attempt" to find out just what foundation there may be for the implicit assertion that Germany is the "standard-bearer of civilization." Then he adds:

"The most obvious characteristic of a highly civilized man is his willingness to keep his word, at whatever cost to himself. For reasons satisfactory to itself Germany broke its pledge to respect the neutrality of Luxemburg and of Belgium. It is another characteristic of civilization to cherish the works of art which have been bequeathed to us by the past. For reasons satisfactory to itself Germany destroyed Louvain, more or less completely. It is a final characteristic of civilized man to be humane and to refrain from ill-treating the blameless. For reasons satisfactory to itself Germany dropt bombs in the unbesieged city of Antwerp and caused the death of innocent women and children. Here are three instances where German culture has been tested and found wanting."

ART TOURS AT HOME

A BLOCKADE of the European art-galleries seems to be one of the sure eventualities for an indefinite future. The hope may be heard exprest in many places that the Europe of the tourist has not or will not entirely vanish. However, while these treasures remain under lock and key the artistic appetite of America need not go wholly unsatisfied. "Art tourists," says the *Springfield Republican*, "who begin the

FLEEING THE GERMAN SHELLS.

A priceless Rubens, "The Assumption of the Virgin," taken from the Malines Cathedral to be shipped to Antwerp. The Cathedral was badly damaged.

work of making acquaintance with the museums of America will find not only that there are many more of them than they suspect, but that each one of these institutions may be said to make a special appeal to the amateur and the student who visit them." The Jarves collection of New Haven, which was described in these pages not long since, is, says the *New York Press*, "an astonishingly good substitute for a voyage to study Italian painting." Then worthy of notice is "the Boston Museum, for its modern French canvases, and more particularly for its Oriental art; the Pennsylvania Academy in Philadelphia, for its early American paintings, and the Chicago Museum, for its Innenses." In fact, *The Republican* prepares a sort of itinerary of our American galleries, swinging round a circle beginning with New York:

"Going eastward, there are the Jarves collection in New Haven, the Wadsworth Atheneum in Hartford, the Worcester Art Museum in that Massachusetts city, and the Boston Museum

of Fine Arts. Near by are the Fogg Art Museum of Harvard University, and the Germanic Museum, with its reproductions of ancient German works of art. Of course Boston, also, has the superb murals in the public library, and Robert Reid's thrilling 'Paul Revere's Ride,' and other Revolutionary war wall-decorations in the State-house and, for specialists, the print treasures of the museum.

"Going northward, Portland, Maine, has the Portland Society of Fine Arts and the Swett Memorial Museum; Bowdoin College has the Walker art building in Brunswick, with its murals by La Farge, Vedder, Thayer, and Kenyon Cox, and other art objects. If one wants to include Canada in such a tour, there are the galleries in Montreal and Toronto to visit. Coming back into New York State there are admirable little museums in

A GERMAN VIEW OF GERMANY AS DEFENDER OF CIVILIZATION AGAINST THE BARBARIAN HOST.

—Junker in *The Fatherland* (New York).

Rochester and Syracuse, and the Albright Gallery in Buffalo is known to most American art lovers, by name at least.

"Cincinnati has its museum, with the John J. Emery collection of paintings and special groups by Frank Duveneck and Robert Blum. Indianapolis has the John Herron Institute; Toledo has its museum, and Cleveland is to open its splendid marble art palace next summer. Chicago has its admirable Art Institute, that is visited by more persons every year than any other art institution in the United States. Detroit has its Museum of Art; Milwaukee, the Art Society and Layton Art Gallery; Muskegon, Mich., has its Hackley Public Library, that is up to acquiring Whistlers; and Wisconsin has the State Historical Society's collections of historical paintings, portraits, and other objects in Madison.

"In Minnesota, Minneapolis has the Society of Fine Arts Building and the Walker Gallery. St. Paul has its Art Institute. St. Louis has its splendid City Art Museum; in Kansas City is the Western Gallery of Art; in San Francisco is the Crocker Art Gallery, and in Los Angeles is the Fine Arts League with its gallery in the Southwest Museum of History and Art. In Texas are the Fort Worth Museum in the city of that name, and in Dallas the Gallery of the Art Association. New Orleans has the Delgado Museum; in Savannah is the Telfair Gallery of Arts and Sciences; Baltimore has the Walters Gallery, and in Washington are the Corecoran Gallery and the National Gallery in the Smithsonian Institution.

"On the last lap of this swing around the circle of art museums is Philadelphia, with the permanent collections of the Pennsylvania Academy and the Wiltach Gallery in Fairmount Park; near by are the Montclair and Newark museums. Tentative

and hastily prepared as this list is, it shows that even if European picture-galleries are closed to art students, they still have numerous excuses for going away from home to 'study art.' Possibly they will be surprized at the extent of study and pleasure our American museums will present to them."

ARTISTS AS "CANNON-FODDER"

WHAT we shall hear of "sweet music's strains" during the coming season still remains in the realm of doubt. Occasional ships bring the musical refugees to our shores, but in the final mobilization for concert and opera there are likely to be numbers who will not answer the roll-call. Report, which many hope to be false, already numbers four well-accredited opera-singers among the slain. They are the Belgians Armand Crabbé and Marcel Charlier and the Frenchmen Gustave Huberdeau and Léon Rothier. Many others, according to common account, are in the danger zones. Dr. William C. Carl, the New York organist, returns from Europe and tells the *New York Times* that the musical world of that side of the sea is "completely demoralized by the war." He names some of the greatest lights of the musical firmament as having joined the ranks:

"Chaliapin, the great Russian basso, as well as all the artists of his company; Rachmaninoff, the Russian composer; Muratore, the French tenor; Dohananyi, the Austrian pianist, and Maurice Aliamet, son-in-law of Alexandre Guilmant, are only a few of those doing military service, for all have had to go.

"Félix Guilmant, the French artist, was awaiting his call a few days before I left London, and is probably helping to defend Paris now. Henri Marteau, the violinist, a Frenchman by birth, the successor of Joachim in Berlin, refused to fight against either country, and therefore made himself a willing prisoner of war. It is safe to predict that there is not a single artist left in either Germany, France, Belgium, or Russia, unless he is beyond the age limit.

"In Trinity College of Music, London, I was told that four of the staff had already gone to the front, altho the mobilization in England is voluntary. The only concerts given thus far in London are those at the Queen's Hall under the direction of Sir Henry Wood."

The question of the prodigal waste of such precious material, where war-lords regard the rank and file as only "kanonenfutter," is one not easily balanced between the scales of men as men and men as artists. The *New York Times* makes an attempt:

"Fritz Kreisler, perhaps the greatest living violinist, is carrying a rifle, and thus running the risk of injuring the fingers which he has employed so dexterously in rendering the Beethoven concerto, even if he escapes death or severe wounds. Rudolf Ganz, the Swiss pianist, has served in the frontier guard since the outbreak of the war, but has been released in time to fill his winter engagements. The fingers of a skilful violinist or pianist are his priceless assets. He has them insured at the beginning of a tour, for the crippling of a finger may mean the loss of a small fortune, if not the ruin of a career.

"France, Austria, and Germany might contrive to fight their battles without forcing military service upon great artists, but the artist is still the man and the patriot, and not only the singers and instrumentalists, but the painters, sculptors, and poets have freely given their services to the cause that is dearer to each than his art. We sincerely hope, however, to hear Rothier again as the sonorous high priest of Isis, Huberdeau as the blind old king in 'Pelleas and Melisande,' and Crabbé in the lesser impersonations, to which nevertheless he lent so much distinction. We are happily permitted to doubt the authenticity of the reports that they have been killed. But that their patriotism has compelled them to face danger must greatly increase the world's respect for them. The ordinary routine of a soldier's life, the physical exhaustion, the outdoor labor in bad weather, endanger the singing voice as much as the rough manual labor tends to injure the fingers of the violinist and pianist. These men seem to risk so much for country, yet no man can risk more than his life, and the life of the artisan is as dear to his dependents as that of the most eminent artist. The services of artists in this most terrible of wars, however, will make an inspiring chapter in its history."

The cable dispatches give one fatality that seems authentic:

"Alberic Magnard, the composer, was killed while defending his house near Nanteuil from the Germans. M. Magnard was in his villa when two German cavalymen burst into his garden. The composer was armed with a rifle. He fired and killed both the Germans. Soon afterward a squadron of Uhlans arrived. M. Magnard was forthwith seized and placed against a wall in his garden. There he was shot dead."

THE WAR AS AN EDUCATIONAL TOPIC

THE BOON that many have seen to fall to the study of geography and history from the European crisis has found an opposite interpretation at the hands of the Philadelphia and St. Louis school boards. How many officials of other cities will take this stand and permit no war-talk in the schools remains to be seen. Dr. Maxwell, of New York, thinks a neutral ground can be taken by teachers in presenting the matter, and the attitude of many other school principals is seen in their decision to use this weekly as a classroom text-book during the present school year. On the other hand, Superintendent Jacobs, of Philadelphia, has issued an order, according to *The North American* of that city, that "no teacher in high or elementary schools is to mention war, that no discussion of the situation is to be allowed in the classroom, and that no mention is ever to be made of countries involved in the conflict." This is going to the length of eliminating geography practically from the school curriculum. This justification for such a stand is given:

"I do not say that we will never teach the history of the war, and I do not intend that the public-school children shall be uninformed by the end of the year on what has happened in Europe. But I do maintain that it is unwise to allow the matter to be broached in the public schools at the present stage in developments."

"We do not know, authoritatively, what is happening, and we can not vouch for the truth of reports. Therefore, it is better to wait until we can be sure of what we are teaching before we instruct our pupils in the nature and events of the war."

The St. Louis *Globe Democrat*, surveying the character of that city's population, finds it too mixed for safety in a free discussion of war topics, tho it does not go to the length of eliminating the war news from its own pages. It says:

"When we consider the fact that so many of the teachers themselves are of different nationalities, and there are pupils in the St. Louis schools whose parents are from all parts of Europe, the wisdom of the restriction is obvious. It will be difficult to eliminate the subject from the thoughts of teachers and pupils, since war news will for some time fill the newspapers and periodicals. It will be especially difficult to avoid any contemporaneous references in the history classes. But difficult as it will be to shun the subject entirely, this is the only safe course. It may be argued that the war could be discussed with absolute impartiality, but no discussion will be considered impartial. There is too much prejudice among the nationalities. The alert little folk would be quick to seize on any statement which could be construed as revealing the teacher's sympathies, and there would be continual friction."

New York's school superintendent, Dr. Maxwell, has defined the attitude teachers may consistently take in dealing with the war topics. He told his superintendents and principals what he conceived to be the great educational opportunity of the crisis:

"We have assembled at a season when Austria, Belgium, England, France, Germany, Russia, and Serbia are plunged into the desolation of war. To the lookers-on, as we are, its aspects have by no one been more weightily expressed than by the late Pontiff, Pius X., in the message he addressed to the world with his dying breath. What should be the attitude of teachers in the

classroom toward this tremendous calamity that has befallen the human race?"

"In at least one of our sister cities, if we are to believe the newspapers, all mention of the war is forbidden in the classroom. Even the teaching of the geography of Europe is forbidden while the war lasts. I have no sympathy with a position of this kind. Children who have reached the age at which they can read the newspapers are neither made nor kept virtuous by preserving silence in the classroom regarding what they and all the rest of the world know, at least vaguely, and beyond a doubt, ignorantly."

"What, then, is the duty of the teacher in the treatment of this war? This question must have an answer, first on the negative side, and then on the affirmative side."

"On the negative side we should say to our teachers: 'You must not express any opinion regarding the causes or the issues

Copyrighted by the International News Service

STARTING ON ITS FLIGHT TO ANTWERP.

A Van Dyck removed from the Malines Museum, which later fell in ruins.

of the war that will give offense to any children in the public schools.' A teacher who, before her pupils, assails the Austrians or the Belgians, the English or the French, or the Germans, or the Russians, or the Servians, is guilty of two heinous offenses. The first is an offense against a child. He may wound the sensibilities of a deeply sensitive boy or girl, and this, as I have often told you, is the teacher's cardinal sin. He offends against our national patriotism, which was, and is, to make one, on American soil, the children of all the earth's nations—to wipe out and not to perpetuate racial prejudices. Therefore, the order should be issued, clear and positive: No assault on the motives or conduct of any nation engaged in this war."

"The facts should be treated simply as facts. Our children should not be allowed to form imperfect or prejudiced ideas of great events that will influence the development of civilization until the last moment of recorded time. In teaching the geography of Europe and in the hours devoted to current events the large military movements should be carefully and accurately followed with the aid of maps. Every teacher should prepare herself to teach this subject accurately. The chief reliance should be placed, however, on encouraging children to gather facts accurately for themselves and to record them, under judicious criticism, on maps of their own making."

"No occasion should be neglected to impress upon our children the horrors of war—not merely the immediate horrors of the battle-field, but the collateral horrors that follow in the wake of war—the orphaning of tender children, the widowhood of loving wives, old age deprived of its natural support, the flower of a country cut off in its youth, the poverty, the disease, the unspeakable anguish of mind and body. And all this to the end that our children, to whom, in years to come, may be committed the issues of peace or war for our beloved country, may learn that war is so dreadful a thing that it should never be entered upon lightly, but only as a last resort, in defense against national peril or in support of some fundamental principle of transcendent value to humanity, as, for instance, the abolition of slavery, with its horrors worse than war."

RELIGION AND SOCIAL SERVICE

A TARGET THAT HAD SURVIVED SEVEN CENTURIES.

Germany claims that the French fire came from that direction, and the necessity for shelling the Reims Cathedral is regretted.

THE FALLING CATHEDRALS

AFTER LOUVAIN COMES REIMS. The cathedral which has escaped the destructive forces of seven hundred years now suffers beneath the impact of siege-guns. It may be that these instances of destruction are defensible on military grounds, but they raise a cry of horror that it is our duty to record. Even the Pope breaks his neutrality to protest. The *New York Sun's* dispatch from Rome declares: "Pope Benedict says this crime cries for God's vengeance. He warns the Kaiser lest the destruction of the Lord's temples provoke the anger of God, against which the most powerful armies are powerless." Berlin dispatches declare that orders were issued to save the cathedral, which flew the Red Cross flag and sheltered many of the German wounded left behind by the retreating forces to the chance mercies of enemy or shell. "Reims was in the battle-line of the French," says the Berlin dispatch, "and the Germans were obliged to bombard it. We regret the necessity, but the fire of the French came from that quarter." From Bordeaux comes this statement from President Poincaré:

"The German troops, without military necessity, but for the sole pleasure of destroying, subjected the Reims Cathedral to a systematic and furious bombardment. The famous basilica is now a mass of ruins.

"It is the duty of the Government of the Republic to denounce to universal indignation this revolting act of vandalism, which, in giving over to the flames this sanctuary of history, deprives humanity of an incomparable portion of its historic patrimony."

La France (Paris) expresses thus the nation's "public horror and wrath":

"Of this priceless jewel of Gothic architecture there remains but ruins. Can such a crime be pardoned? No, a thousand times no. Let there be a holy war that shall conquer at all cost and wipe out the immoral horde of Potsdam. The glorious carillon of Reims will no longer be heard, but Nemesis will surely come."

Before the final coup of church destruction was made the *London Tablet* speaks of Belgium's desolated temples:

"The irreparable crime of Louvain and the ruthless damage done to the Cathedral of Malines while Cardinal Mercier was absent in Rome (says a *Times* leader on Wednesday) have left Belgium's cup of bitterness still unfilled. We do not understand the reason of these remorseless attacks upon venerable places of

worship, and particularly upon Roman Catholic churches. We do not fully discern why even the modern Huns should be so eager to violate these peaceful sanctuaries, destroying one, bombarding another with zest, stabling their horses in a third, as they have undoubtedly done. One would almost fancy that the late Professor Cramb was right after all, that Germany regards the Christian creed as outworn, and that she dreams, when she has imposed her will upon the world (if she can), of founding a new religion, with the Kaiser as its inspired expositor. We wonder what the pious people of Bavaria and Austria-Hungary think of this persistent desecration of Catholic shrines. The meaning of the sack of Dinant is, however, sufficiently clear. Thousands of English travelers know that pleasant little town, which clustered beneath the old citadel on the banks of the Meuse. They will learn with horror and distress that it has shared the fate of Louvain, that it has been shelled and burned, that many of its defenseless men have been shot, and that its women are hunted and homeless. We have not yet been told, but doubtless shall hear in due course, that the splendid thirteenth-century church of Notre Dame, the most complete example of pointed Gothic architecture in Belgium, has perished amid the general destruction. The reason of this sack and pillage of town after town in Belgium, with every accompaniment of murderous barbarity—Termonde is another melancholy case in point—is becoming obvious. It is due to the resolute resistance of Antwerp. The Germans want to capture Antwerp, but can not spare enough men to invest the fortress, and in any case hope to obtain it without paying the price. They seek to terrorize Antwerp into submission by laying Belgium waste, by razing her undefended cities to the ground, and by shedding the blood of innocent Belgian citizens of both sexes. . . . The wilful devastation of Belgium will have only one definite result. It will increase the chorus of indignant denunciation of German methods of warfare which now rises from every civilized country in the world."

Later dispatches seem to show that the cathedral was not reduced to total ruin, and may be restored. A Paris dispatch to the *New York Sun* says:

"The battering of the building was not done by the heavier guns, as had been feared. The building suffered most from shrapnel fire. The famous rose windows, the sculpture and other details of the façade that were ruined are, however, just the examples of art that can not be replaced. . . .

"Statues, gargoyles, and other ornaments on the exterior of the cathedral have been tumbled to the pavement and shattered, but at first glance the outer walls of the cathedral do not show the ruin that had been said took place."

EUROPE'S HOUR OF NEED

WHEN THIS NATION, at the President's behest, prays for peace on the day set apart, October 4, many will doubtless heed another admonition. The suggestion comes from Miss Mabel Choate, daughter of our one-time Ambassador to England, that all the churches in the land take up collections for the Red Cross. The newspapers have many of them hailed this suggestion as especially feasible in pointing a way to carrying out this unsectarian and non-racial charity, making prayer and good works go hand in hand. The *New York Evening Post*, to which Miss Choate's letter was addressed, says editorially:

"It is sincerely to be hoped that the ministers of religion, of all creeds and sects, will pay heed to this most admirable suggestion and act upon it promptly and earnestly. Usually it is extremely difficult to center upon a given benevolent purpose the attention of millions of people throughout the country, with sufficient effectiveness to bring about immediately a great material result. But such is not the case in this instance. The President's designation of the day will undoubtedly result in a general observance of it for the purpose be named. The thoughts of all our people will on that day be fixt upon the idea of America's peculiar duty and opportunity as a representative of humane endeavor in this time of fearful trial for the nations of Europe. Unless that sentiment is wholly insincere, there must be millions of men and women who will be glad to attest its genuineness by contributing from their means, great or small, toward works of mercy for which, however generous the response, the resources can not begin to be as great as the need. Let every minister of religion feel that upon him it is incumbent to place before his congregation a duty which many of them will surely be glad to perform, and the fulfilment of which will bring untold blessings to millions of human beings in direct need of succor."

While the terrific drama of war is being played, the mind fails to comprehend the extent of wo which the funds of the Red Cross aim to relieve. *The Christian Herald* (New York) turns to the pictures that glow in the wake of battle:

"One of the inevitable results of war is that the suffering is not confined to the contesting forces in the field. The great war in Europe, in which over 6,000,000 men are engaged in a deadly struggle, has aroused the sympathies of the Christian world. Many thousands are already dead, while tens of thousands fill the hospitals. It is the most tremendous conflict the world has ever witnessed. No calamity to equal it has ever befallen the human race.

"There is another very large class of sufferers by the war who, amid the tumult and confusion of the time, are even more entitled to our sympathy and help than any others. These are the thousands of helpless widows and orphans, who have been deprived by this terrible war of their natural providers, their husbands, sons, and brothers having perished in the struggle. In France, Belgium, Germany, Austria, England, Serbia, Russia, and other countries there is an immense number of these un-

fortunates, for whom no appeal has been made from any source whatsoever. Aid is being rendered to the soldiers on the field and in the hospital; but the beneficiaries thus helped may simply be put to the front to fight again, thus prolonging the struggle. But the case of the 'Silent Sufferers'—the bereaved mothers and children whose homes are broken up by the war—is far more pitiable. Tens of thousands of them are left utterly helpless, while great numbers have been cast adrift on the world shelterless and friendless.

"Correspondents in their cable dispatches give here and there a paragraph which reveals a glimpse of the dark drama of suffering and sorrow that is now being enacted in innumerable homes in Europe. Writing from the war zone in France, one correspondent says of the refugees host:

"I was in the midst of it, and saw unforgettable scenes of the enormous tragedy. It was a flight of hundreds and thousands of families from St. Omer and Roubaix, Bethune, Douai, Valenciennes, and Arras, who were driven away from their northern homes. They are still being hunted by fear from place to place, where they can find no shelter and no permanent safety. The railways have been choked with them, and in these long fugitive trains, which pass through stations, there is no food or drink. The poor runaways, weary, filthy, and exhausted, spend long days and nights shunted onto side lines, while troop trains pass and pass, and are held up in towns where they can find no means of existence.

"Can one wonder that mothers rush from their houses and wander forth in a blind, unreasoning way to swell the panic tide of fugitives, homeless and without food, dropping here and there on the wayside in utter weariness?"

"After the tide of war had swept past, this was the picture of the French frontier villages, as the correspondent saw them: 'It was almost possible to reach the French frontier, but the villages but lately populous and filled with panic are now half deserted and melancholy. The refugees pour aimlessly to the coast and back again.'

"Remember, these refugees are not soldiers, but the wives and children of men who have gone to the war, very many of them never to return. War is inexorable. It demands not only the life of its victim on the field, but too often it involves the desolation of his home, the breaking up of his little circle of dear ones, making them outcasts and wanderers. Surely the widows and the orphans—the 'Silent Sufferers'—are the victims of the war most deserving of our sympathy.

"A correspondent in Belgium describes his visit to a deserted town. There was a stream of refugees along the road, every face bespeaking fear and helplessness. Aged men and women were there, and many mothers, dragging or carrying their children with them. 'A mother among the fugitives,' he writes, 'when miles on the way, suddenly remembered that in the terror and confusion of gathering her household together and snatching a few belongings, she had wholly forgotten her little infant sleeping in its cradle. She now thought of it as awakening and crying for companionship and food. She was forcibly restrained from returning to its rescue, an impossible task, and was compelled to hurry on, forever to be haunted by the vision of her deserted babe.'

"These conditions are duplicated in every country in Europe in which war is now raging. In the rural districts from which

THE VOICE OF THE LOUVAIN CHURCH SPEAKS:

"Louvain, thou wast built on my foundations, spirit of my spirit, heart of my heart."
—Bijvoegel in the *Amsterdammer*.

all able-bodied men have been drawn for service, there is a great blind fear possessing the people, driving them from their homes. In scores of towns and villages across which the war has swept, the once happy homes are masses of blackened ruins. Weeping women and little children, smitten with a fear they can not understand, are everywhere."

CHURCH DUTIES IN WAR DAYS

LEST the great war unfortunately absorb our attention to our detriment, a writer in the *New York Christian Work and Evangelist* (Undenom.) warns us against neglecting "certain primary and necessary duties here at home." We have work to do, he reminds us, regardless of the war or "our sympathies with the awful suffering of the world." This work in school and church, especially, will bear fruit not only

would bar the subject from the school, he would discuss it in the church, "for if there ever was anything in which the whole Church is concerned, it is this war." But he adds that:

"The danger will be that other imperative things, immediate tasks, will be neglected. Thus there is the question of Christian unity. If there is anything in the world that should be pushed at just this moment it is the unity of the churches. The Church is going to play a great part in the stopping of this war and a great part in the consideration of what the new order of the world shall consist in after the war is over. For this we need a united Church, one which can speak with unanimous voice, with a nation-wide authority. . . . Perhaps the world has never looked to the Church for some great authoritative word as it will look to it in this time of crisis."

A third present duty, brought earnestly to the attention of church people, is that they "must not let the war interfere with . . . work with the immigrant." The writer speaks of the United States as "the great peace society," whose business it is to weld together in harmony "the sons of every nation now at war," who are "citizens side by side" in this country. So may Europe learn "the ultimate lesson of peace," he ventures to hope, and calls to his support in the issue Prof. Edward A. Steiner, who, writing in *The Congregationalist* (Boston), points to the fact that:

"The United States of America has never been more united, more vitally one, than now. It has two possible foes to face—neither of them from without, both of them from within. One of them is the struggle between capital and labor, with its sharpening of class consciousness until it may become a two-edged sword liable to hurt not only the contending forces, but the vital life of the nation. The other is the growth of race prejudice, which may be strengthened rather than weakened by the present conflict in Europe. We have a Monroe Doctrine, which justly excludes foreign Powers from getting a foothold upon this continent. We also have a Christ Doctrine, which includes humanity, as the other excludes governments. The sympathy of the American people must be with the people—with all the people

who have been suddenly hurled from twentieth-century civilization into primitive barbarism, from peaceful labors into deadly conflict, from severe struggle into deeper poverty. Victory or defeat for one or the other of the contending armies will bring little or no blessing to the people who suffer, bleed, and die; except as it may open the eyes of those who survive to the brutality of war, its waste, its uselessness. It is now time to emphasize our American unity in spite of our diversity; to glory in it; to be careful not to transplant and propagate the Old World hate upon this newer continent; to realize that the United States must become a world-server, and the Stars and Stripes in some form a world flag. We must also realize that the men who are to carry this gospel of unity are working in the mines and shops, and that the hands which are to hold up that flag are consecrated to hard and dangerous toil in our midst. As we deal with them we deal with the world, we deal with humanity. Now is the most auspicious moment to begin a holy war against war."

In noting a feeling in some quarters that the war would of necessity seem to frustrate the labors of missionaries, the writer in *The Christian Work* declares himself strongly on an unusual opportunity of the Church in America in these words:

"It is her duty now to push her missionary work with ten-fold zeal. Not only should she sustain splendidly her own work, but she might well take over the highly developed stations of the British and German societies and prevent the gains of many years being lost. This would be one of those supreme pieces of Christian far-sightedness that stand out in history."

WHAT IS LEFT OF THE UNIVERSITY OF LOUVAIN.

It contained Belgium's chief school of theology.

for ourselves, but for the nations unhappily in conflict. And he points out that our responsibility is the more grave because of the fact that ours as "the one great nation acceptable to all the nations" may be called upon to serve as mediator. To undertake such a high office, we are told, "America must prove her own strength and integrity" and be "both pure and peaceable." All her faculties must be at the highest, and "she must be ready to undertake great things." As for the duties that lie right at hand, this writer says they affect our schools, our churches, our immigrants, and our missions. On the subject of the first he recommends specifically that:

"We must not let our schools suffer from this universal possession of the children's minds by the war. One of the most lamentable things of the whole affair is that the boys of America are being fed day and night by pages of slaughter, lust, and hatred. It is going to be hard to get their minds on study and to hold them to consecutive work. But now as never before should all the energy of parent and teacher be bent upon the accomplishment of this thing. The work of the world for twenty years has got to be done by America. Europe will be so burdened by poverty that the next generation will be practically uneducated. Our boys should be better trained than ever."

Another danger due to the "universal engrossment in the miserable fortunes of our neighbors," continues the writer, is that our church work is liable to suffer. He admits, tho, that war will be the chief pulpit topic on Sundays, and while he

REVIEWS OF NEW BOOKS

FRANCE AND ENGLAND—THE STORY OF THE "ENTENTE CORDIALE"

Barclay, Sir Thomas. *Thirty Years' Anglo-French Reminiscences.* (1876-1906.) Crown 8vo, pp. viii-389. With frontispiece in color. Boston and New York: Houghton Mifflin Company.

In ordinary circumstances this volume would claim unusual attention from students of contemporary European politics, but its intrinsic interest is now enhanced by an opportuneness quite rare among books of its class. Sir Thomas Barclay is a distinguished journalist, formerly a correspondent of the *London Times*, the friend of statesmen and rulers, and one of the best-informed publicists of his period. As a journalist he was the English counterpart of De Blowitz, who, by the way, was his intimate friend and figures largely in the opening pages of the book.

Sir Thomas was one of the chief instruments in bringing about the famous and, as events have proved, portentous Anglo-French alliance popularly known as the *Entente Cordiale*. This fateful compact, looming in the public imagination by reason of its vital connection with the present war, is described in detail in his pages. A large portion of the volume is given up to the history of the *Entente*, in the achievement of which he did yeoman's service. The reader is taken behind the scenes of the involved diplomacy which resulted in the alliance, and is brought into intimate contact with the great figures of European statecraft. It is probably the greatest and culminating act in the modern drama which forms the subject of these pregnant pages—that period which, tho included within the memory of men not yet beyond maturity, has seen such fundamental changes that it seems as if the edifice of civilization had been razed and reconstructed. Sir Thomas, like the Italian historian Ferrero, is struck with the historic distinction of our epoch. He describes in admiring phrase the period so crowded with great events and large achievement which, opening in 1870 with the birth of the French Republic and of Imperial Germany, witnessed extraordinary changes in the social organization due to the rise and progress of democracy as a vital force in the State, and which saw industrial and commercial development with a consequent increase of wealth on a scale hitherto unheard of in the world. Having described the *mise en scène*, the author launches into an intimate discussion of the strategy, the mines and countermines of diplomacy, which preluded the long-deferred outbreak of the conflagration now devastating Europe.

When King Edward crossed the channel to visit France in the interest of the *Entente*, he never dreamed that he was taking a long step in the direction of war. Sir Thomas Barclay and his superiors, working at their utmost strength for the success of the alliance, thought they were furthering the cause of peace. Sir Thomas even had hopes of an additional *Entente* between his country and Germany. *Dis aliter visum*. The titanic conflict now raging casts a baleful and ironic light upon the ill-advised optimism of the pages before us, wherein the reader finds a kind

of apocryphal charm in discerning the fatuity of statesmen before the mysterious Power that rules the destinies of the world.

FERRERO ON ROME AND THE UNITED STATES

Ferrero, Guglielmo. *Ancient Rome and Modern America. A Comparative Study of Morals and Manners.* 8vo, pp. vi-162. New York and London: G. P. Putnam's Sons. \$2.50 net.

With the appearance, a few years ago, of the brilliant work in five volumes on "The Greatness and Decline of Rome," it became evident that a personality of distinction, and of more than ordinary intellectual power, had entered the lists of contemporary European literature. The author, Guglielmo Ferrero, is still in the prime of life, and is not unknown in this country. In 1906 he visited the United States and was entertained at the White House by President Roosevelt. His knowledge of the New World was further extended by a trip to Argentina and Brazil. His present work, with its alluring title, "Ancient Rome and Modern America," is the fruit of these visits.

This book is more interesting and more direct in its significance to American readers than anything yet written by the distinguished Italian historian. It is more intimate in character than his former writings; it lets us know something of the personality of the author. He is a North Italian, upon whose original stock has been engrafted the strain of the Etruscan and Goth, resulting in an intellectual temperament quite rare in contemporary literature. Master of a serious and trenchant style which at times reaches the highest plane and bears the stamp of erudition, into which has entered a modernity of idea tempered by reverence and admiration for the past, he seems rarely equipped. Like Froude, he seems to have been imprinted with the striking resemblance between the Rome of Caesar's epoch and the civilization of our own time; but the subtlety of an Italian intellect, aided by rare philosophic insight, has enabled him to penetrate more deeply into the obscure workings of the Genius of History. He has thus brought to light striking analogies overlooked by the English historian. It is also worth while to note the reappearance, in another form in Dr. Ferrero's pages, of Bryce's fascinating idea regarding the shadowy sovereignty of Rome perpetuated in the modern world in the Catholic Church centuries after every vestige of the Empire itself disappeared.

The author admits that there are immense differences between the two epochs and the two civilizations, but declares his conviction that, notwithstanding these essential differences, the resemblances, far from being fanciful, are actual and wonderful. He invites our especial consideration to what he calls "urbanization," that malady "which corrupted the trunk of the Roman Empire and which is beginning slowly, subtly, insidiously to eat the heart out of the modern world." Neither the assaults of the barbarians from without, nor those of Christianity from within, the author maintains, would have prevailed against the might of Rome, had not the

cancer of urbanization already undermined its strength. This tendency of a people toward congestion, this passion for congregating in cities with the resultant deterioration of morals and corruption, and sapping of the agricultural portion of the population, all of which has its counterpart in contemporary civilization, was hurrying Rome on to its doom.

Yet all this was taking place during a period of unexampled splendor under the sun of the *pax Romana*. From the third century onward this excess of urbanization in the Roman Empire, at first the cause of splendor and apparent civic health, began to show deteriorating effects. The author shows, with much striking detail, how this ancient civic development, with its ominous resemblance to what is taking place in our own time, drained the agricultural resources of the nation, and finally brought on the worst cataclysm in human history:

"The agriculture of the Empire, and with it the Empire itself, received its death-blow. The East and the West split apart, and, left to itself, the West went to pieces. The quality of the works of Rome, the empire founded by her in Europe, including the immense territory bounded by the Rhine and the Danube, lay a vast ruin: a ruin of shattered monuments, of peoples relapsed into barbarism, of perished arts, of forgotten tongues, of laws thrown to the four winds, of roads, cities, villages razed from the face of the earth, swallowed up in the primeval forest which slowly and tenaciously thrust out its tentacles, in that cemetery of a past civilization, and entwined the giant bones of Rome!"

MONMOUTH THE REBEL

Nepean, Mrs. Evan. *On the Left of a Throne.* 36 illustrations. 8vo, pp. 274. New York: John Lane. Price \$3 net.

This is a personal study of James, Duke of Monmouth, issued under a misleading title. The publisher's announcement describes Monmouth as "a Stuart Prince of the left hand—son of Charles II. and Lucy Walter, aspiring to the throne of England, to which he had every right but *The Right*," which he "found it harder to win than the crown of the martyr," while the author believes him to have been "Charles's son, born out of wedlock." It would be ungracious to dispute with a lady who tells us that she has "not attempted to deal with his campaigns—he saw much service and was the reverse of a carpet knight, as is popularly supposed—I have only touched on his Rebellion—and I have merely indicated his place in the politics and intrigues of his day." He has been hitherto treated as "nothing better than a pawn in the great game of history, without a personality of his own." As she has "never yet read a study of Monmouth the man," she has written one.

The author does not deny any of Monmouth's follies, but claims to have gone deeply into "the question of his religion, his enduring love, and his fine finish on the scaffold." Monmouth is treated with a tenderness akin to pity—a pity that he himself seldom or never showed to others. He came into the world "nameless and without honor,"

Little Jack Hoener
Ran to the corner,
Said to the grocery man:
"Some Borden's, please, Mister,
For me and my sister;
Be sure that the bird's on the can!"

How many thousands of American children have grown up sturdy and strong because the Eagle was a household word in their homes.

They were fortunate children whose mothers and family physicians were wise enough to know that as a substitute for mothers' milk nothing is quite so safe, nourishing and satisfactory as

Gail Borden EAGLE BRAND CONDENSED MILK

THE ORIGINAL

If you are having difficulty with the feeding of your baby, you will surely be interested in the experiences of hundreds of physicians and thousands of mothers who have written to give us their unsolicited approval of Borden's Milk.

We will send without charge to any mother two books which embody this experience of many years. "Baby's Welfare," including a valuable feeding chart, was compiled under the supervision of a competent physician. "Where Cleanliness Reigns Supreme" will tell you why you may count upon the absolute purity of Borden's Milk.

stript of names and honors did he go out of it, bearing with him *only his lady's love* and his own simple faith in meeting the Christ in whom he trusted." Sympathetic as is this study, it steps from the sublime to the ridiculous when its author compares Monmouth with the repentant malefactor on the cross.

Of Monmouth's Rebellion, which culminated with the battle of Sedgemoor, July 5, 1685, Mrs. Nepean tells little. It suffices to say, however, that he landed at Lyme-Regis, June 11 of that year, and issued a manifesto declaring James, who had succeeded his brother Charles II. to the throne, to be a murderer and usurper; charged him with superseding the national faith, and asserted his own legitimacy and right of blood to be King of England. At Taunton he was received with acclamation and proclaimed King as James II. At Sedgemoor, near Bridgewater, he attempted to surprize the royal forces that were encamped there, but his troops were utterly routed and he himself became a fugitive. He was captured near Ringwood, in Hampshire, three days later, and on that very day wrote to King James, in terms of the most unmanly contrition, ascribing his wrong-doings to the action of others and imploring an interview. On the 14th his petition was granted, and all the accounts of this interview agree that Monmouth's behavior was disgraceful. As the chief instrument in disturbing the peace of the country he deserved no mercy, and was shown none by the King, whom he had maliciously libeled and treacherously attacked. There followed two painful interviews with his wife, who had lost all respect for him, owing to his neglect and amorous intrigues with other women, and for whom he himself bore no love, having abandoned her for Henrietta Wentworth some time before. Then he address another letter of abject protestation to the King, imploring forgiveness, and, as a last hope, offered to embrace the Catholic faith. But the sincerity of his "conversion" was doubted, and the Church, after due investigation, declared that he cared more for his safety than for his soul. Faithless in wedlock; untrue to himself, to country, creed, and king, he expiated his crime on Tower Hill, July 15, 1685, suffering the death of a traitor. And, to quote our author, "After all, what does it matter now?"

RECENT NOVELS

Von Hutten, Bettina. *Maria*. Pp. 259. New York: D. Appleton & Company. \$1.35 net.

This is an interesting love-story, but not particularly convincing, nor satisfactory in its conclusions. The main concern of the reader comes from the attachment between Maria, a young vocalist, and "Mr. Frederick," otherwise "H. H. Prince Augustus Frederick, of Zealand," a love which was as unreasonable as it was sudden. Maria had a wonderful voice, but all her teachers said there was one "lack." The book tries to prove that that lack is due to lack of the experience which comes from love and suffering. First, there is separation because of disparity in ranks, then a loving cousin intervenes and an arrangement is made for the Prince to accept an earldom. The day of the wedding approaches, with everybody apparently happy until Sarmania needs a ruler and Frederick is appointed king. So the love and suffering go on. But the Prince is not the only lover, nor the only sufferer.

Tomak, the dwarf accompanist, and the artist, Ferrari, pay their tribute to the lady of great beauty. Maria, however, can not bring herself to more than casual interest in her dear old father, her lovers, or her snobbish brother, with all his family troubles. After the Prince has a wife and child, he meets Maria and the struggle is renewed. Shall she become a great singer through renunciation of love, or sell herself and go to Ipniz to be near her beloved? Tomak is her one faithful friend, and whatever strength Maria has seems to come from him. We wish the Prince had seemed worthier of such tenacious affection.

Tehekoff, Anton. *Stories of Russian Life*. Translated by Marian Fell. Pp. 314. New York: Charles Scribner's Sons.

We have read Russian stories before, but few have given us more genuine pleasure than this series by the greatest of recent Russian writers, Tehekoff, who died in 1904. He is the most widely read author in Russia to-day. The twenty-four tales display a depth of feeling that is remarkable, with here and there a subtle humor wholly charming. While it is difficult to select from such uniform excellence, those entitled "Dreams" and "The Night Before Easter" are gems; while "The Decoration" shows the author's humor at its best. "In the Ravine" gives a picture of Russian village life that is natural and convincing, the characters being drawn with a fidelity that makes the reader feel that he is watching the actual action of the story. The translator is to be congratulated on having caught the spirit of the author. Nothing of the original strength of the tale seems lost to the reader.

Brown, Alice (Martin Redfield). *My Love and I*. Pp. 377. New York: The Macmillan Company. \$1.35 net.

Two years ago, when this book first appeared, there were many speculations in regard to its author. Critics agreed that its vigor and virility plainly indicated masculine authorship. Now comes the announcement that "Martin Redfield" is Alice Brown, the well-known writer, just now very much in the public eye because of her winning the ten-thousand-dollar prize in the Winthrop Ames's play contest. It is good that the book was judged on its merits first. While some of the conditions portrayed are discouraging, they are true to life and show how a peaceful and contented every-day life may be built out of seemingly chaotic and hopeless conditions. Martin tells his own story, reproducing the complexion of his past so that the tale, "if not good, is at least faithful to what was." He tells of his New England parentage, his formative years in Trinidad under the influence of his foster father, Egerton Sims, his establishing himself in a Boston boarding-house where he met those who were so much involved in his later life. We learn to know, appreciatively, Blake, the poet, Mary, who typified everything that was helpful and self-sacrificing in woman, and, at the "Toasted Cheese," many a good comrade among the literary and newspaper world. When his genius for poetry and prose was just beginning to bud and blossom, he married Mildred Lee, whose sweet and gentle exterior concealed a nature cold, ambitious, and calculating, whose demands kept him so busy writing "pot-boilers" that he had no time for inspiration or literary effort. Martin is not spared the tragedy of meet-

ing the right woman when it is too late, out the duty and responsibility imposed on him by his son, and the sane and helpful advice of Ellen Tracey, who insists that he shall never cease to be "splendid," finally help him to evolve a working basis of existence. The vital part of the book illustrates the conquering power of habit and honor over more feverish passion.

Marquis, Melina Melcher. The Torch Bearer. Pp. 314. New York and London: D. Appleton & Company. \$1.30 net.

Sheila Caldwell was a girl of unusual aspirations and ideals, whose life with her devoted grandmother and her teacher friend, Peter Burnet, fell in pleasant paths. Her genius for writing met only with encouragement and approval. But with the springtime of youth came love. She wedded her childhood friend Ted Kent, convinced that there was no other in the world like him. Ted had become editor of the home paper, and was a clever, bright, lovable young fellow in every way, but he didn't sympathize with Sheila on the question of women authors, thinking motherhood and authorship incompatible, and believing that nothing should interfere with the former. This difference of ideas gives the theme. Sheila, finding she hasn't Ted's approval, takes to writing secretly. While at her desk, her little son is exposed by the nurse to dangerous illness. In a fit of remorse, Sheila makes a vow that, if Eric is spared, she will sacrifice her talent and write no more. Then life becomes a problem, and she gradually learns to crave the sympathetic companionship of Friend Peter until Ted objects. After the stress time of disappointment and temptation, Sheila finds comfort and consolation in her son's dawning literary genius, and Ted, who has never failed in loyal devotion, assures her that the talent which she possess has blossomed in Eric. Then they unite to direct his power so that he may be the "torch bearer" for future generations.

Phillipotts, Eden. Faith Tresilion. Pp. 409. New York: The Macmillan Company. \$1.35 net.

This is a book of stirring adventure and sensational experiences, dealing with smugglers and their struggles with the excise men in the early part of the nineteenth century and with a background of political unrest at the time when Napoleon was at Elba. There are fine characters in it. Superstition, intrigue, love, and jealousy pervade many thrilling scenes. Faith is the lovely daughter of the best-known smuggler on the coast. It is his death that opens the story and leaves the captaincy of the *Gray Bird* to Nick, thereby causing dissatisfaction among some of the men. Emma Tresilion, the mother, is the compelling character—a woman of enormous size, helpless from the waist down, but with a quick brain, a quicker tongue, and a nature that brooked no opposition. With her pipe and her brandy, her tremendous bulk and her fantastic costumes, she is a startling but interesting character. Faith's love for the excise man, Robert Pawlett, and the complication arising from her loyalty to her own family of smugglers, form one side of the plot, which is closely connected with others. Warner Baldwin and the "Bad Egg" furnish villainy; Paul Deschamps and Honorine, the tragedy. There are many dramatic and blood-curdling episodes before virtue is suitably rewarded and vice is punished, but the reader is satisfied with the final outcome.

"Yes, James
It is a
good
menu"

"You are quite right to include Campbell's Tomato Soup"

And many a clever hostess says practically the same thing, on many important occasions.

Its unusually appetizing quality makes this favorite Campbell kind entirely suitable with quite an elaborate menu. Often it is the precise feature needed to make such a menu a complete success.

It is easily prepared in various tempting ways; and it is readily adapted to the character of the meal.

Prepared as a Cream-of-Tomato—according to the simple directions on the label—it is particularly rich and inviting.

Do you enjoy the full advantage of its many delightful qualities on your table?
Why not order a dozen today?

CURRENT POETRY

As the war goes on, the poets of England grow more and more intensely patriotic. The following strong colloquial lines, published originally in the *London Chronicle*, are an example. Mr. Begbie's poem was not written in response to an impulse wholly esthetic, nor is its appeal of a lofty patriotic character; it is straight propaganda, calculated to bring in the needed recruits, and the fact that it has been reprinted on huge posters and displayed in shop windows and on walls all over London as a part of the campaign is its reason for appearing here. These stanzas have lately been set to music by Sir Frederic Cowen, the composer, and all England is now singing the song.

FALL IN!

BY HAROLD BEGBIE

What will you lack, sonny, what will you lack
When the girls line up the street,
Shouting their love to the lads come back
From the foe they rushed to beat?
Will you send a strangled cheer to the sky
And grin till your cheeks are red?
But what will you lack when your mate goes by
With a girl who cuts you dead?

Where will you look, sonny, where will you look
When your children yet to be
Clamor to learn of the part you took
In the War that kept men free?
Will you say it was naught to you if France
Stood up to her foe or bunked?
But where will you look when they give the glance
That tells you they know you funk?

How will you fare, sonny, how will you fare
In the far-off winter night,
When you sit by the fire in an old man's chair
And your neighbors talk of the fight?
Will you blink away, as it were from a blow,
Your old head shamed and bent?
Or say—I was not with the first to go,
But I went, thank God, I went?

Why do they call, sonny, why do they call
For men who are brave and strong?
Is it naught to you if your country fall,
And Right is smashed by Wrong?
Is it football still and the picture-show,
The pub and the betting odds,
When your brothers stand to the tyrant's blow
And England's call is God's?

The German poets are probably not idle, but their product is not reaching us. In the meantime Mr. Viereck is almost alone here in voicing German sentiment in his *International* and *Fatherland*. In this poem he appeals to America:

THE GERMAN-AMERICAN TO HIS ADOPTED COUNTRY

BY GEORGE SYLVESTER VIERECK

The great guns crashing angrily
Sound, distant echoes, in our ear.
We pray for those beyond the sea
Whose lives to us are very dear.

We catch a mother's smile. We see
In thought a father's hand again.
We see the house and, through the trees,
A girl's face in the window-pane.

May God above them stretch His hand.
For men are mowed as fields of rye.
Destruction rides on sea and land
Or drops, like thunder, from the sky.

Columbia, tho thou shed no tear,
Must thou fan hate with evil breath
Through ghoul's in easy chairs who sneer
While these our brothers go to death?

Shall these that are thy children fling
Their gibes upon our brothers' scars?
We taught our hearts thy songs to sing,
Ay, with our blood we waged thy wars.

We fought thy fight when Britain's paw
Upon thy country's heart was laid,
When the French eagle's iron claw
Perturbed great Montezuma's shade.

The dry bones of our kinsmen rot
In Gettysburg. Was it for this?
Are Schurz and Steuben both forgot?
Nay, thine is not a traitor's kin.

Let not thy words belie the right,
Turn not from them that are thy kin!
Thy starry crown will shine less bright
If freedom lose, if Cossacks win.

It is refreshing nowadays to come upon a poem that is not about hate and blood men in khaki, and bursting shells, especially verses so gay and exquisite as "The Daisy," which we take from *The Windsor Magazine*.

THE DAISY

BY AGNES GROSSE HERBERTSON

The daisy like a Quaker sits
Among the grasses,
The while the vagrant sunshine flits,
The shadow passes;
She does not flirt upon the wind,
Like blossoms of a lighter mind.

Bluebells and buttercups, they try—
The cowslips, too—
To smile at every passer-by
As pansies do;
The daisy scorns those airs and graces,
She does not care for such grimaces.

Her simple gown is starched and white,
And frilled precisely;
She keeps it clean by day and night,
And holds it nicely;
She does not flaunt her frills around,
Nor let them drizzle on the ground.

She has a wide and limpid eye,
But all her glances
Are given to the distant sky,
And no one chances
To find her nodding 'gainst her will,
Like primrose or like daffodil.

She is, indeed, a dame discreet,
A Quaker lady;
Not knowing any walled retreat,
Nor corner shady;
But living on a common earth—
Not all unconscious of her worth.

As neutrality is at a premium nowadays it is consoling to find not a few of our American poets voicing their allegiance not with any people or nation, but with the cause of peace. In the following, taken from the *New York Sun*, the lilt of the lines strengthens most admirably with its mockery the irony of the verses.

THE CARNIVAL

BY CLINTON SCOLLARD

Oh, the autumn tide is the carnival-tide,
And what shall the carnival wear?
Shall it be the blue of the haze-hung skies
That is blent with gold and with vapors?

Reduced One Half

In Thickness and Weight—The India-Paper Edition

Webster's New International

with **New Gazetteer**, the supreme authority on the pronunciation of all geographical names, and with meaning of war terms, is of timely value while the whole world is following, with breathless interest, the making of European history.

This New Creation The *Merriam Webster*

has nearly 8,000 pages, with type matter equivalent to a **15-Volume Encyclopedia**, within the limits of a single volume! Only $2\frac{3}{4}$ inches thick, in Rich, Full Red Leather Binding, with Gilt Top.

1914 ATLAS (With War Map) FREE

to readers of **The Literary Digest** who take advantage of the offer here made to

Deliver for \$1.00

and easy payments thereafter of only a few cents a week, either the **India-Paper** or **Regular Edition** in full Red Leather Binding. (In United States and Canada.)

India-Paper Edition →

Printed on *thin, opaque, strong*, expensive India Paper just imported for this edition. It has an excellent printing surface, resulting in remarkably clear impressions of type and illustrations. What a satisfaction to own the *new Merriam Webster* in a form so light and so convenient to use! This edition is *one half* the thickness and weight of the regular edition. Size $12\frac{3}{8}$ in. x $9\frac{1}{4}$ in. x $2\frac{3}{4}$ in. Weight $7\frac{1}{2}$ lbs.

Regular-Paper Edition →

Printed on strong book paper of the highest quality. Size $12\frac{3}{8}$ in. x $9\frac{1}{4}$ in. x $5\frac{1}{2}$ in. Weight 16 lbs. Both Editions are printed from the same plates and indexed.

Over 400,000 **Vocabulary Terms**, and, in addition, 12,000 **Biographical Names**, nearly 30,000 **Geographical Subjects**, besides thousands of other References. Nearly 3,000 Pages. Over 6,000 Illustrations.

The only dictionary with the *New Divided Page*, characterized as "A Stroke of Genius."

"To have this work in the home is like sending the whole family to college."

THE ATLAS

Is the 1914 "New Reference Atlas of the World," containing nearly 200 pages, with 128 pages of maps, beautifully printed in colors, with marginal reference indexes, besides illustrated description of **PANAMA CANAL**, all handsomely bound in red cloth, size $10\frac{1}{4}$ x $13\frac{3}{8}$.

To those who respond at once we will send a new War Map in colors, size 12×16 , showing the European situation at a glance and also a "Red Facsimile Booklet" of interesting questions with references to their answers.

Walks 100 Miles a Week

Here is an unsolicited letter which tells what a real walker thinks of Cat's Paw Cushion Rubber Heels. Think of walking 100 miles every week—5200 miles in a year—that man ought to know something about shoes and heels.

The Higgins Leather Co.
1407 Franklin Avenue

Foster Rubber Co.,

St. Louis, Mo., July 24th, 1914

Gentlemen:-

Our attention was recently called to a remarkable test of Cat's Paw Heels and we thought possibly it might interest you. For some years past, Frank H. Krieger, a walker with more than a local reputation, has been wearing a heel of another make. This walker, "the O'Leary of the West", walks on an average of 100 miles per week, all through the year, weather conditions making no appreciable difference.

About one year ago he gave his shoemaker instructions to put on a certain kind of rubber heel. The shoemaker misunderstood or was out of that make of heel and placed a pair of "Cat's Paw" heels on his shoes. He concluded to give them a trial. He states that the heels were no much longer than the other make that he will not now have any other heel attached but "Cat's Paw". For long, hard wear he says he has never had a heel that has given him the satisfaction that "Cat's Paw" have.

This is only another instance of the exceptional wear of "Cat's Paw" heels -- in fact we do not know of a harder user of heels, and we thought his statement might be of interest to you.

We spoke to this party saying we would like to make this statement to you and he was perfectly agreeable, saying that the heels had given him such satisfaction, because of the Foster Friction Plug, which prevents slipping and superior wearing qualities, that he would be more than pleased to have us do so.

Very truly yours,

The Higgins Leather Co.

H. F. Higgins

WM-2

This experience is typical of millions who have found that Cat's Paw Heels make walking easier and safer. They make good because made right. Cost no more than ordinary kinds. 50 cents attached. All dealers everywhere.
Foster Rubber Co., 105 Federal St., Boston, Mass.

Shall it be the pled soft green that lies
On the meadow slope and the mountainside,
Shimmering far and fair?

Nay, none of these for the carnival-tide,
For red is the carnival wear!
And never a redder carnival alone
Than now where the Sun and the Aisne flow on
In the red of the eve, in the red of the dawn,
And the war-fires rule and the thunders ride
Under the autumn air!

Of what avail is this carnival-tide,
This blood red carnival wear,
These carnival lines that rock and reel
And eddy and sully and meet and wheel
And break like a surge on a shore of steel?
Ay, what, when the doom-led men have died,
Does the King of the carnival care?

In "The Twilight of the Kings" that follows, Miss Flint blends, on the theme of "Götterdämmerung," the old idea of divine retribution for past wrongs, with the new and not unpopular belief that this war may be the last great war that the world will know. The poem is quoted from the New York Times.

"THE TWILIGHT OF THE KINGS"

BY ANNIE JOHNSON FLINT

Three Kings there be, and one is mad
And one is weak and one is old,
And all are blind—they will not see
The Hand that writes a doom foretold:
And all are deaf—they will not hear
The Voice that speaks, the Word it brings—
Voice of the People and of God:
"This is the twilight of the Kings!"

From mountain-pass, from fertile plain
Where harvests wait the reapers' tread,
From vineyards on the sunny slopes
Where drossers of the vine lie dead,
From homes where starving children wait
The father's coming—and in vain,
From pallid cheeks and voiceless lips
Of manhood wrecked and manhood slain,
From smould'ring roofs and blackened walls,
From idle wheels of labor stilled,
From ancient battle-fields, and new,
That reek of blood unjustly spilled,
A solemn Voice that cries aloud,
Through all the world the portent rings:
"The sword shall free us from the sword—
This is the twilight of the Kings!"

It is the twilight! Spent the day
Of splendor, tyranny, and crime,
The long, long day that had its birth
Within the far-off dawn of Time—
The day of iron hand and heel,
Of bondage, cruelty, and woe,
The day of Babylon and Rome,
Of Louis, Herod, Pharaoh,
The night that follows on that day
Across the world its shadow flings:
The outworn dynasties shall pass—
It is the twilight of the Kings!

Fast falls the night; beyond its gloom
There shines the dawn of better things—
The light of liberty and peace,
Of justice higher than the Kings,
When breaks that dawn, no more one man
Shall move a million at his will,
Like pawns upon a chessboard played,
To vaunt his power and his skill;
No more one man, by "right divine,"
On age-old wrongs his House shall build,
No more the slogan "Might makes right"
Shall serve his selfish greed to gild,
Their glory fades as fades the day,
In fire and blood their sun has set,
Tho in the swiftly dark'ning skies
A smoky crimson lingers yet;
For hopeless, when the tide has turned,
To fight against the trend of things,
The thrones are rocking to their fall—
It is the twilight of the Kings!

PERSONAL GLIMPSES

BARRIE "AT HOME"

THE other day in New York City a friend stopt in at the office of Daniel Frohman's publicity manager and remarked upon the fact that James Barrie was in town. "Nonsense," was the reply, "Mr. Barrie is in England. We would know if he were here, if any one did." But when, all day long, other people repeated the news, it began to look as tho there must be some truth in it, and later it was most definitely substantiated by the entrance of a quiet little man who could be no other in the world but James Matthew Barrie himself. His entrance into America, his second visit, was most characteristic, for, known tho he is throughout the world by all lovers of *Peter Pan*, *Sentimental Tommy*, *Maggie Wylie* (who knew "What Every Woman Knows"), and a host of other children of his fancy, yet Barrie the man is known even by sight to few outside of the intimate circle of his friends. Publicity is the one thing he shuns. Only once has he been successfully interviewed, and that but recently, by John D. Williams, who publishes a delightful account of that interview in the *October Century*. In this article is related an amusing account of one unsuccessful interview. It appears that Barrie's apartment in the Adelphi Terrace House in London bears no name to indicate the identity of its tenant. In spite of this attempt at concealment, however, one ambitious newspaper man discovered the secret and had the good fortune, as he thought it, to enter the building just six feet behind his victim. Barrie, unconscious of pursuit, entered the elevator and started upward. Too late to catch him there—

The reporter took to the cylindrical flight of stairs that winds upward about the elevator. Then through the iron grating between the stairs and the slowly climbing elevator the reporter, after disclosing his identity, conducted this interview, all the while walking up-stairs, but no faster than the elevator.

"Do you always smoke an old pipe, Mr. Barrie, as people say you do, when you are at work?"

"Wouldn't you rather come into the lift and ride instead of walk?" replied Barrie.

"Everybody's glad at the report that you're at work upon a new novel. Is it named yet?" continued the reporter.

"I think you're suspicious of the dependableness of the lift," answered Barrie; "but you shouldn't be. It's a perfectly honest lift."

"They say," persisted the reporter, still trudging up the stairs and keeping level with the elevator, "that you're altering your vein for the next piece of writing that you do."

"Step into the lift, and I'll explain to you how it works," Barrie called back through the iron grating.

With a sharp clank the elevator then

Suppose your children had their choice of homes to which to go for breakfast. And one home offered them a dish like this—Puffed Wheat or Puffed Rice with cream and sugar, or mixed with any fruit. Dainty grains, flaky, crisp and tempting—eight times normal size. Grains that taste like toasted nuts. Where would they go for breakfast?

Suppose your folks, for a dairy-dish supper, had their choice of bread or crackers, or Puffed Wheat or Puffed Rice. And they saw these toasted Puffed Grains—airy, thin, inviting—floating on bowls of milk. Grains four times as porous as bread.

Which would they choose for their milk?

Puffed Wheat, 10c
Puffed Rice, 15c

Western Electric Vacuum Cleaner

A New Model at a New Price

\$32.50

Including extension nozzle for cleaning under furniture—an exclusive feature

Vacuum cleaners can be purchased at all prices. But look further than the price tag.

Here is a cleaner with a reputation back of it—more than thirty years of manufacturing experience. When we introduce this new cleaner at the price of \$32.50 we claim for it the best value in the vacuum cleaner market.

You never saw one just like it. This is the cleaner *NOT* built like a broom.

It is designed along new lines.

The illustrations in the circles tell some of the story. The handle in a natural position—the double frame supporting the dustbag—both make for easy operation and convenient storage.

The extension nozzle for cleaning under low furniture is part of the regular equipment—likewise a new type of attachment for picking up threads.

This Model 11 is so new and so unusual that you cannot afford to buy a vacuum cleaner without learning first about this one. It can be easily purchased in your city or town.

There is a Western Electric Vacuum Cleaner for every need—both portable and stationary types.

WM. H. LUTTON CO.

321-3 Kearney Ave. Jersey City, N. J.

stopped automatically at the third floor, and Barrie stepped out, extending his hand to the reporter.

"Tell me," he said, "is this an interview?"

"Not exactly," replied the reporter; "I only meant it for a conversation."

"That's good," said Barrie, warmly shaking the hand he held; "for, you see, I mustn't be interviewed, because if once I begin, I shall never know when or how to stop. Already I am sure I have been more illuminating than is the custom outside of public life. Perhaps it was the exhilaration of the lift." With that, Barrie disappeared beyond the double doors.

Mr. Williams describes the Victoria Embankment, just at the end of Roberts Street, as the one spot in London best haunted by the personality of Barrie. Here of a night, through the dim light of the one gas-lamp, you may have the good fortune to discern, he says, a little man hurrying along in the middle of the street, puffing smoke from a brier pipe, getting over the ground with a stride almost as long as himself, and as inconspicuous of dress as any day-laborer, but with a face that you can not pass without stopping and looking after—that is J. M. Barrie. But do not venture to hail him. That would embarrass him greatly, and hurt his pride in his beloved London, which is, in his own words, "the only city in the world in whose streets you could stop to eat a penny bun without people turning around to look at you." Mr. Williams describes his interview, in part, as follows:

The visitors to Barrie's part of Adelphi Terrace House are so few that on the sound of the elevator-doors opening, Barrie's front door is opened, too, by a pleasant-faced butler, unmistakably Scotch, who bows you into the room.

J. M. Barrie's hand-shake is as quaint as himself. He doesn't wait for your part of the ceremony, but he takes your hand away from you, lifts it as high as his shoulder, gives it a firm, warm shake, and drops it in mid-air. At the same time he makes a quick, low bow of odd formality; and then you see that the top of Barrie's head is level with the top of your shoulder. For he is, and he isn't, a little man. When he is in his workshop, among his books, he wears a pair of light "Congress" shoes that have been converted into house-slippers by having their heels summarily knocked off, and have got even for the outrage by letting their owner down several inches in his own house. The surprisingly small feet these odd slippers snugly enclose are almost never at rest. With soundless, lightninglike rapidity they dive everywhere about the room, the willingest feet a man ever had; and then as quickly they stop, and one disappears: it is curled up under its owner. When Barrie settles himself for a good long talk he sits like a tailor, or, rather, like half a tailor, firmly squatted on one foot or the other. The right seems the favorite. . . .

If you have ever seen the first act of "Peter Pan," you have as good as seen the room where J. M. Barrie does all his writing. Every night when the curtain goes down after the flight of the children through the window and the stage-manager cries "Strike!" as a signal to

Detroit Electric

Announcing 1915 Models

Six splendid new body designs, mounted on a chassis of demonstrated mechanical perfection—simplified, refined and improved, yet not embodying radical changes in principle—make up the Detroit Electric line for 1915. It includes broughams of varying passenger capacity, with front, rear or duplex drive, also a cabriolet.

A Car for Men and Women

The electric car is no longer merely a woman's car. The performances of the Detroit Electric in mileage and speed have dispelled this old delusion.

True the electric has many qualities which make it the preferable car for women, but these features have proven to be the same desirable qualities which men are seeking in other types of automobiles but cannot get, except in an electric, namely: dependableness, freedom from mechanical annoyances, ease of operation, quietness, cleanliness, and most of all, low cost of operation, maintenance and depreciation.

If You Use Only One Car in the Family Buy a Detroit Electric

98% of all automobile trips, statistics prove, do not exceed a total of sixty miles at an average speed of twenty to twenty-five miles an hour, which means that 98% of all trips are within easy radius of the Detroit Electric. Don't pay a premium on an entire year's driving for a service required only 2% of the time.

Men Who Have Learned the Utility of the Detroit Electric Never Give It Up

To the man or woman hesitating between another type of car and the Detroit Electric this fact is significant: we do not know of a single instance where a man who has given the Detroit Electric a thorough trial and has learned from actual experience the great utility of this car has ever gone back to any other type of car for his ordinary needs.

Detroit Electric is the Choice of One-Third of All Electric Automobile Buyers

It is a fact that to be a successful manufacturer of high grade automobiles requires a certain annual volume to permit the expense of making patterns, tools and jigs, by which method only can they manufacture strong drop forgings, and attain the accuracy and perfect interchangeability of parts which insure working harmony throughout the car.

The Anderson Electric Car Company builds one-third of all the electric pleasure cars made today. It has met and crossed that dividing line in volume which separates strong drop forgings from heavy cheap castings, perfect accuracy from near-accuracy, first quality from second quality.

Our 1915 Models are now in the hands of our dealers everywhere. See them today.

LEADERSHIP!

Electric-car owners turn naturally to the Ohio Electric for advanced ideas of real value

Last season the Ohio Electric was universally admitted to be two years in advance—in design, in comfort and in operating simplicity.

The new Fall models maintain this leadership. The magnetic control, magnetic brake and double drive—the operating combination which made handling this Electric child's play—is still an exclusive Ohio feature.

The exquisite body design, which attracted instant admiration everywhere, has been still further refined. Crown fenders, beaten by hand from one piece of aluminum, make possible an added harmony of line. We can supply either worm or helical gear-driven cars, at the owner's option. Literature on request.

THE ENVIED
ELECTRIC

dismantle the nursery, behold then the features of Barrie's den.

Where *Michael's* and *Wendy's* beds always stand, at the left, in Barrie's workroom there is a large, flat-top desk. All his writings since "*The Little Minister*" have sprung into being from a little space, about a foot wide, cleared away at the top of that otherwise hopelessly cluttered desk. In place of *John's* bed, at the right, there is a brown, upholstered easy chair. That is Barrie's favorite corner. He presses so deep down into this chair that he ruffles up the hair on the back of his head. But suddenly he sits bolt upright to talk or to listen or to make his only gesture, which is to smooth down the hair he has ruffled. Then he presses deep down once more, and ruffles it all over again.

At the back of the room, instead of the nursery bathroom, there is a small window streaming daylight on the desk. And the door leading to *Mrs. Darling's* room, at the right, is an extra bookcase, the only one with glass doors that Barrie possesses. All remaining wall-space is covered with book-shelves, stuffed to overflowing and rearing themselves ceiling high. But the nursery fireplace, where *Nana* warms the children's nightclothes, stands in exactly the same place in the room. It has the same black fender and guard and the same opening described in the manuscript of "*Peter Pan*"; and the only thing on the mantel-shelf over it is a picture of Barrie's mother.

There are two other enormous windows at the back of the workroom, just like the one through which *Peter Pan* flew away with the *Darling* children, and these windows, too, look out on rooftops. Since Barrie came to live in his six-room apartment, Adelphi Terrace has become a kind of colony of playwrights. Underneath the Barrie apartment lives *John Galsworthy*, and a floor farther down, *Granville Barker*. Just across the way, at No. 10 Adelphi Terrace, *George Bernard Shaw* has rooms exactly facing Barrie's.

"I've never seen Shaw," an American said to Barrie, when sitting with him one day as his guest for luncheon.

"Well, you shall, my lad, and at once," answered Barrie. And at that he took from the table two or three crusts of bread which he was presently throwing through the open upper half of his dining-room window with all his might. Soon a face, as of a grinning satyr, appeared in the corresponding window across the way. Quickly the upper half of the window over the way was pulled down, and a voice shouted, "An invitation to a feast, Barrie, or are you casting bread upon troubled waters?"

In spite of the fact that Mr. Williams gives the reader a delightful and intimate picture of the much-beloved playwright, he confesses that he, too, found some difficulty in getting Barrie to pose in just the desired manner for the interviewer's pen. Mr. Barrie is most obliging, and explains everything most willingly, but the explanations have a way of leaving one almost as uncertain of the truth as he was before. For example, he was asked how he came to conceive the idea of his remarkable playlet, "*The Twelve-Pound Look*." He responded with instant cordiality, as follows:

"Well; I will tell you how that came

"CREO-DIPT" Shingles are the only ones that will last a lifetime. An example of good painting is shown with creosote stain that harmonizes with the surroundings. These shingles last a lifetime.

about. Yes; I will tell you the very beginnings of 'The Twelve-Pound Look.' You see, I had the malaria a little time ago, and after a while I was convalescent, and on the first day of the convalescence I came out to the desk over there. That's where it all happened, over there by the window. 'The Twelve-Pound Look' is my convalescence from the malaria."

This is the nearest one can come to finding out directly from Barrie the Barrie method of workmanship, so far as there is any method at all beyond the economic pursuit of definite ideas of human interest. There does exist a snap shot in words—in fact, in Barrie's own words—that gives a glimpse of him just as he looks and acts at the desk "by the window." But this, too, he has divulged only to illustrate his comical habit of unconsciously making faces like the faces of his characters while he is in the act of contriving their dialog.

"It is my contemptible weakness," he says of himself, "that if I say a character smiled vacuously, I must smile vacuously; if he frowns or leers, I frown or leer; if he is a coward or given to contortions, I cringe, or twist my legs until I have to stop writing to undo the knot. I bow with him, eat with him, and gnaw my mustache with him. If the character be a lady, with an exquisite laugh, I suddenly terrify you by laughing exquisitely. One reads of the astonishing versatility of an actor who is stout and lean on the same evening, but what is he to the novelist who is a dozen persons within the hour? Morally, I fear, we must deteriorate; but this is a subject I may wisely edge away from."

The bit of London that Barrie best loves is found in Hyde Park, "on the shores of a wondrous lake." "It is easily found, any fair morning," says Mr. Williams, and he gives Barrie's own directions for reaching it:

"Before you go in at the gate," he says, "you speak to the lady with the balloons, who sits just outside. This is as near being inside as she may venture, because, if she were to let go her hold of the railings for one moment, the balloons would lift her up, and she would be flown away. She sits very squat, for the balloons are always tugging at her, and the strain has given her quite a red face."

All perambulators lead past the lady with the balloons, and then enter the Broad Walk. Presently the Broad Walk is met by the Baby's Walk, and, by following this, you come to the lake on the shores of which is Barrie's best-beloved London.

"It is a lovely lake," says Barrie, "and there is a drowned forest at the bottom of it. If you peer over the edge, you can see the trees all growing upside down, and they say that at night there are drowned stars in it. If so, *Peter Pan* sees them when he is sailing across the lake in the Thrush's Nest. A small part only of the Serpentine is in the gardens, for soon it passes beneath a bridge to far away where the island is on which all the birds are born that become baby boys and girls. No one who is human, except *Peter Pan*, and he is only half human, can land on the island; but you may write what you want, boy or girl, dark or fair, on a piece of paper, and then twist it into the shape of a boat, and slip it into the water, and it reaches *Peter Pan's* island after dark."

1/2 Ton Less Weight

THE NEW LIGHT BAKER ELECTRIC

Weighs a Full Half Ton Less Than Many Other Electrics

Easy Steering: High Speed and Mileage: Reduced Upkeep

Cost: Steering is no effort. Imagine the relief in being rid of 1000 pounds when driving over a rough pavement through a jam of traffic. And speed! 23 miles per hour—probably the greatest ever built into an electric coupe. Better speed and just as good mileage with 32 cells of battery as heavier electrics with 40 to 42 cells—weight is the greatest handicap to both speed and mileage. Much lower cost of upkeep—weight is the most expensive thing about a motor car; it wears out tires, consumes power, grinds out bearings, increases repair bills. Longer life of car—excess weight pounds itself to pieces. Rides with unusual comfort—light body hung low on long chassis equipped in the rear with Cantilever springs. Light, graceful exterior impossible with heavy bulky cars.

Unique Seating Arrangement: 98 per cent of the time electrics carry four passengers and under. 71 per cent of the time, one or two passengers. The new light Baker is designed to meet these actual conditions. It is a roomy four-passenger Coupe, instantly convertible into a two or three-passenger car merely by folding back the front seats (new disappearing type) out of sight and out of the way. Think of the pleasure of riding without empty front seats.

Advanced Equipment: Frameless windows throughout; front window drops way down. Invisible drip moulding; fixed rain visor. Mechanical window lifts; automatic circuit breaker; automatic door switch for interior lighting; combination eight-day clock and odometer. Worm drive axle; crown metal fenders. Exquisitely rich interior upholstered with exclusive imported fabrics in beautiful Pointe colorings. From every standpoint this new light Coupe is the finest Baker Electric ever made.

TREASURES OF THE HOUSEHOLD

Every household has its moments of danger, when even a scene of merrymaking may be turned into a sudden tragedy. A candle, a lamp, a box of matches, through a single careless act, may rob the home of its treasures and fill the heart with lifelong sorrow.

THE PYRENE FIRE EXTINGUISHER gives, not protection alone, but that which is equally important, the *constant feeling of security*. Aside from its efficiency when the fire does come, it repays its modest cost a hundred times a year in peace of mind.

Hanging on the wall, it constantly reminds you that it will throttle at its inception every form of fire—the gasoline and electric fire, the kitchen grease fire, as well as the ordinary blaze. So handy that a woman or child can use it—may be readily refilled. Indorsed and used by the largest institutions in the country.

At Leading Dealers Everywhere. Write for Literature.

WHERE PLAY OUSTS COMMERCE

TO each city its own peculiar municipal problems. The city of New York has recently arrived at the solution of a problem that has long persisted. What is to be done with the children of the poor, and where can they play? If the poor would only not live so close together, or if the children that swarm the tenements had only the sense to play at jig-saw puzzles within-doors, or to walk up to Central Park, three miles away, the answer would be an easy one. But children are not connoisseurs in the art of playing; they are gluttons. They want a lot of playing, the harder the better, and they want it right away, without having to go in search of it. Dark hallways and narrow fire-escapes do not allure for long, but there, in the street below, where all the world clatters, clumps, and crashes back and forth, there is playing enough for a lifetime of childhood. So they have thronged the streets, and, as a consequence, every little while, or occasionally several times in the same day, an ambulance is called and a limp little youngster, who spent his or her playtime a bit too lavishly, pays toll for the others' happiness. Carl Beck, a settlement-worker in New York's East Side, tells in the *New York Press* how he watched the children in the street and came to the firm conclusion that means must be taken to give them play space at a lower cost than life and limb:

I spent fifteen minutes in observation one afternoon on the balcony of the University Settlement, overlooking the playground on Eldridge Street, to check up the number of residential tenements on the block. In that time one gang of boys was playing "cat" in the street with a manhole as a base, and as teams passed every minute they had to play and disperse and collect again, keeping right on just the same, playing under difficulties.

Ten yards away another gang of eight boys was playing baseball with a soft gum ball, the rung of a ladder as a bat, and another manhole as a base. They were chasing and catching the ball under the heads of running horses. At the same time against the side of the schoolhouse two boys were playing handball with the sidewalk as the court and a pedestrian crossing the court every thirty seconds.

I was about to go in from the balcony of the settlement when I saw below me on the street a fast-moving furniture-wagon slacken speed. The horse's head was pulled high in the air; he was sliding on all fours, being held back by the driver from running down a little girl, not more than three, who was strutting across the street to join her playmates. It is a common sight. Accidents are many. Narrow escapes are multitudinous.

Multiply what I saw in fifteen minutes by four and then by fifteen hours and then again by 365 days for just one block alone, and the sum total of but one phase of congested life on the East Side can be imagined.

Many have been the proposed solutions.

of the problem. One of the most popular is the proposal to build elevated parks over a few of the streets not now used by elevated railways; but this, like most of the other schemes, is something for the uncertain future. A more immediate way, even if only temporary, had to be found. And so those in authority came finally upon the notion of taking quite away from the street its age-old dignity as a channel of commerce and placing upon it the gentler distinction of a safe and pleasant playground for youngsters. Police Commissioner Arthur Woods has made the experiment in that East Side district which, with its 600,000 population, is known as the most thickly populated square mile in the world. The resident settlement-workers cooperate gladly, as do, for that matter, all parties concerned, including even the shopkeepers along the shut-in streets. From 3 to 6:30 each afternoon certain streets are closed to all traffic. For those three hours and a half they belong to the city's children. Since the original experiment eleven other "play-streets" have been added. Taking one of these as an example, Mr. Beck draws for us a pleasant picture of what the result has meant to the children of the tenements:

Were it 3 p.m. now you would see Police Commissioner Woods's special traffic policemen being assisted by the boys in placing the warning signs at each end of the block. We unto the occasional pushcart peddler or the truck-driver who tries to assert what used to be his "divine right" of streets. If the pushers or drivers cannot read English they will find printed in plain Yiddish on the other side of the sign-posts: "Closed to traffic by order of the Police Department." Let it be said that most drivers and pushers, seeing the benefit to the children, take a roundabout route with good nature.

Supervision, schedule, and a minimum amount of play leadership have been injected into the experiment by the workers at the University Settlement. Six street post-stanchions were taken from the Traffic Department. These stanchions the janitor of the settlement brings out, strings with 200 feet of rope, and across the street and along the curbs he makes a fair-sized arena. Several hundred spectators gather outside the ropes. A gallery of little tots sit on the curb. A hundred girls of all sizes hop with glee. Mr. Stover, who has been a "big brother" of the people of the East Side for more than twenty years, hired an Italian organ-grinder to bring his hurdy-gurdy and play three afternoons a week. This was temporary until Supervisor of Playgrounds Lee, of the Park Department, had the department's organ repaired for use. Often Miss Cook and her friend, Miss Mack, get into the arena as play leaders in games and folk-dancing.

One day a Roumanian girl of sixteen contributed her talent in the form of her national folk-dance. There was applause. The expressions of enjoyment on the faces of the hundreds of spectators showed that recreation comes in looking on as well as in doing it.

Here is an arena stuck between tenement-houses where neighborhood talent is exhibited, to the delight of the parents and friends. Here, as in the village streets

3 kinds of SHERWIN-WILLIAMS VARNISH

for three kinds of surfaces

MAR-NOT

For Floors

is a washable floor varnish of special durability. It is elastic and tough, to resist the constant pounding of heels. It is easy to apply, flows out freely under the brush, dries overnight, and enhances the beauty of the floor.

SCAR-NOT

For Woodwork and Furniture

The steam from a radiator, the heat of a dish or the splash of boiling water will not mar it. Takes a rich, lustrous polish. Used in quantities by manufacturers of high-grade furniture.

REXPAR

For All Outdoor Work The King of Varnishes

Whether exposed to rain and sleet or submerged indefinitely under water, Rexpar holds its lustre and never turns white. Use it on all outside woodwork requiring a handsome waterproof finish.

Different surfaces have different needs. There is no varnish made that will effectively meet all of them. Floors are walked on; tables have hot liquids spilled on them; outdoor surfaces get the sun and rain. To meet these three kinds of wear the Sherwin-Williams Company has specialized on three kinds of varnishes and each is absolutely the best for its purpose. You can get just the varnish for your purpose from the Sherwin-Williams dealer in your town.

Write for Portfolio of Suggestions for Painting and Decorating, showing rooms and exteriors in colors and giving complete specifications.
